Government of Kerala

Preface

The Vital Statistics Bulletin presents the Vital Statistics of Kerala for the year 1995. The Vital rates estimated in the report is based on the births and deaths cards received from the Registration units of Kerala

The data entry work of the Births and Deaths Cards were carried out in the Computer Division of this office. The Bulletin has been prepared by the Vital Statistics division of this department.

17	Live Birth according to order of birth and age of Mother - 1995 (Urban)	30
18	Live Birth according to order of birth and age of Mother - 1995 (Rural &Urban)	31
19	Live Birth by age of Mother in Corporation and Municipalities - Kerala 1995	32
20	Live Birth by Religion in the Corporation and Municipalities - Kerala 1995	36
21	Live Birth by Religion in Kerala (District wise) 1995	40
22	Month wise distribution of Live Births in Kerala-1995 (Rural & Urban)	43
23	Sex-Ratio of Live Births in Kerala (District wise	44
24	Month wise Distribution of Deaths in Kerala 1995 (Rural/Urban	47
25	Deaths by age and sex in Kerala	48
26	Death by Religion in Kerala (District wise)	49
27	Distribution of Death due to some specified diseases	52
28	Infant Death by sex in Kerala (District wise)	56
29	Infant Deaths by age and sex in Kerala	59
30	Maternal Deaths in Kerala by age at Death -- 1995	60

Vital Statistics Bulletin 1995

The Civil Registration System was began in India during the pre-independence period. Still it is functioning under the Births and Deaths Registration Act of 1969 which was enacted in parliament for the purpose of the unification of the Registration of Births and Deaths at state and national level. As statutory Act, it is binding everybody in the country. The Act stipulated to the fine and punishment to the defaulters for the Registration of their vital events. Even though the Act stipulate both fine and punishment the functioning of the Registration system is not attained in a full-fledged level. The report published by the Registrar General shows that Kerala has achieved 100 percent in Birth Registration and 90 percent in Death Registration

Civil Registration System is defined as continuous permanent, compulsory recording of the occurrence and characteristics of vital events as defined in and as provided through decree or regulation in accordance with the legal requirement of a country. It provides a safeguard to social status and Individual benefits. Birth Registration provides unique identity of the person, records of parental relationship, place of Birth, nationality, proof of age for school entry, entry in service, obtaining a driving license. Similarly the death registration provides benefits such as settlement of inheritance, insurance claims, claiming family allowances and other social security benefits.

Apart from the above-mentioned benefits, birth registration provides so many administrative benefits such as public health programs for post, nature care of mother and child, programs of vaccination immunisation etc. Likewise Death Registration provides benefits such as indicators of existence of infections and epidemic diseases and the need for immediate control measures.

The Director of Panchayats is the statutory Chief Registrar of Births and Deaths of Kerala. The Additional Director of Economics & Statistics is the Additional Registrar of Births and Deaths, Other staff involved in the system are Deputy Chief Registrars, District Registrars and Local Registrars.

Source of Data

According to the present ruling of Births and Deaths Registration Acts, all events should be registered in the concerned Registration units within 21

days of date of occurrence. There after the events are to be registered with the consent of the respective authority by remitting fine for late registration. As per the provision of the Act, the local registrar would forward the Births and Deaths cards of each month to the Additional Chief Registrar at the beginning of the next month. Based on the births and death cards received from Registration units, this section has to prepare both priority tables and Vital Statistics Bulletin.

Processing of Data

During the year under report 557787 births and 162868 deaths were reported from the registration units. Processing of data was carried out in the Computer Division of the DES.

Limitation of the data

Even though the Civil Registration system has statutory binding, it failed to achieve cent percentage in registration of vital events. Under registration of death events are still existing. This would be due to the ignorance of the lay man about the registration system, or hiding of some deaths of suicide, abortion etc. Under this system, there is no measure to estimate the level of under registration especially in rural areas. For the successful functioning of the system some measures should be taken for estimating the level of under registration both in rural and urban areas.

Births and Birth rate

Among the major states in India, Kerala's birth rate is the lowest one. The data collected through C.R.S shows that the birth rate in urban areas is always higher than that in the rural areas in Kerala. This would be due to the inflow of rural people to urban areas for obtaining modern medical facilities installed in urban areas.

During the year under report 557787 birth events were registered, of which the males and females breakup were 286480 and 271307 respectively. During 1994 the number of births registered in the state were 533209. The classification of urban and rural registered births during 1995 was 308786 and 249001 respectively. It is obvious that the registration of births in urban areas is higher than in rural areas.

During the year under report estimated birth rate of the state was 18.09 as against 17.52 in 1994. It is clear that the birth rate showed an increasing trend in the state during the year.

An analysis of Districtwise figures shows that it was highest in Malappuram with 24.63 with the urban and rural classification of this district 97.33 and 17.74 respectively. Next to it was Kozhikode with 19.59 followed by Palakkad with 19.35. Birth rate was reported lowest in Alappuzha with 13.24. Analysing the birth rate of urban areas it was high in all districts. This would be due to inflow of rural people to urban areas for avail the modern medical facilities established therein.

Deaths and Death rate.

Similar to birthrate, death rate of Kerala is the lowest among the major states in India. Usually death rate of Kerala shows a decreasing trend and the same continued during 1995 also.

During 1995, the number of deaths registered in the state were 162868 of which the males and females breakups were 93319 and 69549 respectively. The urban and rural classifications of total deaths were 50826 and 112042 respectively. Comparing with urban areas, total number of deaths registered in rural area is higher than the former.

The estimated death rate during the year under report was 5.28 as against 5.38 in the last year. It indicates that death rate is decreasing in the state. The rural and urban classification of the same was 4.23 and 11.64 respectively. Similar to the birth rate, the death rate of the urban area is higher than rural areas.

Districtwise analysis shows that death rate was highest in Thrissur with 6.52 followed by Idukki and Kottayam with 6.18 and 6.06 respectively. However Death rate was lowest in Malappuram district with 3.85 followed by Idukki with 3.92.

Infant deaths rate

It means the death of the person having less than one year of age. At national level infant death is lowest in Kerala. This is due to the development in

the field of medical, health, education etc. Total number of infant death registered during the year was 5664 as against 5551 in the last year.

The estimated Infant Death Rate for 1995 was 10.15 as against 10.41 in the previous year. It indicates that the infant deaths in the state shows decreasing trend. Similar to the births and deaths, infant deaths were also higher in urban areas than rural areas. The rural and urban classification of the same was 6.49 and 13.11 respectively. Another feature of infant deaths in the state is the males death were higher than the females death with 3096 and 2568 respectively.

Districtwise breakup of infant deaths displays that it was highest in Kozhikode with 15.96 followed by Kottayam with 14.88. The lowest infant death rate was in Malappuram district with 6.42.

Maternal death rate

The number of maternal deaths registered during the year under report was 42. The estimated maternal death rate during the year was 0.07 as against 0.06 in the previous year. Maternal deaths was higher in rural areas than urban areas with 31 and 11 respectively.

Still birth rate

Total number of still births registered during 1995 was 3210 as against 2743 in the previous year. The classification of males and females were 1766 and 1444 respectively. Out of 3210 events 964 numbers were registered in rural areas and 2264 numbers in urban area. That is the still births in urban areas are higher than the rural areas. The estimated still birth rate during the year was 5.72 as against 5.12 in the last year.

Districtwise breakup shows that it was highest in Kozhikode with 10.46 followed by Kasargode with 9.63. However it was lowest in Malappuram district with 2.14.

Conclusion

Compared to the last year the birth rate of the reference year had increased in the state, The death rate and Infant mortality rate had been decreased during the year. The special feature of Malappuram District is that it

had the highest birth rate and lowest death rate in the state. The lowest birth rate was in Alappuzha district and highest death rate was in Trissur district. Both birth rate and death rate were highest in urban areas than in rural areas.

Vital Statistics at a glance from 1991 to 1995

Year	Birth rate	Death rate	Infant death rate	Still birth rate	Maternal death rate
1991	19.08	5.37	11.32	6.08	0.09
