GOVERNMENT OF KERALA

PADDY CULTIVATION IN KERALA

(1995-96 TO 2004-05)

Department of Economics & Statistics
Thiruvananthapuram
October-2006

PREFACE

This is the first attempt by the department to prepare an analytical and comparative report on the area and production of paddy for the last ten years (1995-96 to 2004-05) The district wise and seasonal details of paddy grown area, production and productivity are furnished in this report

The department has recently released an analytical report on the area, production and productivity of various important crops grown in the state for the past twenty years and that has been well received by the users. Encouraged by this, the EARAS division of the Directorate has made this attempt. Sri.T.P.Govindan kutty (Assistant Director), Sri.A.P.Shojan and Sri.S.Anirudhan (Research Officers), Sri. N.Gopinathan Nair (Research Assistant), Sri. Aniyar Thomas and Sri. K.K.Sasi (U.D.Compilers) with the support of computer division under the guidance of Sri.S.Rajendran-Joint Director have made earnest efforts to prepare this report.

The efforts made by the team of officials of the EARAS division are definitely appreciable. I hope that this analytical report will be of immense use to those engaged and interested in agricultural sector and to Planners, Research Scholars etc.

Suggestions for improvement of the book are most welcome.

Thiruvananthapuram,

17-10-2006

M.R.BALAKRISHNAN

DIRECTOR

COMPARATIVE STUDY OF PADDYCULTIVATION IN KERALA

(1995-96 w.r.t. 2004-05)

CONTENTS

Section	Subject	Page Number
I	Trend analysis of paddy cultivation in Kerala	- 1 to 4
II.	Comparative study of paddy cultivation in Kerala	- 5 to 42
III	Area details – High Yield Variety (HYV), Local, Irrigated, Unirrigated	- 43 to 69
IV	Production details – High Yield Variety (HYV), Local, Irrigated, Unirrigated	- 70 to 96
V.	Productivity details – High Yield Variety (HYV), Local, Irrigated, Unirrigated	- 97 to 123
VI.	Graphical representation of Area, Production & Productivity	- 124 to 167

TREND ANALYSIS OF PADDY CULTIVATION IN KERALA

Agricultural crops in the state are broadly divided into two classes- Food and Non-Food crops. The ratio of food crop area to non-food crop area in the state in 1968-69 was 64:36. But in 1995-96 the ratio was 47:53 and in 2004-05 it was 44: 56. The main food crop in Kerala is rice. The area under Paddy during 1967-68 was 48% of the total food crop area. But in 1995-96 it was 15% and in 2004-05 it was 10%. The area under paddy in different seasons in the state during the years 1995-96 and 2004-05 is narrated below.

During the span of ten years (i.e. from 1995-96 to 2004-05), the state witnessed a decrease of 44%, 34%, and 40% in paddy field area in Autumn, winter, Summer seasons respectively. In general there is an overall decrease of 38.5% paddy grown area. The districts which record major decrease of paddy field area in Autumn season are Pathanamthitta (70%), Thiruvananthapuram (69%), Kozhikode (68%), Malappuram (65%). The paddy grown area showed the least decrease (20%) in Palakkad district, which is the largest paddy growing district of the state. The districts which showed drastic decrease of winter paddy are Thiruvananthapuram (69%), Kollam (59%), Pathanamthitta (53%) and Malappuram (50%). As in Autumn, Palakkad district showed minimum fall in area of paddy in winter (11%). Ernakulam and Palakkad districts had recorded considerable decrease in summer paddy area. The decrease in paddy area is 62% in Ernakulam and 89% in Palakkad.

As said earlier, Palakkad district occupied the first place in Autumn paddy area in the state during the years 1995-96 (36%) and 2004-05 (53%). The percentage distribution of Autumn paddy area in few other districts in the state is Ernakulam (11%), Thrissur (11%) & Kozhikode (1%) during the year 1995-96. In 2004-05 it was 10% in Ernakulam, 9% in Thrissur and very negligible % in Kozhikode. There is no Autumn paddy cultivation in Wayanad district.

Out of the total area of paddy field in winter season in the state during the period 1995-96, Palakkad, Thrissur, Ernakulam, Alappuzha and Malappuram districts recorded 27%, 13%, 10%, 9% and 9% respectively. After ten years the winter paddy area

was changed by 38% in Palakkad, 12% in Thrissur, 8% in Ernakulam, 9% in Alappuzha and 7% in Malappuram districts.

High Yielding and Local Variety

It is found that in Autumn season of 1995-96, the area under HYV paddy was 38% and Local Variety was 62%. But during the year 2004-05 its ratio was 93:7. Similarly in Winter season it changed from 23% to 78% and in Summer it changed from 69% to 99%. In autumn season of 1995-96, the area coverage of HYV paddy in Kozhikode, Palakkad and Malappuram was 34%, 12% and 32% respectively. It is seen that the coverage of HYV's during 2004-05 (Winter season) in Kottayam and Alappuzha is 98% & 96% respectively while in Kozhikode it is only 16%.

Awareness programmes to enlighten the farmers to use high yielding varieties of seeds have to be arranged for the cultivators so as to make paddy cultivation a profitable and remunerative activity. Due to the lack of awareness about modern high yielding seeds and other inputs of cultivation, a good percentage of farmers still resort to conventional cultivation practices. This results in low productivity, production and thereby low income. This to a certain extent detracts the farmers from paddy cultivation

Irrigation

During the year 1995-96 the ratio of irrigated and un-irrigated paddy area was 50:50. The ratio of irrigated Paddy area to un-irrigated paddy area in the state during 2004-05 is 63:37. District-wise details are given. In Autumn season during the year 2004-05, irrigated area was very high in Alappuzha(92%) and Kottayam(90%) districts. But it was very negligible in Pathanamthitta, Thrissur, Malappuram, Kozhikode, Kannur, Kasaragode and Kollam districts. In winter season of the year 100% irrigation was recorded in Thrissur, Ernakulam, Kottayam, and Pathanamthitta. But irrigated winter paddy area during the year in Kozhikode district was only 30%.

Production

The total rice production during the year 2004-05 was estimated as 6.67 lakh tonnes as against 13.39 lakh tonnes during 1981-82. This shows a decreasing trend in the production of rice over the years. Thus within 23 years, there is a decrease of nearly 6.72 lakh tonnes rice i.e. a decrease of more than 50%. From the table, it is seen that Palakkad

is the chief rice producing district and accounts for 39% of the total rice poroduction in the state. Thrissur and Alapuzha are the other major rice producing districts of the state. In the case of rice production (Autumn), Palakkad district has increased its contribution from 41% to 52% in 2004-05 when compared to the year 1995-96 But the share of production(Autumn) trend of other districts is negative(Except Alappuzha & Kasaragode).In 2004-05 winter season Thiruvananthapuram, Alappuzha and Kollam district showed a 50% decline in rice production and Kottayam district marked the least decrease, only 4%.In 2004-05, winter season Palakkad district contributed 40% of total production and followed by Thrissur (12%) and Alappuzha (10%). In summer rice production, Alappuzha occupies first position i.e.32% while Palakkad produced only 1% of the total production in the state. Out of the three seasons, winter paddy, production is comparatively high in the state.

Productivity

The yield per hectare was highest in Alappuzha (4386kg) followed by Kottayam (4369Kg) in Autumn season. In Winter season the productivity of paddy in the state ranged between 2078Kg (Kozhikode) and 3890Kg (Idukki) per hectare. But the state average was 3430Kg/Hct. The yield rate per hectare was less than the state average in districts Kollam, Eranakulam, Malappuram, Kozhikode, Kannur and Kasaragode. Rice productivity in Alappuzha district during winter season (1995-96) was 4527 Kg/hect while the productivity during the same season in 2004-05 is 3581Kg/hect The productivity of paddy in the state during the last 10 years, increased from 2807Kg/Hct to 3494Kg/Hct, 3104Kg/Hct to 3430Kg/Hcts in Autumn and winter seasons respectively and it decreased from 3835g/Hct to 3823Kg/Hct in Summer season.

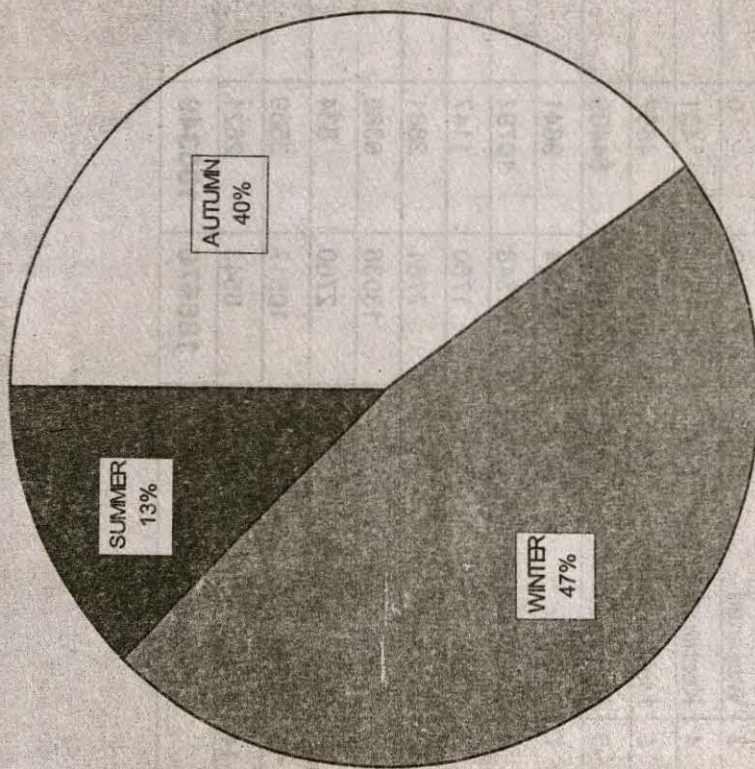

The state produces only around 6.67lakh tones of rice i.e. One fifth (1/5) of its annual requirement of estimated 30 lakh tonnes. Kerala depends on other states for its rice requirement. The paddy fields are being reclaimed for non-agricultural purposes and which reduces the rice production in the state. The state Govt. and other local self Govts aim to sustain paddy cultivation and to push up the average productivity to more than 5 tonnes per hectare. Additional infrastructure and better management of land and water resources on the basis of systems approach have to be encouraged. The tendency of conversion of paddy fields to non-paddy or non-agricultural purposes has to be discouraged by adopting various measures. State Govt. or local self Govts have to

identify areas where paddy cultivation can be carried out profitably and to proclaim these areas for exclusive paddy production areas and to encourage the farmers by giving necessary helps so that paddy production can be increased to a very good extent . These paddy sown areas should include Pokkali lands, Kari, Kayal and Karapadam land of Kuttanad and Kole lands in Thrissur and other suitable areas for paddy production in the districts. Programmes aim to reduce cost of cultivation, increase production; productivity and marketing facilities for making paddy cultivation profitable have to be chalked out sincerely by all concerned. . Reclamation of paddy field should be totally banned and the ban order has to be stringently executed.
