DEPARTMENT OF ECONOMICS AND STATISTICS
THIRUVANANTHAPURAM
1993

#### PREFACE

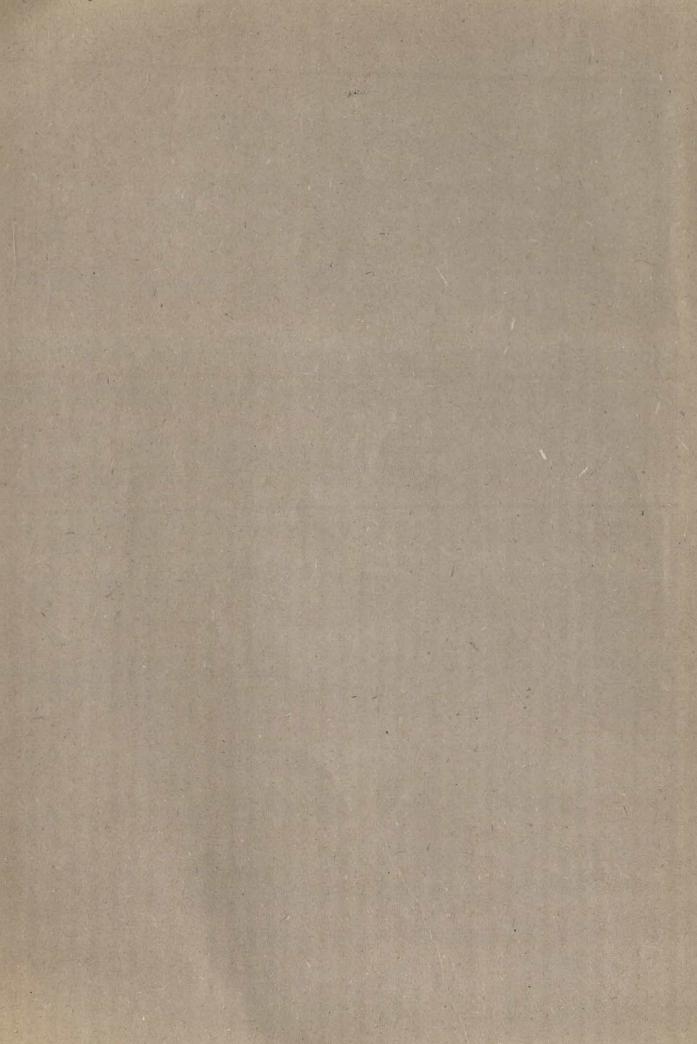

The Sample Registration System was introduced in all the States of India under the directions of the Registrar General of India with the objective of obtaining quick and reliable estimates of vital rates in the country regularly.

The report presents the results of the study in rural areas of Kerala State for the year 1990. The estimates of vital rates viz:-crude birth and death rates, infant mortality rate etc. and also the details of marriages obtained through the study are included in the report.

This report was prepared by the Sample Registration Unit of the Directorate of Economics and Statistics.

> Dr. M. Kuttappan, DIRECTOR OF ECONOMICS AND STATISTICS.

Thiruvananthapuram, 11.10.1993.

#### CONTENTS

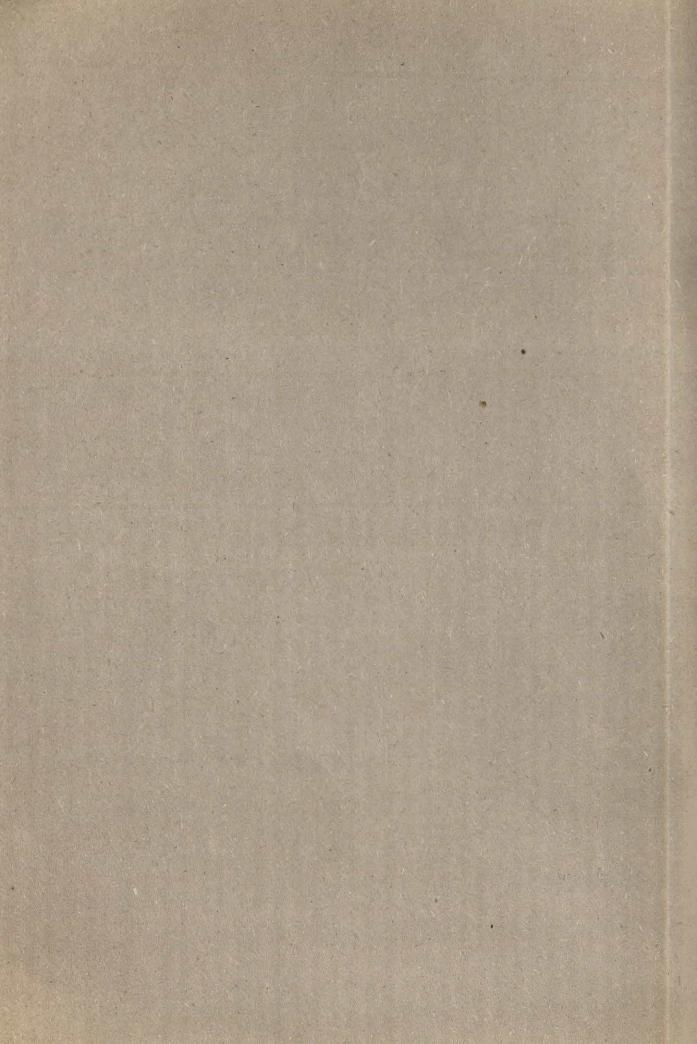

Chapter 1 - Introduction

Chapter 2 - Population and its growth

Chapter 3 - Measures of fertility

Chapter 4 - Mortality measures

Appendix - Table 1 to 36

#### APPENDIX

#### List of Tables - 1990

S1.		Page No.
1.	Mid-year estimated population, birth, death and vital rates 1990.	16
2.	Sample population and estimated population for each stratum.	, 17
3.	Stratum-wise population according to sex	18
4.	Mid-year sample population and estimated population according to age and sex.	- 19
5.	Sex ratio and percentage distribution of population by age group (years 1971, 1989, 1990).	20
6.	Religion-wise sample population and estimated population for each stratum.	21
7.	Stratum-wise live births observed in samples and estimated according to sex.	22
8.	Estimated number of total women and live births in different reproductive age groups.	23
9.	Distribution of currently married women observed according to age, religion and number of surviving children.	24
10.	Distribution of currently married women observed in samples according to age and children everborn - 1990.	25
11.	Distribution of currently married women observed in samples according to age of mother and age of the last child - 1990.	25
12.	Age specific fertility rate, age specific marital fertility rate, G.F.R., T.F.R. and G.R.R.	26
13.	Live births observed in samples classified by month of occurrence.	27
14.	Live births observed in samples by type of medical attention at delivery.	28
15.	Percentage distribution of births by age of mother and order of birth of child.	29
16.	Distribution of samples according to birth rate of each sample.	30
17.	Still births observed in samples and estimated according to sex and still birth rates.	31

#### (List of tables contd.)

1		
18.	Religion-wise birth and death rates	31
19.	Stratum-wise deaths observed in samples and estimated according to sex.	32
20.	(a) Distribution of estimated death according to age and sex.	33
	(b) Deaths observed in samples according to age and sex.	34
21.	Age specific death rates based on estimated values.	35
22.	Deaths observed in samples classified by month of occurrence	36
23.	Deaths classified by type of medical attention	37
24.	Distribution of samples according to death rate of each sample	38
25.	Infant deaths observed and estimated according to sex and infant mortality rate.	39
26.	Number of infant deaths observed in samples of children born during the current year and previous year.	40
27.	Estimated number of infant deaths for the year 1990 of chidlren born during the current year and previous year.	41
28.	Estimated number of perinatal, neonatal and infant deaths according to sex.	42
29.	Births and deaths detected through overlapping survey and intensive enquiry classified according to place and type of births and deaths.	42
30.	Distribution of births and deaths recorded by Enuemerators supervisor, detected through overlapping survey and intesive enquiry.	43
31.	Distribution of rate of marriage per thousand population and percentage distribution of marriages according to age and sex.	44
32.	Life table of males based on age specific death rates for the years 1988, 1989 and 1990.	45
33.	Life table of females based on age speific death rates for the years 1988, 1989 and 1990.	46
	Life table of persons based on age specific death rates for the years 1988, 1989 and 1990.	47
35.	Number of units and population in the Universe and the samples	48
36.	Estimated number of Religion-wise population births, deaths and birth and death rates.	49

# SAMPLE REGISTRATION OF BIRTHS AND DEATHS IN KERALA (RURAL) 1990

#### Chapter 1 - Introduction

The Sample Registration System which is a dual record system provides reliable vital rates at the national and State level separately for urban and rural areas. The deficiencies in Civil Registration System have made the Sample Registration System as a unique technique for obtaining reliable vital rates. The Department of Economics and Statistics and the Census Department are the implementing agencies of the study in the rural and ubran sectors respectively of the state as per the directions from the Registrar General of India. This report is based on the findings of the operation of the Sample Registration System in the 150 samples selected in the rural sector for the year 1990.

The Sample Registration System was introduced in the State during 1964-'65 as a pilot project in 20 rural and 5 urban sample units. The ful-fledged scheme was introduced on a regular basis by extending the survey in 150 rural samples in the State on 1st July 1965. The samples originally selected were retained upto the year 1982. Out of 150 rural samples, 75 samples were replaced during the year 1982 and the remaining 75 samples by the year 1983 for the survey. The rural samples were selected after stratifying the villages into 4 types according to population of 1981 census such as below 500, 500 - 999, 1000 - 1999 and 2000 and above in the two regions of the State namely northern region consisting of northern districts beyond Thrissur and Southern region consisting of the remaining districts from Thiruvananthapuram to Thrissur. The allocation of the samples in different strata was in proportion to the population of each stratum to the total population. The number and population of the samples selected for the study and the total number and population of census villages in each stratum are given in Table 36 appended to the report.

#### 1.2 Staff engaged in the survey:-

The field work for netting all the births and deaths occurred in each sample was carried out by 150 part-time enumerators appointed for the purpose and the details were reported to this office in each month. The half-yearly surveys in these 150 selected samples were conducted by 16 Statistical Assistants/Computors deputed from the Census Department. The Additional District Officers of this Department in each district supervised the field work and conducted the reverification of the unmatched and partially matched events. At the State Headquarters one Regional Officer, One Research Assistant, One Computor from Census Department and two Compilers attended the Sample Registration work.

#### 1.3. Field work:-

To start with, a base line survey was conducted in all the selected 150 sample units to identify and fix the resident population. The births and deaths occurring in these units for the resident population were registered by the part-time enumerators on a regular basis through informants and house visits and the details reported to the District Office and State headquarters for each month. The Computer Supervisor/Statistical Assistants conducted the half yearly survey for

updating the population and collected the details of births and deaths occurred in each sample. These two sets of data collected independantly by the Enumerator and by the Supervisor were matched at the district head-quarters for identifying the unmatched and partially matched events. The additional District Officer in the District Offices conducted re-verification of these unmatched and partially matched events and then finalised the survey results for furnishing to the State head-quarters. These results were subjected to further scrutiny and one copy of each of the birth and death and population statements containing the details were forwarded to the Registrar General of India for computation of vital rates.

#### 1.4 Overlapping survey:-

The supervisors while conducting the half-yearly survey, collected the details of the births and deaths occurred during the previous half year also to find out the missed events if any which the enumerator as well as the supervisor had failed to record. Thus 77 births and 23 deaths were detected during the year as the events for extended reference period.

#### 1.5 Intensive enquiry:-

An intensive enquiry in all the households of the sample was conducted in 20 units, including the 15 units selected by the Registrar General of India, identified as deficient units, by the Additional District Officers of this department for the year. Through this enquiry 4 extra events in respect of births for the year 1990 were detected.

#### Chapter 2

# 2.1 Populations and its growth:- " oset ctel ade: 186

The rural population of Kerala was estimated as 2,31,37,992 on 1.7.1990 and as 2,32,30,965 on 1.1.1991 recording an increase of 0.40 percent during the second half of 1990 as against 0.49 percent recorded for the corresponding period of 1989. The increase in population during the period in northern region was 0.88 percent as against 0.64 percent and in the southern region 0.05 percent as against 0.38 percent of the corresponding period of the previous year respectively. An increase of 1.33 percent is recorded in the mid-year population over the previous year.

#### 2.2 Sex-ratio and percentage distribution of population by age-group:-

The sex-ratio and percentage distribution of population for different age-groups for the year 1971, 1989 and 1990 are presented in Table - 5 appended to this report. The sex-ratio is seen decreased from 1056 in 1989 to 1055. The sex-ratio in northern region (1062) was higher than that of the southern region (1050) for the year under report. Children below the age of 14 form 30.8% of the total rural population which again shows a decreasing trend.

## 2.3 Religion-wise population (Mid-Year):-

The percentage of estimated population of Hindus, Muslims and Christians for the year constitute 57.4, 20.9 and 21.7 respectively whereas the corresponding percentages for 1989 were 57.6, 20.7 and 21.7 respectively.

## Chapter 3 - Measures of fertility

#### 3.1 Crude birth rate:-

The crude birth rate is defined as the number of live births per 1000 mid-year population. This is the most common measure of fertility. The birth to the usual residents of the area were only taken into account for calculating the vital rates.

For the year 1990 the crude birth rate of Kerala (rural) was estimated as 19.55 showing a decrease of 0.64 compared to the previous year. The chirth rate is lower in southern region than in northern region. The birth rate in southern and northen regions were estimated as 17.76 and 21.97 respectively whereas the corresponding figures for 1989 were 18.38 and 22.66. The birth rate among rural population of Kerala and India for the years 1983 to 1990 are given in the following table.

Table A1 - Crude birth rate for Kerala (Rural) and India (Rural) for the year 1983 to 1990

	Kerala Rural		India Rur	2]
Year	Northern Region	Southern Region	Total	
1	2	3, 1, 1	4	5
1983	29.3	19.5	22 -	
1984	28.5	20.3	23.5	35.3
1985	27.2	The state of the s	23.7	35.3
1986		20.4	23.2	34.3
	27.0	19.4	22.6	34.2
1987	24.6	19.2	21.5	33.7
988	23.2	17.6	19.9	
1989	22.7	18.4	20.2	33.1
990	22.0	17.8	The state of the s	32.2
		+4.0	19.6	31.7

The birth rate for the year 1990 was lower by 0.6 than the previous year. Both northern and southern regions showed a decreasing trend in birth rate. The birth rate in both the regions is seen decreased by 0.7 and 0.6 respectively.

## 3.2. Birth rates of neighbouring states:-

The birth rates for rural along and rural urban together estimated for the year 1990 by the Registrar General of India in respect of Kerala and neighbouring states and all India are given in Table A2.

Table A2 - Birth rates of neighbouring states and all India for 1990

State	Rural	Rural & Urban combined
1/	2	3
Andhra Pradesh	26.6	26.3
Karnataka	29.0	28.0
Tamil Nadu	21.8	21.6
Kerala	19.6	19.6
All India	31.7	30.2

Comparing the birth rates in rural areas, Kerala as in the previous years recorded the lowest birth rate of 19.6. The Karnataka state recorded the highest birth rate of 29 followed by Andhra Pradesh (26.6) and Tamil Nadu (21.8).

#### 3.3 Birth rates by religion:-

The birth rates among the three major religions of the State viz. Hindus, Muslims and Christians in rural areas of the State for the year 1990 estimated separately for northern and southern regions are given in table 18 appended.

The birth rate among all the three religions shows a decreasing trend during the year under report. The estimated birth rates were 17.5, 27.4 and 17.4 for Hindus, Muslims and Christians respectively whereas the corresponding rates for the previous year were 18.0, 29.1 and 17.4. The highest birth rate 27.4 was recorded for the Muslim community which form only 20.9 percent of the total population. The Hindus and Christians formed 57.4 percent and 21.7 percent of the total population. Higher birth rate was recorded among the Hindus (18.4) and Muslims (29.4) in the northern region where as the birth rate 17.5 was higher in the southern region for the Christian community. The lowest birth rate was recorded by Christians and the highest birth rate was recorded by Muslims of the northern region. For the southern region the Hindus recorded the lowest birth rate (16.9). The estimated number of religion-wise and region-wise births and deaths are given in Table 36 appended.

#### 3.4 Distribution of sample villages under different birth rates:-

The distribution of sample villages by crude birth rate for the years 1988, 1989 and 1990 are presented in Table 16 appended. The birth rate for the State 19.6 during the year found place in the group 16 and less than 20. The previous year's birth rate 20.2 found place in the next group ie. 20 and less than 24. Out of the 61 samples of the northern regions 28 samples (45.9%) and out of 89 samples in the southern region 62 samples (69.7%) had the birth rate below 20. One sample in the northern region recorded the highest birth rate which falls in the group 36 and less than 40. Eight samples in the same region were having the birth rate above 28. Five samples in southern region recorded the lowest birth rate (less than 12) during the year under report. The birth rates in the rural samples in southern region

were comparatively low, the northern region ranged from 12 to 38 whereas the birth rate of samples in southern region from 7 to 26.

#### 3.5 Age specific fertility rate:-

Age-specific fertility rate can be defined as the number of live births in an year to 1000 women of a specific age-group. Age specific fertility rates for the year 1990 are given separately for the two regions in Table 12 appended. Age-specific fertility rates for the year 1983 to 1990 are given in Table A3 for comparing the rates.

Table A3 - Age specific fertility rate in Kerala - rural for the year 1983 - 1990

Age Group	1983	1984	1985	1986	1987	1988	1989	1990
1	2	3	4	5	6	7	8	9
15-19	34.9	34.5	33.7	36.7	31.3	28.1	26.8	26.37
20-24	172.7	179.2	177.0	166.1	171.6	153.1	156.3	151.93
25-29	161.0	168.0	155.4	147.1	140.0	128.2	134.9	134.24
30-34	87.5	74.6	73.0	67.5	55.1	57.2	54.1	50.10
35-39	42.5	35.8	29.6	27.4	24.4	24.1	19.9	14.71
40-44	13.6	14.1	14.2	11.2	7.2	6.3	6.6	5.78
45-49	3.1	4.0	1.8	2.9	2.1	3.0	1.9	1.02

#### 3.6 Age-specific marital fertility rate:-

Age specific maritial fertility rate can be defined as the number of live births in an year to 1000 married women of specific age-group. Age-specific marital fertility rate for the year 1990 is given in Table 12. The highest marital fertility rate 291.7 during the year is seen recorded in the age group (20-24) as against 300.7 for the previous year in the same age-group.

# 3.7 No.of surviving children and childrens ever born in different age group:-

The religion-wise number of surviving children to currently married women in different age-group from 15-19 to 45-49 is given in table 9 appended.

The number of children ever born to currently married women and age of last child in different age group are given in table 10 and 11 appended.

#### 3.8 General Fertility Rate (G.F.R):-

The General Fertility Rate, is the number of live births in an year to 1000 women in the reproductive age-group 15-49. General Fertility Rates for the two regions separately for the year 1989 and 1990 are given below.

	1990	1989
Northern Region	80.9	83.6
Southern Region	62.1	64.2
State	69.8	72.2

#### G.F.R. for the years 1983 to 1990 are shown below:-

G.F.R.  $\frac{1983}{87.1}$   $\frac{1984}{87.5}$   $\frac{1985}{84.4}$   $\frac{1986}{81.0}$   $\frac{1987}{77.4}$   $\frac{1988}{71.5}$   $\frac{1989}{72.2}$   $\frac{1990}{69.8}$ 

#### 3.9 Total Fertility Rate (T.F.R):-

Total fertility rate denotes the average number of children that would be born to a women during her life time, if she was to pass through her child bearing years conforming to the age-specific fertility rates of the year. The total fertility rates for the two regions for 1989 and 1990 are given below.

	1989	1990
Northern Region	2.37	2.26
Southern Region	1.74	1.68
State	2.00	1.92

For the period from 1983 to 1990 the T.F.R of Kerala showed a decreasing trend. The rates are noted below.

T.F.R 
$$\frac{1983}{2.6}$$
  $\frac{1984}{2.6}$   $\frac{1985}{2.4}$   $\frac{1986}{2.3}$   $\frac{1987}{2.2}$   $\frac{1988}{2.0}$   $\frac{1989}{2.0}$   $\frac{1990}{1.9}$ 

# 3.10 Gross Reproduction Rate (G.R.R):-

Gross Reproduction Rate is defined as the average number of female children that would be born to a women during her life time, if she was to pass through her child bearing years conforming to the age-specific fertility rate of the year. The gross reproduction rate of Kerala for the years 1983 to 1990 are given below.

G.R.R 
$$\frac{1983}{1.2}$$
  $\frac{1984}{1.3}$   $\frac{1985}{1.2}$   $\frac{1986}{1.1}$   $\frac{1987}{1.1}$   $\frac{1988}{1.0}$   $\frac{1989}{0.95}$   $\frac{1990}{0.92}$ 

### 3.11 Net Reproduction Rate (N.R.R):-

Net Reproduction Rate is the average number of female children that would be born to a woman during her life time conforming to the age specific fertility rate of the child bearing age-groups by corresponding proportion of survivors as per life table for female (Lx/lx) and then repeating the process as in gross production rate. Net reproduction rate for the years 1983 to 1990 are given below.

N.R.R.  $\frac{1983}{1.15}$   $\frac{1984}{1.26}$   $\frac{1985}{1.20}$   $\frac{1986}{1.09}$   $\frac{1987}{1.05}$   $\frac{1988}{1.00}$   $\frac{1989}{0.95}$   $\frac{1990}{0.91}$ 

#### 3.12 Still Birth Rate (S.B.R):-

Still Birth Rate is the number of still births to 1000 births (both live births and still births). The still birth rate was estimated as 8.6 for the year as against 10.6 for the previous year. Still birth rates for northern and southern regions were estimate as 9.87 and 7.38 respectively. Even though the still birth rate for the state during the year was lower by 2.0 than that for the previous year, the still birth rate in the southern region was found higher by 0.5 than that in the previous year.

#### 3.13 Order of birth by age of mother:-

The percentage distribution of births by age of mother and order of birth of child is given in Table 15 appended. Out of the total births 78.3 percent of births come under the 1st and 2nd orders of birth and 13.2 percent births under 3rd order birth. The corresponding percentages for the previous years were 76.4 and 13.7 respectively. The birth under seventh order and above during the year was 1.3 percent as against 1.8 percent of the previous year.

#### 3.14 Birth by type of medical attention received:-

The percentage distribution of births by type of medical attention received during the year 1983 to 1990 are given in table number A4.

Table A4 - Percentage distribution of births by type of medical attention received during the period 1983 - 1990

Year	Insti- tutional	Trained profes-	Untrained profes- sional	Non-pro- fessional	Not stated
1 ·	2	3	4	5	6
1983	68.9	16.1	13.1	1.9	
1984	73.3	9.2	13.6	3.7	0.2
1985	76.5	8.2	12.8	2.2	0.3
1986	80.2	6.3	9.7	3.7	0.1
1987	82.5	7.7	9.2	0.6	
1988	83.1	6.8	7.9	2.0	0.2
1989	86.0	5.6	6.8	1.5	0.1
1990	89.1	3.6	5.6	1.4	0.3

It was observed that the number of people utilising the institutional facilities provided for maternal and child health increased year by year. About 89.1 percent of the birth took place in Medical Institutions during 1990 where as the corresponding percentage for the previous year was 86.0. The distribution of number of births by

various medical attention received is given in Table 14 appended. The people of southern region utilised the institutional facilities more than those of the northern region, 79.5 percent people of the northern region and 98.1 percent people of the southern region availed of the institutional medical facilities during the year where as the corresponding percentages for the previous year were 74 4 and 96.9. The services of untrained professionals were utilised by 10.4 percent of people of the northern region and 1.1 percent people of the southern region during the year as against 12.6 and 1.4 percent respectively during the previous year.

#### 3.15 Sex ratio at birth:-

The sex-ratio can be defined as the number of male children born to 100 female children. Sex-ratio at birth for the year 1983 to 1989 are given below.

Sex-Ratio 1983 1984 1985 1986 1987 1988 1989 1990 109.3

Sex-ratio at birth in northern region and southern region were 112.6 and 106.4 respectively as against 107.4 and 115.0 respectively during the previous year.

#### 3.16 Child - women ratio (C.W.R):-

Child-women ratio is defined as the estimated number of children in the age-group (0-4) years per 1000 women in the reproductive age group (15-49).

Estimated number of children in : 2384817 the age group of (0-4)

Estimated number of women in the age group (15-49)

Child-women ratio for the years 1983 to 1990 are given below.

C.W.R.  $\frac{1983}{400}$   $\frac{1984}{390}$   $\frac{1985}{377}$   $\frac{1986}{378}$   $\frac{1987}{383}$   $\frac{1988}{376}$   $\frac{1989}{368}$   $\frac{1990}{368}$ 

# 3.17 Comparison of vital rates under sample registration system and Civil Registration System:-

Civil Registration System is the statutory system of recording the details of all births and deaths occuring in the State. On comparing the vital rates obtained under these two systems it is seen that a considerable number of births and deaths are left un-registered under Civil Registration System. The birth rates and still birth rates arrived from the data collected through sample registration system and Civil Registration System for the year 1983 to 1990 are given in Table A5. The vital rates calculated from the data on Civil Registration

System show that the rates were very high in urban areas compared to the rural areas of the State. As in the past a good number of births and deaths of the resident population in rural areas are seen registered in urban areas of the State in Civil Registration System.

Table A5 - Vital rates under Civil Registration System and Sample Registration System in Kerala (Rural) for the years 1983 to 1990

	Birth	rate	Still Still	Birth Rate
Year	Civil Regi- stration	Sample Regi- stration	Civil Regi- stration	Sample Re-
1	2	. 3	4	5
1983	14.3	23.5	3.9	13.5
1984	13.8	23.7	4.9	10.5
1985	14.7	23.2	3.9	13.3
1986	13.5	22.6	2.9	14.0
1987	13.2	21.5	2.9	11.1
1988	13.0	19.9	2.4	11.7
1989	12.6	20.2	3.4	10.6
1990	*11.4	19.6	*2.5	8.6

<sup>\*</sup> Provisionsal.

# 3.18 Rate of marriage per 1000 population and percentage distribution according to age and sex:-

The rate of marriages and re-marriages per 1000 population and percentage distribution of marriages according to age and sex are given in Table - 31 appended. The highest rate of first marriage in the case of female (63.8) was in the age group 20-24 and that for males (67.6) is in the age group 25-29. During the previous year the corresponding rates were 67.8 and 64.8 in the respective age groups. The rates of marriage of females in the age groups 15-19 and 20-24 during the year under report were lower by 2.1 and 4.0 than in the previous year whereas the rate of marriage among males in the age group 20-24 showed a decrease of 5.5 and an increase of 2.7 in the age group 25-29 than in the previous year. Of the total marriages the percentage of re-marriage was 3.1 as against 3.2 percent of the previous year. The mean age at marriage was changed from last years 27.2 to 27.5 during the year for males. In the case of females the mean age of marriage remain (22.4) the same as in the previous year.

#### Chapter 4 - Mortality Measures

#### 4.1 Crude Death Rate:-

The number of deaths per 1000 of mid-year population is taken as the crude death rate. The deaths occurred to the usual residents of the area were considered for caclculating the death rate as was done in the

calculation of birth rate. The crude death rate for the year in Kerala (rural) was 6.0 as against 6.1 during the previous year. The death rates in northern region and southern region were 5.7 and 6.2 respectively. The crude birth rate for Kerala (rural) and All India (rural) for the year 1983 to 1990 are given in Table Bl below.

Table B1 - Crude death rates in Kerala Rural and All India rural for the year 1983 to 1990

Year	Northern region	Southern region	Combined	All India
1	2	3	4	5
1983	7.2	6.2	6.6	13.1
1984	6.9	6.0	6.4	13.8
1985	6.8	6.4	6.6	13.0
1986	6.0	6.1	6.0	12.2
1987	6.1	6.1	6.1	12.0
1988	6.2	6.3	6.3	12.0
1989	6.0	6.1	6.1	11.1
1990	5.7	6.2	6.0	10.5

#### 4.2 Death rates of neighbouring states:-

The death rates in rural area and rural and urban areas combined provisionally for the year 1990 by the Registrar General of India in respect of the neighbouring States and All India are given below in Table B2.

Table B2 - Death rates of neighbouring states and All India

State	Rural	Rural & Urban combined
1	2	3
Andhra Pradesh	9.7	9.1
Karnataka	8.8	8.1 8.5
Tamil Nadu	9.6	
Kerala	6.0	6.0
All India	10.4	9.6

Comparing the death rates in rural areas of the neighbouring States, Andhra Pradesh recorded the highest death rate (9.7) while Kerala recorded the lowest rate 6.0 during the year.

#### 4.3 Death rate among religions:-

The death rates among the three religions viz. Hindus, Muslims and Christians are given in Table 18 appended.

The highest death rate of 6.6 recorded among the Hindus of the southern region during 1990 whereas in 1989 the highest death rate of 6.5 was recorded among the Hindus of northern region. The lowest rate of death (3.5) was recorded among the Christians of northern region as in the previous year. The death rate for rural areas of the State among Hindus increased from 6.4 in 1989 to 6.5 during 1990, among Muslims it decreased from 5.5 to 4.9 and in the case of Christians the rate showed a slight change (ie. from 5.6 to 5.7) during the year.

#### 4.4 Age-specific death rate:-

Age-specific death rate is the number of deaths in a specific age-group among 1000 persons of that age-group in an year. age-specific death rates for different age-groups according to region and sex are given in Table - 21 appended. As in the previous year the death rate was highest (86.4) in the age-group 70 & above and lowest (0.43) in the age-group (10-14). During 1989 these rates were 83.4 and 0.38 respectively. Between the the two regions the death rate in the age-groups (70 and above) was comparatively high in the northern region. Similarly the death rate among males was higher (91.4) than the females (82.3) in the same age-group. During 1989 the corresponding age-specific death rates for the northern and southerr regions were 95.4 and 77.9 respectively and those among males and females 93.3 and 75.7 respectively. The difference in the age-specific death rates of males and females in the age group 70 and above showed a considerable decrease during the year. It was 9.1 during the year 1990 as against 17.6 in the previous year. The death rate among children below 1 year also come down in the previous year down from 24.2 to 16.4 during 1990. Below the age of one year the death rate among males was 28.0 and among females it was 10.5 whereas in the previous year the corresponding rates were 25.1 and 23.3.

#### 4.5 Infant mortality rates:-

The infant mortality rate is defined as the estimated number of deaths of children below one year of age out of 1000 live births in an year. The estimated number of infant death and infant mortality rates in Kerala (rural) according to sex and region are given in Table - 25 appended. The infant mortality rates of Kerala for the year 1983 to 1990 are given below.

		A PART TO THE	Infant	Mortality	Rate	4 10 12 12	
1983	1984	1985	1986	1987	1988	1989	1990
38.9	30.1	33.0	28.6	27.0	29.9		

The infant mortality rate in northern region and southern region were 17.9 and 16.3 respectively as against 25.5 and 21.4 during the previous year showing a decrease of 7.6 and 5.1 respectively during the year.

## 4.6 Neo-Natal mortality rate:-

Neo-Natal mortality rate is defined as the estimated number of deaths of infants below 28 days of age per 1000 live births in an year. During 1990 the Neo-Natal mortality rate was 12.2 as against 15.8 of previous year.

#### 4.7 Peri-natal mortality rate:-

Peri-natal mortality rate is defined as the estimated number of deaths of infants below 7 days of age per 1000 live births in an year. The peri-natal mortality rate was calculated as 10.6 against 12.4 during the previous year. The peri-natal, neo-natal and infant mortality rates according to sex and region are given in Table B3 - below.

Table B3 - Peri-natal, neo-natal and infant mortality rate

			ESTIMATE NO	Mor	tality	rates	W. P. 10 2 15		
Design	Por	i-nata		Neo	-natal		Infa	nt mor	tality
Region	M	F	T	M	F	T	M	F	T
1	2	3	4	5	6	7	8	9	10
	11 2	11.2	11 2	11 3	11.2	11.2	19.5	16.2	17.9
Northern Southern		3.1			3.8		25.3	6.9	16.3
State	14.1	6.9	10.6	16.6	7.3	12.2		11.2	

# 4.8 Distribution of samples according to death rate of each sample:-

Table - 24 appended gives the distribution of samples according to death rates for the 1990 and for the previous two years. During the year under report 47 sample units of northern region (77.1%) and 55 units of southern region (61.8%) recorded death rate below 7 as against 67.2 percent and 69.7 percent during 1989. When all the samples in the State were taken into account 102 samples (68%) recorded death rate below 7. The highest death rate of 19.8 was recorded by one sample in the northern region where as the lowest death rate 1.5 was recorded by one sample in the southern region.

## 4.9 Medical attention recieved before death:-

The percentage distribution of deaths according to medical attention received before death during the year 1983 to 1990 are given in Table B4 below.

Table B4 - Percentage distribution of deaths according to type of medical attention received for the years 1983 to 1990

Year	Institu- tional	Qualified medical practitioner	Unqualified medical practitioner	None
1	2	3	4	5
1983	46	26	12	
1984	46	24	13	15
1985	49	23	8	22
1986	( 49		11	17
1987	47	28	6	18
1988	42	32	7	18
1989	43	31		19
1990	47 -		6	20
		36	7	10

It is seen that 90% of the persons were received some kind of attention before death.

Comparison of mortality rates under Civil Registration System and Sample Registrastion System for the years from 1983 to 1990

	Death r	ate	Infant me	ortality rate
Year	Civil Regi- stration	Sample Regix registration	Civil Regi- stration	- Sample Registration
1	2	3	4	Kegistiation 5
1983	3.6	6.6	11 2	
1984	3.6	6.4	11.3	38.9
1985	4.0	6.6	9.1	30.1
1986	3.9		9.1	33.0
1987	4.0	6.0	8.0	28.6
1988	4.1	6.1	8.1	27.0
1989	4.2	6.3	7.3	29.9
1990		6.1	8.2	23.3
1990	*4.1	6.0	*4.7	17.1

<sup>\*</sup> Provisional.

As in the case of birth rate, the mortality rates estimated under civil registration system are seen less than that of the rates arrived through sample registration system. The low mortality rate under civil registration system may be due to the fact that a considerable number of deaths of resident population in rural areas are registered in urban areas where they seek better medical facilities.

# 4.11 Expectation of life based on age specific death rates for the last three years:-

Expectation of life in different age group is calculated in the life tables - Table number 32, 33 and 34 - appended to this reports. The

tables were prepared sex-wise and population-wise separately based on age specific death rates for the years 1988, 1989 and 1990. The expectation of life at birth for males, females and for both sex together were calculated as 67.9, 74.7 and 71.1 as against 67.6, 73.9 and 70.6 respectively during the previous year. Expectation of life of females is seen always higher than that of males. The difference in expectation of life between male and female was 7.2 where as the difference was 6.3 in the previous year. The expectation of life calculated for the last eight years are given in Table - B6 below.

Table B6 - Expectation of life based on age specific death rates for the years 1983 to 1990

Age specific death rates for the years	Males	Females	Males & females together
- 1	2	3	4
1981, 1982, 1983	66.0	71.8	68.8
1982, 1983, 1984	66.5	73.4	69.7
1983, 1984, 1985	65.7	72.5	68.9
1984, 1985, 1986	66.9	72.8	69.7
1985, 1986, 1987	67.1	73.1	70.1
1986, 1987, 1988	67.0	73.5	70.2
1987, 1988, 1989	67.6	73.9	70.6
1988, 1989, 1990	67.9	74.7	71.1

#### Method adopted for calculation of life tables

$$_{\text{mx}} = \frac{\text{Total of age specific death rates for the last 3 years}}{3 \times 1000}$$

 $q_0 = \frac{D1}{B1} + \frac{D2}{B2}$  Where D1 is the number of deaths of children born during the previous year and died during the current year and D2 is that of the children born and died during the current year. B1 and B2 denote the total number of births accrued during the previous year and current year respectively.

 $qx = \frac{2 \times cx \times mx}{2 + cx \times mx}$  where c is the class interval

Let 10 be 100000

1x = 10 - do

 $dx = 1x \times qx$ 

Let d<sub>70</sub> is equal to 1<sub>70</sub>

Lo = f x lo + (1 - f) 
$$1_1$$
 where  $f = \frac{D1}{D1 + D2}$ 

$$Lx = \frac{(1x + 1x + 1)}{2} C$$

$$L_{70} = \frac{d70}{m70}$$

$$T(70-1) = T_{70} + L(70-1)$$

Expectation of life 
$$Ex = \frac{Tx}{1x}$$

Table 1 - Mid-year estimated population, births, deaths and vital rates - 1990
