ANNUAL REPORT—1981
No. 19

SAMPLE REGISTRATION
KERALA RURAL

Published on 13 Aug - 1984

DEPARTMENT OF ECONOMICS AND STATISTICS
TRIVANDRUM
AUGUST, 1984

PREFACE

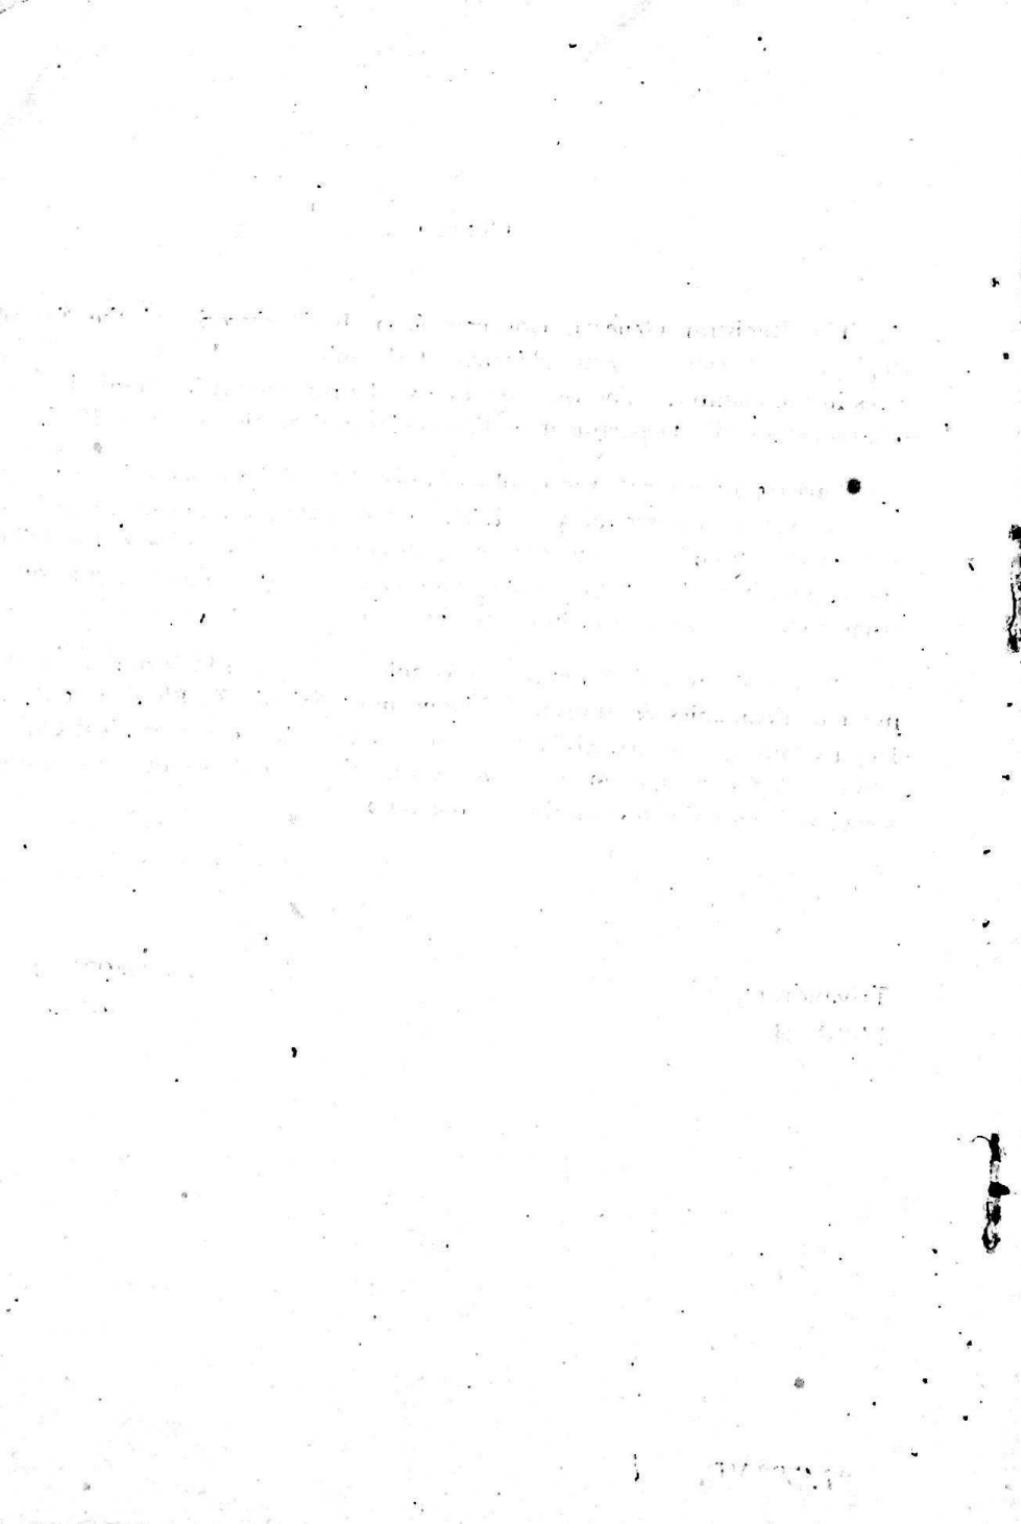

The Registrar General, Government of India introduced the Sample Registration System with the objective of obtaining reliable estimates of vital rates in the country. The work relating to the rural areas in Kerala is being conducted by the Department of Economics and Statistics, since 1965.

This report presents the results of operation of the scheme in the rural areas of Kerala during the year 1981. Besides the estimates of crude birth and death rates of the population, estimates of the rates for different religions and comparison of rates in Malabar and Travancore-Cochin areas and other adjacent States, are also included in this report.

This report was prepared by the Sample Registration Unit of the Department of Economics & Statistics, Trivandrum. Sri M. K. Bhaskaran Pillai, Deputy Director, Sri M. Mohammed Serverkhan, Regional Statistical Officer (SR) and Sri N. Umamaheswaran Asari, Research Assistant were deeply associated with the preparation of the report.

Trivandrum,
13-8-1984.

N. GEORGE JOHN,
Director.

SAMPLE REGISTRATION ON BIRTHS AND DEATHS IN RURAL AREA—1981

CHAPTER I

INTRODUCTION

The results of Sample Registration in rural areas of Kerala for the year 1981, are presented in this report. The deficiencies in the Civil Registration System has made the sample registration system a necessity for obtaining reliable and accurate vital rates.

Thus, this system, basically a sample survey, designed for obtaining reliable data of vital events, was introduced in the State during 1964-65 as a pilot study in 20 rural and 5 urban samples. The full-fledged scheme began functioning on a regular basis, in 150 samples in rural areas with effect from 1-7-1965, under the direction of Department of Economics and Statistics, Kerala. The Director of Census Operations was in-charge of the work in the urban area since 1970. The sample design adopted, was uni-stage stratified sampling. The samples were selected after stratifying the villages into four types according to population of below 500, 500-999, 1000-1999 and 2000 & above, under the three natural regions of Lowland, Midland and Highland. The number of samples were allocated to different strata in proportion to the population of the strata to the total population. Details of allocation of sample units among strata are given in Table I appended.

1.1 Staff

The regular field work of continuous enumeration of births and deaths was being attended to by 150 part-time Enumerators. The half yearly surveys were conducted by 13 Computors of the Census Department and the reverification by Additional District Officers of the Department of Economics and Statistics. The nucleus staff of a Regional Statistical Officer, a Research Assistant and Compilers, at the State Headquarters, attended to the final tabulation, analysis and preparation of the report.

1.2 Field Work

Through the informants and by house visits, the Enumerators collected information on occurrence of vital events and register them on a regular basis gathering all necessary details from the households where events have occurred. These were reported to State Headquarters as well as to the District Headquarters, every month. The Computer Supervisors independently conducted half yearly surveys, when, besides updating demographic particulars of each member of each household, they prepare an independent list of birth and death

that has occurred during the half year. The data, collected by both the Enumerators and Computors were matched at the District Offices and reverification of unmatched and partially matched events was done by the Additional District Officers.

1.3 Overlapping Survey

With every half yearly survey, the details of the previous half year were also collected in order to bring out the events, missed by both the Enumerator and Computor during the previous half year. By this procedure, 62 births and 13 deaths were additionally detected during the year 1981.

1.4 Intensive Enquiry

An intensive enquiry in weaker units was conducted in 22 samples by Senior Officers of this Department, by which 50 births and 7 deaths were additionally netted.

CHAPTER II

ESTIMATED POPULATION IN RURAL AREAS OF KERALA

2.1 Population and its growth

The rural population in Kerala estimated through Sample Registration Survey has increased from 206.65 lakhs on 1-1-1980 to 210.00 lakhs on 1-1-1981, recording an increase of only 1.62% as against 2.18% in the previous year. In the case of natural regions, midland holds the highest increase in population during the year, as in the previous year. The actual population growth rates during 1981 in lowland, midland and highland were 0.54%, 2.00% and 1.62% respectively as against 2.01%, 2.29% and 1.89% respectively during 1980.

2.2 Percentage Distribution of population by age and sex ratio

Table 2.2 presents the percentage distribution of population by age and sex ratios for the years 1971, 1980 and 1981 in the different age groups.

TABLE 2.2

Sex Ratio—No. of females per 1000 males:

CHAPTER III

MEASURES OF FERTILITY

3.1 Introduction

The most common measure of fertility is the crude birth rate. Other measures of fertility are age-specific fertility rate, general fertility rate, total fertility rate, gross reproduction rate and net reproduction rate. Estimates of these rates for the year 1981 are presented in this chapter.

3.2 Crude Birth rate

Crude birth rate (the number of live births per 1000 of mid-year population) in rural Kerala during 1981 is estimated as 24.72, which is 2.13 less than that in the previous year. Only the births to usual resident population of the area are taken for estimation of fertility rates. The birth rates in the natural regions of the State during the years 1972 to 1981 are given in Table 3.2. The corresponding rates for rural India is also given for comparison purpose.

TABLE 3.2
**Crude birth rate in 1972-1981 in Kerala (Rural) and
 All India (Rural)**

Year	<i>Natural regions in Kerala</i>			Kerala (Rural)	All India (Rural)
	<i>Lowland</i>	<i>Midland</i>	<i>Highland</i>		
1972	30.5	32.4	33.4	32.1	38.4
1973	27.8	30.0	33.0	29.9	35.9
1974	25.6	27.0	29.3	27.0	35.9
1975	25.9	27.9	32.8	28.2	36.7
1976	26.4	28.7	30.8	28.5	35.8
1977	24.8	26.2	28.7	26.2	34.2
1978	24.6	26.1	26.4	25.8	34.6
1979	23.6	27.8	27.4	26.8	34.3
1980	25.1	26.9	29.3	26.9	35.0
1981	23.2	24.8	26.9	24.7	35.5

3.3 Birth rates in the rural areas of neighbouring states

Compared to the rural areas of neighbouring states, Rural Kerala keeps the lowest rate. In accordance with the estimates of the Registrar General India, for the period under report, the birth rates for Andhra Pradesh, Karnataka and Tamil Nadu are 32.5, 30.2 and 29.6 respectively.

3.4 Birth rates in Malabar and Travancore-Cochin areas of the State (Rural)

Based on the historical development and Socio-economic conditions, the state forms two distinct regions as Malabar and Travancore-Cochin regions; the former comprising of the northern districts and the latter the remaining districts. Out of 150 samples, selected for the rural areas 72 samples fall in the Malabar region and 78 in Travancore-Cochin region.

Rural birth rates in the above two regions for the past five years are given in Table 3.4.

TABLE 3.4

Birth Rates in Malabar and Travancore-Cochin Areas (Rural)

Years	Malabar	Travancore-Cochin	Kerala
1977	28.92	23.64	26.22
1978	30.57	21.72	25.78
1979	31.80	22.18	26.84
1980	30.46	23.38	26.85
1981	28.01	21.50	24.74

The birth rate has always been higher in Malabar region, when compared to that in Travancore-Cochin region. The factors responsible for this phenomenon may be the low age of female at marriage, low literacy rate etc., prevailed among the majority of the residents in the region.

In the case of natural regions, the birth rates in Lowland Midland and Highland in Malabar area are 25.2, 28.7 and 26.8 respectively as against 22.7, 19.7 and 26.9 respectively in Travancore-Cochin area during the year 1981.

3.5 Birth rates by religions

The birth rates for the major religious groups in the state for the year 1981 are shown in Table 3.5.

TABLE 3.5
Birth rates among different religions

<i>Region</i>	<i>Hindu</i>	<i>Muslims</i>	<i>Christians</i>
Lowland	21.6	27.8	23.1
Midland	23.1	33.6	16.8
Highland	26.3	31.5	23.4
State	23.3	32.2	18.8

The birth rate among Muslims in the state is the highest during the year as in the previous year.

The birth rate is lowest among Christians except in Lowland.

3.6 Birth rates by religious groups in Malabar and Travancore-Cochin Areas

In the case of Travancore-Cochin area and Malabar area the highest birth rate in the state i.e., 34.9 is among the Muslims in Malabar area, where Muslims form 35.2% of the total population in the area, and at the same time the lowest birth rate, i.e., 15.6 is seen among the Christians in the same area; the facts of which can be derived from Table 3.6.

TABLE 3.6
Birth rates by religious groups in Malabar and Travancore-Cochin Area

<i>Region</i>	<i>Religious groups</i>		
	<i>Hindus</i>	<i>Muslims</i>	<i>Christians</i>
Malabar	25.1	34.9	15.6
Travancore-Cochin	21.6	25.8	19.6
Kerala	23.3	32.2	18.8

In short the Muslims have the highest birth rate while the Christians the lowest.

3.7 Distribution of samples by birth rate

The distribution of samples by birth rate is given in Table No. 3.7.

TABLE 3.7

Distribution of samples under different Rates of Birth 1981

Region	Birth Rates										All No. %									
	Less than 16	16-19.9	20-23.9	24-27.9	28-31.9	32-35.9	36-39.9	40-43.9	44 and above	All No. %										
No.	No. %	No. %	No. %	No. %	No. %	No. %	No. %	No. %	No. %	No. %										
1981 Rural Malabar	2	2.8	1	1.4	20	27.8	17	23.6	11	15.3	10	13.9	4	5.5	4	5.5	3	4.2	72	100
1981 Rural Travancore- Cochin	18	23.1	15	19.2	21	26.9	12	15.4	7	9.00	3	3.8	1	1.3	1	1.3	78	100
1981 Rural Kerala	20	13.3	16	10.7	41	27.3	29	19.3	18	12.0	13	8.7	5	3.3	5	3.3	3	2.0	150.	100
1980 Rural Kerala	11	7.3	25	16.7	32	21.3	22	14.7	24	16.0	15	10.0	7	4.7	10	6.7	4	2.7	150	100
1979 Rural Kerala	10	6.7	30	20.0	31	20.7	16	10.6	23	15.3	16	10.6	13	8.7	7	4.7	4	2.7	150	100
1978 Rural Kerala	14	9.3	22	14.7	32	21.3	33	22.0	21	14.0	9	6.0	9	6.0	6	4.0	4	2.7	150	100

It is seen from the distribution of samples, that 70.7% of samples have birth rate below 28 (State rate 24.7 falls in the group 24-27.9 in the table) during the year 1981, as against 60% in 1980. About 55.6% of the samples in Malabar area and 84.6% of those in Travancore-Cochin area, which form 26.7% and 44% respectively of the total samples in the State, were having birth rates below 28.

3.8 Age specific fertility rate

Age specific fertility rate denotes, the number of live births in one year to 1000 women of specific age group. The age specific fertility rate for 1981 and for previous years are given in Table 3.8.

TABLE 3.8
Age-specific Fertility Rate in Kerala Rural (1972-1981)

<i>Age group</i>	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
15-19	50.6	48.8	44.5	41.6	42.7	44.2	43.06	48.5	47.0	39.3
20-24	212.6	206.5	179.3	188.5	193.4	186.2	183.2	184.8	197.2	175.9
25-29	238.5	221.8	190.2	194.8	202.3	171.9	169.1	181.4	184.3	166.2
30-34	174.9	153.6	134.3	134.0	137.1	113.1	112.7	121.5	105.8	98.6
35-39	119.3	99.9	86.3	94.1	80.7	75.9	71.4	65.1	59.5	53.9
40-44	45.7	38.6	25.7	29.8	25.3	24.3	22.6	19.4	15.9	19.4
45-49	6.3	6.0	6.9	5.4	6.1	5.6	3.7	5.5	3.6	4.9

Compared to the previous year, the age specific fertility rates in all the age groups except 40-44 and 45-49 have considerably decreased during the year 1981, as a result of the decline in the number of births. The age specific fertility rate in the age group 40-44 has come up to the level of that for the year 1979. The age group 45-49 has shown a slight decrease in ASFR compared to 1979.

3.9 General Fertility Rate

General Fertility Rate (GFR) in the number of live births in an year to 1000 women in the reproductive age group 15-49. General Fertility Rate for the years 1972 to 1981 are given below:

Year	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
GFR	127.9	118.4	104.0	108.0	109.0	99.4	97.7	101.3	101.1	92.2

The General Fertility rate during the year, is the lowest of all those in the previous ten years. In the case of natural regions, low land shows the lowest G.F.R. ie. 85.9 while the high land, the highest, ie. 102.7 as in the previous year. General fertility rate for the midland is 92.04, during the period.

3.10 Total Fertility Rate (TFR)

Total Fertility Rate is the average number of children that would be born to a woman during her life time if she was to pass through her child bearing years confirming to the age specific fertility rates of the year. Total Fertility rates for Kerala Rural during 1981 and preceeding years are given below:

Year	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
T.F.R.	4.2	3.9	3.3	3.4	3.4	3.1	3.0	3.1	3.1	2.8

The Total Fertility rate for the year 1971 was 4.1. But after a decade, it has decreased by 1.3. The total fertility rates for low land, midland and high land for the year 1981 are 2.5, 2.8 and 3.2 respectively.

3.11 Gross Reproduction Rate (GRR)

Gross Reproduction Rate is the average number of Female children that would be born to a woman during her life time if she was to pass through

the child bearing years conforming to the age specific fertility rates of the year. The GRR for Kerala Rural for the years 1972 to 1981 are given below:

<i>Years</i>	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
GRR	2.1	1.9	1.6	1.7	1.7	1.5	1.5	1.5	1.5	1.3

3.12 Net Reproduction Rate (NRR)

Net Reproduction Rate shows the average number of female children that would be born to a woman during her life time conforming to the age specific fertility rate and mortality condition in the year. The NRR for the year 1981 is 1.21 as against 1.34 for the year 1980.

3.13 Order of birth

Table 3.13 presents the observed number of births by age of mother and order of birth of child during 1981.

TABLE 3.13

Age of mother and order of birth of child 1981

Age of mother	Order of birth										<i>Total</i>
	1	2	3	4	5	6	7	8	9	10 and above	
15—19	513	76	4	593
20—24	1191	884	291	48	59	16	7	1	2497
25—29	380	611	539	283	21	5	2	2	1843
30—34	47	101	209	183	137	99	52	19	5	..	852
35—39	13	14	37	48	61	69	54	45	18	15	374
40—44	1	3	7	5	15	30	23	21	9	13	127
45—49	..	1	1	1	1	2	8	5	2	2	25
Total	2145	1690	1088	568	295	227	143	90	34	31	6311

About 78% of total births during the year comes under the first three orders of births and the remaining 22% of births falls under orders above 3. As in the previous years, the percentage of births under orders above 3, during the year also decreased by 1.7. But it is seen that the percentage of births under orders six and nine, increased during the year, by 0.1 and 0.3 respectively. Out of 6311 live births observed during the year 1981 about 34% comes under the first order of birth in the age groups 15-44 and 0.5% under the tenth order of birth in the age groups 35-49.

3.14 Medical attendance at birth

The percentage of births under different types of medical attendance during the years 1974 to 1981 is given in table 3.14.

TABLE 3.14

Medical attendance at birth (percentage)

Years	Institutional	Trained professional	Untrained professional	Non professional	Not stated
(1)	(2)	(3)	(4)	(5)	(6)
1974	28.1	20.9	37.5	13.2	0.4
1975	28.8	21.8	34.8	14.3	8.3
1976	32.1	19.1	32.6	14.8	0.7
1977	35.6	17.6	31.8	13.9	1.1
1978	40.8	16.4	40.6	2.2	0.0
1979	45.4	27.5	25.9	1.2	0.0
1980	46.6	24.4	28.2	0.7	0.1
1981	47.8	26.7	23.6	1.7	0.2

The continuous increase in the institutional medical attendance at birth is an evidence of the awareness of the people to avail of the facilities and services provided, for maternal and child health.

But contrary to the conditions during previous years, the percentage of births under institutional attendance among the high land people has slipped down from 36.4 to 31.8 during the year. As such, in the case of utilising the services of trained professionals, low land and high land people failed to reach up to the mark which they gained during the previous year. When the utilisation of services of trained professionals among low land and high land residents has decreased by 1.1% and 0.7% respectively, that among the mid land residents increased by 4.3%.

3.15 Still birth rate (SBR)

Still Birth rate is the number of still births out of 1000 births, i.e. both the live and still births in a year. The still birth rates during the year 1981 and previous years are given below:—

Year	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
S.B.R.	27.25	25.01	18.28	19.44	26.18	19.30	23.68	20.50	18.35	20.76

Though there was considerable decrease in the still birth rate during 1980, considerable increase is seen during the year 1981. The still birth rate for low land midland and high land are 18.96, 21.35 and 20.75 respectively during 1981.

3.16 Sex ratio at birth

Sex ratio at birth (number of males per 100 females) during the year 1981 and previous years is given below:

Year	Sex ratio at birth
1972	105.7
1973	110.2
1974	103.2
1975	108.0
1976	100.5
1977	103.6
1978	104.9
1979	104.4
1980	107.4
1981	108.8

3.17 Child-woman ratio (C.W.R.)

Child-woman ratio can be defined as the number of children in the age group 0-4 years per 1000 women in the reproductive age group, 15-49.

The child-woman ratios during years 1972—1981 are given below:

Years	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
C.W.R.	520	511	479	463	470	459	441	451	466	441

3.18 No. of marriages and age at marriage

The Table 3.18 below, presents the rate of marriages and remarriages per 1000 population (for males and females separately) which took place for each age group of sample population during 1981.

The highest rate of first marriage per thousand female population is 54.75 in the age group 20-24 as against 63.64 in the same group during the previous year. In the case of males, highest rate of first marriage during the year 1980 was 63.42 in the age group 25-29, and it is 49.87 in the same age group in 1981.

The median age at first marriage for males and females is same as in the previous year i.e. 27.2 and 21.6 respectively.

The highest percentage of remarriages among males and females occurs in the age groups 20-24 and 25-29 respectively. Out of total marriages during the year 2.16% marriages were remarriages for both males and females.

TABLE 3.18

Marriage rate per 1000 population for the year 1981

Age group	First marriage		Remarriage		All marriages	
	Male	Female	Male	Female	Male	Female
(1)	(2)	(3)	(4)	(5)	(6)	(7)
15—19	1.72 (2.46)	35.50 (33.37)	0.20 (5.08)	1.72 (2.32)	35.70 (32.37)
20—24	22.95 (27.73)	54.75 (48.56)	1.06 (22.03)	1.06 (25.43)	24.01 (27.42)	55.81 (47.73)
25—29	49.87 (48.77)	22.94 (15.75)	1.10 (18.65)	1.64 (30.51)	50.97 (47.12)	24.58 (16.27)
30—34	22.03 (17.31)	3.98 (2.13)	1.25 (16.95)	1.17 (16.95)	23.28 (17.28)	5.15 (2.66)
35—39	5.46 (3.34)	0.44 (0.19)	1.77 (18.65)	1.17 (13.56)	7.23 (4.18)	1.61 (0.67)
40—44	0.69 (0.39)	0.86 (8.47)	0.31 (3.39)	1.55 (0.84)	0.31 (0.12)
45—49	1.73 (15.25)	0.50 (5.08)	1.73 (0.84)	0.50 (0.18)
All	16.41 (100.00)	23.46 (100.00)	0.95 (100.00)	0.87 (100.00)	17.36 (100.00)	24.33 (100.00)

(Figures in brackets denote the percentage of marriage under each group)

CHAPTER IV

MORTALITY MEASURES

4.1 Crude death rate

The crude death rate for Kerala Rural for 1981 is estimated as 6.49 as against 7.11 during the previous year. As in the case of births, deaths occurred to usual residents only are taken into consideration for calculating the death rate.

The crude death rates for Kerala Rural and All India Rural from 1972 onwards are presented in Table 4.1

TABLE 4.1

Crude Death Rates in Kerala Rural and All India Rural 1972-1981

Year	<i>Natural regions in Kerala</i>			Kerala Rural	All India Rural
	Low land	Mid land	High land	(5)	(6)
(1)	(2)	(3)	(4)		
1972	8.2	9.5	11.0	9.4	18.9
1973	8.8	8.5	9.3	8.7	17.0
1974	8.1	7.7	9.6	8.0	15.9
1975	8.5	8.4	9.1	8.5	17.3
1976	8.6	7.7	10.4	8.3	16.3
1977	7.4	7.3	8.4	7.3	16.0
1978	7.2	7.0	8.2	7.2	15.3
1979	6.0	7.2	8.9	7.2	13.9
1980	6.5	7.0	8.5	7.1	13.7
1981	6.9	6.1	7.5	6.5	13.6

Death rate in low land has shown an increase of 0.4 during the year 1981 as against 0.5 in 1980. As in the case of 1975 and 1977, the death rate for Kerala Rural is below 50% of the death rate for All India (Rural) during this year. The high land records the highest death rate and the mid land the lowest.

4.2 Death rates in the rural areas of neighbouring States

The death rate of Kerala Rural during the year 1981, is the lowest of all the States in India, except Nagaland, where the death rate is 5.3 according to the estimates of Registrar General India. As far as the neighbouring States are concerned Karnataka stands second in the lowest death rate. The death rates in the rural areas of Andhra Pradesh, Tamil Nadu and Karnataka for the period are 12.1, 13.5 and 10.5 respectively.

4.3 Death rates in Malabar and Travancore-Cochin Region (Rural)

The death rates in Malabar and Travancore-Cochin region for 1981, are given in Table 4.3.

TABLE 4.3

Death Rates in Rural Areas of Malabar and Travancore-Cochin Area (Rural)

Years	Malabar	Travancore-Cochin	Kerala
1977	8.39	6.64	7.3
1978	8.37	6.22	7.2
1979	8.63	5.84	7.2
1980	7.51	6.71	7.1
1981	6.91	6.07	6.5

The general tendency of decreasing the death rates, since 1977 was upset by a sudden increase of 0.26 in Malabar region during 1979 and of 0.87 in Travancore-Cochin region during 1980. However, a uniform decrease in death rates for both the regions during the year is seen. As usual, the death rate in Malabar region is seen higher than that in Travancore-Cochin region. The gradual decrease, found in the difference in death rates between these two regions, shows that the difference in Socio-economic conditions of these regions is becoming less.

In regard to the natural regions, the low land in Travancore-Cochin area shows a death rate higher than that in Malabar area, while the midland and the highland regions the lower. The death rates for low land, midland and high land in Travancore-Cochin area for the period are 6.93, 5.27 and 7.39 respectively and in Malabar area 6.78, 6.77 and 7.50 respectively.

4.4 Death rates among religious groups

The death rates according to religious groups in Kerala Rural for 1981 are given in Table 4.4.

TABLE 4.4

Death Rates in Different Religions in Kerala Rural—1981

Regions	Religions		
	Hindus	Muslims	Christians
Low land	7.02	7.33	6.22
Midland	6.60	6.34	4.70
High land	7.86	7.80	3.79
State	6.94	6.69	4.93

The death rate is highest among Hindus in all the natural regions, except in low land, while it is lowest among Christians in all the regions, during the year. The death rates among Hindus, Muslims and Christians in Midland and highland are seen decreasing, but that in lowland increasing from those in the year 1980.

4.5 Death Rates By Religious Groups in Malabar and Travancore-Cochin Areas

As in the case of birth rates, the highest and lowest death rates are seen in Malabar area—the highest is among Hindus and the lowest among Christians. The table below presents the death rates by religious groups in Malabar and Travancore-Cochin areas for 1981.

TABLE 4.5

Death Rates by Religious Groups in Malabar and Travancore-Cochin Area—1981

Regions	Religions		
	Hindus	Muslims	Christians
Malabar	7.38	6.68	3.58
Travancore-Cochin	6.49	6.69	5.25
State	6.94	6.69	4.93

4.6 Distribution of Samples by Death Rates

The distribution of samples by death rate is given in Table 4.6

TABLE 4.6
Distribution of number of samples under different rates of Death—1981

Region	Sample	Death rates										17 and above All (13)
		2	2-2.9	3-4.9	5-6.9	7-8.9	9-10.9	11-12.9	13-14.9	15-16.9	(11)	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
Malabar Area 1981	No.	1	6	5	23	22	13	2	72
	%	1.4	8.3	6.9	31.9	30.6	18.1	2.8	100.00
Travancore-Cochin area 1981	No.	3	8	15	27	15	4	4	1	1	..	78
	%	3.9	10.3	19.2	34.6	19.2	5.1	5.1	1.3	1.3	..	100.00
Kerala 1981	No.	4	14	20	50	37	17	6	1	1	..	150
	%	2.7	9.3	13.3	33.3	24.7	11.3	4.00	0.7	0.7	..	100.00
Kerala 1980	No.	3	3	32	50	28	22	6	4	1	1	150
	%	2.0	2.0	21.3	33.3	18.6	14.7	4.0	2.7	0.7	0.7	100.00
Kerala 1979	No.	2	7	31	44	30	17	11	2	4	2	150
	%	1.3	4.7	20.7	29.4	20.0	11.3	7.3	1.3	2.7	1.3	100.00
Kerala 1978	No.	10	25	43	35	23	4	8	1	1	1	150
	%	..	6.7	16.7	28.7	23.3	15.3	2.7	5.3	0.7	0.7	100.00

During the year 1981, the number of samples, having death rate less than 7 (as the State rate 6.5 falls in the age group 5-6.9) in Malabar and Travancore-Cochin areas are the same as in the previous year, viz. 35 samples forming 48.6% in Malabar, 53 samples forming 67.9% in Travancore-Cocinareas.

4.7 Age specific death rate

Age specific death rate is the number of deaths in a specific age group in one year among 1000 persons of that age group. The age specific death rates for males and females and for the three natural regions of the state are given in Table XI appended.

The age specific death rate is highest in the age group 70 and above, followed by 0.1 age group and then 65-69 age group. This seemed to be a natural phenomenon as the death rates of the aforesaid age groups have been highest since inception of the scheme. As in the previous year, the lowest death rate is in the age group 10-14.

In the case of male and female, the death rates of male are highest in all age groups except the age groups 1-4, 10-14, 15-19 and 35-39. As far as the natural regions are concerned, the highest death rate (119.12) is found in the age group 70 and above, in high land, while the lowest in the same age group, in midland. Contrary to the position in the previous year, the lowest death rate during the year is in the age group 10-14 in all the three natural regions.

4.8 Infant mortality rate

Infant mortality rate is defined as the number of deaths of infants below one year of age out of 1000 live births in an year. The infant mortality rates for the years 1972-1981 for the three natural regions are given in Table 4.8

TABLE 4.8
INFANT MORTALITY RATE IN NATURAL REGIONS

<i>Region</i>	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
Lowland	55.3	46.6	30.7	45.8	57.3	44.9	32.2	29.8	32.0	45.3
Midland	61.2	46.8	55.4	58.1	50.8	46.6	41.1	46.1	40.2	35.9
High land	101.7	78.1	95.2	63.5	77.4	71.4	78.3	84.4	65.7	52.0
State	66.0	51.7	55.9	57.3	56.5	50.7	44.8	48.6	42.5	40.4

A considerable increase in infant mortality rate for low land during the year has been seen. The phenomenon of the highland of having the highest infant mortality rate during the previous years continued this year also. The lowest rate in the previous year was in low land, but during this year it is in midland.

The highest infant mortality rate can be attributed to the paucity of medical facilities in the locality and the lack of awareness of the people of such aspects.

As in the case of death rates, the infant mortality rate is also highest in Malabar area. Infant mortality rates estimated for Travancore-Cochin area, and Malabar area are 39.2 and 42.7 respectively.

4.9 Neo-natal death rate

The neo-natal death rate is the number of deaths to Children of below 28 days of age per 1000 live births in an year. It is estimated as 28 during the year, as against 28.5 in the previous year. Infant mortality has been distributed according to the period within which the infants died before completing one year of age, such as less than 7 days, 7-27 days, 28 days and above. The rates in each period are presented in Table 4.9.

TABLE 4.9

**Infant death rate distributed over different periods
within which the infant died—1981**

Region	Less than 7 days	7-27 days	Less than 28 days	28 days and above	Total
Lowland	21.64	5.65	27.29	17.97	45.26
Midland	19.87	6.47	26.34	9.56	35.90
Highland	25.17	10.18	35.35	16.63	51.98
State	21.07	6.88	27.95	12.43	40.38

The infant death rate for the period 7-27 days in all the natural regions is seen increased during the year. The lowland has shown an increase in the infant death rate for all the periods, while the other two regions, a decrease except for the period 7-27 days.

4.10 Medical Attendance at death

The percentage of deaths under different type of medical attention at the time of death for ten years (1972-1981) is furnished in Table 4.10 below.

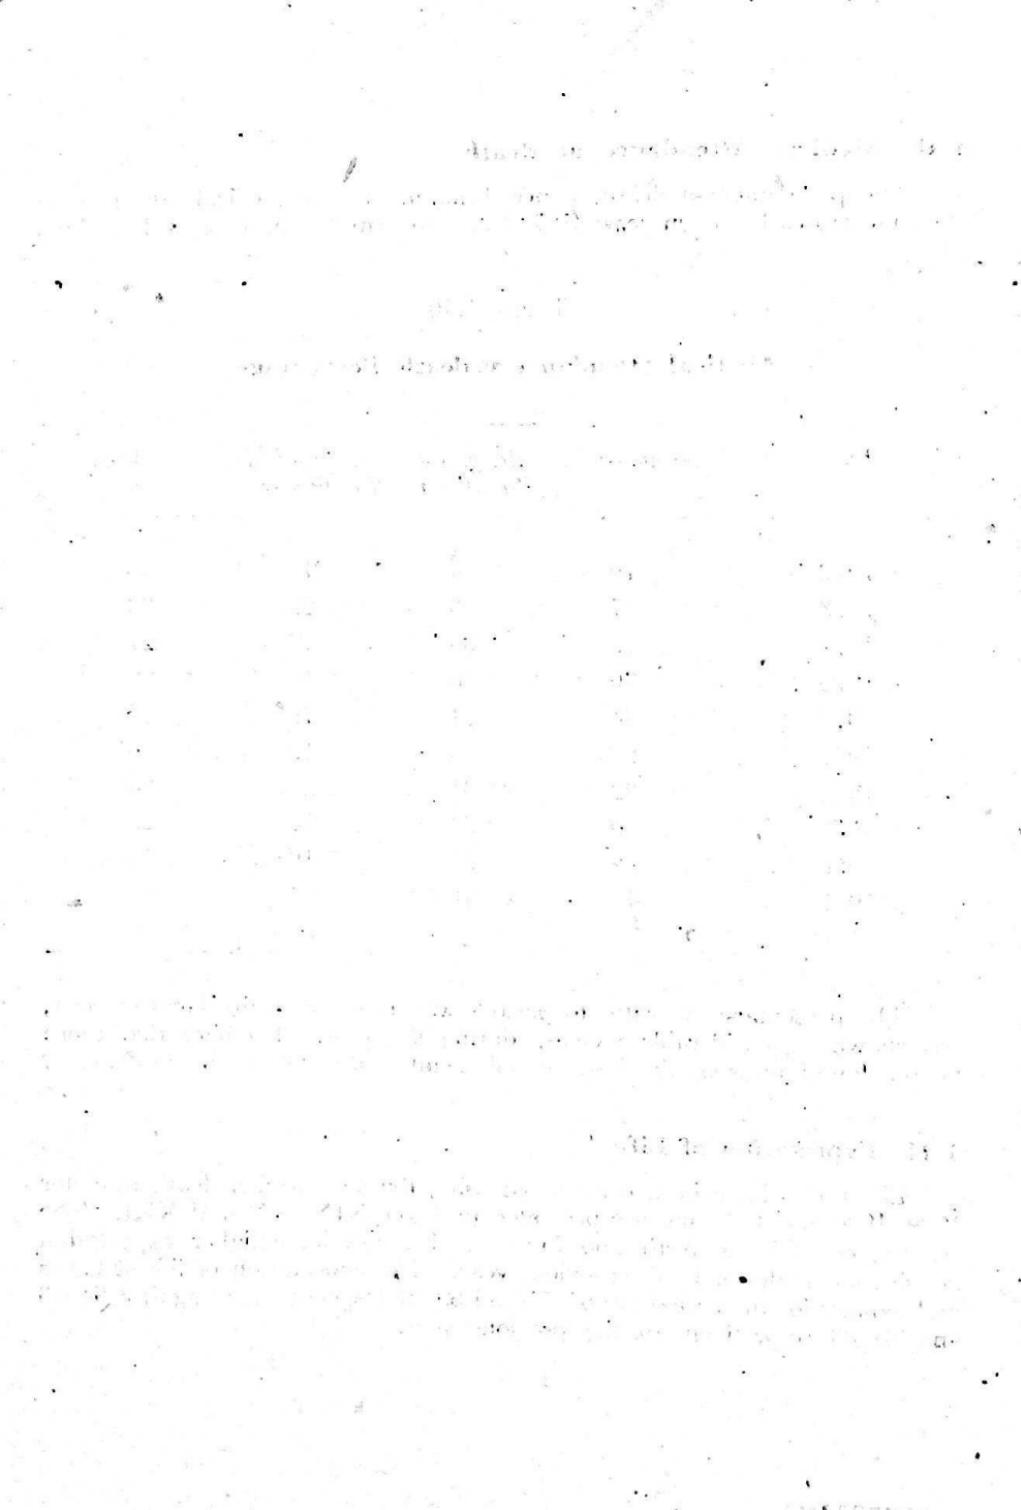

TABLE 4.10
Medical Attendance at death (Percentage)

Year	Institutional	Recognised Practitioner	Unrecognised Practitioner	None
1972	19	34	17	30
1973	17	33	22	28
1974	18	36	19	27
1975	20	36	16	28
1976	24	31	19	26
1977	22	33	19	26
1978	22	34	24	20
1979	30	34	11	25
1980	32	32	19	17
1981	41	31	12	16

The percentage of deaths to persons who received institutional services, has shown a considerable increase during the year. The fact that more people found utilising the institutional facilities deserves to be mentioned.

4.11 Expectation of Life

Life tables have been constructed using the age specific death rates for 1979, 1980 and 1981 and are presented in Table XIX, XX and XXI. The expectation of life at birth is 66.75 years. Females have higher expectation of life than males as in the previous year. The expectation of life of males and females for the period are 64.71 and 69.01 respectively, as against 64.23 and 67.88 respectively in the previous year.

卷之三

APPENDIX

LIST OF TABLES

- I. Numbers of units and 1961 population in the Universe and in the samples.
- II. Observed population in the Samples and estimated population for stratum.
- III. Observed population in retained portion and whole sample population by sex for 1981 and 1961.
- IV. Mid year population (Observed in retained portion and estimated population) according to age and sex.
- V. Live births observed in retained portion and estimated for stratum 1981.
- VI. Age specific fertility rate for 1981.
- VII. Live births observed in samples classified by month of occurrence—1981.
- VIII. Live births by type of attention at delivery.
- IX. Observed deaths, deaths in sample area and estimated deaths by sex—1981.
- X. Number of deaths by age and sex—1981.
- XI. Age Specific death rates—1981.
- XII. Deaths observed in samples, classified by month of occurrence—1981.
- XIII. Deaths classified by type of medical attention.
- XIV. Estimated infant deaths by sex and infant death rate for stratum 1981.
- XV. Population and vital events—1981
- XVI. Estimated population, births, deaths and vital rates for 1981
- XVII. Births and deaths recorded by Enumerators and Supervisors and detected through overlapping survey and intensive enquiry
- XVIII. Extra events detected through overlapping survey and Intensive Enquiry.
- XIX. Abridged life table (All).
- XX. Abridged life table (Male).
- XXI. Abridged life table (Female).
