INTRODUCTION

An Economic Review of Kerala for the year 1965 highlighting the broad trends of economic events is attempted in this report. Statistics pertaining to the economic conditions during the year under report become available only with a time lag. This renders it difficult to make an accurate assessment of the economic conditions during a particular year at the beginning of the succeeding year itself. The available information has been collected and analyzed in the following pages. This report is prepared in the Bureau of Economics and Statistics, Trivandrum.

POPULATION

The population of Kerala according to 1961 Census was 169.04 lakhs. The State's density of population of 435 per square kilometre is about three times the all India density of 144 per sq. km. The rate of growth of population in Kerala is one of the highest for any Indian State. The growth rate of population in Kerala during the decade 1951-1961 was 2.24% per annum, against the all India figure of 1.98% per annum.

1.2. The estimated population of the State is 186.89 lakhs in 1965 (as on 1st March). According to this, the density of population works out to 481 per sq. km. in 1965.

\mathbf{II}

AGRICULTURE

The overall performance of the agricultural sector was satisfactory during 1964-65. Gross value of agricultural production increased by 3.26% and net value by 1.96% compared to the previous year. Marine fish production increased from Rs. 3.14 crores in 1963-64 to Rs. 6.28 crores in 1964-65 registering a phenomenal increase of 100%. The revenue from forest also increased during the year, the increase being 8.25%. Up-to-date data are not available in respect of animal husbandry, but this would not affect the conclusion that the agricultural sector as a whole has fared well during the year under review. In spite of the erratic monsoon the fall in the production of rice in the State was but nominal, about 7,000 tonnes only.

Rainfall

2.2. The annual rainfall which was declining steadily since 1960-61 showed signs of recovery during 1964-65. This is illustrated below:

| Year | Rainfall | (mm) |
|---------|----------|------|
| 1960-61 | 3733.5 | |
| 1961-62 | 3309.5 | |
| 1962-63 | 3125.3 | |
| 1963-64 | 2465.1 | |
| 1964-65 | 3145.8 | |

The district-wise figures of the average monthly rainfall in the State during 1964-65 are given in Table 2.1.

Area under crops

2.3. Despite the limited scope for the expansion of cultivated area, there has been a notable improvement in the utilisation of land for agriculture during the year. The net area sown increased by 15.0 thousand hectares, area sown more than once by 12.8 thousand hectares and total cropped area by 27.8 thousand hectares. This has been brought about partly through the large exploitation of the cultivable waste and fallow lands and partly by sowing the land more than once. As much as 84% of the additional area brought under cultivation went for raising non-food crops like coconut, tea, coffee and rubber. The rest alone was available for food crops. The area under paddy, however, showed a slight decline during the year. The data on land utilisation and area under crops are presented in Table 2.2 and Table 2.3 respectively.

Agricultural production

2.4. Agricultural production, with the exception of the production of food grains, maintained a rising trend during the year. The production of rice which stood at 11.28 lakhs tonnes in 1963-64 declined to 11.21 lakhs tonnes, showing a fall of 0.07 lakh tonnes or about 0.6%. Sugarcane and pepper also showed, similarly, a slight decline in production. The production of other food and cash crops however went up. The increases in some of the major crops are 423 million nuts in the case of betel nuts, 2.4 lakhs tonnes in the case of tapioca and 6.3 thousand tonnes

in the case of rubber. The increase in the case of coconuts was nominal, being 16 million nuts over the previous year. The production statistics for 1964-65 are given in Table 2.3.

Food situation

- 2.5. The food situation in the State continued to be tense and difficult during the year. The production of rice declined from 11.28 lakh tonnes in the previous year to 11.21 lakh tonnes during the year under review. The total production of cereals was 11.33 lakh tonnes in 1964-65 as against 11.39 lakh tonnes in 1963-64. Deducting 10% for seed, etc., the quantity of cereals available for consumption was about 10.20 lakh tonnes.
- 2.6. Following the abolition of the southern food zone in October 1964 which interfered with the free movement of rice into the State from the neighbouring surplus States of Andhra and Madras, a food crisis developed in Kerala. This necessitated the introduction of informal rationing in the State from November 1964 which continued till October 1965. Statutory rationing was introduced throughout the State from the last week of October 1965. A rice ration of 160 gm. per adult per day was maintained for the major part of the year. During the lean months of July to September, it was raised to 190 gm. and again to 200 gm. The actual off-take of rice through the ration shops in 1965 was 906,400 tonnes. Of this, about 55,000 tonnes was the quantity procured through levy within the State and the rest obtained as central allotment to the State.

Fisheries

2.7. The production of marine fish in Kerala which on an average accounts for about 35% of the all India marine fish catches was 3.60 lakh tonnes during the year as against 1.67 lakh tonnes in the previous year. This has been brought about by a record catch of 2.49 lakh tonnes of oil sardine, constituting 69% of the total catches compared to 0.24 lakh tonnes of oil sardine (15% of the total catches) in 1963-64. The catches of prawns and other exportable varieties of fish like seer fish, tunny and mackerel however showed signs of slight decline during the year. The species-wise marine fish catches in Kerala from 1957-58 to 1964-65 are given in Table 2.4.

2.8. An annual account of the export earnings from marine products for a decade is provided in Table 2.5. The export earnings of Kerala in this sector was Rs. 5.04 crores in 1964-65 comprising 70% of the total all India export earnings from marine products. The phenomenal growth in the foreign trade in fish products during the last few years is due to the modernisation in fish processing methods like freezing and canning. U.S.A. provides the biggest foreign market for the fish products of Kerala. During the year U.S.A. purchased marine products valued at Rs. 3 crores from Kerala.

Forests

2.9. With the exception of teak, the out-turn of the major forest products viz., round logs of miscellaneous species, round poles and firewood increased considerably compared to the previous year. The out-turn of teak round logs however was 11% less than that in 1963-64. The minor produce like sandalwood and ivory showed signs of considerable improvement over the previous few years' out-turns. The out-turn of forest products for the last few years is given in Table 2.6. The net revenue from forests was Rs. 5.24 crores in 1964-65 (vide Table 2.7) registering an increase of about 8% on the 1963-64 revenue.

Irrigation

- 2.10. The area irrigated registered an increase of slightly over 4% per annum during the years 1955-56 to 1964-65. Out of the total net area of 104 thousand hectares additionally brought under irrigation during the past decade, the irrigated area sown more than once in an year is about 41 thousand hectares or about 39%.
- 2.11. The pace of progress in irrigation during the Third Plan period has been considerably slow compared to that in the Second Plan period. The ratio of the net irrigated area to net area sown showed an average increase of 0.17% per annum during the Third Plan period compared to 0.61% per annum during the Second Plan period. The ratio of the total irrigated area to total cropped area, similarly, registered an increase of about 0.11% per annum during the Third Plan period as against 0.67% per annum in the Second Plan period. The details of the irrigated area source-wise and crop-wise are given in Tables 2.8 and 2.9 respectively.

2.12. Of the total irrigated area, as much as 91% is under food crops and the rest under cash crops. Paddy covers nearly 79% of the total irrigated area. The irrigated area under paddy forms 49% of the total area under the crop in Kerala in 1964-65 as against 47% in 1963-64.

Plantation crops

- 2.13. The principal plantation crops in Kerala are rubber, coffee and tea. For the past decade, rubber and coffee registered steady progress both in area cultivated and production. The progress in the area under cultivation and production of tea, on the other hand, was not steady. However, the crop has shown signs of improvement during the last three years (vide Table 2.10).
- 2.14. Kerala accounts for over 90% of the total production of rubber in the country. The area under rubber has more than doubled since 1955-56. It reached nearly 147 thousand hectares in 1964-65 as against 123 thousand in 1960-61 and 65 thousand in 1955-56. The pace of progress in the area under rubber has been about 6 thousand hectares per annum in the Third Plan period as against nearly 12 thousand hectares per annum during the Second Plan period. The production of rubber which stood at 21 thousand tonnes in 1955-56 also nearly doubled by the end of 1964-65. The annual increase was about 4.26 thousand tonnes during the Third Plan period compared to 0.370 thousand tonnes in the Second Plan period.
- 2.15. In addition to the increase in area, there is another redeeming feature regarding natural rubber viz. the growing popularity of the high yielding varieties. In 1956-57, out of the total area of 94.84 thousand hectares under rubber in India, only 23,06 thousand hectares (i.e., 24%) were under improved varieties. This has expanded steadily to reach 70.19 thousand hectares which is 45% of the total area under rubber in 1964-65. The details regarding the proportion of area under high yielding varieties are provided in Table 2.11.
- 2.16. Kerala accounts for about 12% of the area under cultivation as well as production of tea in the whole of India. The State lags behind the other South Indian tea producing States of Madras and Mysore in the matter of average yield per unit area. The State's position in this

regard is, however, better compared to the tea producing States in North India.

- The area under tea has not shown any appreciable increase over the past few years in the State or at the all India level. The increase in the area during the decade ending 1964 was only about 5.8% at the all India level. The production, however, showed a more than proportionate increase over the decade, the increase being 25.9%. This was made possible by a rise in the productivity from 961 kg. per hectare in 1955 to 1101 in 1964, ie. 19.0% over the period. In Kerala, the area under tea declined from 39.51 thousand hectares in 1954-55 to thousand 39.36 hectares in 1964-65, but production increased from 30.11 thousand tonnes to 42.08 thousand tonnes during the same period, showing a rise of about 40%. The increase in the average yield rate was about 40%. The area under tea as well as production was higher in Kerala in 1964-65 compared to 1963-64. The statistics of area and production are given in Table 2.10.
- 2.18. The State has an area of 21.73 thousand hectares under coffee which is about 16% of the all India area under the crop. Kerala accounts for about 15% of the all India production of coffee. The year 1964-65 was exceptionally good for the crop in Kerala. The production recorded an increase of about 13% compared to the previous year. The statistics relating to the area and production of coffee in Kerala for the last few years are shown in Table 2.10.

III

INDUSTRIES

According to the 1961 Census, the employment in the secondary sector in the State was 10.88 lakhs. Of this nearly 83% is in the small scale and cottage industries sector. Coir industry accounts for about 50% of the employment in the non-factory sector. Handloom spinning, oil crushing, rice and flour mills, blacksmithy, carpentry and reed works are the other major industries in this sector.

3.2. The registered factories account for about 17% of the total work force in the secondary sector. The number of registered factories as on 31-12-1964 was 2707 as against

- 2607 in 1963, the corresponding figures of employment being 1.86 lakhs and 1.76 lakhs respectively. Tables 3.1 and 3.2 present the distribution of working factories by sections and industries respectively.
- 3.3. During the year 1965, 267 new units were registered and the registration of 127 units were cancelled. Thus the total number of registered factories in the State at the close of the year 1965 was 2847.
- 3.4. The average earnings in the factory sector in the State is low, at Rs. 3.09 per manday. The average daily earnings during 1963 was Rs. 3.05. Even within the State, average daily earnings in industries like cashew (Rs. 1.45), rice and flour mills (Rs. 1.70), coir (Rs. 3.50) and bricks and tiles (Rs. 3.90) are low compared to the earnings of workers in technologically advanced industries like soap (Rs. 9.15) and thread mills Rs. (6.75). The average daily earnings in different industries are presented in Table 3.2.

Minerals

- 3.5. The percentage contribution of Kerala to the total value of mineral production in the country is negligible, being only less than one per cent. The important minerals of the State are ilmenite, monazite, rutile, quartz and china clay. The ilmenite and rutile production during 1965 were 3,198 tonnes and 1,317 tonnes respectively. The corresponding figures for 1,964 were 7,345 tonnes and 1,900 tonnes. M/s. F.X.P. Minerals, Chavara, was the only concern which produced ilmenite, rutile and monazite during 1965. The falling trend in the production of ilmenite was due to the unfavourable conditions that continued to prevail in the foreign markets. The details of production and export of ilmenite, rutile and monazite are given in Table 3.3.
- 3.6. The total production of china clay in the State during 1965 was 52,069 tonnes as against 41,789 tonnes in 1964. The total quantity sold in 1965 was 20,459 tonnes—11,945 tonnes in processed form and the rest raw. The Kerala Traders discontinued production during the year. A new concern Electro Diesel Equipment Company has started production of china clay from April 1965. There were nine lease holders engaged in the production of china clay during 1965. Three companies were engaged in

production of white quartz during the year 1965. The total quantity produced in the year was 18,259 tonnes and the quantity sold 6,889 tonnes. The Punalur Mica Mines and Veli Graphite Mines remained closed during 1965. A new company for producing ball clay and fire clay was formed during the year.

3.7. There were a total of twenty-nine mining lease holders in the State during 1965. Out of this only sixteen lease holders were actually engaged in the production and sales of minerals.

IV

POWER

Kerala is in an advantageous position having been favoured with abundant water resources which could be tapped for generating power at very attractive cost. The hydro-electric potential of the State is about 2.2. million K.W. at 60% L.F. So far only about 8% of the potential has been harnessed. In the context of the State's industrial backwardness power generation assumes a special role in Kerala.

- 4.2. The peak of the system load reached in 1964-65 was 194 M.W. The peak demand met by the hydel stations in the State was only 156 M.W. The difference of 38 M.W. was met by purchase from Madras State.
- 4.3. The number of centres electrified as on 31-3-1965 was 1875. The total number of consumers connected was 280,015. The per capita annual consumption of power rose from 30.10 K.W.H. at the beginning of the Third Plan to 43.9 K.W.H. on 31-3-1965. The details of the power system are give in Tables 4.1 to 4.3.
- 4.4. The State has been experiencing power shortage during the First and Second Plan periods. The shortage has continued in Third Plan also and has been very severe in 1965-66. To tide over the difficult power supply position power cut of 50% on industrial consumption and 25% on domestic consumption has been imposed from 15th December 1965 besides taking additional power supply from Mysore.

٧

TRANSPORT

A major change that took place in the administrative set up of the Transport Department was the formation of the Kerala State Road Transport Corporation with effect from 1-4-1965. The number of routes operated by the Department as on 31st March 1965 was 553 with a route distance of 17,832 Km. The number of bus schedules in operation went up from 652 in 1963-64 to 661 in 1964-65 and the daily schedule distance increased from 1.59 lakh Km to 1.66 lakh Km. The number of passengers carried was 1399.06 lakhs in 1964-65 as against 1204.98 lakhs in 1963-64.

- 5.2. The distance operated by the Department increased from 594.9 lakh Km in 1963-64 to 609. 6 lakh Km in 1964-65 and the earnings from Rs. 477.0 lakhs to Rs. 553.8 lakhs. Against 2.47% increase in the distance operated increase in earnings is found to be 16.10% over the year. The details of distance operated and earnings therefrom are provided in Table 5.1.
- 5.3. The revenue of the State Transport Department in 1964-65 was Rs. 553.88 lakhs and the expenditure Rs. 529.68 lakhs resulting in a profit of Rs. 24.20 lakhs which is less by Rs. 4.44 lakhs than that of the previous year. The profit earned by the Department shows steady decline since 1962-63. Table 5.2 shows the revenue and expenditure of the Department for the last few years.
- 5.4. The Department was operating a Water Transport Section also comprising 5 routes with a fleet strength of 10 powered boats having a seating capacity of 1439. This section was running at a loss as can be seen from Table 5.3
- 5.5. The receipts under Motor Vehicles Acts are increasing steadily. The total receipts in 1964-65 was Rs. 391.46 lakhs as against Rs. 380.50 lakhs in 1963-64. The receipts under various heads are given in Table 5.4. The decrease noted in the receipts under Indian Motor Vehicles Act was mainly due to a change in classification effected from 1964-65.
- 5.6. The total number of different kinds of motor vehicles on road increased from 40443 in 1963-64 to 43110 in 1964-65. The district-wise figures are presented in Table 5.5.

VI

PRICES

The working class price index numbers registered a persistent rise in almost all the centres in Kerala in 1965. The rise in the price level during the year varied from 6.4% (in Punalur) to 12.6% (in Changanacherry) compared to the previous year. The up-trend in the indices was mainly due to the rise in the prices of food articles like condiments, coconut and coconut oil. The working class price index in selected centres of Kerala for different years are given in Table 6.1.

- 6.2. The indices maintained a rising trend in all the centres over the months in 1965. In each centre the indices for different months in 1965 were higher than those for corresponding months in 1964. This is evident from the consumer price index numbers in selected centres for certain months of 1964 and 1965 given in Table 6.2.
- 6.3. The maximum percentage rise in the consumer price index numbers from the beginning of the year during 1963, 1964 and 1965 is given in Table 6.3. It can be seen from the Table that the percentage rise was considerably greater in 1964 than in 1963, but it was slightly smaller in 1965 compared to 1964 in almost all the centres.
- 6.4. The increasing trend of prices is also evident from the wholesale price indices of agricultural commodities presented in Table 6.4.
- 6.5. The retail prices of important agricultural commodities also showed a rising trend in almost in all the centres in the State. The rise in prices was most pronounced in the case of coconut oil which recorded an increase of 50% compared to 1964. The prices of tapioca, sugar and arecanut also registered an increase during 1965 compared to the previous year (vide Table 6.5).

\mathbf{VII}^{\perp}

EXPORT—IMPORT TRADE

Export trade of Kerala continued to maintain an increasing trend during 1963-64 and 1964-65. Earnings

from exports (foreign and coastal) registered an increase of 6.8% during 1963-64 as compared to the previous year. Earnings from foreign exports alone increased by only 1.5% in 1963-64 compared to 1962-63. Foreign export earnings however registered an increase of about 15% in 1964-65 over 1963-64.

Cashew

7.2. Cashew occupies an important place in Kerala's export trade. Out of the total export earnings of Rs. 12590.72 lakhs in 1963-64, cashew (kernels) accounted for as much as 17.5%. The exports of cashew kernels registered an increase of 10% in quantity and 20% in value in 1963-64 over the previous year. Similarly export of cashew shell liquid increased by 84% in quantity and 46% in value compared to 1962-63. During 1964-65 also foreign exports of cashew kernel increased both in quantity and in value over the previous year.

Coir and coir products

7.3. Coir and coir products occupy an important place among the export items of Kerala. During 1963-64 coir and coir products accounted for 10.5% of the total export earnings. Export (foreign and coastal) of coir and coir products registered an increase of 4.3% in quantity and 6.8% in earnings in that year. But foreign exports during 1964-65 in coir and coir products showed a 5% fall in quantity and 3% fall in earnings compared to the previous year.

Rubber and rubber products

7.4. Exports (both foreign and coastal) of raw rubber and rubber products registered an increase of 38.4% in 1963-64 over 1962-63. The value of rubber products increased from Rs. 77.39 lakhs in 1962-63 to Rs. 102.12 takhs in 1963-64. But the figures relating to foreign exports during 1964-65 showed a slight fall both in quantity and in value compared to the previous year.

Coffee

7.5. The year 1963-64 witnessed notable progress in the export trade of coffee. The quantity of coffee exported during 1963-64 registered an increase of 22.7% over 1962-63 while the earnings increased from Rs. 355.40 lakhs to

Rs. 449.46 lakhs (27%) during this period. The data on foreign exports for 1964-65 show a slight fall both in quantity and value.

Copra and coconut oil

- 7.6. There was notable progress in the export trade of coconut oil and copra in 1963-64 over 1962-63. The percentage increase in the quantity of copra and coconut oil exported during 1962-63 and 1963-64 was 63.92 and 9.42 respectively. Earnings from the export of coconut oil increased slightly (from Rs. 257.32 lakhs to Rs. 283.92 lakhs) in 1963-64.
- 7.7. The export of betel nuts increased by 26.1% in quantity and 18.1% in earnings in 1963-64 over 1962-63. The export of cardamom registered only a negligible increase of 1.8% in quantity during this period but the earnings from cardamom increased from Rs. 58.57 lakhs to Rs. 70.04 lakhs. Earnings from ginger increased from Rs. 168.99 lakhs in 1962-63 to Rs. 228.50 lakhs in 1963-64 while its quantity marked an increase of 18.5%. During the year 1964-65 the foreign exports of ginger slightly declined both in quantity and value.
- 7.8. During 1963-64 exports of important items like tea, pepper, lemongrass oil, coconut etc. dwindled. It is the fall in the export of these items coupled with price variations which must have slowed down the increase in the earnings from foreign trade during 1963-64. Tea exports registered 11.8% decrease in 1963-64. But foreign exports of tea during 1964-65 increased by 1.5% in quantity and 3.4% in terms of value over the previous year. Foreign exports of coir and coir products, ginger and cardamon, however, declined in terms of both quantity and value during 1964-65.
- 7.9. The figures relating to exports (foreign and coastal) are given in Tables 7.1, 7.2 and 7.3. Imports through Kerala ports are indicated in Table 7.4. A comparative picture of exports from India and Kerala is presented in Table 7.5.

VIII

EMPLOYMENT

There were 1.42 lakhs of applicants on the live-register of the Employment Exchanges in the State on 31st December

- 1965 as against 1.41 lakhs at the end of December 1964. The number of placings through the agency of Employment Exchanges increased from 14024 to 18378 during this period. The average number of employers using the services of the exchanges increased from 337 in 1964 to 434 in 1965.
- 8.2. During the year under review the employment position both in private and public sector undertakings showed an improvement over the previous years. The indices of employment are given in Table 8.1.

IX

SOCIAL SERVICES

Education

Kerala is far ahead of the other Indian States in the field of general education. The number of schools for general education increased from 10330 in 1963-64 to 10619 in 1964-65. Table 9.1 gives the number of schools for general education in Kerala from 1960-61 to 1964-65. About 83% of the children in the age-group 6-11 years was attending schools in 1964-65. The number of candidates appeared for the S. S. L. C. examination in September 1964 and March 1965 was 56,135 and 1,44,007 respectively and the number passed was 21,302 (38 %) and 60,460 (42%) respectively.

- 9.2. The State's position is not quite satisfactory in the matter of technical education. The faculty-wise distribution of students in colleges reveals that the percentage of students undergoing technical courses of study is only 13.6% of the total number of students.
- 9.3. The State has the highest per-capita expenditure on education among the different States of India and it is on the rise from year to year.

Health services

9.4. Kerala is well advanced in the provision of health services also. The State had 100 hospitals and 379 dispensaries in 1965 as against 94 hospitals and 266 dispensaries in the previous year. Besides, there were 45 hospitals and 218 dispensaries administering the Ayurvedic system of

treatment. The number of hospital beds per lakh of population in the State was 93 in 1964-65, which does not take into account the 847 beds available in Ayurvedic Hospitals. The district-wise break-up of the number of beds available is set out in Table 9.2. Among the Indian States, Kerala ranks next only to Jammu and Kashmir in per-capita Government expenditure on health services.

\mathbf{X}

The year under review has introduced certain negative trends into the Kerala economy. Production in agriculture and industry failed to maintain its earlier rate of growth. There was actually a reduction in the case of rice by7000 tonnes though agricultural production as a whole registered an increase of about 2 per cent. The import of rice in 1965 compared to 1964 registered a significant fall though this was offset to some extent by the import of wheat. The food situation in the State continued to be tense and difficult throughout the year.

10.2. During the year there was a sharp increase in the working class cost of living index numbers. The increase was significant in all the centres. Unemployment continues to be the severest of social and economic problems confronting the State. Though past investments are beginning to yield results, the developments in the economy in the past year highlight the need for greater efforts at increasing production and employment in the coming years.
