## FOREWORD

The first attempt to estimate the State Income of Kerala was made in 1956-57 by the then Department of Statistics. Since then estimates of State Income are being prepared annually. This work relating to State Income estimation devolved upon the Bureau of Economics and Statistics when it was set up in 1963.

So far no attempt has been made to indicate regional differentials in the State Income. District Income estimate is a sine qua non for the study of regional disparities and for the preparation of District Plans.

This monograph presents the estimates of District Income of Kerala for 1970-71 to 1974-75. The estimates are provisional and are likely to be revised when more data become available or when there is a change in methodology. The estimates reveal that about a third of the total income generated is accounted for by Quilon, Ernakulam and Trivandrum Districts. It is also observed that the per capita income in Malappuram, Trichur, Cannanore and Alleppey is less than the State per capita income.

The Bureau of Economics and Statistics gratefully acknowledges the unstinted co-operation it has received from Government and non-government organisations in supplying the necessary information.

N. GOPALAKRISHNAN NAIR,  
*Director.*

## **DISTRICT INCOME OF KERALA**

(1970-71 to 1974-75)

### **INTRODUCTION**

The Bureau of Economics and Statistics has been preparing estimates of State Income on the basis of the standard methodology recommended by the Central Statistical Organisation for the past two decades.

State Income can be defined as the flow of goods and services produced in the economy in a given period of time, expressed in money terms, after allowance has been made for the value of goods and services used up in the process of production. Thus the State Income would be equal to the sum of net domestic income and net income earned from other States in India and from foreign countries. Owing to paucity of data it is not possible to estimate the net income earned from other States and abroad. Therefore the scope of the term State Income has of necessity to be restricted to income produced within the geographical boundaries of the State. Thus the concept of net State domestic product at factor cost has been adopted for estimation of State Income.

These estimates are valuable at the State level for measurement of economic changes, for formulation of sound economic policies and for objective assessment of the actual performance of different sectors of the economy. But they do not provide a basis for measuring the rate of economic growth in any sub regions of the State. For studying the pace and pattern of development at the district level the necessity for District Income estimates has been keenly felt. District Income studies help locate areas of economic backwardness. They also facilitate framing of policies and programmes aimed at achieving balanced regional development. Further, they help in assessing systematically the economic progress made by different districts. With the recent shifting of emphasis from centralised planning to regional planning the need for income estimates at the district level has become all the more acute. An attempt has therefore been made to build up District Income estimates.

The concept adopted in the preparation of these estimates is the same as that adopted in State income estimation viz., the concept of net domestic product at factor cost. According to this concept District Income includes all the income originating within the district irrespective of the fact that the income accrues to persons residing inside or outside the district.

The estimates have been prepared adopting the same industrial classification as is used for estimation of State Income. The estimates are at current prices.

- For agriculture, forestry, fishing, mining and manufacturing (registered) sectors the product method has been followed as district-wise data are available. In respect of the other sectors, owing to dearth of data, the total State product estimated following generally the income method has been apportioned to the districts on the basis of appropriate indicators.

District Income estimate, by and large, provides a good measure of the overall performance of the economy of the district. However, as most of the economic organisations range over more than one district it is difficult to exactly specify what part of the income has been generated within each district. The margin of error in the different sectoral estimates should therefore be high. To this extent the estimates are defective. This inherent limitation of these estimates should be borne in mind while putting them to use.

The estimates of district income have been prepared for 1970-71 to 1974-1975.

So far as total district income is concerned Quilon District stands first for all the years. Contribution of agriculture sector to the State domestic product ranges between 47.1 and 53.4 per cent during 1970-71 to 1974-75. In respect of Quilon district contribution of agriculture sector to the district income varies between 53.0 and 59.5 per cent. For the State (1973-74) about 60% of the contribution from the agriculture sector is accounted for by coconuts and fruits and vegetables. Quilon district almost consistently leads the other districts in area under coconut and fruits and vegetables. Among the districts Quilon also has the highest total cropped area during all the years except 1970-71 and 1971-72. Thus the leading position of the district is to be attributed to its primacy in agricultural income.

Next in rank is Ernakulam district. The manufacturing sector has contributed 7.7 to 10.9 per cent to the total State product during these years. The corresponding contribution of the sector to the district income of Ernakulam is between 18.9 and 24.3 per cent. Further as far as income from the tertiary sector is concerned. Ernakulam is second only to Trivandrum. Importance of these two sectors in the economy of the district accounts for its high rank.

Trivandrum has the third rank for all the years except 1970-71 and 1973-74. During the years under consideration the tertiary sector has contributed 31.7 to 35.0 per cent to the State domestic product. The corresponding variation for the district in the contribution of the sector is between 38.4 and 41.5 per cent. The high income for the district is to be ascribed to the importance of the tertiary sector, especially the services part of it. On the

lowest rung of the ladder is Idukki district with Malappuram just above it. Although Idukki is the second largest district it has the lowest total cropped area. Contribution from manufacturing, transport, trade, banking and real estate and services sectors is also low. In regard to Malappuram the income contributed by manufacturing, banking and real estate, communication and services sectors is low. Thus these two districts are having the lowest income during the years 1970-71 to 1974-75.

Kottayam district is having the highest per capita income consistently for all the years. When the estimates of per capita income for all the years are considered Palghat stands second among the districts. In population size Kottayam and Palghat rank lowest barring Idukki, which partly accounts for their high per capita income. Malappuram is consistently having the lowest per capita income.

Per capita income in Kottayam, Ernakulam and Quilon is higher than the State per capita income for all the five years. In the case of Palghat also the per capita income is higher for all the years except 1970-71. Per capita income in Idukki is higher than the State per capita income during 1970-71, 1971-72 and 1974-75.

Per capita income in Malappuram, Trichur, Cannanore and Alleppey is lower than that for the State consistently during all the years.

## METHODOLOGY

For the preparation of the estimates of district income the concept followed is that of income originating within the geographical boundaries of the respective districts. In respect of the important commodity producing sectors the product method has been adopted. For most of the other sectors the State Product estimated on the basis of income method has been apportioned to the districts. The estimation procedure followed in respect of the different sectors is given below:

### *1. Agriculture*

The agricultural produce and by products as also the livestock products are evaluated for each district using district-wise production and price data. From the gross value so arrived at, value of inputs is deducted to obtain the gross product for the district. The cost of repairs and maintenance and cost of depreciation for the State furnished by the C. S. O. have been allocated to the districts on the basis of total value of agricultural and livestock products in the district. This cost has been subtracted from the gross product to get the net product for the district.

### *2. Forestry*

The forest division-wise data on area under forests and forest produce are available. District-wise production is compiled by using these data. The district production is then evaluated at State average prices.

### *3. Fishing*

District-wise estimates of value of inland and marine fish are obtained from the Fisheries department. The net product from the sector is estimated on the basis of these data.

### *4. Mining*

District-wise production of major minerals is evaluated at average pit head prices obtained from the Indian Bureau of Mines. The value of minor minerals is also furnished by the Indian Bureau of Mines.

### *5(i) Manufacturing (Registered)*

The value added data for 1973-74 in respect of the census sector of the A. S. I. are compiled for each district. On the basis of these data the net product from the sector for each district is estimated.

### *(ii) Manufacturing (Unregistered)*

The State Domestic Product (S. D. P.) is allocated to the districts on the basis of working force relating to household and non-household sectors.

### **6. Construction**

The S. D. P. is apportioned to the districts on the basis of the working force in each district.

### **7. Electricity, Gas and Water Supply**

For this sector also the S. D. P. is broken down according to the working force.

### **8. Transport, Storage and Communication**

For railways district-wise track Kilometre data are used for allocating the State estimate. Freight tonne kilometre data have not been used as they are not easily available. For public sector passenger transport the State income is apportioned to the districts on the basis of number of bus schedule. In respect of private sector passenger transport the income is allocated according to average value added per worker.

For goods transport the income is broken up in proportion to the number of vehicles registered in the district. In respect of taxis and auto-rickshaws, non-mechanised transport and services incidental to transport the income is distributed according to working force.

### **9. Trade, hotels and restaurants**

The income from wholesale trade, retail trade and hotels and restaurants has been apportioned on the basis of working force.

### **10. Banking and Insurance**

The State estimate has been broken down on the basis of a combined index of number of offices, and amount of advances and deposits.

### **11. Real Estate and Ownership of Dwellings**

The income from ownership of dwellings has been allotted in accordance with the number of residential houses separately for urban and rural areas.

### **12. Public Administration**

The income from this sector relating to Central and State administration is allocated on the basis of working force.

### **13. Other Services**

Except for education the State estimate is apportioned on the basis of working force.

**LIST OF TABLES**

1. District Income at current prices—1970-71—1974-75.
2. District Income by broad sectors—at current prices—1970-71.
3. District Income by broad sectors—at current prices—1971-72.
4. District Income by broad sectors—at current prices—1972-73.
5. District Income by broad sectors—at current prices—1973-74.
6. District Income by broad sectors—at current prices—1974-75.
7. District-wise break up of net State domestic product  
at factor cost by industry of origin—at current prices—1970-71.
8. District-wise break up of net State domestic product at  
factor cost by industry of origin—at current prices—1971-72.
9. District-wise break up of net State domestic product at  
factor cost by industry of origin—at current prices—1972-73.
10. District-wise break up of net State domestic product at  
factor cost by industry of origin—at current prices—1973-74.
11. District-wise break up of net State domestic product at  
factor cost by industry of origin—at current prices—1974-75.
