8. Births and birth rates
9. Average number of children
10. Deaths and Death rates
11. Infant deaths and Infant death rates
12. Still Births & still Birth rates
13. Maternal deaths & their rates
14. Deaths according to cause
15. Distribution of deaths according to age
16. Rates from Sample Registration and adjusted rates
17. Tables.

VITAL STATISTICS OF KERALA FOR THE CALENDAR YEAR 1967

1. Introduction:-

The Vital Statistics of the State for the calendar year 1967 are presented in this issue of the Bulletin.

2. Collection of data from the primary agencies:-

The Director of Health Services is the Registrar General of the State for the registration of births and deaths. In the T.C. area (6 Districts) of the State District Medical Officers function as district registrars and in the Malabar area (3 Districts) the District Collectors are the Registrars. At present registration work in the rural areas of T.C. area is attended to by the Health Assistants of the Departments of Health Services where as in Malabar area this work is done by the Village staff of the Revenue Department. In towns the work is done by the Municipal/ Corporation staff.

The Health Assistant/Village Officer named as local Registrar is responsible for the registration of vital events. The details relating to vital events recorded in the registers are transferred to birth & death report cards prescribed by the Bureau of Economics and Statistics and these cards are forwarded periodically to the Bureau of Economics & Statistics through the Taluk Registrars in the rural areas and the Municipal/Corporation Commissioners in the urban areas.

For the towns having a population of 30,000 and above, the birth and death report cards are received weekly in the Bureau of Economics & Statistics from the respective Municipal/Corporation Commissioners. For other towns and also for rural areas the cards are received by the Bureau of Economics & Statistics every month through the Municipal Commissioner or Taluk Registrars. Vital reports relating to a week are received in this office within 7 days after the close of the week.

"The Service unpaid system" which was introduced by this Department from 1964 for the quick transmission of birth and death report cards is operating successfully.

For the improvement of Vital Statistics in the State, the Dist. Statistical Officers and Senior Research Assistants of the Bureau are carrying out spot checks, detecting unregistered events and taking measures to register those events.

In all the municipal towns of the State Statistical staff have been posted.

3. Control of receipt of returns:-

A two fold control is exercised to ensure the smooth flow of returns by the Dist. Statistical Officers

and the V.S. Section at the Headquarters. The Municipal Commissioners have to intimate the Dist. Statistical Officers whether the returns due to the department have been despatched in time. Whenever the Dist. Statistical Officer has not received intimation he will depute one of his staff for spot enquiry. From the headquarters a list of defaulting Taluk Registrars will be furnished to Dist. Statistical Officers to enable the Dist. Statistical Officer to pursue further action.

The Tahsildars and Medical Officers of the Primary Health Centres also keep a control register regarding receipt of returns from the Registrars.

4. Registration areas:-

There are 1219 registration areas in the State, 1158 rural and 61 urban. The average number defaulting units is 87 per month, the lowest (68) being in May and the highest (158) in January. No attempt is made to adjust the rates for the respective months because of non-receipt of return as the events might have been registered in later months, by relaxation of relevant rules.

5. Training in Vital Statistics:-

A State Training Officer has been appointed from August 1966. His main function is to improve registration and vital statistics through education and training. He conducts study classes for all personnel in any way related to vital statistics registration.

6. Processing of data:-

Mechanical tabulation unit was set up from 1965 onwards. A 40 column sorter Tabulator with 3 punches, 2 verifiers and one automatic key punch was supplied by the Registrar General. The data are mechanically processed.

7. Inter Departmental Committee for improvement of Registration:-

The Inter Departmental Committee took shape in February 1966 with Director of Health Services as Chairman, The Additional Director, Bureau of Economics & Statistics, Secretary, Board of Revenue, Director of Municipalities, Director of Panchayats, the Assistant Director of Health Services (Epidemiology and Vital Statistics) and Deputy Director, Vital Statistics, Bureau of Economics & Statistics (Member Secretary) as members. The Committee have met 5 times and considered ways and means of improving registration.

8. Births & Birth rates:-

4.02 lakhs of live births were registered during the year 1967 - 3.09 lakhs in rural areas and 0.93 lakhs in urban areas. The birth rate for the whole State is 20.69; 17.60 for rural and 49.79 for urban. Compared to the corresponding rates of the previous year viz. 22.52 (State), 18.28 (rural) and 62.85 (urban) a decrease is seen in 1967.

The table below shows the registered vital rates for the years 1958-1967.

Vital rates for the years 1958-67

	Year (Rate)									
	1958	1959	1960	1961	1962	1963	1964	1965	1966	1967
Birth	24.58	26.23	23.92	25.00	22.73	22.38	23.32	22.32	22.52	20.69
Death	7.57	7.80	6.94	7.25	6.35	5.99	5.85	5.25	5.38	4.86
Infant deaths	49.31	49.77	39.79	41.82	34.62	32.02	28.36	27.28	26.01	24.01

As in the previous year Cannanore District has registered the highest birth rate (23.85) and Trichur District the minimum birth rate (16.26). Considering the urban birth rates, Quilon District registers the highest (76.23) and the lowest is the Ernakulam District (39.79). In general rural birth rates are very low when compared to urban rates. The reason for this phenomenon seems to be that a sizeable number of births to rural mothers occur in urban hospitals and are therefore registered in the urban registration offices.

Also the statistical staff posted in Corporations and Municipalities have caused a large number of detected events to be registered.

It may be stated here that the figures of birth, deaths, infant deaths and maternal deaths for Municipal areas include in this bulletin is found to very slightly from the figures reported by and included in publications relating to some individual Municipalities. The reasons for this discrepancy are being studied.

9. Average number of children:-

It is seen that mothers below 15 years of age had one child born, while mothers of age 20-24 years had two children born. In the age group 30-34 years the mothers had 5 children while in 45 and above age group the number of children born is about 8. Thus completed fertility can be taken as 8 children in Kerala taking only mothers who had one delivery in 1967. The average number of children born to all mothers is nearly 4.

10. Deaths and death rate:-

A total of 94552 deaths are registered during 1967 of which 72494 are in rural areas and 22058 in the urban areas. The crude death rate come to 4.86 for the State as a whole, 4.12 for rural and 11.80 for urban areas. The death rate from the registration data has shown a decrease when compared with that for the previous year (1966).

The maximum death rate is for Cannanore District (6.19) minimum is for Trichur (3.01). As in the case of birth rates, death rates are also higher for urban areas. The death rates of the three Districts in Malabar areas are very high when compared to that of the 6 Districts of T.C. area.

11. Infant death and Infant death rates:

A total of 9683 infant deaths were recorded during the year under review. Of these 7201 deaths occurred in rural areas and the 2482 in urban areas. Compared to the previous year, there is a reduction in infant death rate in 1967 (24.08 for State, 23.27 and 26.77 for rural and urban respectively. Palghat District records the highest infant death rate (32.52) while Trichur the lowest (16.41).

12. Still births & still birth rates:-

The total number of still birth registered during the year is 2936. Of these 972 occurred in rural areas and 1964 in urban areas. Still birth rate during the year under review is 7.25 while in 1966 it stood at 7.63. The urban rate is 20.75 and rural rate is 3.13. The highest still birth rate is recorded in Quilon District (10.31), the lowest is in Trichur District (3.35).

13. Maternal deaths and their rates:-

During the year under review 339 maternal deaths were registered, 303 in rural areas and 36 in urban areas. The State rate is 0.84. In 1966 it was 1.31.

14. Deaths according to cause:-

A break up of deaths according to cause group is given in Table number 12. The cause of death is recorded by the Registrars who are non-medical men. Since the cause of death is not certified by a doctor for the vast majority of death the cause of death given in the statement is not dependable.

Out of 94552 deaths registered during the year, 42 deaths are due to small-pox, 3933 due to dysentery and diarrhoea, 10212 due to respiratory diseases including pulmanary tuberculosis, 4278 from fevers (other than typhoid fever) including malaria and 1562 due to accidents and injuries.

15. Distribution of death according to age:-

The breakup of deaths according to age groups is as follows. The rural urban and sex-wise distribution is given in table No.10.

Distribution of deaths according to age

<u>Age group</u>	<u>Number</u>	<u>Percentage</u>
Under 1 year	9683	10.24
1-4	12577	13.30
5-9	3851	4.07
10-14	1732	1.83
15-19	1644	1.74
20-29	3760	3.98

Age-group	Number	Percentage
30-39	5190	5.49
40-49	6703	7.09
50-59	8823	9.33
60 & above	40296	42.62
Not recorded	293	0.31
TOTAL	94552	100

From the table given above it is seen that 10% of the deaths occurred to children below 1 year. During 1966 this was nearly 12%. Nearly 43% of the deaths are accounted for by the population aged 60 and above.

16. Under-Registration:

Spot checks for estimating the extent of under-registration are to be conducted by the Senior Research Assistants. Data relating to spot checks have been received only from 6 districts and the number of events enumerated is low.

As regards Municipalities spot checks have been conducted by the Research Assistants and U.D.Compilers during 1967.

All together 6185 births and 1366 deaths were enumerated. Out of this 1338 births and 376 deaths were not registered. The corresponding percentage of under registration is 21.63% for births and 27.53% for deaths. But as data for the whole year have been given in respect of only three Municipalities these rates could not be used. Therefore the registered rates were compared to those with the scheme of Sample Registration for determining the extent of under registration.

A comparison of the birth and death rates obtained from registration data with those obtained from Sample Registration reveals that about 57% of the births and 48% of the deaths that occurred during 1967 have been registered. The rates are given below:

	Sample Registration		Normal Registration	
	Birth rate	Death rate	Birth rate	Death rate
Rural (1967)	36.30	10.13	17.60	4.12
Urban (Pilot survey 1967 1st half)	33.60	9.90	49.79	11.80
State	36.04	10.11	20.69	4.86
