Preface

Small Scale Industries, commerce, transport and professions and liberal arts contribute a sizeable part towards the state income. Income from these trades is worked out on the basis of the number of persons engaged in such activities. The data thrown up by the population censuses is depended upon for the estimates of working force.

But, the data (on working force) available in the 1951 and 1961 census reports are not strictly comparable in relation to

- (1) concepts and definitions and
- (2) industrial classifications.

In the present report it is attempted to present the estimates of working force in 1951 and 1961 for comparable industrial classifications.

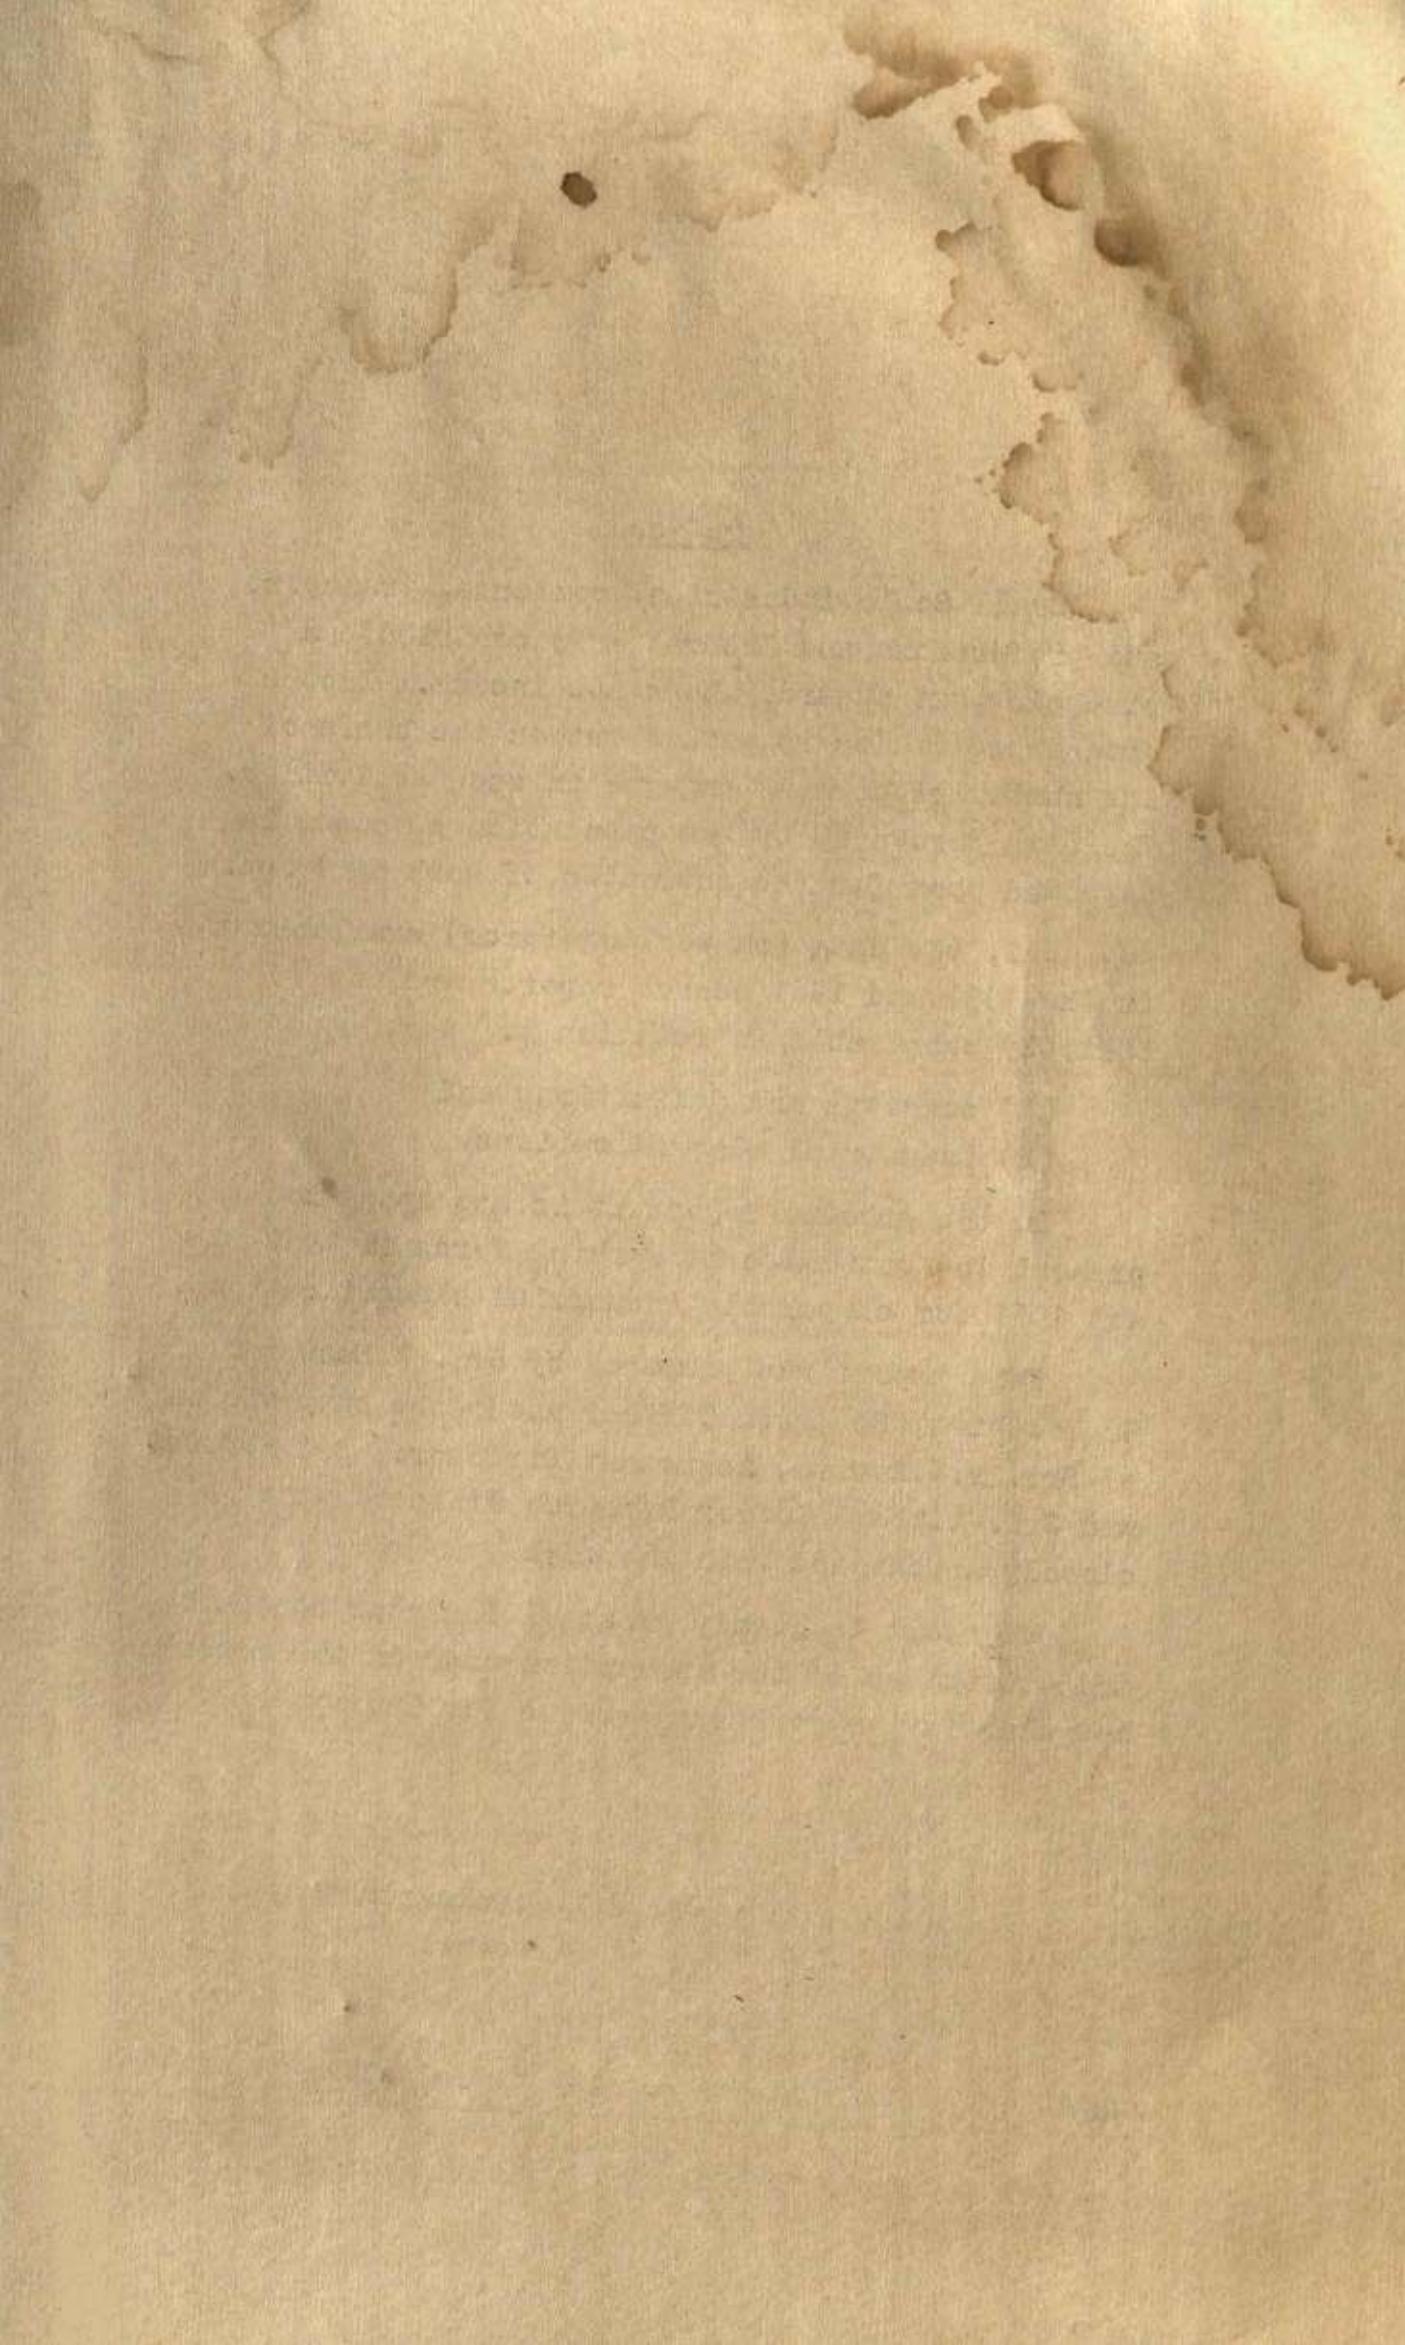

This report was prepared by Sri. K.Easwaran Namboothiri, Research Officer under the supervision of Sri. P.C.Kurian, Assistant Director. Sri.P.V.Das and Sri. A.Abdul Gafoor Research Officers were closely associated with the work.

We shall be highly grateful for your comments and criticisms of the assumption made in the report and also invite your suggestions for improvement.

Dr. P.K.Gopalakrishnan,
Director.

COMPARABLE ESTIMATES OF WORKING FORCE

1951 & 1961 - KERALA

INTRODUCTION

1.1 This paper attempts to present the estimates of working force of the State for the years 1951 and 1961 in as comparable a manner as possible. The problem involved is two fold. In the first instance the figures of working force of 1951 have to be recast in the 1961 pattern under the Indian Standard Industrial Classification (I.S.I.C.) scheme. Secondly, the figures of working force of 1961 census in the various I.S.I.C. groups have to be appropriately adjusted by a judicious distribution among them of a substantial portion of the workers left in division 9. The working force by comparable groups for 1951 and 1961 thus derived may serve as the basis for estimation of working force for the intercensal and post 1961 years for purposes of State income computation.

1.2 The available census data on working force, however are subject to several limitations. As a result, numerous practical difficulties are encountered in the preparation of comparable estimates.

1.3 Between 1901 and 1951 the census economic classification has been more based on a person's occupation than on his industry. Departing from this method, in 1961, the classification has been based on a person's industry irrespective of his own occupation. The change in the economic classification and concepts from census to census has rendered the comparison of census data extremely difficult especially at the level of major and minor groups. The elements in the scheme of classification of 1951 Census cannot be distinctly grouped under the various industrial groups of 1961.

1.4 The 1951 census data itself is slightly affected by the re-organisation of States in 1956. The livelihood sub-classes break-up was not available in the 1951 census records for the population in the portions transferred. The data in respect of such persons have been estimated on the basis of the livelihood sub-classes break-up of the census tracts concerned for which such data are available. This, however, may not significantly affect the accuracy of the data at State level.

1.5 Despite the minute classification scheme adopted in the 1961 census, a large number of workers vaguely described as 'general labourers' are seen included in minor group 900 under division 9. They may be mostly composed of occasional farm hands and dependants who help other members of the family in more than one calling as well as casual labourers. Most of them should have been classified in one or other of the various specific industrial groups. Their misclassification under division 9 has greatly affected the accuracy of the census data*. Consequently the economic data of 1961 census discloses only a distorted picture of the industry-wise distribution of the working force. Therefore the misclassified workers in division 9 have to be transferred back to their appropriate industrial groups before the working force estimates of 1961

* See "A classification about the Tertiary Sector" para 12.8 page 697 - Census of India 1961, Kerala - Part IA(i) General Report.

are compared by industrial groups to those of 1951 census. For this purpose we have to find out those groups in which there is significant decrease owing to possible exclusion of casual labourers. Although relevant data are lacking, all available data have been pressed into service to ascertain the probable number of workers in the various industrial groups of 1961 engaging casual labourers.

1.6 The paper consists of VII Parts. Part I deals with the basic concepts underlying the classification of economic activities adopted in 1951 and 1961 censuses as well as the comparability of the Indian Census Economic Classification (ICEC) Scheme of 1951 census and the I.S.I.C. Scheme of 1961 Census. The method of estimation of comparable working force 1951-1961 and the adjustments made by comparable groups in the basic frame of the comparable chart of the I.S.I.C. and I.C.E.C. and working force 1951 and 1961 furnished by the Registrar General are discussed in Part II. In Part III the adjustments carried out at minor group level (for 1961) are explained. The Household - non-household classification of working force 1961 and 1951 is discussed in Part IV and the Urban - Rural classification in Part V. Comparable summary tables for 1951 and 1961 are presented in Part VI.

1.7 Industrial classification of working force for 1951 and 1961 for measurement of State income and the rates of growth of working force by comparable groups will be discussed in a separate paper.

P A R T - I

A. ECONOMIC CLASSIFICATION AND CONCEPTS

I. Industrial classification of 1961 Census:

2.1 In 1961 census the Indian Standard Industrial Classification (I.S.I.C.) is adopted. Under this scheme the unit of classification is the "establishment". The commodity produced or the service performed as a result of the work of the establishment is the criterion for classifying the establishment. The classification of the establishment is the classification of every member of the establishment*. That is, a worker is classified with reference to the goods produced or services rendered by the establishment with which he is connected irrespective of the actual work he does in that establishment**.

2.2 On the above basis the entire population of the State has been divided into workers and non-workers. Workers are defined as follows:

The basis of work will be satisfied in the case of seasonal work like cultivation, livestock, dairying, household industry, etc., if the person has had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce the basis of work will be satisfied if the person was employed during any of the fifteen days preceding the day on which the enumerator visited the household. A person who is working but was absent from his work during the fifteen days preceding the day on which he was enumerated or even exceeding the period of fifteen days due to illness or other causes should be treated as worker. A person who has been offered work but has not actually joined should be treated as non-worker. Work includes not only actual work but effective supervision and direction of work.

2.3 Persons under training as apprentices with or without stipend or wages will be regarded as working.

2.4 An adult woman who is engaged in household duties but doing no other productive work to augment the family's resources is not considered as working. If, however, in addition to her household work she engages herself in work such as rice pounding for sale or wages, or in domestic services for wages for others or minding cattle or selling firewood or grass etc., or any such work she is treated as a worker.

2.5 Persons like beggars, pensioners, agricultural or non-agricultural royalty, rent or divisioned receivers who may be earning an income but who are not participating in any productive work are not treated as working unless they also work in cultivation, industry, trade, profession, business or commerce.

2.6 A public or social service worker who is actively engaged in public service activity or a political worker who is also actively engaged in furthering the political activity of his party is regarded as a worker***. (For definition of persons not working see Appendix-II)

* Census of India - Paper No. I - 1960

** Census of India 1961 - Vol. VII - Kerala.

*** Census of India Paper No. I of 1962.

2.7 Thus in the census of 1961 more emphasis is laid on work than on income so that all people who work, including family workers who are not in receipt of any income have also been included as workers. All workers are grouped under the nine industrial categories (APPENDIX-III).

II. Economic classification of 1951 census:

1. Livelihood classes:

2.8 The scheme of classification adopted in the 1951 census is the Indian census Economic classification (ICEC) Scheme. Under this scheme the unit of classification, in every case, is the individual. All employees and all independent workers are classified with reference to the commodity produced or service performed by them individually, there being no question of an 'establishment' distinct from the individual in these cases*.

2.9 The 1951 census seeks to ascertain the 'economic status' and the means of livelihood of every person enumerated. On this basis, the people are divided into two broad livelihood categories, viz., the Agricultural classes and the Non-agricultural classes, each of them being divided into four livelihood classes.

The four agricultural classes are

- i. cultivators of land, wholly or mainly owned and their dependants;
- ii. cultivators of land, wholly or mainly unowned; and their dependants;
- iii. Cultivating labourers and their dependants; and
- iv. Non-cultivating owners of land, agricultural rent receivers; and their dependants.

The four non-agricultural classes are defined as all persons (including dependants) who derive their principal means of livelihood from:

- v. production (other than cultivation);
- vi. commerce;
- vii. transport
- viii. other services and miscellaneous sources.

Each of the eight livelihood classes is divided into three sub-classes with reference to their economic status viz., (i) self-supporting persons (ii) non-earning dependants and (iii) earning dependants.

2. Classification of economic activities - 1951:

2.10 Adopting income or economic independence as the criterion for measuring economic activities all persons are classified into three types viz., Economically passive, semi-active and active persons. All non-earning dependants are economically passive. An earning dependant is an economically semi-active persons in receipt of regular income, no matter how small, but insufficient to maintain himself. A self-supporting persons is one with sufficient income to support himself individually at his level of

* Census of India - Paper No.1 of 1960.

living*. All self-supporting persons with productive principal means of livelihood are treated as economically active.

2.11 Economically active persons engaged in cultivation are the self-supporting persons of agricultural classes I to III. They are either cultivators or cultivating labourers. Economically active persons engaged in industries and services are classified into divisions and sub-divisions of I.C.E.C. All persons included in each sub-division are further divided into employers, employees and independant workers.

2.12 All earning dependants are economically semi-active persons. Their individual earning is too small to justify their description as economically active. However, along with the self-supporting persons, the earning dependants are classified according to their secondary means of livelihood, if they have any. The classification for secondary means of livelihood is the same as that for principal means of livelihood. The principal means of livelihood of the earning dependants is taken to be the same as that of the self-supporting persons on whom they depend**.

2.13 In effecting the economic classification no account is taken of whether the classified person was actually employed or unemployed on the date of enumeration. He is allocated to that particular description of economic activity, from which he has been in fact deriving a regular (that is non-casual) income, as his principal means of livelihood.

2.14 As regards 'employees', all persons engaged in production, commerce or transport (and not being domestic servants) are classified under the appropriate sub-divisions with reference to their own activity, and without reference to that of their employer. Domestic servants are all classed in one sub-division without reference to the nature of their work. All other employees (including all managerial and supervisory employees, clerical services, messengers, watchmen and un-skilled labour of every description) are classified with reference to the commodity produced or service rendered by their employers***.

2.15. Thus, there is a technical distinction between the unit of classification adopted in the I.S.I.C. and I.C.E.C. This is unavoidable having regard to the nature of the questions which alone can be put in a general population census in India. Nevertheless, there is no difference between the two schemes, except as regards the allocation of those 'employees' who are individually engaged in activities classifiable as production, commerce or transport and who are employed in 'establishments' whose main purpose is classifiable differently from the activity of the individual employee. The proportion of employees of this kind to the total of all active workers in industries and services (as they are organised at present in India) is unlikely to be large enough to make a significant difference to the comparability of data classified under the two schemes@.

(For definition of non-workers of 1951 - See Appendix-IV)

* National Income Statistics - CSO 1961. Proposals for a revised series of National Income Estimates for 1955-56 to 1959-60.

** Census of India 1951 - Vol.XIII, Travancore-Cochin, Part II Tables.

III. Working force - Concept:

2.16 The term 'working force' (formulated by the National Income Committee or NIC) is used to represent the economically active and semi-active persons as derived from the census data. It is based on the concepts of 'Self supporting persons' and 'earning dependants' used in the 1951 census. Working force in any sector of economic activity consists of self-supporting persons by 'principal means of livelihood' (economically active persons only) and all earning dependants by their own means of livelihood, i.e. 'secondary means of livelihood' according to the 1951 census*.

2.17 The tripartite division of population into self-supporting persons, earning dependants and non-earning dependants has been done away with in 1961 census and the population has been classified into workers and non-workers only. Therefore working force may be taken to mean the workers according to 1961 census.

2.18 'Workers' in 1951, in terms of the concept of workers in 1961, comprise of:

(i) All self-supporting persons with productive principal means of livelihood, i.e., all self-supporting persons other than (a) agricultural rent receivers belonging to livelihood class IV and (b) self-supporting persons deriving their means of livelihood from non-agricultural, non-productive occupations, like beggars, pensioners, etc., belonging to livelihood class VIII.

(ii) Self-supporting persons belonging to livelihood class IV (agricultural rent-receivers) but deriving secondary means of livelihood from productive occupations, i.e. from other than class IV.

(iii) All earning dependants in respect of their own (secondary) means of livelihood other than those who derive their secondary means of livelihood from:

(a) receipt of agricultural rent under class IV; and

(b) non-agricultural non-productive occupations**
(For non-workers of 1951 see Appendix-IV)

IV. Comparative chart of I.S.I.C. & I.C.E.C.:

2.19 The comparative chart of I.S.I.C. and I.C.E.C. provides us with a list of the elements of the I.C.E.C. upto groups of two decimal digits which correspond to each of the minor groups of the I.S.I.C. But, in the 1951 census the self-supporting persons of non-agricultural classes alone were broken up into industrial groups of I.C.E.C. and this was done only in respect of their principal means of livelihood. There was no grouping of the earning dependants into industrial divisions or subdivisions or groups. So the distribution of workers at the level of industrial groups of two decimal digits cannot be directly arrived at from the 1951 census data. As a result it is not practicable to work out exactly comparable figures of working force for 1951 and 1961 at minor group level of I.S.I.C. It is attempted to overcome this difficulty by grouping the elements of the I.C.E.C. under appropriate major groups of I.S.I.C. and under minor groups only wherever possible by virtue of proper

* National Income Statistics - Proposals for a revised series of National Income Estimates for 1955-56 to 1959-60, CSO '61.

** General Economic Tables census of India 1961-Annexure-III.

correspondence. Accordingly, a list of the comparable elements of the I.C.E.C. and I.S.I.C. with suitable modifications has been furnished in Appendix-I.

B. COMPARABILITY OF THE INDUSTRIAL CATEGORIES OF 1961 AND LIVELIHOOD CLASSES OF 1951.

I.(a) 1961 Census - Industrial categories I & II*:

(i) Cultivators (Category-I):

2.20 A person is working as cultivator if he is engaged either as employer, single worker or family worker in cultivation of land or supervision or direction of cultivation of land either (a) owned or held from Government or (b) held from private persons or institutions for payment in money, kind or share.

2.21 Cultivation involves ploughing, sowing and harvesting and does not include fruit growing or keeping orchards or groves or working for plantations like tea, coffee, rubber, cinchona and other medicinal plantations.

2.22 The following kinds of persons are not counted as cultivators:

(a) a person who has given out his land to another person for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation of land;

(b) a person working in another person's land only as a labourer and has no right or lease or contract on land on which he works, nor is responsible for taking decisions as to which crop to sow and when, or taking the risks of cultivation and is paid wages in cash, kind or share such as share of produce.

2.23 Cultivation of the following crops will come under this category:

1. cereal crops (including bengal gram) such as rice, wheat, jowar, bajra, maize, roots and tubers like potato, yam, beet etc., sugarcane etc.
2. pulses such as arhar, moong, masur, urd, khesari, other gram;
3. raw jute and kindred fibre crops; and
4. raw cotton and kindred fibre crops.

(ii) Agricultural labourers (Category-II):

2.24 A person is working as agricultural labourer if he works in another person's land only as a labourer without exercising any supervision or direction in cultivation, for wages in cash, kind or share such as share of produce. The labourer should have no right or lease or contract on land on which he works, nor should he be responsible for taking decisions as to which crop to sow and when, or taking the risks of cultivation. He should have been working as agricultural labourer in the last or current cultivating season. Those engaged in operations on

land in fruit groves, orchards, plantations and other items not included in the definition of cultivation should not be treated as agricultural labourers.

2.25 The crops that come under this category are the same as in the case of cultivators described above.

2.26 Cultivators and agricultural labourers correspond to the minor groups 000 to 004 and part of 005 of the I.S.I.C. The number of workers under these minor groups are not separately furnished by the census data. The remaining industries described under 005 of I.S.I.C. the figures for which have been furnished in the general economic tables Part II-B(i)-Kerala do not come within the purview of cultivation according to the 1961 definition.

I.(b). 1951 Census - Livelihood Classes I, II and III:
(1). Cultivators(Livelihood Classes I and II):

2.27 Livelihood class I consists of cultivators of land wholly or mainly owned and their dependants. Cultivators of land wholly or mainly unowned and their dependants form livelihood class II. Each of these is divided into three sub-classes: (i) self-supporting persons; (ii) non-earning dependants and (iii) earning dependants. As the non-earning dependants are economically passive they fall outside the working force. The self-supporting persons and earning dependants under livelihood classes I and II include cultivators as defined in 1961 census.

(ii) Agricultural labourers(Livelihood Class-III):

2.28 Livelihood class-III consists of cultivating labourers and their dependants. The self-supporting persons and earning dependants of this class include agricultural labourers of 1961 census.

2.29 Besides the cultivators and agricultural labourers according to the 1961 definition, the livelihood classes I, II and III (Excluding non-earning dependants) of 1951 census contain some workers classified under non-agricultural industries of 1961. They are the following:

- i) 005 - Production of other crops (including vegetables) not covered by 000 to 004. Workers corresponding to part of this minor group as given in the Economic Tables 1961 which is excluded from the definition of cultivators and agricultural labourers are contained in livelihood classes I to III of 1951.
- ii) Workers corresponding to minor group 006 - production of fruits and nuts in plantation, vines and orchards.
- iii) Workers corresponding to 007 - Production of wood, bamboo, cane, reeds, thatching grass etc.
- iv) Workers corresponding to 009 - Production of other agricultural produce (including fruits and nuts not covered by code number 006 and flowers) not covered by 000 to 008.

2.30 As explained in the 'instructions to Enumerators' of 1961 census (Part I A(ii) - General Report - Appendices - Kerala) production of fruits and nuts in plantations, vines and orchards (minor group 006) includes coconut, arecanut, etc.

The minor group 005 relates to production of other crops (including vegetables) not included under cultivation. The figures for 1951 corresponding to the workers in these minor groups as well as those in 007 and 009 are contained in livelihood classes I to III and are not separately available.

2.31 Thus workers in industrial categories I and II of 1961 plus workers in minor groups 005, 006, 007 and 009 correspond to the workers in livelihood classes I to III of 1951.

2.32 In the minor groups 005 to 007 and 009 of 1961, the number of workers who may be treated as cultivators and of those who may be treated as agricultural labourers are not separately available. However, if they are allocated between categories I and II (of 1961) a more detailed break up is obtained in the comparable groups. Cultivators (in industrial category I) of 1961 plus cultivators in minor groups 005 to 007 and 009 correspond to the self-supporting persons and earning dependants of livelihood classes I and II of 1961. The agricultural labourers (in industrial category II) of 1961 plus agricultural labourers in minor groups 005 to 007 and 009 correspond to the self-supporting persons and earning dependants of livelihood class III of 1951.

2.33 Workers in part of O.30 of 1951 come under groups 005 and 006 of 1961 classification. When workers in 005 to 007 and 009 of 1961 are transferred to categories I and II to correspond to workers in livelihood classes I, II & III of 1951, workers in this part of O.30 of 1951 also have to be transferred to workers in livelihood classes I to III of 1951 for comparability. In Kerala this part of O.30 of I.C.E.C. mainly relates to workers in cultivation of cashew and it is difficult to separate the workers under this part of O.30 from the rest of the workers under O.30. The employment in this respect is also negligible. Therefore no attempt is made to transfer workers in this part of O.30 of 1951 to workers in livelihood classes I to III.

(iii) Workers in production of juice by tapping palms of 1961 and Toddy drawers 1961 census:

2.34 In 1961 the minor group 008 gives persons working in the production of juice by tapping palms and 212 relates to workers engaged in production of indigenous liquor such as toddy, liquor from mahua, palm juice. The group 2.42 Toddy drawers of 1951 comprises the workers in both of these groups. Since the workers under 2.42 of 1951 cannot be allocated between 008 and 212 workers in these groups are pooled together against the group 2.42 of 1951 for comparability.

(iv) Workers in major group 84 - Legal services and 89 services not elsewhere classified 1961 census:

2.35 According to the 'Comparative chart of I.S.I.C. and I.C.E.C. and Working Force 1951 and 1961 of the Registrar General minor groups 840 and 841 of I.S.I.C. correspond to the groups 9.61 and 9.62 of I.C.E.C. By the very description it is clear that workers under the minor group 841 - 'Matrimonial services rendered by organisations and individuals' of I.S.I.C. are not covered by the group 9.61 and 9.62 of I.C.E.C. The only possible group under which these workers might have been classified in 1951 is that part of 9.0 of I.C.E.C. corresponding to major group 89 of I.S.I.C. Therefore the workers in minor group 841 are transferred to major group 89 services not elsewhere classified.

2.36 Document writers as a specific class are not included in any of the groups of I.C.E.C. of 1951. The only group in which they might have been included in 1951 is 9.62 of I.C.E.C. Clerks of lawyers, petition writers etc., which comes under the corresponding I.S.I.C. group 840. The description of minor groups in 84 and 85 shows that they do not include document writers. Therefore in 1961 they might have been classified in major group 89 - services not elsewhere classified. Hence, for comparability the document writers included under major group 89 of 1961 are transferred to minor group 840.

(v) Workers in major groups 89 and 90 of 1961 and 8.9 & 9.0 of 1951

2.37 The striking incomparability between the census figures of 1951 and 1961 in category IX can be traced to the conceptual differences regarding the workers of 1951 and 1961 coming under the major groups 89 and 90 of I.S.I.C.

2.38 The elements of I.C.E.C. that correspond to the major group 89 (services not elsewhere classified) of I.S.I.C. are 8.9 (employees of Non-Indian Governments) and part of 9.0 services otherwise unclassified. The other part of 9.0 comes under minor group 900 activities unspecified and not adequately described etc. of 1961. The two portions of 9.0 of 1961 included under major groups 89 and 90 of I.S.I.C. are not separable as 9.0 has no further break up. However, the figures of 1951 under 9.0 may be allocated between the major groups 89 and 90 on some suitable basis.

2.39 The major group 90 or the minor group 900 - gives the workers whose activities are unspecified and not adequately described. It includes those who fail to provide sufficient information about their industrial affiliation to enable them to be classified. Only a part of the group 9.0 of 1951 corresponds to this minor group (The other part is included under major group 89). But, on comparison with the number of workers in 1951 under this part, the number of workers under 900 of 1961 seems to be unreasonably large. While the figures for 1951 is only about 1.5 lakhs that for 1961 is 7.75 lakhs.

2.40 It may be possible to account for this abnormal increases if we examine the types of workers which constitute the major group 90. The instructions to the enumerators of 1961 census appear to throw some light on this aspect.

2.41 In the case of any person if more than one productive activity is recorded, his principal work has to be ascertained. The principal work is the one on which the person spends most time. On this basis the workers in the minor groups 000 to 004 and part of 005 are to be returned as cultivators or agricultural labourers as the case may be. The workers in part of 005 and in 006 to 015 are to be returned under the respective minor groups. Also, the types of crops that come under 'cultivation' and 'other field produce' have been listed. All the same, in the peculiar mixed cropping pattern prevailing in the State it is often difficult to determine the crop most benefitted by the work of a worker. This, in many cases, renders it impossible for the enumerator to make out the appropriate minor group to which a worker belongs according to the minute classification

envisioned in the 1961 census. It becomes difficult to draw a distinction between workers in 'other field produce' and agricultural labourers.

2.42 Most of the above workers may be classifiable in several minor groups under field produce at the same time besides category-II. Many rural labourers in the State neither work for a fixed type of crop nor pursue a particular kind of work on land alone during a given season. Moreover, in many cases a labourer's own description of his work may not be of much avail in determining 'the work on which he devotes most time'. Thereby classification by priority scale is rendered most difficult if not impossible. In such cases it is likely that the labourer may be treated as one accustomed to work on various jobs and working in different places. Then, it is no wonder if the enumerator returns the nature of industry of the worker as 'general labourer' and establishment as 'no fixed place of work'. What is more, it is apparently in accordance with the instructions*: "If accustomed to work on various jobs, write general labourer" and "If a person has no fixed place of work, write 'No fixed place of work".

2.43 As in respect of agricultural labourers a number of persons may have been so returned in other industries also. In 1951 census there was no such description or classification of industry as 'general labourer'. The mere inclusion of the instructions mentioned above might have induced enumerators to some extent to classify labourers under the group. It is highly probable that there was a tendency to classify a labourer at once as a 'general labourer' and to note his establishment as 'no fixed place of work' on finding that he used to work on different jobs at different places and thereby avoid taking pains to ascertain his principal work.

2.44 Probably, as a result of it all, in the 1961 census under minor group 900 there accumulated a large number of workers who should have been classified under the various other industrial categories. The figures in this group are considerably large especially in the rural areas of all districts (see table 1.1). "Most of these entries relate to those returning their nature of work as 'general coolies' or 'general labourers' and the nature of industry as 'no fixed place of work'**.

2.45 Of course, in both censuses there may be a certain number of workers whose activities are unspecified or not so adequately described as to enable them to be classified. The workers of 1951 coming under the sub-division 9.0 (excluding services not elsewhere classified) must be of this type. We may reasonably assume that a more or less proportionate number in division 9 of 1961 corresponds to this figure. Obviously, in 1961 over and above such persons a large number of workers who could have been included under one or the other of the remaining groups seem to have got included under minor group 900. It is the workers of this type who are returned as 'general labourers'.

2.46 Thus the workers of 1961 given under the minor group 900 consists of two types: (i) workers whose activities are unspecified and not adequately described and (ii) those returning their nature of work as 'general labourer' and nature of industry as

* Instructions to enumerators - Census of India 1961 Kerala Part-IA(ii)

** Fly leaf to table B-IV of census of India Part IIB(i)-Kerala.

'in fixed place of work'. The first type may be treated as corresponding to the workers of 1951 in sub-division 9.0 excluding services not elsewhere classified. Most of the workers in minor group 900 come under the second type for which there is no corresponding group in 1951. This excessively large number of workers must have come from the various other industrial divisions. Our purpose is to introduce proper comparability between the 1951 and 1961 figures of working force. Therefore it is imperative that we should transfer the workers of this type back to the appropriate classes from which they might have been drawn. This, in fact, has emerged as the main problem to be dealt with in this paper.

C. GROWTH OF WORKING FORCE 1951-61 BY CATEGORIES IN KERALA AND NEIGHBOURING STATES.

2.47 The general trend in the growth of workers in Kerala over the decade 1951-61 may be studied in comparison with the general trend in the neighbouring States and all India.

2.48 Table 1.2 gives the general variation of workers in the three industrial sectors (in primary, secondary & Tertiary sectors) in Kerala over the decade 1951-61 as compared to that in the neighbouring States of Madras and Mysore and all India. The most distinctive feature is a poor growth in the Primary Sector accompanied by an abnormal increase in the Tertiary Sector.

2.49 The general trend of change in the various industrial categories in Kerala and other States may be clear from table 1.3.

(i) Category-I - Cultivators and II - Agricultural Labourers:

2.50 There is a general decrease in the percentage of agricultural labourers along with an increase in cultivators except in Kerala and Bihar where the percentages have decreased in both. The fall in the percentage of agricultural labourers in Kerala is much greater in magnitude than that in Bihar. It is also more than double the percentage of decrease in Madras and Mysore where the fall in the percentage of agricultural labourers is counterpoised by a rise in the percentage of cultivators (see table 1.4). There is a net increase in the percentage of agricultural workers (cultivators + agricultural labourers) to total working force in Madras, Mysore and most other States and the all India figures remain more or less Static (see table 1.5). In Kerala the total number of agricultural workers also show a marked decrease.

Agricultural workers and net area sown:

2.51 In Kerala the increase in the number of cultivators per 100 acres of net area sown is extremely small (increased from 24 to 26) while their number has substantially increased in other states. (Table 1.6). At the same time the number of agricultural labourers decreased from 26 to 21 in Kerala against an increase in most other states.

(ii) Category-III - Workers in Mining, Quarrying, Livestock, Forestry, Fishing, Hunting, Plantations, Orchards and allied activities:

2.52 In Kerala, Madras, Mysore and All-India the percentage increase in workers under this category in 1961 is considerable

(See table 1.7). The proportion of workers in this category records a general increase in several states including Kerala (see table 1.3). However, as the Household - Non-household classification was not adopted in the 1951 census, the working force of 1961 in categories III, IV & V are not generally comparable.

(iii) Categories-IV - At household industry
V - In manufacturing:
VI - In construction

2.53 In categories IV and V, the proportions have risen in all states except Rajasthan and Kerala during 1951-61. Category VI shows a marked decrease in most of the States including Kerala (see table 1.3). In fact, the proportion of workers in Kerala in the Secondary sector as a whole has decreased over the decade.

(iv) Category-VII - Trade and Commerce:

2.54 The proportion of workers in this category has decreased in every State (see table 1.3). This decline is partly attributed to the principle of classifying 'makers and sellers' under 'Makers' in category-IV or V and not under 'sellers' in category-VII. The fact that hawkers or pedlars are yielding place to a fewer number of retail shop keepers is also cited as a probable reason.*.

(v) Category-VIII - Transport, Storage and Communication:

2.55 There is not much of any distinctly noticeable trend in this category among the different States; in some states the proportions have slightly increased while in others they have decreased. In Madras, the proportion of male labourers has risen a little, but that of females has decreased. In Mysore there is a fall in the proportion of both males and females of (0.2% and 0.01% respectively). Kerala exhibits an even greater magnitude of decline of 0.5% in Male labourers and 0.29% in female labourers. (See table 1.3).

2.56 Considering the percentage change in 1961 over the number of workers in 1951, Kerala shows only a small increase compared to Madras, Mysore and all-India (Table 1.7). In Kerala the number of workers in this category has registered only a small increase of 9.7% as against 49.4% in Madras, 39.4% in Mysore and 40.6% in all India.

(vi) Category-IX - Other Services:

2.57 During 1951-61 the All-India figures show no appreciable change in the proportion of workers in this category (Table 1.3). Mysore records a decrease of 0.75% and Madras an increase of 2.57%. But, in Kerala there is an outstanding increase of 11.46% which at any rate is unreasonable.

2.58 Again the percentage change in the proportion during 1951-61 reveals a decline in India as a whole. Mysore shows a fall by 7% and Madras an increase of about 20%. Kerala draws a striking contrast by recording a rise of nearly 83% in the proportion in

* Census of India - Paper No.1 of 1962

this category. On examining similar percentage of the male workers, which are more consistant, an increase is observed for all-India (6.2%) and for most of the States. (Mysore, 1.2; Madras 23.6, Bihar 47.6% etc.)*. Of all the States Kerala exhibits the greatest increase of 85.7% in the male workers.

2.59 Further more, in Kerala, in none of the other categories is seen such an overwhelming percentage of increase in the number of workers in 1961 against that in 1951 (see table 1.7). This abnormal increase must be due, in a large measure, to the conceptual differences between the economic classification of 1951 and the industrial classification of 1961.

2.60 Thus there is a decrease in the proportion of workers of 1961 in categories I and II and IV to VIII as against an excessively large increase in category-IX. This does not agree with the trends for the corresponding categories in the neighbouring States and All-India. It indicates that the category-wise figures of 1951 and 1961 as such are not properly comparable, for Kerala. The changes over time in the different categories can, therefore, be studied only after recasting the figures in a comparable manner at major group or even minor group level. These aspects are examined in detail in Part-II of this paper.

* Census of India - Paper No. I of 1962.

APPENDIX - I

Statement showing the comparable groups of elements of the Indian standard Industrial Classification (ISIC) 1961 and the Indian Census Economics Classification (IGEC) 1951.

Categories, Divisions, Major and Minor Groups	I.S.I.C. 1961 Description	Livelihood classes, Division and sub-divisions	I.C.P.C. 1951 description
		2	3
		TOTAL WORKERS	TOTAL WORKERS
CULTIVATORS			
Category-I*	Working as cultivators: Cultivators in the following minor groups:	L.C.I	Livelihood Class-I: Cultivators of land wholly or mainly owned (self supporting persons and earning dependants whose secondary means of livelihood is cultivation)
005	Production of other crops (including vegetables) not covered by codes 000 to 004	L.C.II	Livelihood Class-II: Cultivators of land wholly or mainly unowned. (Self supporting persons and earning dependants whose secondary means of livelihood is cultivation) and persons working in all plantations other than tea, coffee and rubber, but not including the cultivation of special crops in conjunction with ordinary cultivation of field crops (0.30 partly)
006	Production of fruits and nuts in plantations, vines and orchards	0.30 (Partly)	
007	Production of wood, bamboo, cane reeds, thatching grass, etc.		
009	Production of other Agricultural produce (including fruits and nuts not covered by code 006 and flowers) not covered above.		
AGRICULTURAL LABOURERS			
Category-II *	Working as agricultural labourers, and agricultural labourers in the minor groups 005, 006, 007 and 009	L.C.III (0.30) Partly	Livelihood Class-III: Cultivating labourers (self supporting persons and earning dependants) and cultivating labourers in all plantations other than tea, coffee and rubber, but not including the cultivation of special crops in conjunction with ordinary cultivation of field crops (0.30 partly).
005 - 007 & 009			Contd.....

1	01	Plantation crops	0.3	Plantation Industries - except part of 0.30 included above
2	02	Forestry and logging	0.4	Forestry and collection of products not elsewhere specified cultivation of lac
3	03	Fishing	0.6	Fishing
4	04	Live stock and hunting	0.1	Stock raising
			0.21	Poultry farmers
			0.22	Bee keepers
			0.23	Silk worm rearers
			0.20	Rearers of other small animals and insects
			0.5	Hunting (including trapping and game propagation)
				<u>MINING AND QUARRYING</u>
			Division (1)	Division (1)
			10	(1.0 - 1.7)
			1.0	Non-Metallic mining and quarrying not otherwise classified
			1.1	Coal mining
			1.2	Iron ore mining
			1.3	Metal mining except iron ore mining
			1.4	Crude petroleum and natural gas
			1.5	Stone quarrying clay and sand pits
			1.6	Mica
			1.7	Salt, salt petre and saline substances (Partly)
				<u>MANUFACTURING</u>
			20	Food stuffs
			200 and 203-209	Food stuffs except sugar
			201 & 202	Sugar and gur
	21*	0C3	2.0	Food industries-otherwise unclassified
			2.1	grains and pulses
			2.2	Vegetable oil & dairy products etc.,
			2.3	Sugar Industries
			2.4	Beverages

Division 7	<u>TRANSPORT, etc.</u>		
70-71	Transport and services incidental to transport		
700	Transport by railways	7.4	Railway transport
701-705	Road transport	7.1	Transport by road
706=707	Water transport	7.2	Transport by water
708-710	Transport by air, by other means not covered above and services incidental to transport	7.3	Transport by air
72	Storage and warehousing	7.0	Transport and communications otherwise unclassified and incidental services
73	Communications	7.5	Storage and warehousing
		7.6	Postal services
		7.7	Telegraph services
		7.8	Telephone services
		7.9	wireless services
		9.5 (Partly) Recreation services	9.5 (Partly) Recreation services
Division 8	<u>SERVICES</u>		
80	Public services	8.3	Army, navy and airforce
		8.4	Police (other than Village Watchman)
		8.5	Village Officers and servants including Village watchmen
		8.6	Employees of municipalities and local boards (Not elsewhere classified)
		8.7	Employees of State Governments (Not elsewhere classified)
		8.8	Employees of Union Government (Not elsewhere classified)
81	Educational and scientific services	8.2	Educational services and research
82	Medical and Health services	8.11	Medical and other health services
83	Religious and welfare services	9.8	Religious charitable and welfare services
84*	Legal services (minor group 840 plus document writers drawn from major group 89)	9.61	Lawyers if all kinds including qazis, law agents and Mukhtians
		9.62	Clerks of lawyers, petition writers, etc. - Contd.

1	2	3	4
85	Business services		
		9.63	Architects, surveyors, engineers and their employees (not being state servants)
		9.64	Public scribes, stenographers, accountants, auditors
		9.72	Authors, editors and journalists
		9.0 (partly)	Services otherwise unclassified (partly)
86	Community services and trade and labour associations		
		9.65	Managers, clerks, servants and employees of trade association, Chamber of Commerce, Board of Trade, Labour Organizations and similar organisation of employers and employees.
		9.5 (partly)	Recreation services (partly)
B7	Recreation services		
88	Personal services		
880-881	Domestic services		
882-885	Other personal services		
88*	Services (not elsewhere classified) (minor group 841 is included)		
<u>Division 9</u>	ACTIVITIES UNSPECIFIED and not adequately described (including fresh entrants to the labour market)	9.0 (Partly)	Services otherwise unclassified (Partly)
990			

NOTE: This chart is based on the Comparative Chart of I.S.I.C. and I.C.P. and Working Force 1951 and 1961 provided by the Registrar General, India. The adjusted major groups are denoted by asterisks. For details please see notes in part-I.

APPENDIX - II

Persons not working - 1961

1. A full-time student or child attending school who does no other work, such as make articles at home for sale, nor even help part-time, in his own family cultivation, industry, trade or business.
2. A person engaged in unpaid home duties (like house-wife or other adult female) who does no other work, such as make articles at home for sale or wages nor help regularly even part-time in family cultivation, industry, trade or business.
3. Any dependant including an infant or child not attending school, a person permanently disabled from work because of illness or oldage.
4. A retired person who is not employed again, rentier, person living on agricultural or non-agricultural royalty, rent or dividend or any other person of independent means for securing which he does not have to work and who does no other work.
5. A beggar, vagrant or independent woman without indication of source of income and others of unspecified source of income.
6. A convict in jail (an undertrial prisoner will be shown as a worker if he used to work before he was apprehended) or a inmate of a penal, mental or charitable institution.
7. A person who has not been employed before but is seeking employment for the first time.
8. A person employed before but now out of employment and seeking employment.

APPENDIX - III

Industrial Categories and the corresponding divisions
of the Indian standard Industrial Classification

<u>Category</u>	<u>Industrial Division of I.S.I.C.</u>
I. Cultivator	
II. Agricultural labourer	{ These have not been separately coded for industrial classification as they formed distinct categories in themselves (Minor group 000 to 004 and 005 partly)*.
III. Mining, Quarrying, Live-stock, Forestry, Fishing, Hunting & Plantations, Orchards & allied activities	{ 0 (except minor groups 000 to 004 and part of 005) and 1, if the industry is not a household industry*.
IV. Household industry	: 0 (except minor groups 000 to 004 and part of 005), 1, 2 & 3, if the industry is a household industry.
V. Manufacturing other than household industry.	{ 2 & 3 if the industry is not a household industry.
VI. Construction	: 4
VII. Trade & Commerce	: 6
VIII. Transport, Storage & Communications	: 7
IX. Other Services	: 5, 8 and 9 (excluding minor group 999).

GENERAL ECONOMIC TABLES.

* For changes in classification in respect of categories I, II & III in the comparable estimates of working force 1951 and 1961. Please see paras 2.29 to 2.32 of Part-I

APPENDIX - IV
Non-workers of 1951

- I. All non-earning dependants.
- II. Self-supporting persons whose principal means of livelihood was agricultural rent (Class IV) and who had no productive secondary means of livelihood.
- III. The following groups of self-supporting persons included in non-agricultural class-VIII.
 - (a) Persons living principally on income from non-agricultural property;
 - (b) Pensioners and remittance holders;
 - (c) Inmates of jails, asylums, alms houses and recipients of doles, beggars and vagrants; and
 - (d) Other persons living principally on income derived from non-productive activity.
- IV. Earning dependants whose own means of livelihood (secondary means of livelihood was agricultural rent receiving under Class-IV; and
- V. Earning dependants whose secondary means of livelihood was non-agricultural non-productive.

TABLE No. 1.7

WORKERS IN THE INDUSTRIAL CATEGORIES IN 1961 AS PERCENTAGE
OF WORKERS IN 1951.

Categories	All India	Mysore	Madras	Kerala
I	142.6	180.4	194.5	116.4
II	114.4	131.3	145.0	87.8
III	125.9	178.6	149.5	150.0
IV	159.2	182.5	184.8	123.7*
V				
VI	140.0	126.6	135.1	107.3
VII	104.5	112.5	119.7	111.3
VIII	140.6	139.4	149.4	109.7
IX	133.6	150.1	210.8	235.7

NOTE: This table is based on the figures of working force furnished in Tables 11A (1951) and 12A (1961) of Census of India Paper No. I of 1962.

* No. of workers in category IV and V of 1961 together are compared to the No. of workers in category V of 1961.

P A R T - II

METHOD OF ESTIMATION OF COMPARABLE WORKING FORCE
FIGURES 1951-61

I. Method adopted by the Office of the Registrar General:

3.1 On the experience of 1961 it was presumed that the earning dependants in 1951 generally belonged to the household sector and were mostly family workers in the non-house hold sect r. This is, of course, a big assumption to make but seems warranted by 1961 experience. The livelihood class V corresponds with Divisions 0 to 3 of Indian Standard Industrial Classification. The workers in household industry at two digit level in 1961, covering Divisions 0 to 3 of Indian Standard Industrial Classification, were added to family workers at non-household industry and their proportions at two digit level were worked out for livelihood class V of 1951. The earning dependants of livelihood class V of 1951 were allocated to major groups of I.S.I.C. on the basis of the proportions so worked out. Earning dependants in livelihood classes VI, VII and VIII of 1951 were allocated to major groups of 1961 on the basis of the distribution of the family workers of 1961. For this purpose, family workers at major groups for 1961 were first recast into livelihood class were worked out. The earning dependants belonging to each livelihood class were then distributed on the basis of the proportions so worked out.

3.2 The family workers obtaining against major groups 89 and 90 were pooled together. The figure of earning dependants was worked out according to the ratio of the family workers on the pooled figure of major groups 89 and 90. The two major groups were pooled because they were complementary.

3.3 Family workers in 1961 were tabulated in Table B-IV only at major group level and hence it was not possible to allocate earning dependants to minor groups of I.S.I.C. The earning dependants of livelihood class-V allocated to major group 00 to major group 39, were further broken up into minor groups of I.S.I.C. according to the distributive pattern of workers at household industry in 1961. As regards other major groups, the earning dependants were further allocated to minor groups in the proportion of independant workers among self supporting persons where the sub-divisions of 1951 corresponded to the minor groups of 1961. In other cases, i.e., where the sub-divisions of 1951 did not correspond to the minor groups of 1961, the earning dependants were apportioned to minor groups in the ratio of total self-supporting persons calculated against those minor groups.*

(Estimates of Working Force for 1951 and 1961 worked out by by comparable groups on the above lines by the Registrar General are gives in columns 4 & 5 of table 2.1)

* Source: Explanatory Note to the comparative chart of I.S.I.C. and I.C.E.C. And Working Force for 1951 and 1951 by Shri B.R.Kalra, Office of the Registrar General, India.

II. Adjustments effected in the comparable estimates of working force 1951-61:

3.4 With a view to arriving at comparable figures of working force for 1951 and 1961 it is attempted to examine the discrepancies in the number of workers under the various industrial groups by checking them with the figures obtained from sample surveys and other sources. A few adjustments have been effected on the basis of assumptions warranted by the analysis of the available data.

CATEGORY-I (Cultivators) & CATEGORY-II (Agricultural Labourers)

Allocation of workers under minor groups 005 to 007 and 009 to categories I & II of 1961:

3.5 In order to obtain comparable figures of working force in categories I & II for the years 1951 and 1961 the workers in minor groups 005 to 007 and 009 of 1961 are transferred to categories I & II. (For details of Working Force in these minor groups see table 2.2). The male and female workers are allocated in proportion to the male and female workers respectively in categories I & II. The details are given below:

CATEGORIES	Persons	Males	Females
Category-I Cultivators)	1178103	904502	273601
Workers transferred from 005 to 007 and 009	94675	88149	6526
Total	1272778	992651	280127
Category-II (Agricultural labourers)	978396	516914	461482
Workers transferred from 005 to 007 and 009	61355	50345	11010
Total	1039751	567259	472492

(For detailed statement by urban and rural see table No.5.2)

Variation during 1951-61 in categories I & II:

3.6 The adjusted figures in categories I and II of 1961 are compared to the figures of 1951 in the following table. The number of cultivators expressed as percentage of total working force does not show any considerable change over the decade 1951-61. On the contrary, (expressed as percentage of total working force) the number of agricultural labourers shows a sharp fall and a marked numerical decrease in the male agricultural labourers is also noticed. The percentage of female agricultural labourers shows a decrease of 4.2% and that of the male labourers records quite an unusual fall of 8.4%. Even when the cultivators and agricultural labourers are considered together the proportion of male workers is seen to have decreased by 8.9% while the females have decreased by 4.6%.

Agricultural Workers in Categories I & II - 1951 & 1961:
Kerala

DESCRIPTION	SEX	Census 1951		Census 1961	
		Number of workers	Workers as % of total workforce	Number of workers	Workers as % of total workforce
Category-I Cultivators	P	1012308	23.15	1272778	22.61
	M	798652	25.62	992651	25.15
	F	213656	17.02	280127	16.64
Category-II Agricultural Labourers	P	1114783	25.49	1039751	18.47
	M	709392	22.75	567259	14.37
	F	405391	32.30	472492	28.07
Cultivators plus Agricultural Labourers	P	2127091	48.64	2312529	41.08
	M	1508044	48.37	1559910	39.52
	F	619047	49.32	752619	44.71

COMPARISON WITH NEIGHBOURING STATES

Agricultural Labourers and net area sown:

3.7 The number of agricultural labourers is found to bear a close relation to the net area sown. During 1951-61 the net area sown in Mysore State increased by about 6% and the agricultural labourers increased by 31%. In Madras State while the net area sown increased by about 12% the agricultural labourers showed an increase of 45%. Corresponding to an increase of nearly 12% in net area sown, all India figures record a growth of 14% in Agricultural labourers. But in Kerala there is a decrease of 7% in agricultural labourers against an increase of about 8% in the net area sown. In respect of Kerala this reversal in the general trend appears unreal.

Variation in the number of female agricultural labourers:

3.8 The neighbouring States of Madras, Mysore and Andhra show a large increase in the percentage of female agricultural labourers. But Kerala records only a modest increase of 16.55%.

Increase in female agricultural labourers during 1951-61 in Kerala and neighbouring States:

STATES	Number of female agricultural labourers		Percentage increase during 1951-61
	1951	1961	
Kerala	405391	472492	16.55
Madras	738163	1383333	87.40
Mysore	631015	875038	38.67
Andhra	1866518	2881755	54.39
All India	12693671	14170831	11.64

Variation in male agricultural labourers:

3.9 The male agricultural labourers record substantial increase in the neighbouring States and all India. In sharp contrast with this, there is an abnormal decrease of 20.03% in Kerala.

Percentage of change in male agricultural labourers during 1951-61 in Kerala and neighbouring States:

State	1951	1961	Percentage change during 1951-61
Kerala	709392	567259	20.03
Madras	1211811	1445041	19.25
Mysore	710432	886072	24.72
Andhra	1983286	2454741	23.77
All India	14816966	17311474	16.84

3.10 As a result of the comparatively insignificant increase in female labourers and the abnormal decrease in male labourers the total number of agricultural labourers in Kerala has registered a fall of 6.73% over the decade 1951-61.

Percentage variation in males and females during 1951-61:

Description	Percentage change 1951-61		
	Persons	Males	Females
Population	24.76	25.14	24.39
Total workers	29.15	26.62	35.47
Cultivators	25.73	24.29	31.11
Agricultural labourers	-6.73	-20.03	16.55
Cultivators plus Agricultural labourers	8.72	3.44	21.58

Agricultural labourers and general labourers:

3.11 In 1961 the census count was conducted during the nineteen days from the 10th to the 28th of February, 1961. An examination of the calendar of agricultural operations of important crops in Kerala shows that the period of count was off season in respect of most of the major crops. Naturally during this slack season agricultural labourers may seek other available employments. In such cases the labourers may be found to work on various jobs at different places. This is sufficient temptation for the enumerator to classify them as general worker with no fixed place of work. Such misclassification of agricultural labourers as general workers must be the main reason for the sharp decrease in the number of agricultural labourers. Proper adjustments for these misclassified persons have to be made in the population of agricultural labourers so as to get the real trend in keeping with the increase in the net area sown.

3.12 It may be argued that such misclassification is guarded against in the instruction to the enumerators, "The basis of work will be satisfied in the case of seasonal work like cultivation, livestock, dairying, household industry, etc., if the person has had some regular work for more than one hour a day throughout the greater part of the working season." As stated earlier, in the special mixed-cropping pattern of Kerala it is practically impossible for an enumerator to classify a worker

of the type mentioned above as agricultural labourer or as a worker in the production of fruits and nuts or vegetables and other crops, or production of wood etc., or other agricultural produce and flowers, or plantation crops. There is every possibility to return such workers as general labourers with no fixed place of work.

3.13 Another aspect to be examined is whether there is any chance for misclassification in view of the priority scale adopted for 1961 census. Knowing the special characteristics of Kerala one can safely observe that classification by priority scale is not practicable in such cases as mentioned above. Because it is too much to expect of an enumerator who is not much trained in statistical work, most of the enumerators being primary school teachers, to elicit and analyse the time spent on different items of work and to fix a priority within the limited time especially where there is so much complication in assessing the same. To save all this trouble, it is quite possible that the enumerators have in many cases returned such workers as general labourers. This fact is corroborated by the incidence of a very large number of persons in group 900 classified as general labourers.

3.14 The unusual decrease in the male agricultural labourers may be further examined with respect to the proportion of males to females.

Male Agricultural Labourers per 100 Female Labourers:

Year	Male	Female	M/F(%)
1951	709392	405391	175
1961	567279	472492	120

3.15 There were 175 male labourers per 100 female labourers in 1951. This has reduced to 120 in 1961. The sex composition of the population of agricultural labourers may change if the agricultural practices have so changed as to require more women than men or if agriculture absorbs only a proportionately less number of men than women. Over the decade 1951-61 no such extraordinary change in the pattern of agricultural practices has occurred. It is true that the methods of agriculture have been generally intensified and rendered more scientific. Still the preference of men and women for specific types of jobs cannot be held to have shown any appreciable change as to warrant such a high decrease in the proportion of men alone. The items of work usually done by male labourers are still done by them and so is with the items of work done by women.

Moreover, owing to the intensive agricultural activities and 'package of practices' widely introduced there must be a reasonable increase in the total number of both male and female labourers in 1961 over that in 1951, for no mechanisation or other labour saving devices have been introduced in agriculture on any large scale in the State. Therefore we may reasonably assume that the number of males per 100 females has remained more or less the same over the decade and that the female labourers should record a greater increase.

3.16 Accepting the male/female proportion of 1951 the number of male labourers works out to 826810 which exceeds the number given in the census classification 1961 by 259531. This is obtained by assuming as correct the number of female labourers

given in the census classification 1961. But the increase noticed in the number of women labourers is also not significant in the light of the intensified agricultural programmes launched in the State. If the number of females were higher, as it should, the corresponding number of males will be still higher.

General Labourers in minor group 900 of 1961:

3.17 The number of workers in minor group 900 of 1961 may be split up into the following sub-groups, viz.,

- i. activities unspecified and not adequately described, and
- ii. general labourers with no fixed place of work.

3.18 The workers in the first sub-group correspond to those of 1951 census who come under division 9 of I.S.I.C. The workers in the second sub-group have no corresponding code in the 1951 classification.

3.19 A rough estimate of the workers of 1961 who fall in the above sub-groups are given in the following table:

Sl.No.	DESCRIPTION	Persons	Male	Female	Remarks
1	Division 9 - 1951 Total	155128	109128	46000	Estimated from combined figure for group 89 & division 9 -1951
2	Division 9 - 1961 Rural	672291	488343	183948	Census data 1961.
3	Urban	103078	84129	18949	do.
4	Total	775369	572472	202897	do.
5	"Division 9 - 1961 Total	200499	138182	62317	Estimated applying the rate of growth of work-force '51-61 to item 1.
6	i. Activities unspecified ii. General Labourers	574870	434290	140580	Item 4 minus item 5
7	Rural	497919	370468	127451	Split in the
8	Urban	76951	76951	13129	Rural/Urban ratio of item 4.

3.20 From the above estimates we see that out of about 4.3 lakhs of male workers described as 'general labourers' nearly 3.7 lakhs belong to the rural area. The major sector in the rural areas that can employ such a large number of male workers is agriculture. Therefore, we may reasonably infer that a majority of them, if not all, may have been drawn from category-II - agricultural labourers. The inference is amply supported by the examination of the workers in categories I & II which reveals the magnitude of decrease of agricultural labourers.

3.21 The fact that the decrease in the number of agricultural labourers in 1961 is quite unnatural is brought out by a comparison of the figures of 1961 census with those estimated from the Employment Survey 1965. The figures show that the number of agricultural labourers according to the 1961 census is an

under count by about 3 lakhs nearly 2.6 lakhs being males and 0.4 lakhs females (applying the 1951 sex-ratio).

3.22 Thus on the one hand there are about 5.7 lakhs of 'General Labourers' in division 9 and a great majority of them (about 5 lakhs) being to the rural area including among them nearly 3.7 lakhs of male workers and 1.3 lakhs of female workers. On the other hand, the number of agricultural labourers show an under enumeration of more than 3 lakhs of casual labourers most of whom (nearly 2.6 lakhs) are males. The under enumeration or exclusion of casual labourers in counting agricultural labourers followed by a more or less corresponding excess of unclassified general workers leads us to the conclusion that the latter constitute mainly of agricultural labourers. Hence it is reasonable to transfer the general labourers back to category-II - agricultural labourers on some suitable basis.

3.23 The employment survey estimate of agricultural labourers for 1965 is taken as a reasonable one for the year. The number of agricultural labourers in 1961 is estimated by interpolation of the number of agricultural labourers in 1951 census and the Employment Survey estimate of 1965, assuming geometric rate of growth during 1951-65. The interpolated figure exceeds the number of workers in category-II of 1961 census by 305382. This additional number of workers is transferred to category-II from the 'General Labourers' in division 9.

3.24 Out of 7.75 lakhs of workers under division 9, more than 3 lakhs of workers are treated as agricultural labourers misclassified under the division. So the sex ratio of the misclassified workers is assumed to be that of the total workers in division 9. Accordingly the additional number required in category-II (viz. 305382) is split into males and females in the ratio in division 9 and added to the census figures in category-II of 1961.

INDUSTRY	Persons	Males	Females
Production of rice - Employment survey, 1965	610910	379240	231670
Production of other field produce - Employment survey, 1965	854720	604940	249780
Total (Agricultural Labourers) 1965	1465630	984180	481450
Agricultural Labourers - 1951 Census	1114783	709392	405391
Interpolated figures for 1961	1345152
Agricultural Labourers 1961 census	1039751	567259	472492
Additional number taken from division-9	305382	225470	79912
Adjusted figures in Category-II - 1961	1345133	792729	552404

(Detailed statement of adjusted figures in category-II by urban & rural are given in table No.5.3)

3.25 Workers under the industries 'production of rice' and 'production of other field produce' as given in the Employment Survey Report of 1965 are considered to correspond to 'Agricultural labourers' of 1961 census. 'Production of Cashew' is left out as this group contains a large number of factory labourers

and as the number of farm labourers involved is comparatively insignificant. Moreover workers under production of rice may include persons engaged in milling and hand pounding of rice. This number, however, may be considered to compensate for the reduction in number owing to the exclusion of labourers under cashew.

DIVISION:0

Major Group 00 - Field produce and Plantation Crops:

3.26 Data on the number of workers under this major group are not separately available for 1951. Therefore, the workers under this group in 1961 are allocated to other appropriate groups to obtain comparable figures. The workers in the minor groups 005, 006, 007 and 009 are transferred to categories I & II as already explained. Workers in minor group 008 are clubbed with those in minor group 212, under 'Beverages' for reasons stated later under divisions 2 & 3.

Major Groups 01 to 04:

3.27 Employment under the groups 01, 02 and 03 are compared with plantation labour statistics and the results of the Survey on Employment and Un-employment, Kerala 1965 and adjustments are effected as detailed in the following paragraphs. No adjustment is made in major group 04.

01 - Plantation crops:

3.28 The number of workers under this group in the two censuses are compared with the results of the Employment Survey 1965 in the following table:

Sl. No.	Year	Persons	Males	Females	Source
1	1951	122597	87155	35442	Census 1951
2	1961	170590	104720	65870	Census 1961
3	1965	548780	229870	118910	Employment Survey '65
4	1961	250772	169496	81276	Interpolated from (1) & (3)
5	..	80182	64776	15406	Difference between items (2) & (4)

Interpolating the census data of 1951 and the Employment data 1965 (assuming geometric growth) we arrive at an Employment of 250772 during 1961 which reveals an under count of 80182 in the 1961 census. This necessitates a more detailed examination of the minor groups.

3.29 The number of workers in the 1961 Census under minor groups 010, 011 and 012 are compared with the daily average of labourers employed according to plantation statistics in the following table:

Contd.....

Minor group I.S.I.C. 1961	DESCRIPTION	Total No. of workers census 1961	Daily average of labourers employed Plantation Statistics 1961
010	Production of tea in Plantation	90799	81551
011	Production of coffee in plantation	14272	24360
012	Production of rubber in plantation	41876	96916
	Total	146945	202827

Source: PLANTATION STATISTICS, KERALA
(For more detailed statement - see Table 2.3)

3.30 As the plantation Statistics gives the average daily employment, the actuals will always be higher. Therefore, the census of figure under 010 is accepted without change. The census figures under 011 and 012 are far below those given by plantation statistics. The reasons are not far to seek. Only a small proportion of rubber estates situated mainly in the hilly tracts are run on a large scale. In the midland there are numerous small rubber estates most of which are of extent below five acres. Usually, permanent workers are not engaged in such plantations for various agricultural operations such as tilling, contour bunding, spraying etc. So it may be reasonably presumed that such labourers are classified as 'general coolies' under division 9. This may be the case with small coffee plantations also. Thus, in respect of minor groups 011 and 012 the number of workers as given by plantation statistics are more realistic and are therefore accepted. The total number of persons so accepted under each minor group is split into males and females in the sex-ratio of the corresponding census figures. The additional number of male and female workers required under these minor groups are taken from division 9.

Minor Groups 013 to 015:

0.31

i) 013: Production of Tobacco in Plantations:

The number of workers reported in 1961 census is only 139. A large number of labourers engaged in tobacco cultivation appear to have been classified as 'general coolies', for the total area under tobacco in 1960-61 was 740 hectares.

ii) 014: Production of Ganja, Cinchona, Opium:

The total number of workers in this minor group is too insignificant (only 21) to deserve any comment.

iii) 015: Production of other plantation crops not covered above (i.e. by 010 to 014):

3.32 The most important crop in this minor group is cardamom. A rough estimate puts the number of workers in the cardamom estates in the State at 20800. But workers in cardamom estates form only a part of the workers under 015. Therefore under this minor group also there is considerable under enumeration.

3.33 Detailed statistics are not available to cross check the number of workers under the minor groups 013 to 015 as in the case of other minor groups under 01. We may assume that

under the above codes the undercount by misclassification is of the same magnitude as in respect of coffee and rubber which works out to 116%. Giving due allowance for the labourers coming from Tamilnad during seasons the under enumeration may be placed at 100%. Thus the employment in this group is raised to 47290, the additional number of 23645 workers being transferred to this group from division-9.

I.S.I.C. Group	Workers according to 1961 Census				Workers taken from division 9				Adjusted figures 1961		
	Per- sons	Males	Fe- males	Per- sons	Male	Fe- male	Per- sons	Male	Fe- male		
010	90797	42909	47888	90797	42909	47888		
011	14272	10364	3908	10088	7326	2762	24360	17690	6670		
012	41876	35584	6292	55040	46770	8270	96916	82354	14562		
013 to 015	23645	15863	7782	23645	15863	7782	47290	31726	15564		
01	170590	104720	65870	88773	69959	18814	259363	174679	84684		

Major Group 02 - Forestry and Logging:

3.34 Compared to the figures furnished by the Employment Survey 1965, the figures of 1961 Census under this Group are found to be too low to fit in with the actual trend. The development in forestry and logging and the increased employment opportunities created during the decade show that the figures for 1961 are under estimates due to misclassification. So the employment in this group is adjusted by accepting the number of male and female workers estimated for 1961 by interpolation between the figures of 1951 census and Employment Survey 1965. The total number of workers comes to 26285 against the census count of 15589. The additional number of workers required is drawn from the 'general labourers' in division-9.

Source/ Sex	Census 1951	Census 1961	Employment Survey 1965	Interpolated figures taken from for 1961	No. of workers division-9
Persons	15949	15589	33370	26285	10696
Male	14448	14722	27460	22443	7721
Female	1501	867	5910	3842	2975

Major Group 03 - Fishing:

3.35 Male workers engaged in fishing increased during 1951-61. This as well as the production statistics of fish indicates that there was a general increase in fishing activities. As women are engaged in curing of fish and allied items of work the number of women engaged in such activities should also record a corresponding increase. When judged by the results of the Employment Survey, and even otherwise, the number of female workers in 1961 census is seen to be very low. Interpolation between 1951 and 1965 figures given 107791 as an estimate of workers for 1961. This estimate is accepted. The additional number of workers added being taken from the 'general labourers' under division-9.

Source/ Sex	Census 1951	Census 1961	Employment Survey 1965	Interpolated figure for 1961	Workers taken from division-9
Persons	96533	97716	114170	107791	10075
Male	88949	94787	97920	95002	215
Female	7584	2929	16250	12789	9860

Division 2 & 3 - Manufacturing:

Major Group 21 - Beverages:

3.36 A close examination of the number of persons engaged in the 'Production of juice by tapping palms - 008' in the different districts reveals that the census figure under 008 is unusually small (Table 2.4). These figures, when compared with the workers under the minor group 212 - 'Production of indigenous liquor such as toddy, liquor from mahua, palm juice' - indicate that a substantial number of toddy tappers got included under the minor group 212 due to the establishment approach in 1961. Besides, the workers under 2.42 toddy drawers of 1951 include workers corresponding to both 008 and 212 of I.S.I.C. Therefore to get comparable figures for 1951 and 1961 the workers under 008 of 1961 are transferred to minor group 212 under Beverages.

	Persons	Males	Females
Minor Group 212	13919	13815	104
008	4991	4834	157
Total	18910	18649	261
21 - Beverages (Census 1961)	25387	23869	1518
21 - Adjusted total - 1961	30378	28703	1675

Major Group 24 - Textile Jute:

3.37 There is a decrease in the number of female labourers during 1951-61. The number being very small the variation may be attributed to errors in enumeration. Therefore the decrease in this group is overlooked and the number of female workers in 1951 is repeated for 1961 also. The additional number of females required for this adjustment is drawn from division-9.

Major Group 27 - Textile Miscellaneous:

Details of employment in this group in the years 1951 and 1961 are as follows:-

	Census 1951	Census 1961	Percentage
Persons	315112	302717	96.07
Males	87048	90513	103.98
Females	228064	212204	93.05

3.38. There is a decrease of 3.93% in the working force in this group with a fall of 6.95% in the female work force. The coir industry is the major component industry in this group. Nearly 83% of the total working force in this group belong to the coir industry. Naturally the main reason for decrease in the major group 27 may be owing to a decrease in the minor group 277 - 'Manufacture of coir and coir products.'

Employment in Coir Industry:

3.39. With the rapid growth of population and the acute unemployment situation prevailing in the State the only field open to the ever increasing labour force is the coir industry, especially in the coastal belt. This being the case, there is no justification for the recorded fall in working force in this industry. One plausible argument for this fall in employment during 1951-61 is the fluctuations in foreign demand for coir products in the post-war period. But owing to the unorganised and household nature of the industry and the prevailing unemployment situation in the State a fall in demand need not necessarily result in a proportionate increase in under employment in the industry. Therefore the recorded fall in employment in coir industry during 1951-61 is unnatural and requires necessary adjustments.

Adjustments in minor group 277:

3.40. Employment in coir industry for 1961 is estimated on the basis of the data available from the Report on the Economic and Statistical Survey of Coir Industry 1960 and is compared with

/ fall in employment. Instead we find only a proportionate

-44-

the employment under minor group 277 of 1961 census in the table below:

	Figures estimated from the coir survey report 1969	277 - Coir & Adjusted figures from Census 1961	Difference in 277- (1961)	Difference from division-9
Persons	267771	251078	290214	39136
Males	31774	54217	54217	..
Females	235997	196861	235997	39136

3.41 The total number of female workers estimated based on the survey of Coir Industry-1960 is 235997 against the census count of 196861 which appears to be an undercount. The estimated employment is accepted and the additional number of female workers required is drawn from division-9.

3.42 In respect of male workers the census count is 54217 against the estimated employment of 31774. The employment estimates based on the Survey of Coir Industry excludes workers engaged in retting and counting of coconut husk and those engaged in baling and other preparations of fibre and yarn falling within the boundaries of industrial production in the household sector. Therefore in this case the census figure is accepted.

The adjusted figures in major group 27 of 1961

	Census 1961	Adjusted figures 1961	Additional workers transferred from division-9
Persons	302717	341853	39136
Males	90513	90513	..
Females	212204	251340	39136

Major Group 32 .. Rubber, Petroleum and Coal:

3.43: There is an overall decrease of 3.56% in the working force under this group in 1961 with a fall of 5.83% in male workers. The minor groups 320 to 323 of 1961 census relate to rubber and rubber products and minor groups 324 to 326 relate to products of petroleum and coal. Employment under 'petroleum and coal' according to 1961 census and Factory employment in 1960 are compared in the following table:

Groups	Census 1961			Factory employment data 1960		
	P.	M.	F.	P.	M.	F.
320-323 Rubber and Rubber Products.	4013	3791	222	2433
324-326 Petroleum and Coal.	158	150	8	731	716	15
32 - Total	4171	3941	230	3164

3.44. Employment in factories coming under the Factory Act 1948 does not cover smaller factory units, household units and self-employed persons. The census data can never be less than factory employment. But under the group 'Petroleum and Coal', against a factory employment of 731 the census count is only 158. The industry being a highly organised one it may be safely assumed that data on employment in factories coming under the Factory Act gives complete coverage. Therefore the actual employment in factories coming under the Factory Act 1948, relating to the year 1960, is accepted for the group 'Petroleum and Coal'. For the group 'Rubber and Rubber Products', the census figures are accepted. The number of workers required under 'Petroleum and Coal' in addition to the census figures are drawn from division-9.

3.45: The details of adjustments are as shown below:-

Groups	Description	P.	M.	F.	Source
320-323	Rubber & Rubber Products	4013	3791	222	Census 1961
324-326	Petroleum and Coal	731	716	15	Employment data 1960.
32.	Total	4744	4507	237	Adjusted figures 1961.
32.	Census figure 1961	4171	3941	230	Census 1961
	No.of workers added	573	566	7	Taken from division-9 of 1961 census

Major Group 36 and 37:

Machinery (except transport) and electrical equipment:

3.46: In the working force in major group 37, there is an overall decrease of 42.57% with a decrease of 41.20% in males and 87.05% in females. The absolute number of workers according to the 1961 census under this group is only 1812 whereas factory employment alone in 1960 comes to 3232. This is a clear case of undercount, probably due to misclassification.

3.47: The employment in 1951 (Census) and that in 1965 (Employment Survey 1965) in major group 37 are given in the following table. The employment for 1961 is worked out by assuming geometric rate of growth during 1951-65. The employment so estimated is accepted. The additional number of workers required is drawn from division-9.

	Census 1951	Estimated figures 1961	Employment Survey 1965	Census 1961	Workers taken from division-9
Persons	3156	8275	12920	1812	6463
Males	3034	8116	12740	1784	6332
Females	122	159	180	28	131

Major Group 38 - Transport Equipment and Major Group -36 Basic metals except Machinery & Transport Equipment.

3.48: There is an abnormal increase of 111.34% in the working force in major group 38. The employment survey of 1965 gives

the employment as 7,750 as against 12,652 in 1961 census. The number of workers in 1961 is estimated assuming geometric rate of growth during 1951-65. These figures are substituted for the census count in group 38.

3.49: Thus there is over enumeration (in 1961 census) of 5734 male workers in group 38. This is possibly due to the misclassification of miscellaneous metal workers engaged in activities coming under minor group 369 as workers under groups 384, 386 and 388. Therefore the excess number of 5734 male workers jointly falling in minor groups 384, 386 and 388 are drawn from them in proportion to the census figure in each of the minor groups. The miscellaneous metal workers thus transferred are classified under minor group 369 which falls under the combined group formed by 361, 362 and 364 to 369 termed 'other metal products except machinery and transport equipment'.

3.50: The 1961 census count of female workers in major group 38 is an underenumeration by 141. The additional number of female workers required to off-set this underenumeration is drawn from division-9.

3.51: By virtue of the above adjustments the abnormal increase of 112.27% in the male workers in group 38 is reduced to 15.91% and a nominal increase is seen in 'other metal products except machinery and transport equipment'.

* Workers in C08; @ Taken from group 38 and added to group 36.

Division 4: Construction:

3.52: The working force in this division expressed as percentage of total working force shows a marked decrease during 1951-61, both in respect of males and females. This declining trend is unnatural in view of the increase in construction activities in the public and private sectors during the decade. Data on employment under construction in 1961 estimated on the basis of the employment in 1951 census and 1965 Employment Survey also reveal that the 1961 census count is unusually small. Possibly a considerable number of workers under construction might have been misclassified as 'general labourers' under division 9. The estimated employment for 1961 does not show any abnormal variation in terms of percentage to total working force. Therefore, the employment for 1961 estimated on the basis of 1951-65 rate of growth is accepted and the additional number of workers required is drawn from division-9.

Females	3415	3038	7900	6069	3031

Division-6: Trade and Commerce:

3.53 In the light of the results of the Employment Survey 1965, the growth in this division during 1951-61 is seen to be inconsistent with the increase in volume of trade and commerce during the period. As stated earlier, a number of pedlars and hawkers might have yielded place to a fewer number of retail shop keepers. This may be one of the probable reasons for the low rate of increase in this division. But the main reason may be the misclassification of a large number of general workers engaged in pursuits allied to trade and commerce as 'general labourer' in division-9. The employment in 1961 obtained by interpolation between the employment of 1951 census and that of the Employment Survey 1965 gives a more realistic picture in keeping with the general trend.

Source/ Sex	Census 1951	Census 1961	Employ- ment sur- vey 1965	Estimated figures 1965	Workers taken from division-9
Persons	289214	321933	459740	397386	75453
Males	263105	298218	422670	364183	65965
Females	26109	23715	37070	33203	9488

3.54 The additional number of male and female workers required for the adjustment is taken from division-9.

The number of workers in division-6 obtained by interpolation is distributed to the minor groups requiring adjustments as detailed in notes on adjustments in minor groups.

YEAR	1961 Census			Adjusted figures 1961		
	P.	M.	F.	P.	M.	F.

69	19254	18667	587	25745	24701	1044

Division-8 - Services:

Major Group 84 - Legal Services:

3.55 The description of comparable codes as given in the 'Comparative chart of I.S.I.C. and I.C.E.C. and working force for 1951 and 1961' is as follows:

	I.C.E.C. - 1951	I.S.I.C. - 1961
9.61	Lawyers of all kinds including qazis, law agents, mukhtiar	840 Legal services rendered by barristers, advocates, solicitors, mukteer, pleader, mukrie, munshi.
9.62	Clerks of lawyers, petition writers etc.	841 Matrimonial services rendered by organisations and individuals

3.56 From the above description it is clear that the workers under minor group 841 (I.S.I.C.) are not covered by the group 9.61 and 9.62 (I.C.E.C.), for, the number of qazis who may

Come under the minor group 84 it is quite insignificant. Therefore for comparability the figures of 1961 in this minor group are transferred to major group 89 - 'Services not elsewhere classified'. The figures in group 84 with this adjustment may be compared to the corresponding figures of 1951.

	Persons	Males	Females
Groups 9.61 and 9.62 (I.C.E.C.) 1951	8151	8018	133
Minor group 840 - 1961	7821	7723	98
Workers in 1961 as percentage of workers in 1951	95.95	96.32	73.68

Major Groups 84 and 85 and Scribes and Document Writers:

3.57 The number of Scribes and Document Writers in 1961 and 1951 may be estimated from the figures given in the Administration Reports of the Registration Department. It is interesting to compare these figures with the figures in major group 85 in 1961 and its corresponding group in 1951.

Comparable groups	P	M	F	No.of scribes		No.of document	No.of scri- writers
9.63, 9.64, 9.72 and part of 9.0							
1951	2032	1991	41	1939		1705	3644*
Major group 85 - 1961	5013	4971	42	2721		1957	4678*

* For details of estimation see table 2.5 & 2.6

3.58 The minor groups in which document writers could be included in 1951 are 9.64 - 'Public Scribes, Stenographers, Accountants, Auditors' and in part of 9.0 - 'Services not elsewhere classified'. The total number of workers in 9.64 and the part of 9.0 clubbed with those in 9.63 and 9.72 is 2032 according to the census data of 1951 whereas the total number of scribes and document writers alone comes to 3644. Even assuming that all scribes were included under this group, the document writers appear to have been left out. The only remaining group in which the document writers might have been included in 1951 is 9.62 of I.C.E.C. 'Clerks of Lawyers, Petition Writers etc.' The number of workers in 1951 under 9.61 and 9.62 together is 8151 while those in minor group 840 of 1961 is 7821. It is highly probable that this apparent decrease in these comparable groups of 1951 and 1961 is owing to the inclusion of document writers in 9.62 of 1951. Moreover, the description of minor groups in 84 and 85 of I.S.I.C. 1961 shows that they do not include document writers. So, in 1961 document writers might have been classified under 89 - 'services not elsewhere classified'. Therefore, to obtain comparable figures for 1951 and 1961, the number of document writers (i.e. 1957 male workers) is drawn from major group 89 of 1961 and added to the figures in major group 84.

Adjusted figures in major group 84

	Census 1951	Census 1961	Document Writers 1961	Adjusted figures 1961
Persons	8151	7821	1957	9778
Males	8018	7723	1957*	9680
Females	133	98	..	98

*Document Writers are assumed to be males only

Major Group 87 - Recreation Services:

3.59 In the male working force in this group there is a decrease of 7.41% which is unreasonable. In order to adjust for this deficit the figure for 1961 is estimated by applying the rate of growth (as per adjusted workers) of male workers in the groups 83 to 88 except 87 to the working force of 1951 in major group 87. The number added is taken from division-9.

Workers in Major Group 87

Source/ Sex	Census 1951	Census 1961	Adjusted figures 1961	Workers taken from di- vision-9	Rate of Growth in 83 to 86 and 88
Persons	7111	6837	9060	2223	131.26
Males	6733	6234	8457	2223	125.60
Females	378	603	603	..	145.93

3.60 Major Group 88

Minor Groups 882 to 885 - Other Personal Services:

Percentage of variation of workers during 1951-61

Sex	1951	1961	Percentage decrease during 1951-61
Persons	183592	167161	8.95
Males	147519	132483	10.19
Females	36073	34678	3.87

3.61 The working force in this group shows a decrease of nearly 9% during 1951-61. This is quite unnatural in a developing economy. It could not have happened but for the misclassification of some workers belonging to this group under division-9. The total number of male and female workers in the group 882 to 885 are worked out assuming that the workers in this group may increase at the rate of growth of population. But 882 and 883 are the minor groups among them in which misclassification as 'General Labourers' is probable. Therefore, the groups 882 and 883 are adjusted by allocating proportionate numbers of male and female workers estimated for the whole group 882 to 885.

3.62 The number of workers in major group 88 with the above adjustments given in Table-A.

Major Group 89:

3.63 The workers in group 841 are transferred to this group (see note on major group 84) and the number of document writers (i.e. 1957) is taken from this group and added to group 84. The final figures are given in Table-B.

I
Table-A Workers in Major Group 88 - Census figures 1961 and adjusted figures 1961:

GROUPS	Census 1961			Adjusted figures 1961			Workers taken from division 89		
	Persons	Male	Female	Persons	Male	Female	Persons	Male	Female

Table-B Workers in Major Group 89 - Census figures 1961 and adjusted figures 1961:

	Census 1961	Taken from 841	Adjusted figures 1961	
			Transferred to 84	1957
Persons	8655	183	1957	6881
Males	7669	181	1957	5893
Females	986	2	..	988

Major Group 89 - Services not elsewhere classified of 1951 Census:

3.64 From the combined figures for major group 89 and division-9 of 1951 the number of workers coming under major group 89 is worked out by assuming the ratio of the workers in Group 89 to those in 83 to 88 of 1961. Major groups 80 to 82 are not considered as these groups are likely to follow a different trend.

Year Group/Sex	1961			1951		
	83 to 88	89	89 plus Division-9	83 to 88	89 (es- timat- ed)	Divi- sion-9 (Estim- ated)
Persons	398137	6881	160639	303530	5511	155128
Males	277176	5893	113820	220675	4692	109128
Females	120961	988	46819	82855	819	46000

Workers in division-9 of 1961:

3.65 The details of workers transferred from division-9 for adjustments in other divisions are given in the following table:

Category/Division	Number of persons transferred from Division-9		
	Persons	Males	Females
Category-II	305382	225470	79912
Division-0	109544	77895	31649

NOTE to Table 2.1:

Comparable estimates of working force for 1951 and 1961 furnished by the Registrar General, India are given in columns 4 and 5. The working force in major groups 89 and 90 are not separately available for 1951. The figures shown in this table under the above major groups are those estimated as shown in para. 3.64.

Column 6 gives the adjusted figures of working force for 1961 as detailed in Part-II.
Column 7 gives the adjusted figures of working force 1961 as percentage of 1951 figures.

1951	1705	1939	3644	Item (1) in table above minus increase during 1956 - '61.

PART - III

THE ADJUSTED FIGURES OF WORKING FORCE 1961 BY
MINOR GROUPS

Division 0:

Major group 01: Minor groups 011 to 015:

4.1 The details of adjustments in 011, 012 and in the combined group 013 to 015 are given in Part II. The total number of workers after adjustments in the group 013 to 015 are distributed to the minor groups 013, 014 and 015 in proportion to the census figures in each.

Major groups 02 & 03:

4.2 The number of workers in the major groups 02 & 03 are separately adjusted for comparability (see Part II). The total number of adjusted workers in each major group (males & females separately) are distributed among the minor groups in proportion to the corresponding census figures.

Division 2& 3:

Major group 21: Minor group 212 (See Part II)

Major group 24:

4.3 From the finally adjusted figures in this major group, the census figures in 240, 242 and 243 are deducted as they do not require any adjustment. The remaining male and female workers are separately distributed between minor groups 241 and 244 in proportion to the census figures in them.

Major group 27:

4.4 The details of adjustments made in minor group 277 are given in Part II.

Major group 32:

4.5 Adjustments made for the combined group 324 to 326 are detailed in Part II. Data on Factory employment reveal that the decrease is mainly in minor group 324. Therefore the total additional workers transferred to major group 32 are added to minor group 324.

Major group 37:

4.7 The total number of workers transferred to this major group for adjustment is .6463 (see Part II). The census figures and the corresponding Factory employment in the minor groups are compared below:

✓ Major Group 36:

4.6 The male workers transferred from Major Group 38 are added to minor group 369 (see Part-II)

MINOR GROUPS	Census 1961			Employment in Re- gistered Factoried 1960
	Persons	Male	Female	Persons
370	171	170	1	..
371	32	32	..	79
372	130	128	2	112
373	53	53	..	27
374	147	147
375	39	39	..	198
376	30	28	2	..
377	97	91	6	..
378	360	352	8	16
379	753	744	9	2800
Total	1812	1784	28	3232

4.8 The census figure in any case should not be less than the corresponding factory employment. But in minor groups 371, 375 and 379 the census figures are less than factory employment. As the first stage of adjustment the census figures in the above minor groups are replaced by the corresponding factory employment. For this adjustment 2253 workers are taken out of 6463 workers transferred to major group 37. In the second stage of adjustment the remaining number of workers is distributed to all the minor groups in 37 proportionate to the number of workers in each minor group as they stand adjusted in the first stage. The adjusted figures are given in the following table.

Minor groups	First stage of adjustment			No. of workers added in second stage of adjustment			Final adjusted figures		
	P	M	F	P	M	F	P	M	F
	370	171	170	1	176	175	1	347	345
371	79	79	..	82	82	..	161	161	..
372	130	128	2	134	132	2	264	260	4
373	53	53	..	55	55	..	108	108	..
374	147	147	..	152	152	..	299	299	..
375	198	198	..	205	205	..	403	403	..
376	30	28	2	31	29	2	61	57	4
377	97	91	6	101	94	7	198	185	13
378	360	352	8	373	364	9	733	716	17
379	2800	2745	55	2901	2837	64	5701	5582	119
Total	4065	3991	74	4210	4125	85	8275	8116	159

Major group 38:

4.9 The total number of workers found excess in this group is transferred from minor groups 384, 386 and 388 the number deducted from each minor group being inproportion to the census figure in it (see Part II). The female workers (141) transferred to major group 38 from division 9 are distributed to the minor groups in proportion to the census figure in each.

Workers transferred from minor groups 384, 386 & 388:

Minor groups	Census 1961			No. of workers transferred			Adjusted total		
	P	M	F	P	M	F	P	M	F
384	6726	6719	7	3373	3373	..	3353	3346	7
386	2679	2679	..	1345	1345	..	1334	1334	..
388	2029	2025	4	1016	1016	..	1013	1009	4
Total	11434	11423	11	5734	5734	..	5700	5689	11

Division 4:

Major group 40:

4.10 From the adjusted totals in this division the census figures in minor group 402 are subtracted as exclusion of workers by misclassification is not probable in this minor group. The remaining numbers of male and female workers are distributed to the remaining minor groups in proportion to the census figures in each.

Minor groups	Census 1961			Adjusted figures		
	P	M	F	P	M	F
400	47007	45842	1165	57828	55499	2329
401	12570	11955	615	15703	14474	1229
403	11025	9771	1254	14336	11829	2507
Total	70602	67568	3034	87867	81802	6065
402	100	96	4	100	96	4
Division 4	70702	67664	3038	87967	81898	6069

Division 6

Minor group 693:

4.11 The working force in minor group 693 is first adjusted on the basis of data on employment under the Life Insurance Corporation of India. In the year 1961 there were 1262 regular employees (other than agents) and 6281 agents in Kerala under the L.I.C. of India. Employees under general marine, fire insurance etc., are not under the purview of the L.I.C. of India and no region-wise data on them are available. The exclusion of employees under the above branches of Insurance may lead to an understatement to some extent. The fact that Insurance may be a secondary means in certain cases may cause an overstatement to that extent. This understatement on the one hand and the overstatement on the other are expected to mutually cancel out. Therefore the actual employment of 7543 under the L.I.C. of India is accepted for minor group 693. This total employment is split up into male and female workers in the ratio of the corresponding census figures in the minor groups.

4.12 The adjusted figures in minor group 693 and the census figures in minor groups in which misclassification is not likely are deducted from the total adjusted figures in division-6.

The minor groups in which misclassification is not probable are 605, 615, 617, 625, 637, 638, 643, 684, 685, 686, 691, 692, 694, 695, 696 and 697. The remaining number of workers in division-6 are distributed to the remaining minor groups in division-6 in proportion to the census figures in each.

Division 8:

Major group 84: Minor group 840:

4.13 The details of adjustments made in minor group 840 are given in Part II.

Major group 87: Minor groups 871 and 872:

4.14 From the adjusted totals under this major group, the census figures in the minor groups 870 and 873 are deducted as exclusion of workers by misclassification is not probable in them. The remaining workers are distributed between minor groups 871 and 872 in proportion to the census figures in each.

Major group 88:

4.15 The minor groups 882 and 883 are adjusted as detailed in Part II.

4.16 A comparative statement of working force in affected minor groups before and after adjustment is given in Table-3.1.

Table: 3.1 (contn....)

NOTE: 1. For divisions the figures given are the total figures as they stand adjusted for the minor group. Where a minor group is affected by adjustment the adjusted figures for the concerned major group are given as they stand adjusted.

Finally Stand adjusted
2. Division 1-9 Figures for division 9 in columns 2 to 4 are the total figures by sex according to the census data. The total number of workers by sex transferred to the various other groups are given in columns 5 to 7. Columns 8 to 10 show the residual number of workers by sex in division 9 after all adjustments.

P A R T IV

5.1: This Part deals with the Household-Non-household classification of working force of 1951 and adjusted working force of 1961.

I. Adjustments made in the Household-Non-household classification of working force 1961 (Table No. 4.1)

5.2. The number of workers in Household Industries are altered by adjustment only in some of the groups to which workers are transferred from division 9. In the census economic tables for 1961 all workers in division 9 are classified under Non-household industries, probably because of the vague description of their nature of work as 'general coolies' and the nature of industry as 'no fixed place of work' (See Fly leaf to table B IV - Census of India Part-II B(i) - Kerala). However, in the adjusted working force 1961, a reasonable number of female workers in division 9 transferred to other groups are classified under Household industries. The details are as follows:-

Division or group to which added	Division 2 & 3	241	244	277	388	389
No. of female workers	39396	71	161	39136	7	21

5.3. All other workers transferred from division 9 to other groups for adjustment as well as the remaining number of workers in division 9 after adjustments are classified under Non-household industries.

Details of Household-Non-household break up - 1961.

Division 0 except major group '00'

Major group 01

5.4. According to the census data there is no worker in household industries under this major group. Therefore all workers taken from division 9 are included under Non-household industries.

5.5. Major group 02 All the workers transferred to this group from division 9 are included under Non-household industries. as misclassification is not probable in the household sector in this major group.

Division 2 & 3

5.6. Major Group 24 The number of workers transferred to this group (291 females only) is split-up in the Household-Nonhousehold ratio of the census figures of 1961 in this group.

5.7. Major group 27 The total number of 39,136 female workers transferred to minor group 277 from division 9 are classified under Household industries because female workers engaged in coir industry are mainly in the Household sector.

5.8. Major group 37 The number of workers in Household industries in this group is insignificant. Therefore the number of workers taken from division 9(6463) is added under Non-household industries.

5.9. Major Group 38

The workers taken from division 9 (141 females) are split up into the sectors of Household and Non-household industries in the 1961 census ratio. (For other adjustments See para. 6.4 to 6.5 part V)

II. Household-Non-household break up of working force 1951

(Table No. 4.2)

5.10. Working force of 1951 by comparable groups of Indian Standard Industrial Classification are split up into workers in household and non-household industries in the corresponding ratio in the adjusted working force of 1961.

TABLE No. 4.1

P A R T - V

Urban-Rural Classification of working force 1961
(Table No. 5.1)

6.1. Although the Urban-Rural classification of total working force is not affected by adjustments, the working force under urban and rural in the adjusted groups has changed.

I. Workers transferred from 005 to 007 and 009 to categories I & II

6.2. The numbers of male and female workers by urban and rural are separately split in the corresponding ratio of the census figures in category-I and Category-II and added to the respective item under each category.

(See Table No.5.2)

Workers under 008 and 212:

6.3. The number of workers in the two groups are combined together by sex and by rural and urban to get working force in the adjusted minor group 212.

Workers transferred from major group 38 to major group 36

6.4. A total number of 5734 male workers are drawn from minor groups 384, 386 and 388 (see para 3.49- Part.III) in proportion to number of male workers in each. The number of males drawn from each minor group is split up in the original (census) Household-Non-household ratio in the minor group. The number of male workers drawn from the minor groups 384, 386 and 388 together by Household and Non-household are added to the respective items of workers in minor group 369.

6.5. The remaining number of workers in minor groups 384, 386 and 388 are split up by urban and rural in the original urban rural ratio in the respective minor groups. The workers transferred from each of the above groups to minor group 369 are also split into urban and rural in the original census ratios of the respective groups i.e. 384, 386 and 388. The total number of workers taken from these minor groups by Household-Non-Household and by rural and urban are added to the respective census figures in minor group 369.

Minor Groups 840 and 890:

6.6. An excess of 1957 workers found in minor group 890 are to be transferred to minor group 840 (see para 3.53 & 3.58-Part.II). These workers are split up in the original urban-rural ratio in minor group 840 and transferred from minor group 890 to minor group 840.

Minor groups 841 and 890:

6.7. The residual number of workers in minor group 890 and the workers in minor groups 841 are combined together by sex, Household - non-household and by rural and urban (see para. 3.55 and 3.56 Part.II).

II. Workers transferred from division 9

Category-II

6.8. The urban-rural split up (as well as the male-female ratio) of the workers transferred from division 9 to category-II is effected in the original ratio of division 9.

6.9. In all major and minor groups where adjustments are effected by transfer of workers from division 9, the urban-rural split of the adjusted numbers is made in the original ratio in the respective major and minor groups.

PART VISUMMARY TABLES.Working Force:-

Between the censuses of 1951 and 1961 the total working force of Kerala increased by 29% corresponding to a growth of 25% in population (Table No. II). The proportion of working force to total population rose from 32% in 1951 to 33% in 1961 (Table V). Working force has thus grown at a faster rate than population. Apparently this is an encouraging sign, but it is quite probable that the increase in the proportion of working force is largely attributable to the variant definitions for workers adopted in the two censuses.

Working force is divided into three sectors as follows:-

Sectors	Categories	Description
Primary sector	I	Cultivators
	II	Agricultural labourers
	III	Workers in mining, quarrying, livestock, forestry, fishing, hunting and plantations, orchards and allied activities.
Secondary Sector	IV	Workers at household industry
	V	Workers in manufacturing
	VI	Workers in construction
Tertiary sector	VII	Workers in trade and commerce
	VIII	Workers in transport, storage and communications
	IX	Workers in other services

The primary sector as a whole registered a growth of 28% during 1951-'61 against an increase of 25% in population. (Table III). The higher rate of growth in this sector compared to population is owing to increased employment in plantations, forestry and logging as well as livestock and hunting in category III. However, the proportion of workers of this sector to total working force decreased from 55% in 1951 to 54% in 1961 (Table IV). This is due to the significant decrease in agricultural workers (cultivators plus agricultural labourers) who form nearly 86% of the workers in this sector. The rate of growth of agricultural workers is only 23% and there is a decreasing trend in their proportion to total working force as well as to total population (Table III, IV & V). The rate of growth of this sector is lower than that of both working force and population. It indicates that employment in this sector has more or less reached a stage of saturation.

The secondary sector also has increased only at a lower rate than population. The total growth in this sector is only 23%. The proportion of this sector to total working force has decreased from 22% to 21% (Table IV). The growth of employment in this sector has almost come to a stand still.

The proportion of workers in the tertiary sector rose from 24% in 1951 to 25% in 1961. The percentage of workers in this sector to total population increased from 7.6% to 8.4% (Tables IV & V). The decennial growth of this sector is 38% which is far greater than the growth of total working force. The increase in this sector is most prominent in category IX - other services (Table II). probably under employment and unemployment in the primary and secondary sectors might have forced the working population to overflow these sectors into the tertiary sector.

Participation of Males and Females:-

The total growth of male workers during the decade is 27% while the growth of female workers is 35%. Male workers who formed 46.7% of the population in 1951 rose to 47.2% in 1961. The corresponding increase in female workers is from 18.1% to 19.7% (Table III & V). The participation of males has not substantially increased relative to population though the females show a certain amount of increase.

Among agricultural workers the proportion of males as well as females decreased considerably during 1951 to 1961. However, owing to a large increase in female workers in category III, the female participation ratio in the primary sector as a whole registered an increase. But the proportion of male workers has decreased from 55% to 44% (Table IV).

In the secondary sector also male workers show a small decrease from 17.6% to 17.1% (Table IV). On the other hand, in the tertiary sector, their proportion has risen except under category VIII - Transport, storage and communications. The proportion of male workers has recorded a fall in the primary and secondary sectors but a rise in the tertiary sector. The proportion of female workers has declined in the secondary sector and has gone up in the primary and tertiary sectors especially under category II - agricultural labourers and category IX - other services respectively.

The proportion of male workers has decreased in all categories except in VII - Trade and commerce and in VIII - Transport, storage and communications in the tertiary sector. On the other hand the percentage of female workers has increased in all categories other than categories VII & VIII. (Vide Table VI)

In the primary sector, the proportion of male agricultural workers to male working force has decreased from 48% to 45%. The proportion of male workers has declined in the secondary sector also under category IV household industry and category V manufacturing other than household industry. The decennial growth of male workers in all the above categories is less than that of both total male population and total male working force. In the tertiary sector the proportion of male workers has increased relative to total male working force as well as to total male population. In categories VII - Trade and commerce and IX - other services the decennial growth of male workers is very much higher than that of total working force.

The proportion of female workers to total female working force reveals a large decrease under category IV (Household industry) in the secondary sector. The proportion has diminished even for the whole sector. This decrease is accompanied by an increase in the proportion of female workers in the primary and tertiary sectors under categories III & IX. Thus, there is a shift to other services, of male workers from agriculture and manufacturing industries (except construction) and of female workers coming mostly from household industries.

The above analysis throws some light on the limited capacity of agriculture in Kerala to absorb new entrants to the labour force and the pressing need to develop the other sectors of the economy. This sector can neither keep pace with the growth in population any longer nor expand proportionate to the general working force. There is a general stagnation in employment generated under manufacturing industries in the state with a marked declining trend in household industries. The services sector alone shows a substantial increase in the proportion of workers. This sector has grown by 38% during the decade where as the primary and secondary sectors have grown only by 28% and 23% respectively.

But about 40% of the total increase in this sector is contributed by new entrants in domestic and personal services, unclassified services and those with unspecified activities which may be mostly own-aid and part-time jobs. The increase in the services ~~sector~~ sector is normally an indicator of economic and social development. Nevertheless in respect of Kerala, it indicates the high level of under employment due to saturation in employment in the primary sector and a stage of stagnation in the secondary sector.
