PREFACE

The growth-trend in the agricultural sector is not consistent in Kerala. The contribution of agriculture to State Income has been on decline. For formulating proper price policies and for achieving economic efficiency in the crop production sector, studies on Cost of Cultivation of Important Crops in Kerala is essential. In connection with this, department conducts annual survey on Cost of Cultivation of Important Crops in Kerala.

This report is based on the field survey on Cost of Cultivation of Important Crops conducted during the year 2017-18. The crops are Paddy (3 seasons), Coconut, Arecanut, Pepper, Banana, Tapioca, Ginger, Turmeric, Bitter Gourd (3seasons), Cowpea (3 seasons), Pineapple and Cardamom.

The first chapter of this report deals with introduction, concepts and definitions of the survey. The chapter two of the report gives state wise information. The district wise tables based on the survey are given in appendix.

The field work of the survey was carried out by the Statistical Investigator/ Enumerators posted in the concerned Taluk Statistical Offices. The report was prepared in the Cost of Cultivation Division of the Directorate of Economics and Statistics. The dedicated efforts made by all officers to bring out this publication are very much appreciated. I hope the report will be useful to Planners, Policymakers, Researchers and other data users.

Suggestions and comments for improvement of this report are most welcome.

Chapter I

GENERAL

1.1 Introduction

Government of Kerala accorded sanction for conducting annual survey of cost of cultivation of important crops in the State from 1980-81 onwards vide G.O.(Rt) 466/79/plg dated 27/10/1979 .The present report relates to the 38th round of survey conducted during the agricultural year 2017-18

The crops covered under the round are given below:-

1.	Paddy (3 seasons)
2.	Coconut
3.	Arecanut
4.	Tapioca
5.	Banana
6.	Pepper
7.	Ginger
8.	Turmeric
9.	Pineapple
10.	Bitter gourd (3 seasons)
11.	Cowpea (3 Seasons)
12.	Cardamom

Objectives

The main objective of this survey is to estimate the cost of cultivation per hectare of important crops in Kerala and to compare the cost under different concepts, over a period.

1.3. Period of the Survey

The period of the survey was the Agricultural Year (July to June) 2017-18.

1.4. Design of the Survey

The survey covered all the districts in the state by considering taluk as a stratum. From each Taluk, required numbers of investigator zones were selected using circular systematic sampling method. Name of crops and number of zones selected from each taluk are given below.

Sl. No	Name of crops	Number of Zones
1	Coconut, Arecanut	4
2	Paddy, Tapioca, Banana, Pepper, Ginger, Turmeric Pineapple, Cardamom.	3
3	Cowpea, Bitter gourd	2

Selection of cultivators

In selected Investigator zones, list of cultivators growing paddy in the previous autumn season is prepared based on the last year's Form I Diary connected with the EARAS survey. From this, 5 cultivators who are likely to be engaged in paddy cultivation during the current year are selected at random for the study for the autumn paddy. Similar procedure is also adopted for the selection of cultivators for winter and summer seasons.

In case, the cultivators who are selected for cost of cultivation study in Autumn Paddy possess suitable number of plots and engaged in cultivation of other specified crops in stipulated area/numbers will also be selected for the study for other crops like Coconut, Pepper, Arecanut, Banana and Tapioca etc.

If sufficient numbers of suitable plots of other crops are not available within the cultivators selected for the study of Autumn Paddy, the required number of plots growing crops other than paddy will be selected from the list of wet and dry land plots of the same investigator zone during the previous year. If the selected investigator zone in a taluk does not provide the required number of plots for these crops, another Investigator zone in the same taluk will be selected at random for selection of the remaining (required) number of plots/cultivators for the study.

Number of holdings selected for each crop in a Taluk:

1	Paddy	Autumn	15 (5 holdings each from one Investigator zone)
		Winter	15 (5 holdings each from one Investigator zone)
		Summer	15 (5 holdings each from one Investigator zone)
2	Coconut		20 (5 holdings each from one Investigator zone)
3	Arecanut		20 (5 holdings each from one Investigator zone)
4	Pepper		15 (Minimum 2 holdings in one Investigator zone)
5	Banana		15 (Minimum 2 holdings in one Investigator zone)
6	Tapioca		15 (Minimum 2 holdings in one Investigator zone)
7	Ginger		15 (Minimum 2 holdings in one Investigator zone)
8	Turmeric		15 (Minimum 2 holdings in one Investigator zone)
9	Pineapple		15 (5 holdings each from one Investigator zone)
10	Bitter gourd	Autumn	10 (5 holdings each from one Investigator zone)
		Winter	10 (5 holdings each from one Investigator zone)
		Summer	10 (5 holdings each from one Investigator zone)
11	Cowpea	Autumn	10 (5 holdings each from one Investigator zone)
		Winter	10 (5 holdings each from one Investigator zone)
		Summer	10 (5 holdings each from one Investigator zone)
12	Cardamom		15 (5 holdings each from one Investigator zone)

A holding is to be considered for the study normally if the crop coverage is at least 25 cents in the case of Paddy and Cardamom, 10 cents for Tapioca, Banana and Pineapple and 5 cents for Ginger, Turmeric, Cowpea and Bitter gourd. In the case of perennial crops like Coconut, Arecanut and Pepper the holdings should have 25 trees/plants of which a minimum of 50% should be bearing trees/plants in the selected holding.

The holdings are grouped under three size classes (small, medium and large) for each crop on the basis of the area under the crops in the holding as:

Size Group	Holding size	
	Paddy	Other crops
Small	< 0.40 hectare	< 0.2 hectare
Medium	0.40 to < 2 hectare	0.20 to < 0.80 hectare
Large	≥ 2 hectare	≥ 0.80 hectare

1.5 Schedules

Schedules used for the survey

Schedule -1	Selected Investigator zone
Schedule -2	Summary of Form I Diary
Schedule -3	List of selected cultivators
Schedule -4	General Particulars
Schedule -5	Recorded cost incurred for growing the selected crop in each fortnight.

1.6 Field work

Fieldwork survey is carried out by the Statistical Investigator /enumerators in 61 Taluks. One Investigator /enumerators is posted in each Taluk for this purpose. The investigators visit the selected holdings/cultivators every fortnight/three weeks/one month/two month and recorded fortnightly details of agricultural operations in schedule 5. Periodicity of visit will be vary according to the type of crops. Periodicity of visit are given below

Sl. No	Name of crop	Periodicity
1	Cowpea, Bittergourd	Fortnight
2	Paddy	Three weeks
3	Cardamom	One month
4	Coconut, Arecanut, Pepper, Tapioca, Banana, Ginger, Turmeric, Pineapple.	Two months

The fieldwork is supervised by Taluk Statistical Officer/Statistical Inspector at Taluk level and Deputy Director/ District officer /other district level supervisory officer at District level.

1.7 Processing and Analysis of Data

The data entry and tabulation sheet preparation works are done at Taluk level in DESCAS software. The compilation tabulation works are done at the district office. Consolidation of data, the report write-up and analysis works are done at the Directorate.

1.8 Method of Estimation

(a) Concepts of Cost.

Cost incurred for growing the selected crops are classified under, cost ‘A’ cost ‘B1’, Cost ‘B’ and Cost ‘C’ and the analysis of the data is made as: **Cost ‘A’**

Cost ‘A’ All kind of expenses (paid out costs) actually incurred by the cultivators. includes:

- i. Hired human labour
- ii. Animal labour
- iii. Machine labour
- iv. Seed/ seedlings
- v. Farm yard Manure and Chemical fertilizers
- vi. Plant protection
- vii. Land tax and Irrigation Cess
- viii. Repair and maintenance charges of implements, machinery and buildings
- ix. Interest on working capital
- x. Other expenses

Cost ‘B1’: Cost ‘A’ + Interest on fixed assets (excluding land)

Cost ‘B’: Cost ‘B1’ + interest on Fair value of land

Cost ‘C’: Cost ‘B’ + Imputed value of family labour

As per the recommendation of the Expert Committee for Agricultural Statistics, instead of taking interest on Land value, Fair value of land report of the Registration Department has been taken for calculating Cost B of each crop.

(b) Procedure for imputation of values of owned inputs

In the production process, certain inputs from home stocks are used. In order to estimate the cost, the values of input used out of home stock are imputed. The procedures used for the imputation of values of such home stock inputs are:

- | | | |
|-----|-----------------------------------|--|
| I | Family labour | Imputed on the basis of average wage rate per work hour of hired labour. |
| II | Owned and Exchange human labour | The rate of wages per hour for hired human labour is taken for imputing the value of own stock and exchange human labour |
| III | Owned and Exchange animal labour | The charges paid per hour for hired animal labour is taken for imputing the value of owned and exchange animal labour. |
| IV | Owned and Exchange machine labour | The hire charges per hour for machine labour has been taken |
| V | Implements | Repair and maintenance charges of implements |
| VI | Owned seed | Farm produced (house grown) seed has been imputed at the prices prevalent in the investigator zone concerned at the time of sowing |

VII	Farm produced manure	Imputed at the rate prevalent in the zone concerned.
VIII	Interest on fixed capital	Interest on the present value of fixed assets such as land, farm, building, implements, machinery, irrigation structure, equipments and livestock (only draught animals) at the rate of 10 % per annum has been calculated.
IX	Interest on working capital	Interest has been charged at the rate of 10% per annum on the working capital, cash and kind expenses excluding items in respect of which payments are generally made after harvest (i.e. rent, land tax etc) incurred during the period of cultivation
X	Payments in kind	The payments in kind have been evaluated at the market prices prevalent in the locality at the time of payment. Perquisites have been included in the payments in kind calculated at the market prices.

(c) Allocation of costs to different crops

Some of the inputs used for the cultivation of one crop are common for other crops also. For the purpose of computing the cost share of individual crops, the cost of such inputs is apportioned in the following manner.

I	Repair and maintenance charges of implements	In proportion to the area under the crop
II	Interest on fixed capital (excluding land)	In proportion to the area under the crop
III	Interest on land value	Interest on the Fair value of land under the crop

(d) Procedure for valuation of farm assets

I	Own farm buildings (cattle sheds, storage shed etc)	prices prevailing in the locality
II	Implements and other machinery	prevalent market prices
III	Livestock (only draught animals)	prevalent market prices

In calculating the cost of production of paddy crop in each season the interest on fair value of land at the rate of 10% per annum for the period of 6 months is taken into account. The land value is estimated at the fair value rate of agricultural land

CHAPTER 2

RESULTS OF THE SURVEY

The crops selected for this round of study are Paddy, Cowpea and Bitter gourd (autumn, winter and summer) seasons and the remaining crops Coconut, Tapioca, Banana, Pepper, Arecanut, Ginger, Turmeric, Pineapple and Cardamom for the whole year. The costs of cultivation of crops are calculated under three different cost concepts viz Cost ‘A’, Cost ‘B’, and Cost ‘C’ respectively.

2.1.1 Paddy- Autumn (Virippu) during 2017-18

For this study details of holding selected and area coverage are given below. The data collected from 746 holdings according to the size class by covering 567.67 hectares of land. It is observed that the average area per holding is 0.76 hectares in all classes while area per holding in large size class, ie more than two hectares is 3.47 hectares per holdings. But in small size class, ie, less than 0.40 hectare which comprises 384 holdings, the average area per holding is only 0.21 hectare.

Table 1: Area and number of holdings under Autumn Paddy

Holding size class	No of selected holdings	Area under the crop in the sample (ha)	Percentage Area	Average Area per holding (ha)
Small	384	80.11	14.11	0.21
Medium	284	216.66	38.17	0..76
Large	78	270.90	47.72	3.47
Total	746	567.67	100	0.76

Cost of cultivation

Under the Cost A ie; paid out cost actually incurred by the cultivators 45.72 percent of cost incurred against hired human labour is the highest. Machine labour cost shares 12.70% and farmyard manure and chemical fertilizers accounts to 11.12% respectively. In holdings size class less than 0.40 hectare, cost under hired human labour is more, ie, 52.69% against total cost under Cost A while in size class above two hectares, the cost percentage under hired human labour is coming down to 48..45%. Similarly per hectare cost difference between large and small size class is Rs 15374/-.

Cost of cultivation of Autumn Paddy per hectare (in Rs.) - during 2015-2016, 2016-17 and 2017-18

The last three years data shows a slight fluctuation in cost of paddy cultivation in the state. Cost A per hectre of Autumn Paddy in 2017-18 is increased by Rs 4551 as compared to cost in 2016-17.

Cost of Production of Paddy per quintal

Cost of production of paddy per quintal is estimated by dividing the cost of cultivation per hectare (after deducting the value of by-product per hectare from the cost of cultivation per hectare) by the quantity of paddy produced per hectare. The survey results show that during 2017-18 for producing one quintal of paddy Rs.1866/- has been expended by the farmer when Cost 'A' is considered. Details are given below:

2.1.2 Paddy-Winter (Mundakan) during 2017-18

During 2017-18, cost of cultivation study on winter paddy was conducted in 867 holdings according the size class by covering 822.94 hectare of land. The average area per holding during the season under study is 0.95 hectare. In winter season area per holding in large size class is 3.86 hectare and in small size class it is only 0.22 hectare, area per holding is increased slightly when compared to autumn season.

Table 7: Area and number of holdings under Winter Paddy

Holding size class	No of selected holdings	Area under the crop in the sample (ha)	Percentage Area	Area per holding (ha)

Cost of Cultivation

In Cost A, the paid out cost actually incurred by the cultivator, the major share of the cost component is hired human labour. It constitutes 42.30% per cent. Another two major contributing factor in cost are machine labour and other expences which constitutes 14.75% and 16.86 % respectively. Farmyard manure and chemical fertilizers accounts are 11.28 %. By considering the various cost component of winter- paddy cultivation of total Cost A, it can be seen that per hectare cost for cultivating paddy is Rs.61663/- . Considerable variation in hired human labour component is reported in winter season during 2017-18 when small and large size classes are compared. Cost difference in human hired labour between small and large size class is Rs 15223/-.

Percentage Distribution of “COST A” per hectare of Winter Paddy during 2017-2018

Sex wise work participation in hired human labours for winter paddy cultivation reveals that 42.94% of work shared by Female whereas 34.98% shared by male workers.

The following table reveals the percentage of hired human labours hours to total human labour hours.

2.1.3 Paddy - Summer (Puncha) during 2017-18

For the cost of cultivation study on summer paddy during 2017-18 the total number of holdings selected was 663. Number of holdings selected in large holding size is 89. The details of these holdings are presented below:

Table 13: Area and number of holdings under Summer Paddy

Holding size class	No of selected holdings	Area under the crop in the sample (ha)	Percentage	Area per holding (ha)

Large	89	468.82	60.28	5.27
All Size	663	777.72	100	1.17

The above table reveals that the total area under cultivation in the selected sample holdings covers to 777.72 hectares and the average size of a holding is 1.17 hectare. In the large size class the average area per holding is 5.27 hectare where as in small size class area per holding is 0.22 hectare only.

Cost of Cultivation

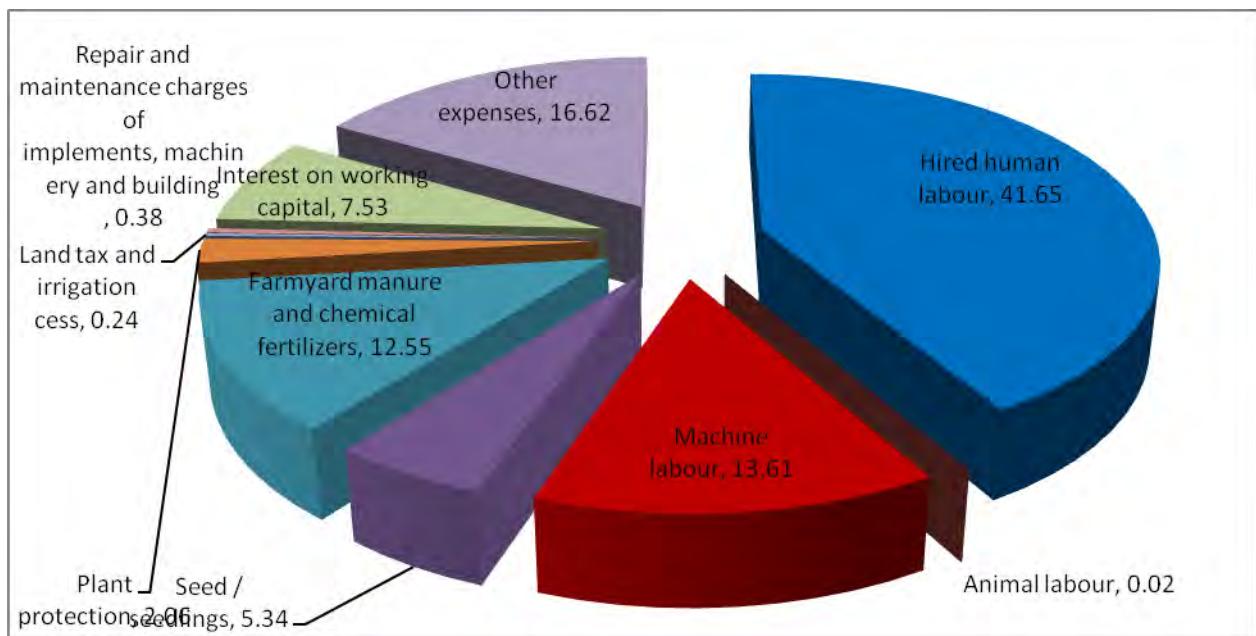

Cost of cultivation of summer paddy per hectare is estimated as Rs.57200/- when cost ‘A’ is considered. Component wise holding size class details are presented below:

Out of the total cost incurred for crop husbandry more than 41.65 percent cost goes to human labour component. Similarly compare to winter seasons a slight decrease in total cost A during the summer season is reported.

Percentage Distribution of “COST A” per hectare of Summer Paddy during 2017-18

In summer paddy cultivation hired female labour participation accounted as 44.20 % and that of male labour participation is 35.85% to the total labour hours. Details are given below:

2.2 Coconut during 2017-18

The area as well as production of coconut in the state has been declining. The data regarding the cost of cultivation of Coconut is significant. As there is a general feeling among the cultivators that the profitability of the crop is decreasing due to the prevalence of high cost involved in the cultivation. To conduct the study, 1220 sample holdings selected in the state from the different holdings size classes, the average area per holding is 0.42 hectare. Details of the study conducted during 2017-18 are presented below.

Cost of Cultivation

Cost per hectare for cultivating coconut during 2017-18 was Rs 68434/- excluding interest on fixed capital, land value and value of household labour. Out of this 61.62% of total cost is for the component of hired human labour and 22.18 % for farmyard manure and chemical fertilizer.

2.3 Arecanut during 2017-18

Arecanut is one among the cash crops cultivating in the state. Similar to some other crops the area of this crop is shrinking on varied reason especially the cost of cultivation. For this study 1215 sample holding were selected under three holdings size classes namely small, medium and large. The average area per holding was 0.14 hectare and the total area under the crop in the sample was 173.27 hectare.

Table 24: Area and Number of holdings under Arecanut cultivation

Cost of Cultivation

The different cost components of Arecanut cultivation is given below: Per hectare cost expenses is worked out as Rs.84897/- excluding interest on fixed capital, interest on land value and household labour components. Out of this 52.80 % cost is for hired human labour and 31.33% for farmyard manure and chemical fertilizers.

Cost of Cultivation

When Cost A is considered, per hectare cost of cultivation of tapioca is worked out as Rs. 103061/- . In this cost A, hired human labour cost constituted 51.78 % where as farmyard manure and chemical fertilizers shares 20.31%. Interest on working capital 8.12% and other expenses contribute 9.90%.. The cost of cultivation of Tapioca under different concepts is given below.

The value of output for medium holding size class has slight variation. The value of output per hectre of Tapioca is estimated as Rs.287490/- where as the cost of cultivation per hectre, the paid out cost actually increased by the cultivators is only Rs.103061/-.

2.5 Banana during 2017-18

To study the cost of cultivation on banana 880 sample holdings were selected by covering an area of 250.43 hectares under three different holding size classes with an average area per holding of 0.28 hectare.

As in the case of other crops, cost of cultivation of banana is also calculated at different cost concepts such as cost ‘A’, Cost ‘B1’, ‘Cost ‘B’ and Cost ‘C’. When Cost A is considered, cost of cultivation per hectare is Rs 186081/- Out of this 39.55% cost involved in hired human labour component, 21.79% cost for farmyard manure and chemical fertilizers and Seed/Seedlings constitute 13.34 % and other expenses shares 14.45%.

Percentage Distribution of “COST A” per hectare of Banana during 2017-18

In Banana cultivation male participation (57.03%) is higher than that of female (8.48%). The percentage distributions are as follows.

Cost of Cultivation

In Cost A, the major share of the cost component was hired human labour. It constitutes 45.10% and farmyard manure and chemical fertilizers which accounted 16.67% respectively. Interest on working capital was 6.89%. The share of other expenses contributes 22.58%. By considering the various cost component of Cowpea (winter) cultivation per hectare cost calculated as Rs.126257/-.

Large	3	2.83	6.11	0.94
Total	450	46.32	100	0.10

The total area under cultivation in the selected sample holdings covers to 46.32 hectares and the average size of a holding is 0.10 hectare.

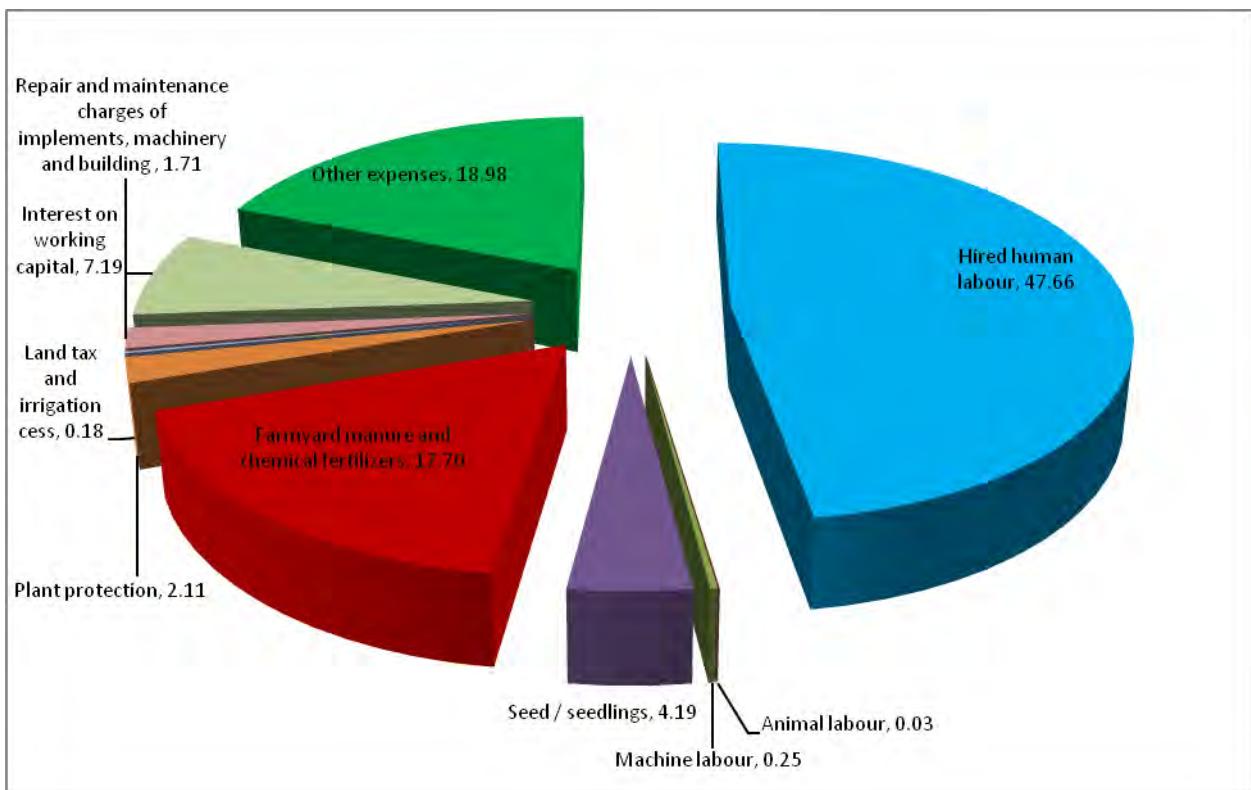

Cost of Cultivation

Cost of cultivation of Cowpea (summer) per hectare is estimated as Rs.122157/- when cost 'A' is considered. Cost incurred for hired human labour is 47.66% of the total cost and farmyard manure and chemical fertilizer is 17.70% of the total cost, but the other expenses share is 18.98%

Percentage Distribution of “COST A” per hectare of Cardamom during 2017-18

When Cost A is considering, 49.93% comes under hired human labour and 23.50% in Farmyard manure and chemical fertilizers.

The following table illustrates the work participation of cardamom cultivation. It shows that percentage of hired human labour hours of females is very high and it is accounted as 52.55%.
