

GOVERNMENT OF KERALA

**REPORT
ON THE
TIMELY REPORTING SURVEY
ON
AGRICULTURAL STATISTICS
KERALA**

1981-1982

**DEPARTMENT OF
ECONOMICS AND STATISTICS**

NOVEMBER 1984

PREFACE

This is the seventh report on the sample survey on area and production of crops conducted in Kerala under the scheme for Establishment of an Agency for Reporting Agricultural Statistics (EARAS). It relates to the first year of the second phase of the survey started in 1981-82. The first phase of the survey which was started in the year 1975-76 was completed in 1980-81. The scheme EARAS was first launched in the State during 1975-76 as a variant of the T.R.S. carried on in the reporting States of India. Ever since the survey is continued regularly as an annual survey covering the agricultural year unistage random sampling is being adopted as sampling design with the revenue village as the unit of selection and Taluk as stratum.

Details on land use, area under seasonal, perennial and annual crops, irrigation etc., were collected from 20 percent villages covering about 1/5th of the total area of the State and the estimates for the whole area are based in this sample. Crop estimation surveys were conducted on paddy, (autumn, winter and summer) tapioca, coconut, arecanut, cashew and pepper during the year 1981-82. Besides, crop estimation surveys were also done for the four minor crops viz. cardamom, pineapple, jowar and ragi.

The estimates obtained from the survey during 1981-82 are presented in this report. I hope this report will be of use to all those who are interested in the agricultural development of the State. Any suggestion for improvement in the technical content, will be appreciated.

In this context I am glad to thank the Economic and Statistical Adviser, Ministry of Agriculture and Irrigation, Government of India for the timely advice and guidance. Sri M. Sundararaman, Deputy Economic and Statistical Advisor, Government of India has always been associated with the programme at every stage for the success of the scheme.

N. GEORGE JOHN,

*Director of Economics &
Statistics.*

Trivandrum,
17-11-1984.

37336 M. C.

REPORT ON THE TIMELY REPORTING SURVEY ON AGRICULTURAL STATISTICS IN KERALA 1981-82.

1. Introduction

This report deals with the first year of the second phase of the Timely reporting survey of agricultural statistics in Kerala State conducted during the Agricultural year 1981-82. The first phase of the survey was started in 1975-76 and completed during the year 1980-81.

The All India scheme of Timely Reporting survey was designed to improve the conditions of reporting of Agricultural statistics. But this scheme could not be implemented as such in the non-reporting states of Orissa, West Bengal and Kerala, where proper agencies for reporting agricultural statistics were not in vogue. So a variant of the same, namely the scheme for Establishment of an Agency for reporting agricultural statistics was designed for these states for improvement in reporting agricultural statistics. Kerala being a non-reporting state the scheme has been started from 1975-76 onwards and completed the enumeration of all villages of the state in 1980-81 after 6 years. But with a view to collect the agricultural statistics on a continuing basis the High Level Co-ordination Committee for Agricultural Statistics suggested in May 1980 to continue the scheme during the sixth plan period also. As such the Central/State Governments ordered to continue the work beyond 1980-81 and to complete it within a period of 5 years i.e., 20 percent of the sample villages are to be completely enumerated each year.

The scheme EARAS as it known, is designed to collect data for estimating the various parameters under area and yield statistics for each agricultural year. At the same time it is also envisaged that the entire area of the state is to be completely enumerated by the end of the fifth year of the survey by completely enumerating in each year all the selected revenue villages, which were taken as the last stage units of sampling. Yield estimation surveys for a year is confined to the villages selected for area enumeration during the year.

2. Design of the Survey

During 1981-82 there were 58 taluks. Each of them was taken as a stratum for the survey. The revenue village which is the smallest well defined unit of revenue administration was the first stage unit of sampling for the survey. The number of sampling units in each of the district and those selected for the year are presented in the table below:

**Number of revenue villages existed in the Districts
and those selected during 1981-82.**

<i>Sl. No.</i>	<i>Name of the District</i>	<i>No. of Revenue villages</i>	
		<i>Total</i>	<i>Selected and enumerated</i>
1.	Trivandrum	94	20
2.	Quilon	99	21
3.	Alleppey	99	22
4.	Kottayam	74	15
5.	Idukki	42	8
6.	Ernakulam	100	22
7.	Trichur	234	46
8.	Palghat	152	30
9.	Malappuram	122	24
10.	Kozhikode	103	19
11.	Wynad	31	6
12.	Cannanore	177	32
		1327	265

3. Scheme of work

Eventhough revenue villages were taken as the last stage units for estimating the various parameters under area for the purpose of conducting the field work conveniently, each of the selected revenue village was further divided into a number of investigator units, on the basis of the number of investigators available, the area under wet and dry lands the number of crop cutting experiments to be conducted in each of the selected villages. The investigator units were as far as possible equal in extent, with defined non-overlapping boundaries. Where clear demarcated natural or artificial boundaries were not possible the units were formed in terms of survey numbers.

The work in each of the investigator units formed as above was assigned to an investigator. He had to conduct the area enumeration survey in all plots in the unit and crop cutting experiments allotted to that unit. In Travancore-Cochin region of the state where only litho sub-divisions are marked in the village maps, the area enumeration was conducted following these divisions. In the Malabar region where the Field Measurement Book was available in sub-division these books were followed in enumerating the details by the investigators.

The preliminary work relating to the survey was started by preparing a list of survey sub division numbers according to the basic tax register available in the village offices. The details required for area enumeration was collected by the investigators, following the above sub-division for the Travancore-Cochin area, the litho maps give only litho sub-divisions, which comprises of one or more sub divisions of the basis tax register. In such cases the details were collected according to the litho sub-divisions only.

The investigators visited the wet lands three times during agricultural year to collect data on seasonal and annual crops corresponding to Autumn, winter and summer seasons. During the last visit data on land use, irrigation and perennial crops were collected. In dry lands, it was programmed to conduct two visits, corresponding to Kharif and Rabi seasons, the first visit to collect data on seasonal and annual crops and during the second visit data on perennial crops were to be collected.

Crop cutting experiments were confined to the villages selected for EARAS, so that the investigator posted in these villages could attend to this work, also. During the year under report, experiments on the following crops were conducted.

- | | |
|---|--------------------------|
| <ol style="list-style-type: none"> 1. Paddy 2. Tapioca 3. Coconut 4. Arecanut 5. Cashew. 6. Pepper 7. Pine apple 8. Jowar 9. Ragi 10. Cardamom. | — Autumn, winter, summer |
|---|--------------------------|

The crop cutting experiments on the above crops were planned in all the taluks where the crops cover substantial area under them but where the area under a crop did not cover a sizable area experiments were not planned. The number of experiments to be conducted in each taluk for each crop was decided at the headquarters and the number of experiments in each investigator unit is decided by the Deputy Director in consultation with the District Officers and Statistical Inspectors. Table 1 gives the number of taluks in each district and the number in which experiments were planned crop-wise. Table 2 gives the number of experiments planned in each district for each crop and the number of experiments analysed under each crop. Table 3 gives the number of experiments missed in the districts and state with reason and table 4 gives the number of experiments conducted by each investigator

The number of experiments to be conducted in a taluk for each of the crops was fixed at the headquarters and for the investigator units by the

Deputy Director in each district in consultation with the District Officer and Statistical Inspectors. The maximum number of experiments in a taluk was fixed as 30 for paddy during each season and 30 for tapioca during a year subject to a minimum of 2 experiments in a village.

The Additional District Officer (TRS) and the Superintendent of N.S.S.O. undertook sample check on area enumeration and on crop cutting according to pre-determined programme. Details are furnished in table 5.

4. Staff position

The conduct of the field work on area enumeration, crop cutting experiments and analysis and reporting etc. relating to the survey were the responsibility of the Directorate of Economics and Statistics. The personnel sanctioned under EARAS scheme by the Central Government and those sanctioned under land utilisation survey attended the survey work during the period under report.

The details of staff position at headquarters and field are given below.

Staff pattern for the scheme

<i>Sl. No.</i>	<i>Details</i>	<i>Staff sanctioned under</i>			<i>Total</i>
		<i>LUS by State Govern- ment</i>	<i>EARAS by Govt. of India</i>	<i>Total</i>	
A. Headquarters					
1.	Joint Director	..	1	1	
2.	Assistant Director	1	..	1	
3.	Research Officer	3	..	3	
4.	Research Assistant	4	..	4	
5.	Compilers	2	6	8	
B. Field Staff					
1.	Deputy Director	..	3	3	
2.	Assistant Director	..	3	3	
3.	Regional Officer	..	3	3	
4.	Addl Dist. Statistical Officer	..	11	11	
5.	Research Assistant	..	5	5	
6.	Statistical Inspectors	51	74	125	
7.	Compilers	9	2	11	
8.	Investigators	159	721	880	

During the period under report 1981-82 crop cutting experiments on paddy were conducted in all taluks for Autumn and Winter seasons but for summer it was conducted only in 51 taluks, since in Idukki there was no summer paddy.

Besides, crop cutting experiments were conducted on Tapioca (52), Coconut (56), Arecanut (45), Cashew (37) and Pepper (45). The number of taluks out of a total of 58 in which experiments were conducted are given in brackets against the name of each crop. The minor crops selected for crop cutting experiments during the year were Jowar, Ragi, Pineapple and Cardamom and experiments were conducted in all these crops also.

As far as the crop cutting experiments on paddy are concerned 94% of the experiments planned for Autumn, 99% for winter and 97% for summer were conducted during the period under report. The percentage in the case of tapioca, coconut, arecanut, cashew, pepper, jowar, ragi, pineapple, cardamom were 99, 97, 100, 96, 98, 60, 74 and 85 respectively. The number of cuts lost reason wise are given in table 3.

5. Survey results

(a) *Land utilisation*—The variation in the utilisation for the years 1975-76 to 1981-82 and percentages under different utilisation to the total geographical area are given in table 6A and 6B.

The estimates of area under various utilisations for each districts for the year 1981-82 are given in table 7. The pattern in utilisation does not show any significant change over the years 1975-76 to 1981-82 except in the case of permanent pastures and grazing land, land under miscellaneous tree crops and cultivable waste land.

The land under non-agricultural uses has increased from 6.67% in 1975-76 to 6.96% in 1981-82 and barren and uncultivable land has also shown an upward trend from 2.02%—2.20%. The percentage of area under permanent pastures and grazing land has decreased to 0.14 in 1981-82 from 0.51 in 1975-76. Similarly land under miscellaneous tree crops has also shown a declining trend from 2.17% in 1975-76 to 1.42% in 1981-82. The sown area in the state was 55.85 per cent to the total geographical area for the year 1981-82 and reserve forest cover an area of 27.83%.

(b) *Irrigated area—Source wise and Crop-wise*

The estimates of area irrigated are given in table 20 and 21 respectively. The irrigated area was 2,39,574 hectares in 1981-82 which is 10.94 percentage of the sown area. The area under different sources in the table reveals that Govt. canal occupies the major portion of irrigated area (42.02). Minor and lift irrigation accounted 18.05% and private tanks and wells 21.58 percentage of the total irrigated area. Among districts Palghat has the largest portion of net area irrigated compared to total net sown area.

(c) *Area under crops*

The estimated area under different crops is given in table 8A, 8B, 10,11,12, 13,14,15,16,17,18 and 19. The classification of area under irrigated and unirrigated high yielding and local season wise in case of paddy is furnished in table 22a, b and c. Paddy and coconut are the most important crops in the state and they together occupy 50.72% of the total cropped area.

The percentage distribution of different crops to total cropped area is also given. An analysis of the extent of area put under different crops to that of total cropped area over the period between 1975-76 to 1981-82 has shown that the area put under paddy has declined by 1.62 per cent and that of coconut by 0.29%. But in the case of cashew it has shown 1.16 per cent increase whereas tapioca declined 2.42% and rubber by 1.25 per cent increase.

(d) *Production of Important crops*

The production of important crops namely paddy, coconut, tapioca, rubber, pepper, arecanut, plantain, Banana, Cashew, Cardamom are given in table 23. The estimates of production for the following crops are based on the average productivity obtained by conducting crop cutting experiments on tapioca, coconut, arecanut, cashewnut and pepper. It is seen that the volume of production of paddy, pepper, rubber, banana and plantain has increased during the year when compared to 1975-76 whereas in the case of cashew and tapioca the decrease is to the extent of 35.54 per cent and 30.52 per cent respectively. Arecanut and coconut also registered a decline in production during the period. The district-wise details of production are furnished in table 24.

6. Estimation Procedure

The following estimates were prepared from the data collected in area enumeration.

- (1) Area under different utilisation.
- (2) Source wise area irrigated.
- (3) Area under different crops.

The estimates were prepared as follows:—

- (a) Land utilisation and irrigation.

Notations used:—

- | | | |
|-----|---|--|
| N . | : | No. of villages in the stratum (taluk) |
| n | : | No. of villages selected for area enumeration in the stratum |
| A | : | Area of stratum. |
| a | : | Area of selected village |
| aj | : | Area of jth selected village |

- y_{ij} : Area under i th utilisation in the j th selected village.
 y_i : estimate of the i th utilisation
 $V(y_i)$: estimate of the variance of y_i

Then y_i is given by

$$y_i = \frac{\sum_{j=1}^n y_{ij} \times A}{\sum_{j=1}^n a_j} = \frac{A}{a} \times \frac{\sum_{j=1}^n y_{ij}}{\sum_{j=1}^n a_j}$$

$$V(y_i) = \frac{N(N-n)}{n(n-1)} \sum_{j=1}^n (y_{ij} - R_{iaj})^2$$

$$\text{where } R_i = \frac{\sum_{j=1}^n y_{ij}}{\sum_{j=1}^n a_j}$$

(b) Area under crops

The area under various crops are estimated as follows:—

- N : No. of villages in a stratum.
 n : no. of villages selected for area enumeration.
 w : Wet land area of the stratum.
 D : Dry land area of the stratum.
 w_j : Wet land area of the J th selected village.
 d_j : dry land area of the j th selected village
 y_{ij} : area under i th crops in the wet land of j th selected village
 x_{ij} : Area under i th crop in the dry land of j th selected village.
 y_i : estimate of the area under i th crop in wet land.
 x_i : estimate of the area under i th crop in dry land.
 z_i : $y_i + x_i$ — Total area under i th crop

$$y_i = \frac{\sum_{j=1}^n y_{ij} \times W}{\sum_{j=1}^n w_j}$$

$$x_i = \frac{\sum_{j=1}^n x_{ij} \times D}{\sum_{j=1}^n d_j}$$

$$V(z_i) = V(y_i) + V(x_i)$$

$$= \frac{N(N-n)}{n(n-1)} \left\{ \sum_{j=1}^n (y_{ij} - R_{i_1} w_j)^2 + \sum_{j=1}^n (x_{ij} - R_{i_2} d_j)^2 \right\}$$

Where $R_{i_1} = \sum_{j=1}^n y_{ij} / \sum_{j=1}^n w_j$ and

$$R_{i_2} = \sum_{j=1}^n x_{ij} / \sum_{j=1}^n d_j$$

- (c) The estimate of average yield is obtained as the simple average of yield obtained from all the experiments in the selection.

APPENDIX PART II
