NATIONAL SAMPLE SURVEY

Thirtieth Round (July 1975-June 1976)

REPORT ON LIVESTOCK NUMBER OF PRODUCTS

**(Some estimates on production of livestock products
and related characteristics)**

SECTION I

INTRODUCTION

1.0. Objective:

The Thirtieth round of the N.S.S. was devoted exclusively to an enquiry on livestock numbers, products and enterprises. This enquiry was mainly intended to fill up the gap in the field of Animal Husbandry Statistics. The 30th round of the National Sample Survey was therefore designed to be a comprehensive survey based on a fairly large sample for collecting data on livestock number and products and livestock enterprises covering various aspects of animal husbandry activities was undertaken in the N.S.S. 30th Round.

1.1. Sample size and field work:

The survey in Kerala State was carried out in 726 census villages and 576 urban blocks. The investigation in fifty per cent of the sample villages and urban sample blocks was carried out by the field staff of the State Bureau of Economics and Statistics and the remaining fifty per cent was covered by the Field Operation Division (FOD) of the National Sample Survey Organisation, Government of India. The report is based on the data collected in the samples covered by the State Bureau.

1.2. Survey coverage in respect of Livestock and Poultry number and products:

The main items of information collected in the survey were number of Livestock and poultry possessed by the households with breakdowns for age, sex, use, type of breed, type of acquisition and disposal of animal, etc. With a view to throwing up estimates of birth, death and fertility rates and other related aspects relevant data were also collected.

For the purpose of this survey livestock was defined to cover cattle, buffalo, Yak, horse, mule, donkey, camel, elephant, sheep, goat and pig whereas fowls, ducks and other poultry birds were considered under poultry. The main item of information collected in the survey were (i) number of livestock and poultry possessed by the household, (ii) primary products from livestock and poultry and (iii) households consumption of livestock products. For livestock products, information on the production of milk, eggs, wool, hair, etc., by a household was collected along with the data on number of livestock possessed by it. For collecting data on number of livestock and poultry and their primary products, three separate schedules viz. schedule 19.1, 19.2 and 19.3 were used respectively for bovines and poultry, pack animals and bovines and pigs. A separate schedule 19.4 was canvassed for obtaining the current data on consumption of livestock products. Household consumption of liquid milk by type of milk (cow, buffalo, etc.), different items of milk products, different types of meat, (goat, sheep, pig, cattle, buffalo and others) eggs, by type of birds, dung-cakes, etc., were collected in this separate schedule. 24 households were drawn from each of the sample villages and urban blocks.

1.3. Survey coverage in respect of livestock enterprises:

For investigating the production and cost aspects of the livestock enterprises, data relating to the following nine household enterprises were collected through household schedule 20. The Enterprises were (i) Dairy (ii) poultry breeding (iii) sheep and goat rearing (iv) piggery (v) cattle and buffalo breeding (vi) butchering and sale of meat (vii) processing of wheel (clearing and spinning) (viii) flaying, curing and skinning of fallen animals and (ix) collection of goat hair, bones, horns, etc.

The households usually engaged in generating various kinds of livestock products and services in the above mentioned enterprises were brought within the purview of investigation. Enterprises registered under 2m (i) and 2m (ii) of the Factory Act of 1948 were however excluded from the scope of the survey. The eligibility criteria of different enterprises adopted in the survey, for bringing the enterprises under the survey coverage were as follows:—

(i) *Dairy*.—Households possessing, on the date of listing 5 or more adult cows and she-buffaloes taken together (Female stock above 3 years of age and also these upto 3 years of age but calves at least once or in calf on date of listing, were defined as adult).

(ii) *Poultry*.—Households possessing, on the date of listing 20 or more fowls, ducks and other poultry birds taken together.

(iii) *Sheep and goat rearing*.—Households possessing on the date of listing, 10 or more sheep and goat taken together.

(iv) *Piggery*.—Households possessing, on the date of listing, 10 or more pigs.

(v) *Cattle and buffalo breeding.*—Households which sold 5 or more cattle and buffaloes taken together including the young ones during the last one year from the date of listing.

The scale of operation was considered for the above five enterprises and thus tiny household farms which do not satisfy the above scale of operation were excluded. For the remaining four enterprises the scale of operation was not considered. The definitions adopted for identification of these enterprises were as follows.

(vi) *Butchering and sale of meat.*—Households usually engaged in slaughtering of animals (cattle, buffalo, goat, sheep and pig) or households engaged in getting the animals slaughtered from licenced recognised slaughter houses or from other places for the purpose of selling meat and other products. Also the households rendering only the services of slaughtering of the specified animals.

(vii) *Processing of wool (cleaning and spinning).*—Households usually engaged in the activities of cleaning of raw wool and/or spinning of cleaning wool (produced at house or purchased). Also the households rendering only the services of cleaning and/or spinning.

(viii) *Flaying curing and skinning of fallen animals.*—Households engaged in the activities of flaying, curing and skinning of fallen animals in respect of cattle, buffalo, horse, camel, sheep and goat [After the skin is taken off from the dead animals (i.e., after the flaying process is over) the raw skin is preserved (i.e. curing) and than the skin is made ready for tanning. The activities upto the stage of skinning were considered but the activity of tanning was excluded from the scope of the survey].

(ix) *Collection of meat, hair, bones, horns, etc.*—Households usually engaged in collection (both purchased and collected free of charge) of goat hair, bones, horns, etc., for the purpose of selling them as such or after a little processing.

In this survey all households reporting the above mentioned nine enterprises in the sample village/blocks were investigated.

In the non-household sector only three livestock enterprises, namely (i) dairy (ii) poultry and (iii) piggery operated by non-household institutional establishments like co-operative societies, Joint Stock, Companies other registered or non-registered Societies, local bodies, trusts, other statutory bodies, etc., were collected through the schedule 20.1. Enterprises registered under 2m (i) and 2m (ii) of the Factory Act, 1948 were however excluded. All the above mentioned enterprises found in the sample villages/ blocks were enumerated.

1.4. Collection of some ancillary-Village level data:

In addition to the details of the livestock, number and products and livestock enterprises, some ancillary information which had some bearing on livestock development were collected through a village schedule 3.1. Thus details in respect of (i) livestock development projects(ii) facilities available for livestock raising (iii) availability of marketing agencies for purchase and sale of livestock and its products and (v) other related aspects were collected through schedule 3.1. Besides those the number of livestock and poultry classified by age, sex and use, enumerated as belonging to the sample village in the 1972 livestock census was copied in the village schedule from the census records.

1.5 Treatment of migration Blocks:

An attempt was made in the survey in the case of migration flocks to collect information on number of animals possessed, receipt from important products, etc., from the hardmen accompanying the flock by locating such flock of animals in the sample village/block or in its vicinity.

1.6 Content of the report:

In this report estimates pertaining to the first phase tabulation of data on schedule 19.1 (bovine and poultry) and 10.4 (consumption of live-stock/products) except the estimate on production and sale of eggs by type of birds have been presented. The remaining tables including these of the second phase will be given in subsequent reports.

The first phase tabulation of data provides estimates on proportion of animal in milk to milch animals, quantity of milk produced and concentrates used per animal in milk classified by species, age group and also by interval since salved, quantity of milk produced for producer household (separately for cows and bullocks), sale of fluid milk and milk products, by producer households, production and sale of eggs by type of birds. To assess the current consumption of livestock production relating to consumption of milk, meat and eggs and purchase of milk products by the households classified by monthly per capita expenditure groups has also been included in the first phase tabulation.

Table numbers given in integral place only (i.e., table 1, table 2, etc.) indicate that the estimates are provided for each sub round. Tables numbered with one place decimal indicate that the estimates have been given on the total sample, pooling all the four sub rounds together.

1.7 List of N. S. S. regions and fecsimile of schedules of enquiry are given in appendices III and IV respectively.

SECTION II

SUMMARY OF FINDINGS

2.0 Some important findings of the survey bringing out the regional and seasonal variation in the characteristics are presented below.

2.1 Estimate of total number of households:

A household was constituted of persons normally living together and taking food from a common kitchen. Normally resident members included temporary stay-aways and excluded temporary visitors and guests. Each of the inmates of a mess hostel, hotel, etc., constituted single member of households. The inmates of jails, hospitals, nursing homes, etc., were excluded from survey coverage but residential staff of such institutions were listed. Floating population could not be covered in the survey.

The estimated total number of households based on the survey data was 35.47 lakhs in rural and 5.95 lakhs in urban areas.

2.2 Milk yield by species:

The estimate of the annual total production of cow milk for the state as a whole was 327998 tons in rural areas and 48354 tons in urban areas. The total production of buffalo milk was 69388 tons in rural areas and 6663 tons in urban areas.

The regional and seasonal variations in yield rate of milk by species are shown in table I below.

TABLE I

Yield rate of milk per day per animal in milk by species and sub rounds separately for each region

Region	Yield rate of buffalo milk (Litre 0.00)										
	Yield rate of cow milk (Litre 0.00)				Yield rate of buffalo milk (Litre 0.00)						
	Sub round	Sub round	Sub round	Sub round	All sub-rounds pooled	Sub round	Sub round	Sub round	All sub-rounds pooled	Sub round	Sub round
	I	II	III	IV		I	II	III	IV	I	II
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	
Northern	1.72	1.50	1.34	1.58	1.54	3.06	2.52	2.22	3.32	2.85	
Southern	1.88	1.90	1.75	1.79	1.83	2.53	2.69	2.32	2.61	2.53	
All regions pooled	1.84	1.78	1.64	1.73	1.75	2.66	2.64	2.29	2.80	2.62	6
<i>Urban</i>											
Northern	2.44	2.32	1.39	2.09	2.03	5.00	1.12	3.06	2.75	3.34	
Southern	2.79	3.14	3.49	2.75	3.06	4.35	3.74	1.89	1.36	3.32	
All regions pooled	2.69	2.94	2.93	2.61	2.80	4.54	3.17	2.39	1.67	3.33	

2.3 The estimates of the above table reveal that the yield rate of cow milk was higher in both the rural and urban areas in the southern region than that in the northern region. In the case of buffalo milk the northern region reported higher yield rate than the southern region both in rural and urban areas. The sub round wise estimates reveal that the yield rate of buffalo milk was reported to be the highest in sub round II (April to June), and in urban areas the rate was high in sub round I (July to September), for cow milk the yield in rural areas was reported to be the highest in sub-round I (July to September) and in urban areas the rate is highest in sub-round II (October to December).

2.4 Consumption of Live stock products:

Information on consumption of fluid milk (consumption of home produced milk with the fluid milk purchased was taken to be the total consumption of milk by households), milk products (for milk products purchased was considered to be equivalent to consumption) and meat and eggs classified by household monthly per capita expenditure groups have been given separately in tables 5, 6 and 7 series of Appendix-II. The sub round wise estimates have been prepared at the state level, all sub round pooled estimates have been built up for each region. The classificatory character household monthly per capita expenditure was ascertained by dividing the average monthly expenditure of the household over the last 12 months by household size. The estimates in table II given below reveal the percentage of households reporting consumption of fluid milk, milk products, meat and eggs.

Regarding the average consumption of these products, the rural and urban households reporting consumption of fluid milk consumed 14.49 litres and 16.85 litres respectively. The expenditure on consumption of milk products, meat and eggs per month per household reporting consumption of products were respectively. Rs. 9.73, 11.99 and 6.13 for rural and Rs. 16.38, 15.90 and 9.09 for urban areas.

TABLE II

Percentage of households reporting consumption of various livestock products to all households and average consumption of the products per month per reporting household separately for rural and urban areas

<i>Sector</i>	<i>Percentage of households reporting consumption of</i>				<i>Average value (Rs. 0.00) of Consumption of</i>			
	<i>Fluid milk</i>	<i>Milk products</i>	<i>Meat</i>	<i>Eggs</i>	<i>Average quantity of fluid milk consumed (Litre 0.00)</i>	<i>Milk products</i>	<i>Meat</i>	<i>Eggs</i>
Rural	47.00	7.04	30.38	27.73	14.49	9.73	11.99	6.13
Urban	46.36	14.37	27.73	27.63	16.85	16.38	15.90	9.09

APPENDIX I

SAMPLE DESIGN AND ESTIMATION PROCEDURE

Sample Design

1. Sample Design

The sample design is a stratified two stage design. The first stage units are 1971 census village in rural areas and urban blocks in urban areas. The second stage units are households for schedules 19 series and schedule 20 series whereas for schedule 20.1, the second stage units are non-household establishments. The design has been made self weighting for schedule 19 series at the regional level in rural sector and at the State level in urban sector.

2. Sample Size

The State sample consists of 360 villages and 288 (urban) blocks.

3. Sub-round

The survey period of 12 months (from July 1975 to June 1976) has been divided into 4 sub-rounds of 3 months each. Number of sample villages and blocks are equal for each of the four sub-round in each of the strata.

4. Stratification

The stratification, selection of village and blocks have been done by the National Sample Survey Organisation. The whole of India has been divided into a number of basic strata so that the basic strata do not cut across district boundaries. Districts with more than 1.5 million 1971 census rural population have been divided into 2 or more basic strata by grouping contiguous tahsils homogeneous, as far as possible with respect to density of rural population and crop pattern, so that the population of each basic stratum is less than 1.5 million. Each district with less than 1.5 million 1976 rural population forms one basic stratum by itself. Basic strata so formed have been treated as basic strata both for rural and urban sector.

Total number of basic strata formed in the 11 districts in Kerala is 19.

5. Allocation

The samples of villages and blocks have been allocated on the basis of the investigator strength and rural/urban population. The total strength of investigators in the State is 30.

6. Selection of Villages

The 1971 census list of villages has been used as the sample frame for selection of villages. Sample villages within each basic stratum has been selected with probability proportional to 1971 census population and with replacement in the form of two independent sub-samples.

7. Selection of Blocks

Within each urban stratum the allocated number of blocks have been selected with probability proportional to size. Where size is a measure of population and with replacement in the form of two independent sub-samples.

Urban Frame Survey (UFS) blocks in cities and towns where U.F.S. has been done, and 1971 census blocks where U.F.S. has not been done have been used for selection of blocks.

8. Selection of Revenue Village

As the census village can be uniquely identified no selection of revenue village was done.

9. Hamlet group/sub-block selection

Villages/Blocks with large population content are divided into two or more compact, areal sub-divisions of nearly equal population content. These sub-divisions are called hamlet groups and sub-blocks in the case of villages and blocks respectively. The survey was conducted in one of the sub-division (formed in a village or block) selected at random.

10. Selection of sample households

(a) *Schedule 3.2.* All the persons or households found camped in a sample village/block or in the vicinity/periphery of the sample village/block during the period of survey with migratory flock of bovines, pack animals and ovines are surveyed for schedule.

3.2

(b) *Schedule 19.1 to 19.4:* All the households in a sample village/block are arranged in a frame with households possessing any livestock or poultry on the date of listing coming first followed by the other households. In a sample village, a sample of 24 households is selected circular systematically from thus arranged frame, whereas in a sample block, a sample of households (24 on the average) is selected linear systematically with a pre-specified interval. All the selected households in a sample village/block are surveyed for schedules 19.1, 19.2, 19.3 and 19.4.

(c) *Schedule 20:* Schedule 20 is canvassed in all the households (of a sample village/block) usually engaged in the following livestock enterprises—(i) dairy, (ii) poultry, (iii) sheep and goat rearing, (iv) piggery, (v) cattle and buffalo breeding, (vi) butchering and sale of meat, (vii) processing of wool (cleaning and spinning), (viii) flaying, curing and skinning of animals and (ix) collection of goat hair, bones, hoofs and horns. However there are two exceptions—first, the enterprises which are registered under section 2m(i) or 2m (ii) of the Factory Act of India, 1948 are not covered in this survey. Secondly, for the first five enterprises, households having very small establishments are excluded.

(d) *Schedule 20.1:* This schedule is filled up for all the non-household and non-registered establishments in the sample village/block engaged in one or more of the three enterprises namely dairy, poultry and piggery.

Estimation procedure

II. The estimation procedure adopted for schedule 19 series is described below for rural and urban sectors separately.

Rural Sector

12. Let Y_r denote the aggregate for region r of any item y on which information is collected in any schedule of 19 series. Then its estimation \hat{Y}_r is given by:

$$\hat{Y}_r = \frac{Y_r}{M_r} \quad (1)$$

Where Y_{ri} is the value for i th sample household for r th region and M_r is the multiplicity for r th region given by

$$M_r = \frac{H_r}{h_r} \quad (2)$$

Where H_r is the total number of households in the r th region as estimated unbiasedly from schedule O.₁ (Listing schedule) and h_r is the number of sample households available for tabulation for schedule 19 series.

13. The estimates of the State aggregates are obtained by adding the estimates of all the constituent regions.

14. Sub-round-wise estimates are obtained by taking \hat{H}_r as the estimate obtained from the listing schedules of a given sub-round and h_r as the number of sample households surveyed in that sub-round. All sub-rounds combined estimates (of aggregates) are obtained by simple averaging of the sub-round wise estimates.

15. Estimates of ratios are obtained by first obtaining the estimates of aggregates of the numerator and denominator of a given ratio and then by division at the final stage.

Urban Sector

16. In the urban sector , the aggregates of item Y at State level is given by

$$\hat{Y} = M \sum_i Y_i \dots \quad (3)$$

Where M is the self weighting multiplier at the State level and Y_i is the value of Y for the i th sample household.

17. Region-wise estimates are obtained by restricting the summation to the sample households of each given region.

18. Sub-round wise estimates are obtained by taking the multiplier as $4M$ and restricting the summation to the sample households surveyed in any given sub-round.

19. Estimates of ratios are computed as in the rural sector and then by division at the final stage.

APPENDIX II

State and Regional Tables (Rural & Urban)

Sl. No.	Table No.	Description of tables		Pages	
		(1)	(2)	(3)	(4)
1	Table 0	Number of sample village/blocks and households by region and sub-round.		16	16
2	" 1	Percentage of animals in milk to total number of milch animals by age group and species (regional and state estimates for each sub round separately)		17-19	47-49
3	" 2	Quantity of milk yield per day animal in milk classified by months since calved and species; regional and state estimates for each sub-round.		20-22	50-52
4	" 2.1	Quantity of milk yield and quantity of concentrates used per day per animal in milk classified by species, age group and interval since calved. State estimates for all sub-rounds pooled.		23-28	53-58
5	" 3	Number of animals in milk and quantity and value of milk produced per day per producer household by species. Regional and State estimates for each sub-round.		29	59
6	" 4.1	Percentage of households reporting sale of (i) fluid milk (ii) milk and milk products to producer households and sale of fluid milk and of milk and milk products per week per reporting household classified by number of bovines possessed Regional and state estimates for all sub rounds pooled.		30-32	60-62
7	" 5	Quantity and value per month of (i) consumption of home produced milk and (ii) purchase of milk per reporting household by type of milk and household monthly per capita expenditure group. State estimate for each sub-round.		33-37	63-67
8	" 5.1	Quantity and value per month of (i) consumption of home produced milk and (ii) purchase of milk per reporting household monthly per capita expenditure groups. Regional estimates for all sub-rounds pooled.		38-40	68-70
9	" 6	Value of purchase of milk products per month per reporting household by household monthly per capita expenditure groups—State estimates for each sub-round.		41	71
10	" 6.1	Value of purchase of milk products per month per household reporting purchase of milk products by household monthly per capita expenditure groups. Regional estimates for all sub-rounds pooled.		42	72
11	" 7	Value of consumption of (i) meat and (ii) eggs per month per reporting household by household monthly per capita expenditure groups—State estimates for each sub-round.		43	73
12	" 7.1	Value of consumption of (i) meat and (ii) eggs per month per reporting household by household monthly per capita expenditure groups—Regional estimates for all sub-rounds pooled		44-46	74-76
