## **SECTION I**

### **Introduction**

The population of India consists of a large number of groups based on religion, faith, culture, occupation etc., with much social and economic disparities. In order to bridge the disparities between the different group of people and to assure the weaker sections, social and economic independence, the Constitution of India has provided certain safeguards for Scheduled Castes/Tribes and other Backward Classes. One of the safeguards provided for is, reservation of appointments for these classes in Government Service.

As the list of Backward Castes/Communities in respect of Kerala State was prepared some time back, the Honourable High Court of Kerala by a recent order directed that a fresh list of Backward Classes standing in need of reservation in Government service should be prepared, after assessing the present condition of the classes. Accordingly a Commission was appointed by the State Government to enquire into condition of the various classes and to suggest the classes of people for which reservation should be made in the State Service and also the quantum of reservation for those classes.

As up-to-date data on the conditions of the different classes of people in the State were not available the Commission suggested that a sample survey on the social and economic conditions of the different classes should be conducted by the Bureau of Economics and Statistics. In G.O. (Rt) 19/68/PD dated 19-3-1968, the Government sanctioned a scheme for the conduct of a sample survey on the conditions of the classes in the State covering about 50,000 households.

## **SECTION II**

### **Technical details**

#### *Object of the Survey.*

The object of the survey was to obtain data on Castes/Communities in respect of their size, income, demographic particulars, education, employment housing and other related characteristics.

#### *Coverage.*

The survey covered the entire State.

*Period of the Survey.*

The field work of the Survey was conducted during the period from May to October 1968.

*Sampling Design.*

A stratified two-stage systematic sampling design was used for the survey. For stratification, the entire State was divided into 20 strata. The Panchayat and Municipal areas in each District formed separate strata. The Municipal Corporations of Trivandrum and Kozhikode formed two independent Strata.

Within each stratum, Panchayat/Municipal wards were the first stage sampling units. In the case of Trivandrum Corporation and double member wards in the Panchayats/Municipalities which were considerably large, each ward was divided into two equal units for sampling. The double member wards in Trivandrum Corporation were considered as four units. The households in the selected wards formed the second stage sampling units.

*Sample size.*

A 12.5% sample consisting of 1049 Panchayats/Municipal/Corporation sampling units were selected for the survey.

Within the selected sampling units, all the households with their cast or community and household size by sex were listed. The number of households thus listed in the first stage sampling units was 395745 and the number of persons listed in these households were 2454187 of which 1211133 were males 1243054 females. This sample covering about 12.5% of the total population in the State was used for preparing the community-wise population estimates.

From the households listed in the selected wards a 10% sample of households subject to a minimum of 3 in each caste/community was selected for detailed enumeration.

The number of second stage sampling units selected was 57315 household covering 347027 persons of which 173046 were males and 173981 were females.

*Items of information collected.*

The following items of information were collected from the Households:

- (1) Households characteristics
- (2) Housing particulars
- (3) Demographic and employment details of households members
- (4) Income and expenditure of households
- (5) Durable consumer goods possessed by Households.

*Method of collection of data.*

The Investigators appointed for the purpose visited the households and collected the required information.

*Staff.*

The enumeration was done by 150 Investigators under the supervision of the Statistical Inspectors/Research Assistants in the Districts. The District Statistical Officer was in charge of the field work in the District. Three Regional Supervisors were in overall charge of the field operations, each having charge over 3 Districts.

During the first six months, when the field work was in progress, the following staff were in position at the Headquarters:

Assistant Director	..	1
Research Officers	..	2
Research Assistants	..	2
Peons	..	2

The tabulation work was done by 40 Compilers under the supervision of 3 Research Assistants, 3 Research Officers and the Assistant Director in a period of about four months.

The Deputy Director (Planning and Co-ordination) was in overall charge of the survey, under the Director, Bureau of Economics and Statistics.

*Cost.*

The total expenditure for the survey was about Rs. 2,673 lakhs.

### SECTION III

#### Findings

*Castes/Communities and their size.*

For the purpose of the survey, a household was considered to belong to a particular caste/community to which the majority of its members belong. If the members of the household are equally divided between different castes/communities the caste/community of the head of the household was taken as the caste or community of the household.

The enumeration of castes/communities was mainly based on the list of castes/communities supplied by the Backward Classes Reservation Commission which is given in Part II.\* During the course of survey, 199 castes/communities came up for enumeration out of which 45 were Scheduled

Castes and 20 were Scheduled Tribes. Some of the Communities enumerated were Scheduled Caste/Scheduled Tribes only in certain specified areas. The number of such communities enumerated outside their specified areas was 22.

The size of each caste/community with its estimated population according to sex is given in Part II Tables. The estimated total population in the State was 200.93 lakhs of which 99.15 lakhs were males and 101.78 lakhs females. An analytical study reveals that 72 castes/communities are very small having only less than 10000 persons.

Ezhavas, Muslims, Nair, Syrian Catholics, Scheduled Castes, Jacobites, Kammalas, Latin Catholics and Marthomites are the major castes/communities in the State. The population of these communities carries from 44.57 lakhs for Ezhavas to 3.17 lakhs for Marthomites.

The table below gives the list of communities falling within each size group, the total population of the group and their respective percentages.

### Households and their sizes

A household was defined as a group of persons normally living together and taking meals from a common kitchen and forming a separate economic unit. Students staying away from their houses and belonging to the same economic unit were treated as members at their original homes. But, domestic

servants staying with the households were not considered as household members as they belonged to separate economic units at their homes. Persons usually staying in Hotels and other boarding houses and forming separate economic units were not considered as household members at their homes.

The total number of households in the State during the period of the survey was found to be 32.39 lakhs, giving an average size of 6.20. The sex composition of the average household size was found to be 3.06 males and 3.14 females. Table (II) of Part II gives the average household size of the different caste/community.

The distribution of households in the State according to their size shows that about 60% of them were having 6 or less persons. Nearly 6% of the households were found to be having more than 10 members.

TABLE 2

**Percentage distribution of households in the  
State according to size**

<i>Household size</i>	<i>Percentage</i>

*Land owned by the Households:*

A person was considered to be owning a piece of land if he had a permanent heritable occupancy right over that land. The total of the lands owned by individual members of the household was considered as the land owned by the household.

The distribution of households according to the extent of land owned by them shows that about one third of them were not owning any land. About 20% of the households were owning land of size above one acre. Only 0.80% of the households were found to be owning lands above 10 acres.

TABLE 4  
Distribution of Households according to land owned

<i>Sl.No.</i>	<i>Size of land owned (in cents)</i>	<i>Percentage</i>
1	No land	32.80
2	1—5	4.52

### Land Possessed

The land possessed by all the members of the household as on the date of the survey was taken into consideration for this purpose.

The distribution of households possessing land shows that only about 19% of them do not possess any land. Below one per cent were possessing above 10 acres. About 75% of the households were found to be possessing land below one acre.

TABLE 6

#### Percentage distribution of households according to land possessed

<i>Sl.No.</i>	<i>Land possessed (in cents)</i>	<i>Percentage of the persons</i>
1	No land	18.99

### ANNUAL INCOME OF HOUSEHOLDS

The income of all persons of the households from various sources was considered for this purpose.

The income distribution reveals that about 0.50 per cent of the households were getting income below Rs. 300 annually. Only less than one percent were found to be in the group above Rs. 10,000 also. Households getting above Rs. 15,000 annually were above one fourth per cent. Nearly two thirds of the households were getting an annual income of Rs. 2,000 or less.

TABLE 8

## PERCAPITA MONTHLY INCOME OF HOUSEHOLDS

Percapita monthly income of a household was arrived at by dividing the total annual income of the household by the number of members of the household, and also by twelve. The percapita income may perhaps bring out the differences between large and small households and reveal the actual share of income for each member of the household.

About three-fourth per cent of the households were having monthly per capita income below Rs. 5. Nearly 1/4 per cent were having percapita income above Rs. 300. About 50% were having income between Rs. 11 and 25. The total percentage of households with monthly percapita income below Rs. 25 was about 59.

TABLE 10

SIZE OF DWELLING HOUSES ACCORDING  
TO NUMBER OF ROOMS

The number of rooms occupied by the households was studied. Kitchens and covered verandahs used for dwelling purposes were counted as rooms. But latrines and attached bath rooms were not counted.

Households staying in large houses with 10 or more rooms were about 1.25%. Nearly 62% of the households were living in houses with rooms below three.

## CONCLUSION

The survey has thrown out useful and up-to-date Statistics on the important characteristics of the various castes/communities in the State. It has also brought out valuable information on Socio-Economic characteristics for the State as a whole.

In the above analysis of the characteristics, only these castes/communities whose estimate population was above 10,000 were considered. The estimates for the smaller groups for which sufficient number of households did not occur in the sample, may not be fully reliable, as they are subject to high degree od sampling fluctuations.
