Preface

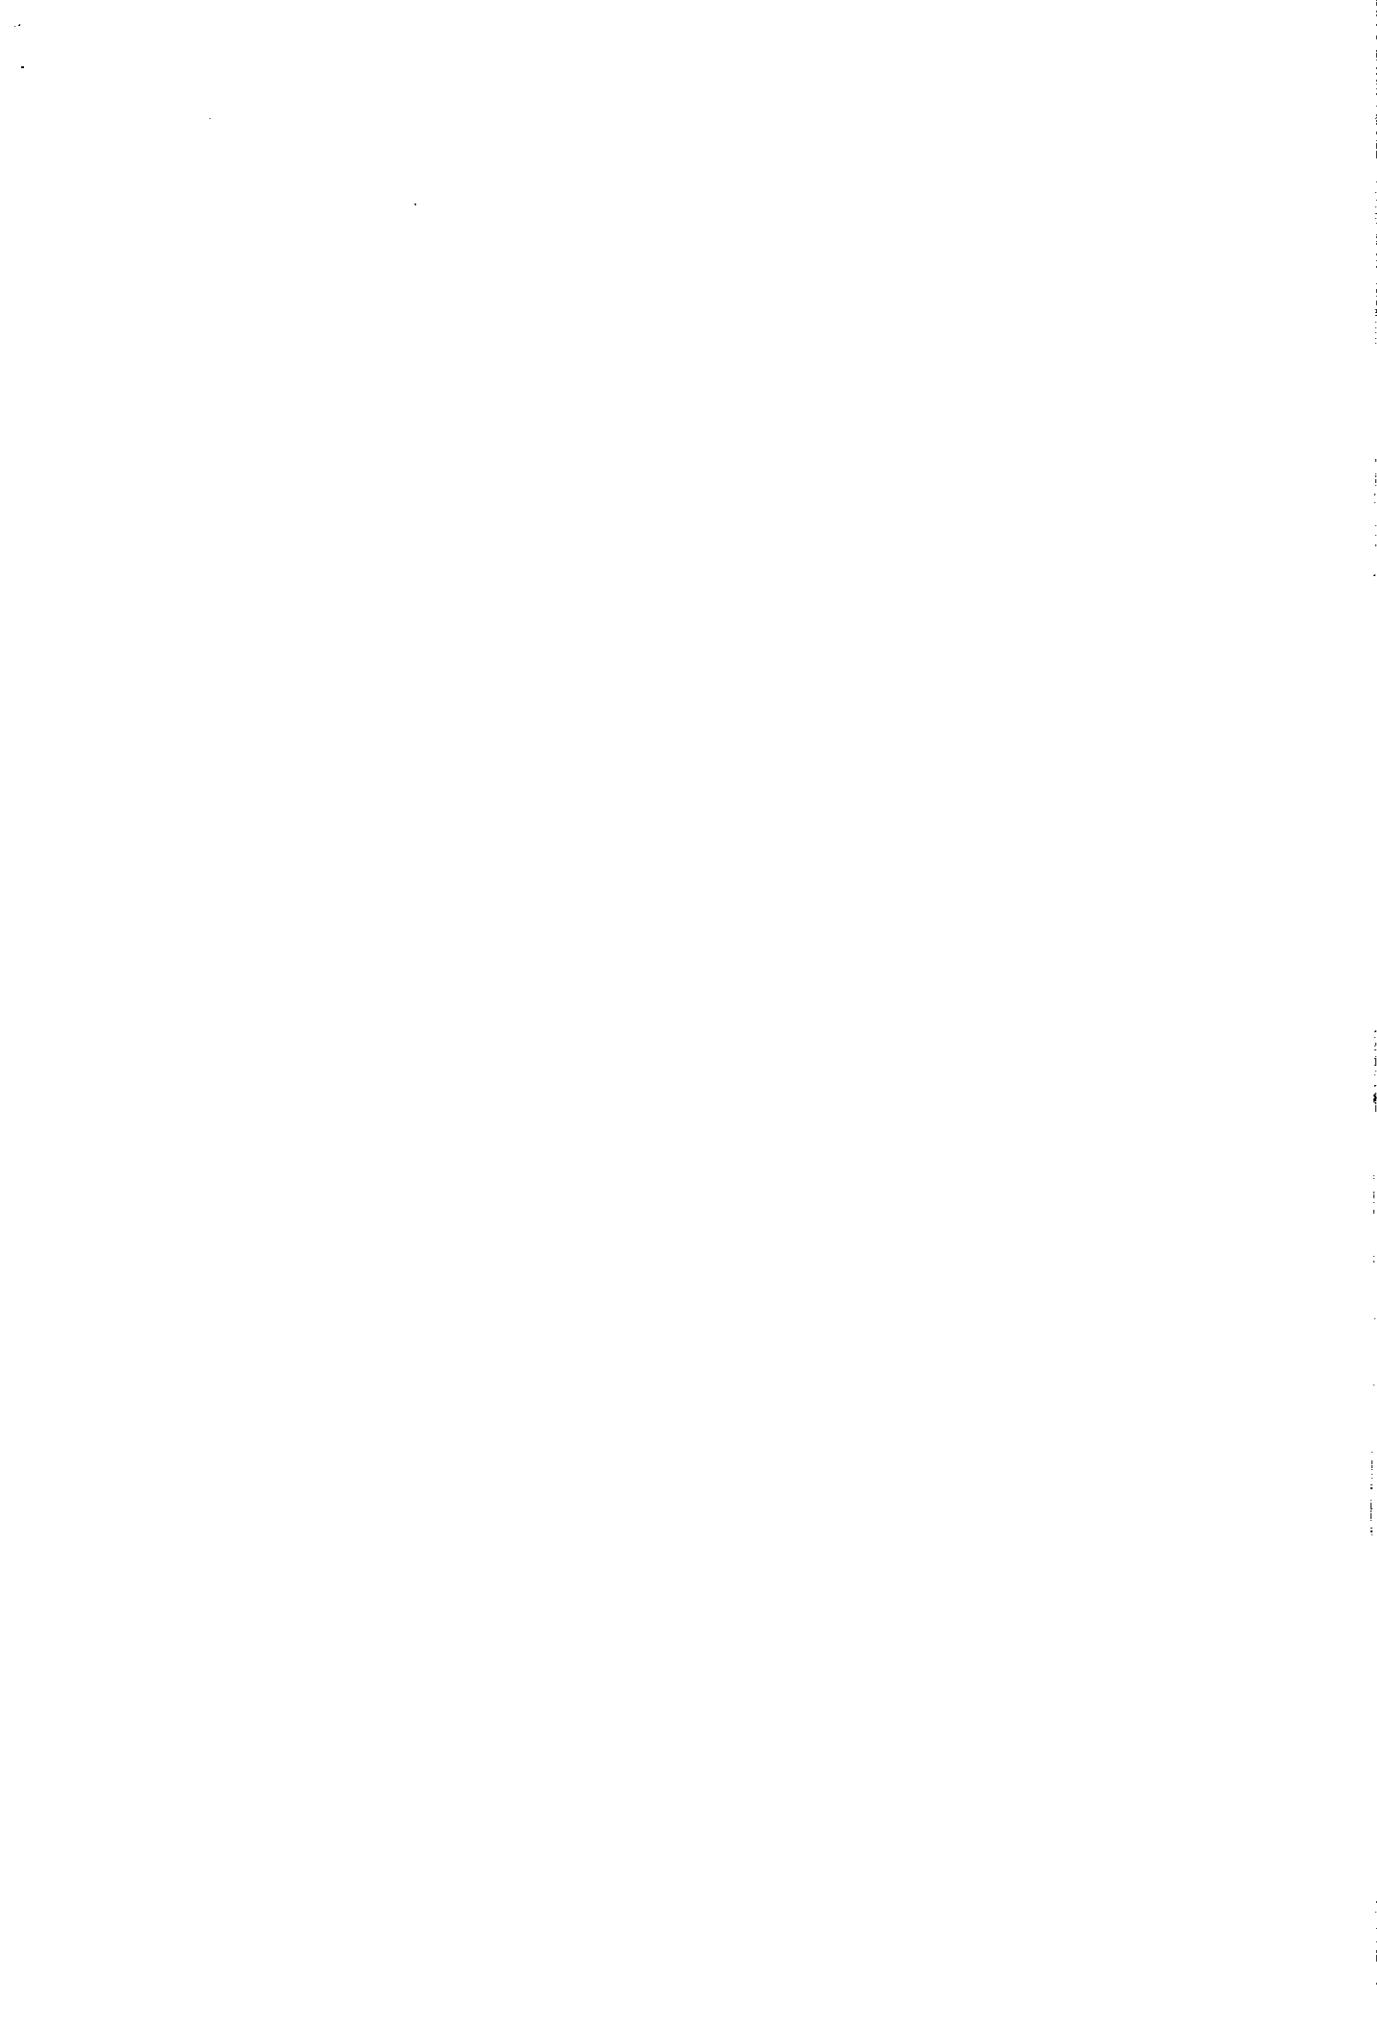

Sixth Agricultural Census was conducted in India with reference year 1995-96 for providing data on various characteristics of agriculture. In continuation of the Sixth Agricultural Census, data on important agricultural inputs such as fertilizers, organic manures, pesticides, etc. were collected. The present report is dealt with the data collected for the input survey.

Taluk Statistical Officers/Statistical Inspectors of this department collected the data for Input Survey and the tabulation of the same was done in the computer unit of the directorate. Data processing and DTP work was done by Sri. S. Saseendran, U.D. Typist under the supervision of Sri. Vimalan, Deputy Director of the computer unit. The complete work was done under the guidance and supervision of Agricultural Census division of the directorate. The report tables are prepared by Sri. P. Sajith Kumar and Sri. M.A. Nandasoonu, U.D. Compilers under the guidance of Sri. Somarajan, Research Assistant (Rtd.). This report was prepared by Smt. Kumari Valsala. C.M., Joint Director with the assistance of Sri. M. Mohanan, Research Assistant and Smt. P. Prabha Kumari, U.D. Compiler of Agricultural Census division under the supervision of Sri. D. Rajan, Additional Director.

The report will be highly useful to planners, research scholars, etc. who are working in the agricultural field.

Chapter I

INTRODUCTION

Indian Agriculture occupies a predominant role in Indian economy. So the necessity to collect and maintain Agricultural Statistics is of more importance. Building up of a data base relating to agricultural holdings is very essential for planning at micro and macro levels. Hence the data collection of operational holdings in different size classes for social groups holds much importance being the basic data relating to number and area, tendency, size, land utilisation, cropping pattern, irrigation etc.

India was participating in the world Agricultural Census Programme for over two decades. Agriculture Census was conducted as a part of the world Agricultural census at National level as well as state level program. It is a 100% C.S.S organised and administered by the Ministry of Agriculture, Government of India. Department of economics and Statistics is responsible for the organisation and conduct of the Census in Kerala State.

The first Agricultural Census was organised in India with the Agricultural year 1970-71 as the reference period. The methodology adopted for 1970-71 agricultural census was complete enumeration by retabulation of data already available in the land record. In the states where land records were not maintained, the data were collected through sample surveys. Since Kerala is a non-land record state, the same method of collection of data was followed through sample surveys. National commission on agriculture have recommended in there to conduct Agricultural Census of India at an interval of five years. As a result, the 11nd agricultural census was carried out with 1976-77 as the reference year. In the non- land record states, the next agricultural census was conducted with agricultural year 1980-81 as the reference period. In this census the data for the holdings of scheduled castes and scheduled tribes were collected separately. The next agriculture census was conducted with reference periods 1985-86 and 1990-91. The 6th Agricultural census was conducted with reference period 1995-96.

From 1976-77 onwards Agricultural Census was conducted in two parts - main survey and Input survey. Under the main survey, data are collected regarding number of operational holdings, Land utilisation, crop wise & source wise irrigated area, cropping pattern, etc. Under Input survey, information on major inputs like variety of seeds, season wise irrigation, use of fertilizers, manure and pesticides, live stocks, agricultural implements, agricultural credit etc. are collected. The fifth input Survey was conducted as part of Agricultural Census 1995-96 with reference period 1996-97.

Objectives

The primary objectives of the survey is to provide levels of consumption of various inputs namely fertilizers, HYV seeds, pesticides, farmyard manures/composts, agricultural implements and machinery and agricultural credit by major size classes of holdings. Information is also collected on the extent of fragmentation of holdings. This information is helpful for planning the production, imports, distribution and stock of critical inputs such as fertilizers, pesticides, credit etc. Additional information is also collected on the live stock population.

Scope and Coverage

The survey covers the entire rural area of the state and all types of agricultural holdings except institutional holdings. The data for Kharif and Rabi seasons of the Agricultural year 1996-97 will be collected separately for irrigated and unirrigated holdings. This have to be done

immediately after the agricultural operations for the above two seasons are over by which the bias on account of memory lapse can be minimised.

Methodology

The number of wards selected for the survey is 7% of the total wards in rural area. These are selected from the wards already selected for the main census. In the selected wards all the operational holdings will be grouped into the following size classes.

Below	<1 Hector
Between	1 & 1.99 Ha
Between	2 & 3.99 Ha
Between	4 & 9.99 Ha
Between	>10 Ha

Four holdings are selected from each of the above five size classes using random sampling method. If the total number of operational holdings of any size class is 4 or less all the holdings are covered. The data are collected separately for Khariff as well as Rabi season. The basic unit for which the data collected is the operational holdings. Individual and joint holdings are considered for the survey. Institutional holdings will not be covered for the input survey.

The Taluk level officers/Supervisors of Agricultural Census 95-96 carried out the fieldwork of the input survey. The data was collected through the following schedules.

1. Schedule 2A – Parcel wise details of area under multiple cropping according to irrigated and unirrigated conditions and agricultural credit, usage of new variety seeds.
2. Schedule 2B – Area under irrigated and unirrigated crops and uses fertilizers, pesticides, etc.
3. Schedule 2C – Inventory of cattle, buffaloes other livestock and poultry as on 15-10-96 and agricultural machinery and implements used in 1996-97.

CHAPTER -II

CONCEPTS AND DEFINITIONS

1. Operational Holdings

Operational holding is defined as all land which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone or with others, without regard to the title, legal form, size or location. The technical unit has been defined as that unit which is under the same management and has the same means of production such as labour force, machinery and animals.

2. Complete / Part holding

A holding may consist of one or more than parcel of land. A holding is said to be a complete holding if all the parcels of land of that holding are in the same village. If any parcel of land of a holding is outside the village it is considered as part holding.

3. Individual / Joint holding

- (a) If the holding is being operated either by one person alone or by a group of persons, who are members in the same household, the holding is said to be individual holding.
- (b) If two or more persons belonging to different holdings, share jointly as partners in the economic and technical responsibility for the operation of an agricultural holding, such holdings are considered as a joint holdings.

4. Parcel

A parcel is all land entirely surrounded by land of other holdings or by Land not forming part of any holding. It may consist of one or more cadastral units, plots or fields.

5. Operational holder

The holder is the person who has the responsibility for the operation of the agricultural holding. He exercises the technical initiative and responsibility for the operation of the holding. When two or more persons share jointly in the economic and technical responsibility for the operation of an agricultural holding, each is to be considered as the holder if they belong to different households.

Total area of the holding

The total area of the holding include the total of all land forming part of a unit which is under the same technical responsibility and management. It also comprise the land occupied by the farm buildings, including the house of the holder, provided such holdings are within the cultivated area.

Agricultural Production

Agricultural production includes the growing of field crops, fruits, grapes, nuts, seeds, tree nurseries, [except those of forest trees], vegetables and other flowers, production of coffee, tea, cocoa, rubber, jute, oil seed, fodder grasses etc.

Tenure and Tenancy

A person is considered to own a piece of land if he has the right of permanent heritable possession over it. Land held under owner like possession is also considered as owned. Owner like possessions included (i) land held from government or others under a grant of lease or assignment with right of permanent heritable possession with or without the right of transfer and (ii) land operated under perpetual lease are called land owned.

In some cases the entire land owned may not be under cultivation in the reference year. A part of holding may be cultivated and a part may be kept fallow or uncultivated for some reason or other. In all such cases the entire extent of land should be taken into account. The modes of farming may be, (1) self cultivation, (2) cultivators getting the land cultivated through members of the family and (3) owned but cultivated with the help of hired labour.

Area leased on or land leased in

Area leased in is defined as land taken on lease from others without any permanent right of possession for the lease. Land leased in may be for,

- a) fixed amount of money
- b) fixed quantity of produce
- c) share of produce
- d) usufructuary mortgage
- e) others

Usufructuary mortgage

Under usufructuary mortgage, the ownership of the property is with the mortgager but the possession is with the mortgages. Income from the property accrues to the mortgages and the mortgage is terminated as soon as the full amount is realised.

Land leased in for others

It means land leased in for which lease is partly paid in cash and partly in kind or area given on the condition of rendering service, either to the village community for the government and area held free of lease etc. It also include cases when labourers are given some land for cultivation without permanent rights.

Area operated otherwise

This include all encroached land or occupied in an unauthorised way and being cultivated by the operated.

Land utilisation

The area under operational holding is classified into six categories according to the utilisation of land. The categories under which classification given are,

- (1) net area sown
- (2) Current fallows
- (3) Other cultivated land excluding fallow land
- (4) Fallow land other than current fallows
- (5) Cultivable waste land
- (6) Not available for cultivation

Net area sown

This represents the total area sown with crops and orchards by counting area sown more than once in the same year only once.

Current fallows

This represent cropped areas which are kept fallow during the current year.

Other uncultivated land excluding fallow land

This include permanent pastures and other grassing lands and land under miscellaneous tree crops etc.

Fallow lands other than current fallow

This include all lands which were taken up for cultivation but are temporarily out of cultivation for a period of not less than one year and not more than five years.

Cultivable waste

This include lands available for cultivation, whether not taken up for cultivation or taken up for cultivation once but not cultivated during the current year and the last five years or more in succession for one reason for other. Land once cultivated but not cultivated after wards for five years in succession should also be included in this category at the end of the five years.

Not available for cultivation

This includes forests, area under non-agricultural use and barren land and uncultivable land.

Gross area sown

This includes the total area under all crops during the year.

Chapter III

ANALYSIS

A parcel is the land entirely surrounded by the land of other holdings. It may consist of one or more cadastral unit, plots or fields.

Numbers of parcels per operational holdings and average area per parcel

Sl. No.	Size group (Hec.)	Total holdings		Total number of parcels	Average number of parcels per holding	Average Area per parcel (Hec)	Average area per holding (Hec)
		Number	Area				
1	< 1.0	4572660	897366	7172046	2	0.13	0.20
2	1.0-1.99	250409	338608	873360	3	0.39	1.35
3	2.0-3.99	83878	216079	316334	4	0.68	2.58
4	4.0-9.99	17970	94876	84772	5	1.12	5.28
5	> 10	1895	36154	7544	4	4.79	19.08
	All groups	4926812	1583083	8454056	2	0.19	0.32

As per the survey conducted during the period 1996-97 Input survey, there are 84.54 lakhs parcels in 49.27 lakh holdings. Comparing to the results of the Input Survey 1991-92, the number of parcels were 83.90 lakh and the number of holdings were 42.30 lakh. The average number of parcels per holding increased to 2.0 in 1996-97 from 1.98 in 1991-92. Also the average area per parcel changed to 0.19 hect. from 0.18 hect. in 1991-92 [table c 1].

Sl. No.	Size	Gross Cropped Area			Current fallow land	Other Uncultivated land
		Irrigated Area	Unirrigated Area	Total Area		
1	< 1.0	183812	663287	847099	19727	107706
2	1.0-1.99	90086	264163	354249	10317	19467
3	2.0-3.99	65923	171293	237216	6953	10771
4	4.0-9.99	3646	73122	103768	2948	5078
5	>10	17951	24456	42407	855	1229
	Total	388418	1196321	1584739	40800	144251

Total gross cropped area is 1584739 hectares. Out of which 388418 hectare are irrigated area and 1196321 hectare unirrigated area; ie 24.5% is irrigated and 75.5% is unirrigated. There is an area of 40800 hectare as current fallow land and 144251 hectare as other uncultivated land. The gross cropped area in the group having below 1.0 hectare is seen high in number; ie 53.5% of the total area. It can be seen that the area is decreasing, where the size of the group is increasing.

The method of multiple cropping is used as an indicator of the intensity of land utilisation. The percentage of area cropped once is 70.52 in irrigated area whereas that in unirrigated area is 92.43. The percentage of area cropped twice and more than twice in irrigated area are 27.18 and 2.30 respectively. But the percentage of area cropped more than twice in irrigated area are 27.18 and 2.30 respectively. But the percentage of area cropped more than twice in unirrigated area is 7.57 only. The result shows an increase in irrigated area from 1991-92 to 1996-97 being 56.1% to 70.52% and 22.3 % to 27.18%.

Table C3 shows an increase in the percentage of gross cropped area during the year 1996-97 from 1991-92 by irrigation status, the percentage being 24.77%. The percentage of gross cropped area in 1991-92 is 16.7% only. Even then the percentage of gross cropped area shows lack of irrigation facilities or under utilisation of available irrigation potentials. Table C4 shows that the average gross cropped area per operations holding is decreased from 0.47 hectares in 1991-92 to 0.32 hectares in 1996-97. This may be due to the increase in the number of operational holding.

The intensity of cropping is the ratio of gross cropped area to net cropped area. From table C5, it is seen as 1.14 in the survey period 1996-97. The intensity ratio was 1.30 in 1981-82, 1.48 in 1986-87 and 1.45 in 1991-92.[table C5] Gross cropped area under irrigated crops was 388418 hectare and unirrigated crops was 1196321 hectare. Net area under irrigated crops was 340804 hectare and for unirrigated crop, it was 1040834 hectare.(See table C5)

Sl. No.	Size	Irrigated Area		Unirrigated Area	
		Gross Area	Net Area	Gross Area	Net Area
1	< 1.0	183812	159950	663287	588363
2	1.0-1.99	90086	79486	264163	223894
3	2.0-3.99	65923	50595	171293	142536
4	4.0-9.99	30646	26940	73122	62913
5	> 10	17951	15833	24456	23128
	Total	388418	340804	1196321	1040834

From table C7, it can be seen 48.37% was occupied by paddy and 59.8% of irrigated area under paddy covers high yielding varieties. 11.5% of gross area under unirrigated crops is paddy whereas 32.4% of this area is used for high yielding varieties of paddy.[See Tables C7,C8,C9& C10].

The percentage of gross cropped area of paddy during the year 1996-97 is 20.60 while that during the year 1991-92 is 17.00. Here an increase of more than 3% is seen. For coconut, the variation of percentage compared to that of the year 1991-92 is very small. Considering rubber, there is a notable change in the percentage of gross cropped area during the year 1996-97 than that of the year 1991-92 (see table C8).

Application of chemical fertilizers

The numbers of holdings irrigated are 1267602 in an area of 394001 hector. Out of 1267602 holdings growing one or more irrigated crops, 671734 holdings are treated with one or more chemical fertilizer (ie 53%) in an area of 27878 hector (ie 70.8%). Also 96.8% of irrigated area cultivating High Yield Varieties were treated with chemical fertilizers. In the case of other varieties in irrigated area, 59.1% area are treated with one or more chemical fertilizers (see table C12). The average consumption of NPK in irrigated area according to the quality of fertilizers treated per hector. Were 54, 25 and 42 Kgs (see table C13).

Application of Straight fertilizers (Irrigated area)

The result of table C14 & C15 show that urea is the most commonly used fertilizer, 31.1% of holdings comprising of 47.4% of area. The usage of potash stands in the second place, 25.9% of holding and the area is 42% of irrigated area. It is seen that ammonium phosphate is the least used fertilizer.

Consumption of mixed fertilizers in irrigated area

The main fertilizer commonly used is factomfose and Vijay 17:17:17. The percentage of usage is 33.1% and 17.7% respectively of irrigated area under all crops. (see table C16 / C17).

Crop wise consumption of chemical fertilizers (irrigated)

The application of chemical fertilizer for paddy in HYV is 98.2% while 93.7% of area was treated for traditional varieties. Average consumption of NPK under irrigated paddy were 74, 30 and 51 Kg./hector. (table C17, C18 & C19). The percentage number of holdings growing Tapioca treated with chemical fertilizer is 45.1% whereas 48% of area growing Tapioca in irrigated area used chemical fertilizer (see table C20).

47% of irrigated area growing coconut was treated with chemical fertilizer. Average quantity of NPK consumed per hector was 71, 47,& 72 kg/ hector. respectively.[table C21]

74% area under irrigated area of rubber [4170 hector.] was treated with chemical fertilizers. The quantity of N,P,K was calculated as 38, 26 &22 kg / hector. respectively..[table C22].

Considering other crops, 38.2% of area was treated with chemical fertilizers, the area being 23539 hector. The estimated quantity of N,P,K nutrients being 122, 50,&92 kg /hector. respectively.[Table C23].

Chemical fertilizers in unirrigated areas.

Totally there are 4464147 unirrigated holdings and the area is 213938 hector. .35.4% of unirrigated holdings growing one or more crops was treated with chemical fertilizers. In

respect of unirrigated area under HYV, 90.8% area was treated with chemical fertilizers whereas for traditional varieties, it was only 42.4%. [Table C24 & C 25].

Average consumption of N P K were estimated as 54, 25 & 42 [irrigated] and 29,20 &25 [unirrigated] respectively. Potash is seen as the main straight fertilizer [16.7%] Urea stands in the second place [14.3%] Factomphose was the most important complex / mixed fertilizer used in unirrigated area [16.1%] followed by 17:17:17 [15.4% of area]. [Table C 27 to C30].

86.1% of unirrigated area under paddy were treated with chemical fertilizers. For high yielding varieties of paddy in unirrigated area, 93.1% were used with chemicals where as for other varieties, it was only 82.6%. Average use of N,P,K for paddy in unirrigated area were 50, 19 & 32 kg / hecter. respectively. [Table C32, C33,& C34].

41.3% of area under tapioca in unirrigated area was treated with chemical fertilizer.[Table C35] .35.3% of area under coconut in unirrigated area used chemical fertilizers, the average consumption of N P K being 20, 16 & 26 kg/hecter. [Table C36]. It is clear from table C 37 that 86.3 % of area under rubber in unirrigated area were treated with chemical fertilizer . The average consumption of N P K was 43, 36 & 33 kg/hecter respectively. Only 18.9 % of area was treated with chemical fertilizers when other crops are considered. The use of N P K was 12, 8 & 11 kg / hecter respectively. [Table C38].

Organic manure in irrigated & unirrigated areas.

Nearly 33% of holdings having an area of 99629 hecter. (25.2%) used FYM / Compost / Biogas manure in irrigated area. Green manures were used in 40% of holdings, the area benefited being 30.5% (1205251ha). Under paddy HYV used only 18.8% area where as other verities used it in 22.6% of area. Area covered by other organic manures was 102701Ha(9%) for paddy (HYV), where as for others it was 11231Ha(14.6%). The area of coconut treated with farm yard manures was 32.3%. Where as for tapioca, it was 38.4% [Tables C39, C40 & C41].

Unirrigated area covered by Farm Yard manure / compost / Biogas manure for paddy (HYV) was 19009 which was 42.6% and for other varieties, it was only 38.1%. For Tapioca, it was seen as 23.1% and for coconut, it was 29.5%. The use of other organic manures was seen as 21.9% under unirrigated crops [Tables C42 & C43].

Plant protection chemicals and pesticides.

The use of pesticides in irrigated and unirrigated area we seen to be 29.1% and 10% respectively. As a result, only 13.2% of cropped area was treated with plant protection chemicals. The results of the last input survey 1991-92 also showed the same percentage for cropped area treated with plant protection chemicals. Plant protection irrespect of high yielding varieties of paddy was 44.9% and for other varieties, it was 45.3%{Tables C44 & C45}.

Livestock

The results of table C46 shows that the number of holding reporting one or more categories of cattle is 1718710 which is 34.8 % of holdings. The estimated number of cattle reported was 3473086. The average number of cattle per 100 hecter was estimated as 219. The average number of cattle for 1981-82 , 1986-87 & 1991-92 were 218, 232 & 161 respectively.

Agricultural machinery & implements

As on 15/10/1996 , the number of agricultural machinery commonly used were ,

[1]	Hand operated sprayers	-	319111
[2]	Wooden plough	-	220034
[3]	Steel plough	-	30997
[4]	Power sprayers	-	48793
[5]	Diesel engine pumpsets	-	79636
[6]	Electric pumpsets	-	450880
[7]	Power tillers	-	47000
[8]	Tractors	-	175507

[see table C47]

Agricultural credit

The number of operational holdings taking institutional credit was reported as 712355 which came to be 14.4% only. The average amount availed / holder [loans] increased from 5450 [1991-92] to 5688 [1996-97] . [Table C48 & C49]

During the survey period , Rs.405.25 crores were given as advance to 712355 holdings via various financial institutions. The details of the percentage distribution of holders availed loan through different types of co-operation institutions are described in table C50.

AGRICULTURAL CENSUS - INPUT SURVEY 1996 - 1997

STATE : KERALA

TABLE C1

AVERAGE NUMBER OF PARCELS PER HOLDING AND AVERAGE AREA OF PARCEL
