**STATE DOMESTIC PRODUCTS
NEW SERIES FROM 1999-00 TO 2006-07 (MODIFIED)**

WITH BASE YEAR 1999-2000

DEPARTMENT OF ECONOMICS AND STATISTICS
THIRUVANANTHAPURAM-2007.

P R E F A C E

The State Domestic Product is estimated annually by the Department of Economics and Statistics based on the guidelines, methodology and definitions prescribed by the Central Statistical Organisation in conformity with the U. N. System of National Accounts. The State Domestic Product thus prepared by the Department is invariably reconciled with the figures prepared by the Central Statistical Organisation before publication.

This publication presents the estimates of new series Gross State Domestic Product (GSDP), Net State Domestic Product and Percapita Income for the years from 1999-00 to 2006-07, both at Current and Constant (1999-00) prices. The estimates prepared separately for all sectors are prescribed in the tables given in this issue.

District-wise breakup of the series of GSDP & NSDP and Percapita Income at Current and Constant (1999-00) prices for the period from 1999-00 to 2006-07 are also presented in this publication.

The series of State Domestic Products from 1999-00 have been modified according to the revised rates provided by Central Statistical Organisation, Government of India.

Thiruvananthapuram,
6-12-2007.

M. R. BALALAKRISHNAN,
Director.

STATE INCOME ESTIMATION-STATE DOMESTIC PRODUCT ESTIMATION- BASE YEAR 1999-00

Population & Planning

The most fundamental needs of planning of any country are population and resources. The main methodology of planning is the distribution of available resources to the present population. The second phase is maximize resources and control population.

State Income

The development of official estimates of national income and related aggregates to meet the requirements for planning and policy purposes began after Independence. Recognizing the need for providing estimates of national income on a regular basis, Government of India set up a High Powered Expert Committee in 1949 known as 'National Income Committee' under the Chairmanship of Prof. P.C. Mahalanobis. This Committee provided the estimates of national income for the entire Indian Union for the first time. The estimates of national income and details of methodology adopted by the Committee were published in the First and Final reports of the National Income Committee brought out in April 1951 and February 1954 respectively. In accordance with the methodology and the pattern of presentation recommended by the National Income Committee, the first official estimates of national income were prepared by the Central Statistical Organisation (CSO) with base year 1948-49. These estimates at constant (1948-49) prices along with the corresponding estimates at current prices and the accounts of the Public Authorities were published in the publication, 'Estimates of National Income in 1956'.

State income by definition is a measurement in monetary terms of all the commodities (goods and services) that an economy produces without duplication within a given period of time, generally a year. The goods cover all possible items like agricultural crops, livestock products, fish, forest products, manufacture of textiles, petroleum, steel, buildings, roads constructed etc. Services similarly cover medical and educational services, domestic services, hotels, restaurants, trade and public services etc. The measurement of state income clearly is in value terms as different units of production and different measures of services are not directly additive. It is ensured that the measurement of total value of products is counted without duplication while measuring the total.

The income of a state can be measured in three alternative ways, viz., production, income generation and final utilisation. The state income begins at the production stage, where the productive units engage capital and labour and turn out goods and services, the total measure of which gives the state product. This production process generates a given amount of money income, which is distributed by the productive units to the two factors of production, viz., labour and capital. The measures of state income in this phase indicate the share of state product distributed to the two factor shares. The income thus received by the factors of production are spent for acquisition of goods and services for consumption, or by the producers in acquiring more capital goods and increasing the physical assets of their productive units. The state income by definition is the same whether measured at the point of production or at the point of income generation or at the point of final utilisation. The state income can thus be measured in any one of these alternative approaches but if a complete analysis of the economy is the object, then it should be measured by all the three different approaches simultaneously.

For measurement of state income at the point of production or for measuring state product, it is important to remember that the value added by production is to be counted without duplication, i.e. not the total value of commodities and services produced over a given period of time, but only the value of final products, excluding the value of inputs of all raw materials and services used in the process of production, i.e., excluding intermediate consumption. At the same time, the coverage of the outputs should be comprehensive enough to include all goods and services even to the extent of including imputed value of products for own consumption or the imputed rent of owner occupied houses. The method followed for this purpose is to divide the economy into a given set of industrial sectors and to estimate the total value of outputs within each sector as well as the total value of inputs of raw materials and services used for production and then estimate the value added by the sectors as the total value of output minus the value of inputs used as intermediate consumption.

Factor Cost And Market Prices

Production and the income approach measures domestic product at the cost paid to the factor of production and known as domestic product at factor cost. But at the expenditure, value of the product is at market prices, i.e. at the actual prices which, either the consumers or the producers, pay for purchase of goods and services, whether for consumption or for capital formation. This measurement of domestic product through the expenditure side is known as domestic expenditure at market prices. This market value of the final expenditure would exceed the total obtained at factor cost by the amount of indirect taxes levied by the government less the value of subsidies given by the government to producers. The domestic product can, therefore, be measured either at factor cost or at market prices, one differing from the other by the amount of net indirect taxes (i.e. indirect taxes less subsidies).

It will be seen that indirect taxes add to the prices paid by the consumers/producers while the subsidies have the opposite effect. It is for this reason that the measurement at market price is obtained after adjustment for net indirect taxes.

Gross & Net Products

There is some wear and tear to the capital goods used in the production process resulting in a reduction in their economic life. This measurement of wear and tear is known as consumption of fixed capital. The estimate of value added without any adjustment of consumption of fixed capital is termed as gross value added. When an adjustment is made for this wear and tear, the resultant aggregate is known as net value. Strictly speaking, the consumption of fixed capital is the value at current replacement cost of the capital goods used up during a period of account as a result of normal wear and tear, foreseen obsolescence and the normal rate of accidental damage.

Current & Constant Prices

State income regardless of the concept used is obviously measured at prices prevailing during the year or in other words at current prices. When calculated over a number of years the changes in state income would, therefore, include implicitly not only the effect of changes in the quantum of production over the period but also changes due to the changes in prices. Thus estimates compared over period would not give a proper measure of the overall real increase in production of the country or the economic welfare of the people or growth of the economy. Therefore, it would be necessary to eliminate the effect of prices, or to recompute the whole series at given prices of one particular base year. State income thus computed, is termed as state domestic product at constant prices. This gives a measure of the growth of the economy. When available by industry of origin, these estimates give a measure of the structural changes in the pattern of production in the country, which is vital for a proper economic analysis.

Classification of Economy

The UN/CSO classified the entire economic activities into the following sectors and sub sectors and items,

Primary Sector—Agriculture (Agriculture proper and Livestock), Forestry and Fishing, Mining and Quarrying.

Secondary Sector—Manufacturing (Registered and Unregistered), Electricity, Gas and Water supply, Construction.

Tertiary sector—Transport, Storage and communication, Trade, Hotels and Restaurants, Banking and Insurance, Real Estate, Ownership of Dwelling and Business, Public Administration and Defence, Other Services.

Base Year

To capture the Structural Changes in the Economy, to incorporate results of long term Surveys (as they are not included in between), to incorporate latest International standards, to make methodological improvements, to realistically measure the real Growth in the Economy, we change the Base Year time to time. Present Base Year is 1999-00.

Brief Methodology of compiling the National Accounts Statistics

Nations System of National Accounts, (SNA) 1968 and 1993. The Central Statistical Organisation (CSO) of the Ministry of Statistics and Programme Implementation (MOSPI) compiles annual estimates of GDP following a documented methodology, which is consistent with the United

For estimating the Gross Domestic Product (GDP), the whole economy is broadly divided into various sectors comprising primary; secondary and tertiary activities. The estimates of GDP in respect of agriculture, forestry and logging, fishing, mining and quarrying, registered manufacturing (establishments registered under Factories Act/workers Act) and construction is based on production approach. In other sectors viz.: un-registered manufacturing (factory establishments not registered under Factories Act/workers Act), electricity, gas and water supply, trade, hotels and restaurants, transport, storage, communication, banking and insurance, real estate, ownership of dwellings, business services, public administration and Defence and other services, the GDP is estimated following the income approach. The estimates of various services in the public sector are compiled by analysing the budget documents and annual reports of departmental and non-departmental commercial undertakings, those of organised (registered) manufacturing sector are made using the data from Annual Survey of Industries, the estimates relating to the unorganised sectors in various economic activities are compiled using the data on per worker value added available from the results of follow-up surveys of the Economic Census and the labour force in the activity. Generally, for unorganised sectors estimate of GDP is compiled for the base year and estimates of subsequent years are obtained by moving the base year estimate with the help of appropriate physical indicators. Detailed methodology of compilation of national accounts statistics and data sources used are given in the CSO publications (a) National Accounts Statistics-Sources and Methods, 1989 and (b) New Series on National Accounts Statistics (base year 1999-2000), 2006.

Agriculture and allied activities

The agriculture sector includes agriculture proper, livestock and operation of irrigation system. The agriculture proper includes various crops including plantation crops, agricultural and horticultural services and ancillary activities etc. The livestock sector covers breeding and rearing of animals and poultry, production of milk, slaughtering, preparation of meat, production of raw hides and skins, eggs, dung, honey and increment in livestock. The estimates of domestic product from these activities are prepared using the production approach, except in the case of operation of irrigation system, which is compiled from the government records. The production approach requires estimation of gross value of output and value of inputs.

In respect of the sub-sector agriculture proper, the estimates of value of output are prepared separately for all the crops under consideration. These crops are divided into four categories, namely, principal crops, minor crops, miscellaneous, and unspecified crops and other products and by-products. The estimates of value of output for the principal crops are prepared using the production and price data made available by the Directorate of Economics and Statistics; the prices relating to the peak marketing period prevailing in the primary market centers compiled by the Directorate of Economics and Statistics. The source for production figures of other minor crops, coffee, rubber and opium are the Coffee Board, Rubber Board and Central Bureau of Narcotics, respectively. Utilising the information on processed tea received from the Tea Board arrives at the estimated production of tea. The miscellaneous and unspecified crops cover other cereals, other oil seeds, other sugars, other fibers, other dyes and tanning material, other drugs and narcotics, other condiments and spices, other fruits and vegetables, fodder, miscellaneous food crops, grass and miscellaneous non-food crops. The products and by-products include stalks and straw, arhar, sesamum, jute and cotton sticks, bagasse and cane trash

The estimates of value of output for the livestock sector are prepared separately for the items, milk, meat group, eggs, wool and hair, dung, honey and increment in livestock. In the case of meat group, which comprises meat (including edible offals & glands and poultry meat), meat products (fats, legs, head, etc.) and by-products (hides, skins, guts, blood, bones, horns, hoofs, etc), the production is estimated with the help of yield rates and number of slaughtered animals, furnished by the State Animal Husbandry Departments. The estimates of other meat products and by-products are based on the number of slaughtered animals and fallen animals, wherever applicable, and the corresponding yield rates. The estimates of poultry meat are prepared in terms of number of adult fowls and chickens slaughtered using the information on utilisation of eggs and chickens survived. The estimates of dung are prepared using the results of Integrated Sample Survey (ISS) conducted by State Animal Husbandry Department. The utilisation rates of dung used as manure and

used as fuel are also supplied by the Department of AHD. The estimates of increment in livestock population are estimated by extrapolating the population figures available from the successive Indian Livestock Censuses.

In order to avoid double counting of value of product, the value of inputs, which are also outputs of some items, are deducted, to arrive at the gross value added (GVA). The inputs, generally being common to both livestock and agriculture sub-sectors, are estimated for the sector as a whole. Thus, GDP estimates are not separately available for the agriculture and livestock sub-sectors. The inputs of agriculture sector are divided into ten items, namely, seed, organic manure, chemical fertilisers, current repairs, maintenance of fixed assets and other operational costs, feed of livestock, irrigation charges, market charges, electricity, pesticides and insecticides and diesel oil. Adjustment is made towards the consumption of these items by the animals, which are not directly connected, to agriculture sector. The estimates of irrigation charges are based on the information available from the state irrigation departments.

Forestry and Logging

Major products comprise industrial wood and fuel wood. Minor products include items like bamboo, fodder, sandalwood, honey etc. The main source of data is Department of Forests. The total estimated consumption expenditure on fuel wood is taken as the proxy of value of output of fuel wood. The estimates of fuel wood consumption are based on large-scale quinquennial household consumer expenditure surveys conducted by the NSSO.

Fishing

The activities covered in this sector are (i) fishing in ocean, coastal, offshore and inland waters for commercial purposes, (ii) subsistence fishing in inland waters (iii) gathering of sea weeds, sea shells and other ocean and coastal water products and (iv) fish curing. Data on production, prices, and value of fish catch are supplied by the Fisheries Department.

Mining and Quarrying

This sector comprises extraction of minerals, which occur in nature as solids, liquids or gases with all supplementary operations for dressing and beneficiating ores, and other crude minerals. The major source of data for fuel minerals is the Indian Bureau of Mines (IBM).

Registered (Organised) Manufacturing

Manufacturing establishments registered under the Indian Factories/Bidi and Cigar Workers Act are included in this sector. Data on output and inputs in respect of this sector are collected under the Annual Survey of Industries (ASI). Industry-wise estimates are released by the CSO. The GDP for the registered manufacturing sector is prepared by following the production approach.

Unregistered (Un-organised) Manufacturing

The estimates of Gross Value Added (GVA) for this sector for the base year are obtained as a product of estimated working force and the GVA per worker available from the results of follow up surveys of Economic Census and Census of Small Scale Industries (SSI). For years other than survey year, the estimates are moved for current and constant price estimates with help of suitable price and the growth rates observed in the Index of Industrial Production (IIP) for each industry group.

Electricity

GDP at current prices is estimated by following the income approach. The estimates of factor incomes are obtained from the analysis of data contained in annual reports of the Kerala State Electricity Board and other part from CSO. Estimates of GDP at constant prices are obtained by moving forward the base year estimates with the index of total power generation.

Gas

Data sources utilised for the estimation of gas sector GVA are the accounts of the Gas Authority of India Ltd. Estimates in respect of gohar (organic) gas are compiled from the data supplied by Khadi and Village Industries Commission. Presently it is provided by CSO.

Water Supply

In the case of government (Kerala Water Authority) and municipal water supply undertakings net value added (NVA) is to be taken as compensation of employees. To get the GVA from KWA, the annual Financial Statements of KWA are used. Estimates of CFC worked out are added to obtain the estimates of GVA.

Construction

The estimates of basic material inputs in pucca construction works are compiled by adding together the value of commodities used for construction at prices paid by the builders at the site of construction following the commodity flow approach. The value of output in, kutchra construction in public sector and private

corporate sector is estimated from the data available in annual budget documents of the government and the annual reports of related firms. In the case of household sector the component of kutchha construction works is estimated from the All India Debt and Investment Survey (AIDIS) results. For other years, the estimates are moved forward with suitable indicators. For pucca construction, based on information available from Central Public Works Department, National Building Organisation and survey results, a fixed percentage of material inputs is taken as factor inputs i.e., GVA in the base year. For other years the value of material input is duly adjusted for wage and price indices. In the case of labour intensive kutchha construction works, 75 per cent of the value of output is taken as GVA. Deflating the current price GVA estimates by suitable price indices arrives at estimates at constant prices.

Trade, Hotels and Restaurants

Current price estimates of GVA in respect of public sector are based on annual budget documents and annual report of trading enterprises. In the case of private corporate sector and the co-operatives the estimates are based on sample studies undertaken by the Reserve Bank of India (RBI) and annual report of the National Bank for Agriculture and Rural Development (NABARD) respectively. For the remaining unorganised part of trading activity, estimates for the base year are based on the results of surveys conducted by the NSSO. For other years, estimates in respect of unorganised trade and hotels are compiled by extrapolating the base year estimates with the help of a specially compiled Gross Trading Index (GTI). The GTI is compiled for the commodity producing sectors and imports on the basis of value of output and commodity-wise marketable surplus ratios and trade margins, separately at current and constant prices.

Railways and Communication

The estimates are based on data available in the annual budget documents and the annual reports of Railways and Communication enterprises. Constant price estimates are arrived at by moving forward the base year estimates by suitable quantum indices. Presently the values are provided by CSO.

Transport other than Railways

For the organised public sector part, the estimates are based on annual data available from State Transport Commissioner and the budget documents & annual reports of KSRTC. For the unorganised part, the base year estimates are based on the results of the follow up surveys of Economic Census.

Storage

The estimates in respect of public sector are compiled from the data contained in the reports of the Central and State warehousing corporations. In respect of cold storage, estimates are based on ASI data and for other storage activities the estimates are based on follow up surveys of Economic Census duly adjusted with suitable indicator for the base year and other years. The constant price estimates are prepared by moving forward the base year estimates with help of quantum indices specially constructed for the purpose.

Banking and Insurance

Detailed data are available from the annual reports of the Reserve Bank of India, Non-banking financial companies and corporations and also the Life Insurance and General Insurance Corporations. In respect of post office savings banks and postal life insurance, data are available from the annual budget documents of the Central Government. Data in respect of co-operative credit societies are available from the NABARD. Estimates at constant price are arrived at by using suitable quantum indices in each case. Presently the values are provided by CSO

Real Estate, Ownership of Dwellings and Business Services

Estimates in respect of Real Estate and Business Services are based on the sample analysis of joint stock companies adjusted for full coverage on the basis of paid up capital of such companies. The estimates in respect of Ownership of Dwellings are based on the number of dwelling as per population census and gross rental per dwelling available from the NSSO survey results. Constant price estimates are worked out by moving forward the base year estimates with suitable quantum indices.

Public Administration and Defence

Annual estimates of NVA, which comprises only the compensation of employees, are compiled from the government budget documents. The CFC estimated separately is added to NVA to arrive at GVA estimates. Estimates of GVA at constant prices are compiled by deflating the current price NVA by consumer price indices (CPI) of Industrial Workers and adding to it the CFC at constant prices.

Other Services

Current prices estimates in respect of organised public sector part are based on data available in budget documents in respect of education, medical, radio and television broadcasting and sanitary services. For unorganised sector the estimates

are made on the basis of data on GVA per worker available from follow up surveys of Economic Census and working force. The estimates at constant prices in respect of public sector are arrived at by deflating the NVA at current prices by CPI and adding to it the CFC at constant prices and in the case of unorganised sector moving forward the base year estimates with the growth in working force of the corresponding services.

The components in this sector are Accounting and Book-keeping, Coaching Centers, Education (Excluding Coaching Centre), Renting of Machinery & Equipment without Operator, Personal / Household goods Computer and Related Activities, Tailoring Services, Funeral and Related Activities, Medical & Health Services, Human health, Veterinary Activities, Recreational, Cultural and Sporting Activities, Washing and Cleaning of Textile and Fur Products, Sanitary Services, Hair Dressing and Beauty Treatment.

Supra Regional Sectors

In the estimates of SDP certain activities transcend state boundaries, and thus their economic contribution cannot be assigned to any one state. Such activities viz Railways, Communications, Banking and Insurance are called Supra-Regional Sectors.

Capital Formation

The estimates of capital formation for the entire economy are based on commodity flow approach except the part of kutcha construction works. Estimates are based on current data in respect of outlays on new construction works, purchase of machinery and equipment and net addition to inventories. Data on expenditure on kutcha construction works are available from various budget documents in respect of public sector. In the case of household sector, estimates of the output of kutcha construction are based on AIDIS results.

In the case of private corporate sector the estimates are prepared on the basis of the results of sample companies published by RBI, duly adjusted by the data on paid up capital for all companies for full coverage. The estimates are prepared by type of assets as well as by type of institutions. Making use of almost the same sources of data, estimates are also prepared by industry of use. However, because of desegregation of data by various industrial sectors the estimates by industry by use as well as by type of assets and institutions generally do not tally. Therefore, the estimates of capital formation by industries are subsequently aligned on corporate basis with those of institutions. The estimates at constant prices are compiled with the help of suitable price indices as applicable for various assets, institutions as well as industry groups separately.
