Preface

Gross Domestic Product (GDP) is widely recognized as a key macroeconomic indicator, playing a crucial role in shaping developmental policies for any region. The Department of Economics and Statistics (DES) has been consistently compiling Kerala's GSDP and related aggregates in adherence to the guidelines provided by the National Accounts Division (NAD) of the Ministry of Statistics and Programme Implementation (MoSPI).

This publication first of its kind provides a detailed analysis of Kerala's Gross State Domestic Product (GSDP) for the period 2011-12 to 2023-24, offering valuable insights into the economic dynamics of one of India's most distinctive states. Kerala, renowned for its exemplary social indicators such as high literacy rates, advanced healthcare systems, and controlled population growth, stands as a distinctive model of development. The Kerala Model highlights how prioritizing human development and social equity can significantly enhance the quality of life, even amidst constrained economic resources. Understanding its economic performance is vital for policymakers, researchers, and citizens alike. The subsequent pages examine the complexities of Kerala's economic output, focusing on trends, sectoral contributions, and growth patterns over time. This report is designed to:

- Provide accurate and current GSDP data for Kerala.
- Analyse the contributions of various sectors to the state's economy.
- Benchmark Kerala's economic performance against national averages.
- Identify key growth drivers and areas requiring improvement.
- Offer insights to guide policy decisions and shape future economic strategies.

By presenting this data and analysis, the publication seeks to deepen understanding of Kerala's economic trajectory and encourage informed discussions aimed at fostering sustainable and inclusive growth in the State.

The State Accounts Division (SAD) of the Directorate of Economics and Statistics has undertaken commendable efforts to compile this report under the guidance and supervision of Sri. Manoj M, Additional Director (SI) and Sri. Gopakumar S, Deputy Director in charge of State Accounts Division (SAD). Their dedication and contributions are gratefully acknowledged. I extend my heartfelt appreciation to the entire team of the State Accounts Division (SAD) headed by Sri. Sajin Gopi, Assistant Director for their commendable effort in bringing out such a worthy publication.

I hope this report will be useful to the government and various segments of the society who are regularly watching the economic impulses of the State.

Highlights

Kerala's **nominal GSDP** growth rate in 2021-22 was **19.8%**, making it **the 7th fastest-growing state** in India. Odisha ranked first with a growth rate of 29.03%.

In 2021-22, Kerala recorded a **real GSDP** growth rate of **11.78%**, making it the **4th fastest-growing state**. Odisha led with 16.4%, followed by Jharkhand (12.02%) and West Bengal (11.85%).

In 2021-22, Kerala's **GSDP at current prices** stood at ₹9,24,465.41 crore, making it the **11th largest economy among Indian states**. Maharashtra topped the list with ₹31,44,138.02 crore, followed by Tamil Nadu ₹20,72,495.78 crore and Uttar Pradesh ₹19,81,367.44 crore.

Kerala's **per capita GSDP at current prices** was ₹2,59,878.4 in 2021-22, **ranking 10th** among all States and UTs, and **6th** among major states.

The **real per capita GSDP** of Kerala was ₹1,60,791.3 in 2021-22, ranking **13th** among all states and UTs, and **7th** among major states.

Kerala ranked **11th** in **per capita NSDP** among all states and UTs, and **6th** among major states, in both current and constant prices, in 2021-22.

Kerala recorded a **nominal GSVA** growth rate of 20.01% in 2021-22, **ranking 5th among major states**.

Highlights

With a **real GSVA** growth rate of 12.59% in 2021-22, Kerala ranked as the **3rd fastest-growing major state**.

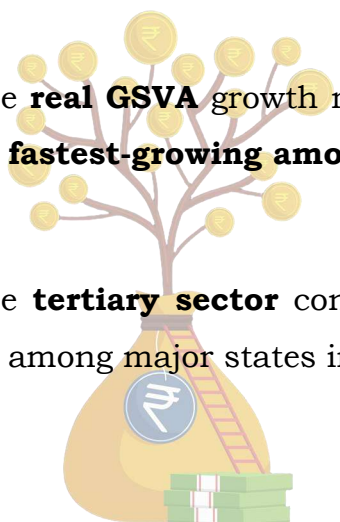

The **nominal GSVA** growth rate for Kerala's tertiary sector was 22.21%, **the 2nd fastest among major states** in 2021-22.

The **real GSVA** growth rate for the **tertiary sector** was 15.92%, making it the **fastest-growing among major states** in 2021-22.

The **tertiary sector** contributed **63.7%** to Kerala's GSDP, the **highest share** among major states in 2021-22.

Chapter 1

Introduction

Regional accounts are crucial in the formulation, implementation, and evaluation of regional policies in a quasi-federal country like India. Regional indicators derived from these accounts are often used to assess the performance of regional economies and measure geographical disparities in development. Objective, reliable, consistent, relevant, and harmonized regional statistical indicators provide a solid foundation for policies aimed at reducing economic and social disparities among different regions. They also generate significant inputs for local level public policies. The most comprehensive indicator of economic activity and progress in an economy is aggregate income. In India, regional income has traditionally been estimated as the domestic product originating within the geographical boundaries of the regional unit.

Thus, the State Domestic Product (SDP) generally referred as State income serves as the primary estimate of aggregate income at the regional level.

These SDP estimates are of considerable importance to individual states as they measure growth and indicate structural changes and shifts within the states. The Gross State Domestic Product (GSDP) estimates for all the States are compiled using the identical concepts and definitions of the National Accounts. Conceptually, the estimates of State Income can be prepared by adopting two approaches, namely income originating and income accruing. In the income originating approach, the measurement corresponds to income generated by the factors of production physically located within the geographical boundaries of the state and represents gross/net value of goods and services produced within the state. On the other hand, the income accruing approach relates to the income accruing to the normal residents of a state. Since this measure the income that become available to the residents of a state, it provides a better measure of welfare of the residents of the state. However, for compiling the State Domestic Product (SDP) estimates by income accruing approach one needs data on flows of factor incomes to/from the boundaries of state i.e. on inter-state flows as well as flows to/from abroad. Due to lack of availability of these data, presently, the estimates of SDP are compiled by the respective Directorates of Economics & Statistics (DES) in the States (state agencies responsible for the regional statistics), following the income originating approach.

Thus, the current concept of compiling the GSDP/NSDP is similar to that of compiling the GDP/NDP of the entire economy i.e., measuring the volume in monetary terms, the total value of goods

and services produced within the geographical boundary of the state. The basic concepts and definitions used in National Accounts largely follow those outlined in the System of National Accounts (SNA), as documented by the United Nations, World Bank, International Monetary Fund (IMF), Organization for Economic Cooperation and Development (OECD), and the European Union. The System of National Accounts (SNA) is a comprehensive framework that provides a set of concepts, definitions, classifications, and accounting rules for compiling and presenting national accounts and macroeconomic statistics.

While the concepts and methodology are largely standardized under the international System of National Accounts (SNA), the specific procedures and approximations depend on each country's data collection system. To ensure estimates are comparable internationally and over time, the Central Statistics Office (CSO), previously known as the Central Statistical Organization, uses detailed, well-documented methods and procedures, which remain consistent until the base year is revised.

History of Compilation of GDP in India

The history of GDP estimation in India reflects the evolution of the country's economic measurement system and its alignment with global standards. The attempts were made during pre-independence period including notable efforts by Dadabhai Naoroji, William Digby and R.C Desai. The first systematic effort was made by Prof. V. K.V Rao in 1931 who estimated India's national Income for the period 1925-29.

Following independence national Income Committee, established by the Government of India in 1949 under Prof. P.C. Mahalanobis, compiled the first comprehensive estimates of National Income for Indian Union. The First Report, published in April 1951 presented preliminary estimates using statistical techniques and data from various sources, adjusted for discrepancies. The Final Report, released in February 1954, provided refined estimates and a detailed methodology, improving data collection and analysis. These reports were the first systematic attempt to measure national income, essential for post-independence economic planning, and set a foundation for future national income accounting in India.

Following the methodology recommended by the National Income Committee, the Central Statistics Office (CSO) prepared the first official national income estimates with the base year 1948-49 at constant prices. In 1956, the CSO published these estimates at constant (1948-49) prices, alongside corresponding estimates at current prices and the accounts of Public Authorities, in the publication 'Estimates of National Income'.

Over the years, CSO has continually reviewed and updated the methodology for National Accounts Statistics to improve data accuracy and reflect structural changes in the economy. This process includes shifting the base year to a more recent one, enhancing coverage of activities, incorporating the latest datasets, and adhering to international guidelines. The periodic change of the base year aims to provide a true picture of the economy through macroeconomic aggregates such

as GDP, National Income, government and individual consumption expenditure, and capital formation. So far, we have had witnessed 7 base year revisions. The latest base year revision was done in 2015 and the current series of national accounts aggregates has base year as 2011-12.

History of Compilation of GDP in Kerala

Department of Economics and Statistics (DES), Kerala, prepares annually the estimates of State Domestic Product (SDP) using the concepts, methodology and guidelines of National Statistical Office. The first estimates of regional income of Kerala was prepared for the years 1955-56 to 1957-58 was released in 1960. The first series estimates of State Income of Kerala were issued by this department for the years 1960-61 to 1968-69 with 1960-61 as base year. The series of State Domestic Product (SDP) estimates in Kerala have undergone multiple base year revisions, aligning with changes made by the National Statistical Office (NSO). These revisions occurred with base years 1970-71, 1980-81, 1993-94, 1999-00, and 2004-05. The NSO most recently revised the national base year from 2004-05 to 2011-12. Consequently, the Department of Economics and Statistics, Kerala also updated the base year for the State Domestic Product estimates to 2011-12, releasing these revised estimates in 2016.

Kerala's economy is a diverse mix of primary, secondary, and service sectors, with a notable paradigm shift towards the service sector. These sectors are interwoven and interdependent, reflecting the state's complex economic structure. Analysing socio-economic parameters remains a key factor in

framing macro-economic policies aimed at reducing regional disparities. Sectoral composition analysis provides insights into the structural shifts within the economy, helping to understand how these contribute to overall contraction, expansion, and balanced growth.

Kerala is a leading State in India with high Gross State Domestic Product (GSDP) and per capita GSDP. According to NITI Aayog's Multidimensional Poverty Index 2023, Kerala has the lowest Multidimensional Poverty Index (0.002) among the states for the second consecutive time. The SDG India Index ranked Kerala first for four years (2018, 2019, 2020, and 2024) consecutively. The State also improved its ranking in the Ease of Doing Business index, moving from 28th in 2022 to 15th. Despite facing unprecedented challenges, the State has made short-term, medium-term, and long-term structural gains in different spheres of the economy. After a year of steep recovery from the Covid-19 slowdown in 2021-22, Kerala experienced steady growth despite financial constraints and adversities.

Basic Concepts

The estimates of State Domestic Product (SDP) are compiled through a combination of different approaches for the State. The general methodology for compiling the estimates of state income is to first compile the estimates at disaggregated level for each economic activity and then aggregating them for the whole State. While compiling the estimates of SDP for each economic activity, either the production approach or the income approach or a combination of the two is adopted, depending upon the data availability.

SDP can be measured in three different ways: From the angle of production, Income generation & Final utilization. This forms the basis for the three approaches to measure the SDP.

- Production Approach
- Income Approach
- Expenditure Approach

The production approach measures the sum of value added of all economic activities within the state's territory (sum of output minus intermediate consumption) plus indirect taxes minus subsidies on products.

$GDP = \sum GVA + NIT$ (Net Indirect Taxes)

$GVA = \text{Output} - \text{Intermediate Consumption}$

$NIT = \text{Indirect Taxes} - \text{Subsidies}$

The expenditure approach GDP depicts the final use (demand) of the output and comprises

- Private Final Consumption Expenditure (C)
- Gross Capital Formation (I) which includes Gross Fixed Capital Formation & Change in Stocks
- Government Final Consumption Expenditure (G)
- Net Export of Goods & Services (NX)

$GDP = C + I + G + NX$

The income generated through production activity is distributed among the factors of production, which receive wages, rent, interest, and profits, captured in national accounts as compensation of employees (wages and salaries), gross operating surplus (rent, interest, and profits of incorporated enterprises), and gross mixed income (earnings of self-employed individuals).

Thus, under the income

$GDP = \text{Compensation of Employees} + \text{Operating Surplus} / \text{Mixed Income} + \text{Consumption of Fixed Capital (CFC)}$

These three methods of measuring GDP are circular in nature. The process begins at the production stage, where productive units engage the factors of production namely, labor and capital to produce goods and services. The total value of this output gives the GDP. This production process generates money income, which is then distributed by the productive units to the factors of production. This income reflects the share of GDP accruing to employees and entrepreneurs. The income thus received is subsequently spent, either by employees, in their capacity as households, on the consumption of goods and services, or by entrepreneurs on acquiring more capital and expanding the physical assets of their enterprises. GDP remains the same whether measured at the point of production, at the point of income generation, or at the point of final expenditure.

Sectors of the economy

The economy is broadly categorized into three main sectors: **Primary**, **Secondary**, and **Tertiary**. Each sector comprises various subsectors that contribute to the overall economic activity. Below is an overview of the sectors and their respective subsectors:

1. Primary Sector

This sector involves the extraction and harvesting of natural resources. Subsectors are:

Agriculture and Allied Activities:

- ◆ Crops
 - Crop production
 - Horticulture
 - Floriculture
 - Apiculture (Bee keeping)
 - ◆ Livestock:
 - Dairy
 - Poultry
 - Forestry and logging
 - Timber production
 - Non-timber forest produces
 - ◆ Fishing and Aquaculture:
 - Inland fisheries
 - Marine fisheries
 - Mining and Quarrying:
 - ◆ Coal, iron ore, and other mineral extraction
 - ◆ Stone and gravel quarrying
- 

2. Secondary Sector

This sector involves manufacturing and industrial production, where raw materials from the primary sector are processed into finished goods. Subsectors of secondary sector are:

- ◆ Manufacturing:
 - Large-scale industries (e.g., steel, automobile, cement)
 - Small and medium enterprises (SMEs)

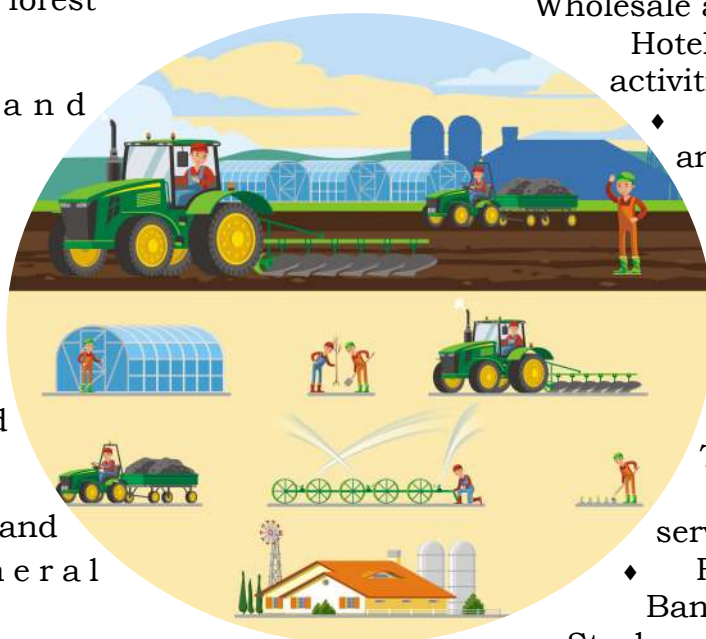

- ◆ Construction:
 - Residential, commercial, and infrastructure construction
 - Roads, bridges, dams
- ◆ Electricity, Gas, and Water Supply:
 - Power generation (thermal, hydropower, solar, wind)
 - Distribution of electricity and natural gas
 - Water treatment and supply

3. Tertiary Sector (Service Sector)

This sector focuses on providing services rather than goods. Subsectors are:

- ◆ Trade, Hotels, and Restaurants:
 - Wholesale and retail trade
 - Hotel and restaurants activities
 - ◆ Transport, Storage, and Communication:
 - Railways, roadways, shipping, and aviation
 - Warehousing and cold storage
 - Telecommunication and postal services
 - ◆ Financial Services:
 - Banking and insurance
 - Stocks and mutual funds
 - ◆ Real Estate , Ownership of Dwellings and Professional Services:
 - Property development and management
 - Professional services (e.g., legal, accounting, consultancy)
 - ◆ Public Administration
 - Government services
 - Defence and law enforcement
 - ◆ Other Services:
 - Health and education
 - IT and software services
 - Personal and community services

These sectors and subsectors together form the backbone of economic activities contributing to GDP.

Broad compilation procedures

The estimates for commodity producing sectors like crops, forestry, fishing, mining & quarrying, manufacturing etc. are prepared using the production approach. i.e. measuring the value of output and deducting there from the cost of material inputs used in the process of production. In the service sectors like trade, transport, hotels & restaurants etc., the estimates are prepared by income approach. In the preparation of state income estimates, certain activities cut across state

boundaries, and thus their economic contribution cannot be assigned to any one state directly. Such activities are Railways, Communications, Banking & Insurance and Central Government Administration, and are known as the **‘Supra-regional Sectors’** of the economy. The estimates for these supra regional activities are compiled for the economy as a whole and allocated to the states on the basis of relevant indicators. Certain activities like, defence Paramilitary, Border Security Force, high seas drilling etc. are still kept outside the

purview of the state income estimation.

Factor Cost, Basic Prices and Market Prices

In its revision in January 2015, the CSO replaced GDP at factor cost with the GVA at basic prices, and the GDP at market prices, which is now called only GDP, is the most highlighted measure. The distinction between factor cost, basic prices and market prices is based on the distinction between net production taxes (production taxes less production subsidies) and net product taxes (product taxes less product subsidies). Production taxes and subsidies are paid or received in relation to production and are independent of the volume of production such as land revenues, stamp and registration fee. On the other hand, product taxes and subsidies are paid or received per unit or product, e.g., excise tax, service tax, export and import duties etc. Factor cost includes only the payment to factors of production, it does not include any tax. In order to arrive at the market prices, we have to add to the factor cost the total indirect taxes less total subsidies. The basic prices lie in between: they include the production taxes (less production subsidies) but not product taxes (less product subsidies). Therefore, in order to arrive at market prices, we have to add product taxes (less product subsidies) to the basic prices.

GVA at basic prices = GVA at factor costs + Net production taxes

GVA at market prices = GVA at basic prices + Net product taxes

Product and production taxes are taxes assessed on the production, sale, purchase, or use of goods and services by producers, which are recorded as part of their expenses. The main taxes in this category include excise duties, value-added tax, sales tax, import and export duties, and entertainment tax. These taxes raise the prices that consumers pay at the end of the production process, so the final price is higher than the total income actually received by the factors of production. Direct taxes do not have this effect, as they are levied directly on income and do not influence the transaction price. Therefore, to arrive at estimates at market prices from factor cost, indirect taxes net of subsidies are added.

Subsidies include all grants on current account which industries obtain from the government. As a matter of long-standing convention, subsidies are regarded as payments necessary to elicit factor services. Accordingly, they are included in the sum of factor incomes. They must, therefore, be subtracted if the estimates are required at market prices.

Current vs Constant Prices

For analyzing the economy's performance in real terms, these macroeconomic aggregates are estimated at the base year's prices, known as 'constant prices' while estimates at the current year's prices are termed 'current prices'. Comparing estimates at constant prices over time measures real growth. Income regardless of the concept is measured at prices prevailing during the period or in other words at current prices. When calculated over a number of years, the changes in national income would, therefore, include implicitly not

only the effect of the changes in production but also the changes in prices. This estimate compared over the period would not, therefore, give a proper measure of the overall real increase in production of the country or the economic welfare of the people or growth of the economy. Therefore, it would be necessary to eliminate the effect of prices, or in other words to recompute the whole series at constant prices of the base year.

State income thus computed is termed as state income at constant prices or in real terms. The national income in real terms provides a measure of the growth of the economy. When available by industry of origin, these estimates give a measure of the structural changes in the pattern of production in the country which is vital for economic analysis. The distribution of national income by factor shares measures the changes in the shares of either labour or capital or individual partly owning capital and partly contributing labour. This reflects not only the variation in the productivity of these groups but also changes in their respective ownership position. Finally, at the point of utilization, the change in the shares of either consumption

expenditure or capital formation give an idea of the common welfare of the people and changes therein as well as the extent by which the capital assets of the country are either increasing or decreasing.

Gross vs net

Net domestic product (NDP) is obtained by deducting the consumption of fixed capital (CFC) from GDP. The value added should conceptually exclude the counterpart of consumption of fixed capital. The latter, in effect, is not newly created value, but a reduction in the value of previously created fixed assets when they are used up in the production process. Excluding depreciation from value added ensures a more accurate measure of economic output. It focuses on the net contribution of production activities to the economy, excluding the costs associated with maintaining and replacing fixed assets.

Per capita income

The per capita income of a state serves as an indicator of its level of economic development, especially in comparison with other states. Gross or net per capita State Domestic Product is calculated by dividing the Gross State Domestic Product (GSDP) or Net State Domestic Product (NSDP) by the mid-year projected population of the state.

FISIM

The Financial Intermediation Services Indirectly Measured (FISIM) has been computed only on loans and deposits, using the Reference Rate (RR) approach, as recommended in the SNA

2008. In short, it is $(LR-RR) \times \text{average stock of loans} + (RR-DR) \times \text{average stock of deposits}$. The RR = harmonic mean of lending rate (LR) and deposit rate (DR) for the banking sector. Moreover, the FISIM does not include interest receipts on investments and debt securities, interest paid on borrowings and debt securities and net profit on sale of investments (POSI). These components have been considered as property income, which come directly under the gross savings of the financial corporations.

Data sources

The Agriculture and Allied sector comprise agriculture (crop sector), livestock and livestock products, irrigation system, forestry, fishing and mining & quarrying.

The estimates of GVA for crop sector are compiled by the production method except for the operation of government irrigation system, for which the income method is followed. The estimates of area and production of principal crops are provided by the State Directorate of Economics and Statistics (DES), which is also the State Agricultural Statistics Authority (SASA) under the scheme EARAS (Establishment of an Agency for Reporting Agricultural Statistics). The estimates of production of commercial crops like tea, coffee, rubber etc. are collected from the respective Boards. The data on inputs is obtained from Cost of Cultivation Survey and rates and ratios provided by NSO are used in the estimation process.

The livestock sector consists of milk, meat, eggs, wool, dung, silkworm, honey and increment in stock. The source of data is the State Animal

Husbandry Departments. For the forestry and logging sector, the production of timber and data on the out-turn of other forest products and the prices of the forest produce are supplied by the Chief Conservator of Forests (CCF), Kerala. Quantity of trees outside forest (TOF) is supplied by Forest Survey of India(FSI).

The GVA estimates of Fishing sector are compiled based on the data on annual production and price of inland as well as marine fishes obtained from State Directorate of Fisheries. The GVA of mining and quarrying is estimated under two broad groups -Major minerals and Minor minerals. The district wise data on production and price of minor minerals is obtained from Directorate of Geology and Mining, Kerala. State level data on production and value of the major minerals along with input rates are obtained from the Indian Bureau of Mines (IBM), Nagpur.

Secondary sector consists of Manufacturing, Electricity, Gas, Water Supply and Other utility Services and Construction sectors. For the purposes of estimation of SDP, the entire manufacturing activities are classified into two broad segments – registered and unregistered. Estimates for registered manufacturing are prepared by following

the production method. The industry wise estimates for organized manufacturing sector are compiled by summation of the estimates of Departmental Enterprises (DE), Non Departmental Enterprises (NDE), Private Corporate Sector, Annual Survey of Industries (ASI) for non- corporate establishments and Quasi corporations. The data sources are ASI, Budget documents and Annual reports of NDEs. The private corporate data is supplied by CSO using Ministry of Corporate Affairs (MCA) 21 data. For the unincorporated manufacturing enterprises, the estimates are worked out based on the Effective Labour Input Method. Estimates are first compiled for the base year and are extrapolated to later years using relevant indicators, like the Index of Industrial Production (IIP).

For Electricity, Gas, Water supply and Other Utility Services Sector, the public part is calculated using the State budget documents and annual accounts of the state and central non-departmental enterprises. The data on private corporations is provided by CSO from MCA21 data.

The construction sector comprises of public, household and residual sector. The estimates of GVA for public sector is arrived by analysing the State budget documents and annual reports of NDEs. The prices of the construction materials collected by DES are used for the constructing weighted price index of construction materials. The results of All India Debt and Investment Survey (AIDIS) 2013 and inter censal growth rate of dwellings are used to arrive at the GVA of household part. The estimates for the residual are allocated to the States by NSO.

Tertiary sector comprises of Trade and Repair Services, Hotel and Restaurants, Railways, Road Transport, Water Transport, Air Transport, Services Incidental to Transport, Storage, Communication and Services Related to Broadcasting, Financial Services, Real Estate, Ownership of Dwellings & Professional services, Public Administration and Defence and Other Services. The public component of these sub-sectors is arrived from budget documents and analysis of NDEs. The private corporate part is apportioned to states using various rates and ratios by NSO from the MCA21 data. The private unincorporated segment estimates are prepared by income approach specifically, by multiplying the value added per worker by the number of workers, for the benchmark estimates and extrapolating these benchmark estimates with suitable indicators for the annual estimates. The information on value added per worker is obtained from the relevant Enterprise Surveys conducted for the purpose. The estimates of workforce are obtained using the results of large-scale sample surveys on Employment & Unemployment conducted by National Sample Survey Organization (NSSO) and decennial population census carried out in the country by the Office of Registrar General of India (RGI) and Census Commissioner.

The GVA of public part of Trade and Repair services is estimated by analysing the budget documents and annual accounts of NDEs. Estimates of private corporate sector is made available by CSO using the MCA 21 database. The estimates of the unincorporated segment are compiled using the labour input and Gross Value

Added Per Worker (GVAPW) and then extrapolated using sales tax index. For Hotels and Restaurants, the public component is derived from annual report of NDEs. The private part is compiled from the MCA21 database on the basis of tourist arrivals. The private unincorporated data is obtained by extrapolating base year value with growth rate in corporate sector. For GVA estimate of storage sector, the public component is based on the analysis of annual accounts of state and central warehousing corporations. Estimates of the private corporate part is compiled using MCA 21 database and for unorganized sector estimates have been prepared using the effective labour input method.

The Transport Sector other than railways includes Road Transport, Water Transport, Air Transport and Services Incidental to Transport. The public component GVA is estimated from budget documents and annual reports of NDEs. The GVA from private corporations is arrived and allocated on the basis of number of registered vehicles (for land), cargo handled at ports (for water) and combined growth rates (for services incidental to transport) from MCA21 database. For private unincorporated enterprises, GVA is estimated using data from NSS rounds and then extrapolated using appropriate indices and growth rates. For Air transport, GVA at the national level is allocated to states on the basis of passengers handled by the airports in the state.

The economic activities covered in Real Estate, Ownership of Dwellings & Professional Services sector are (i) Real Estate Activities; (ii) Computer & Information related services;

(iii) Professional, Scientific and Technical including R&D; and (iv) Administrative and Support Service activities and other professional activities. The Public part GVA is estimated by analyzing the annual accounts of NDEs. MCA21 database has been used for the private corporate sector, while effective labour input method has been used for compiling the estimates of the unincorporated sector except for ownership of dwellings. GVA of ownership of urban dwellings are estimated as the gross rental (actual rent paid and imputed rent for owned dwellings) of the residential census houses less the cost of repairs and maintenance. For rural dwellings gross rental is estimated through user cost approach.

The GVA of public administration is estimated by income approach which includes the GVA of Central, State, Local bodies and Autonomous Institutions. The compensation of employees of various administrative departments are taken by Economic Cum Purpose Classification Analysis of State Budget. The economic and purpose classification of the audited annual accounts of the local bodies in the State are analysed to estimate GVA from the local bodies, the annual accounts of the autonomous bodies are analysed for estimating the GVA of the State Autonomous Bodies. The central share of the Budget and Autonomous Institutions is supplied by CSO.

The 'Other Services' subsector covers Education, Health, Recreation, Membership Organizations, Activities of Personal Services etc. Budget expenditure on salaries and wages of those engaged in education, medical services under public sector are

obtained from State budget expenditure on salaries and wages. The estimates of private corporate part are compiled by using the MCA 21 database are supplied by CSO. GVA of unorganized sector is estimated following the labour input method and benchmark indicator procedures.

Since Railways, Communication and Financial Services are Supra-regional sectors, as the activities that cut across the State boundaries, the economic contribution cannot be assigned to any one state directly. Estimates for these sectors are compiled for the economy as a whole and allocated to the states on the basis of relevant indicators.

Overview of SDP and related aggregates

GSDP estimates of Kerala over the past decade reveal a consistent growth trend. In 2011-12, the GSDP was ₹3,64,047.88 crore, which increased to ₹ 11,46,108.67 crore in 2023-24 (Quick Estimate) at current prices. The growth rate has shown slight fluctuations over the years, particularly during the

Overview of the economy

Item Year	Gross Value Added (Lakhs)		Current Prices	
	Gross State Domestic Product	State Per Capita Income (Rs.)	Growth Rate : Gross State Domestic Product	Growth Rate : State Per Capita Income
2011-12	36404788	108666		
2012-13	41231300	122471	13.26	12.70
2013-14	46504121	137515	12.79	12.28

Table 2.2

The data indicates that variations in aggregate Per Capita Gross State Domestic Product (PCGSDP) commonly referred as Per Capita Income(PCI), align closely with the trends in GSDP, as the state's population growth has remained minimal. A similar pattern is observed in constant price estimates, as presented in Table 2.2.

PCI have remained relatively stable, starting at 6.5% and 5.97%, respectively, and ending at 4.24% and 3.82% though a slight decline was evident. This comparison highlights the significant influence of price changes on these aggregates over the decade.

GDP Aggregates of Kerala in Indian Context

A comprehensive analysis reveals that the average trends of many GSDP aggregates in Kerala align closely with national trends, though significant differences exist for certain indicators. While the state's geographical area constitutes only 1.18% of the country's total, its economic contribution is notably higher, accounting for 3.88% of India's GDP at current price estimates for 2023-24. See diagram 2.1

Table 2.4

The contribution of Kerala's GSDP to India's GDP has shown a decline over the years, both in current and constant price estimates. The growth rates for Kerala and India demonstrate distinct trends over the period. For constant price estimates, Kerala's growth rate exhibited a slight upper hand over India's during the initial years of the

fluctuations, reflecting inadequacies during those affected years. Despite these disruptions, the trends suggest a gradual recovery and the potential to regain momentum. Diagrams 2.3 and 2.4 provide a detailed visualisation of these dynamics.

Growth rate over the years at current prices

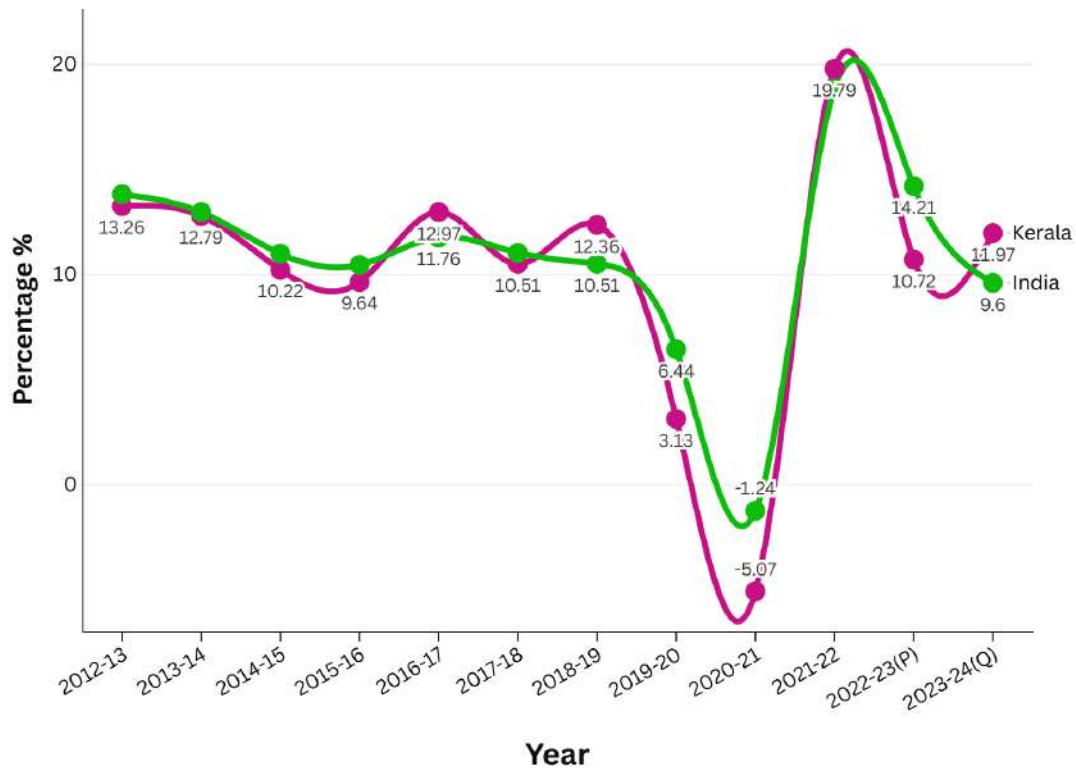

Diagram 2.2

Growth rate over the years at constant prices

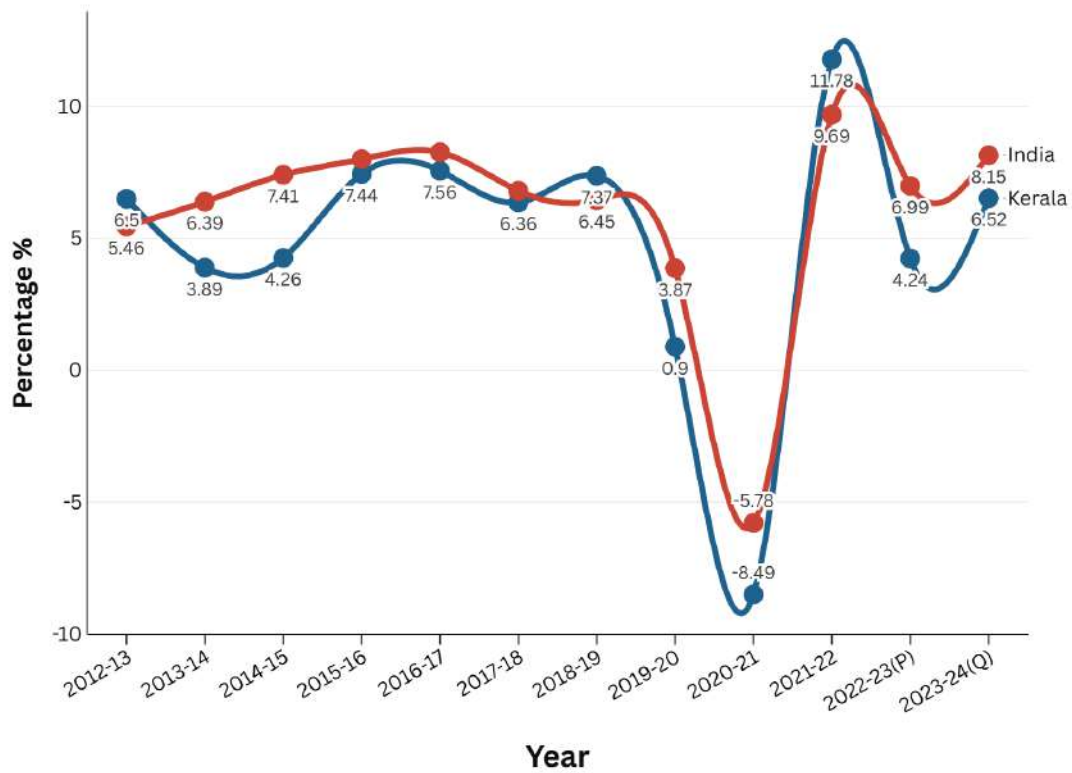

Diagram 2.3

The Per Capita Income (PCGSDP) of the state, at both current and constant prices, has consistently remained significantly higher than the national average. This higher PCI serves as an indicator of the correlation between social and economic development. Current price estimates reveal that Kerala's PCGSDP is, on average, 150% of the national PCI, a

trend that has persisted over time. However, constant price estimates present a different picture, showing a nearly linear decline in this margin—from 152% in 2011-12 to 144% in 2022-23. This trend demands closer attention, as constant price estimates provide a more realistic assessment of the economy's potential.

PCGDP Kerala and India at current prices

Diagram 2.4

PCGDP Kerala and India at constant prices

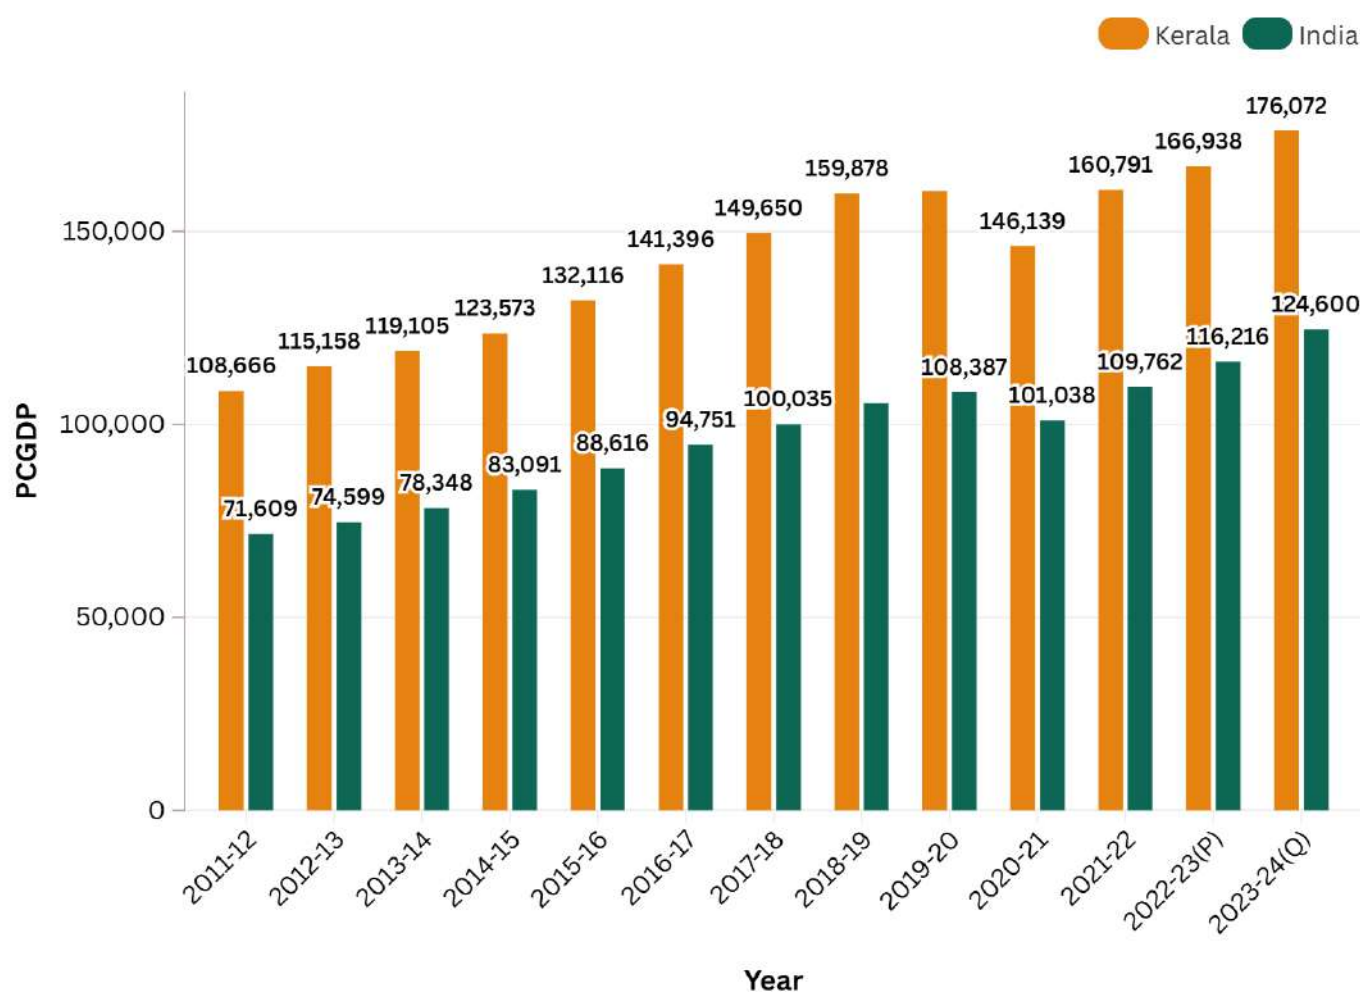

Diagram 2.5

Sectorial outline of Economy

Kerala's economy has traditionally been more reliant on the service sector. The state's economic evolution is deeply rooted in its historical and social context, resulting in a unique economic composition. Diagram 2.6 illustrates the sectorial composition of the state as per 2023-24 current estimates.

In contrast, the all-India scenario differs significantly, with the Primary sector contributing 20.97%, the Secondary sector 26.84%, and the Tertiary sector 52.19%.

A more detailed analysis of the Primary, Secondary, and Tertiary sectors is provided in the following chapters.

Sectorial distribution of GSVA at current prices

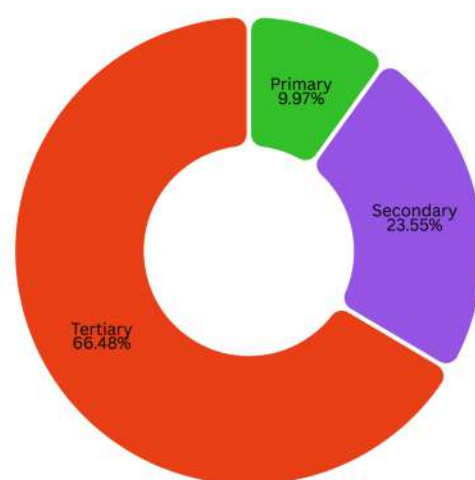

Diagram 2.6

Chapter 3

Primary Sector: GVA and related aggregates

Primary Sector: An Overview

The primary sector of the economy comprises the extraction and harvesting of natural resources, serving as the foundation of economic activities by providing raw materials to other sectors. It includes key activities such as agriculture, livestock, forestry and

and workers in allied sectors like fishing, forestry, and mining. Additionally, activities within agriculture and its allied sectors play a crucial role in ensuring the country's food security. Tables 3.1 and 3.2 provide an overview of the GVA estimates of the primary sector over the years.

overall growth trend, the rate of increase has fluctuated over the years. The contribution of the primary sector to the national primary GVA was 2.9% in 2011-12, but it has steadily declined to an estimated 1.95% in 2023-24. This decline highlights the sector's diminishing relative share at the national level. Refer Diagram 3.1

Contribution of Kerala to all India - Primary Sector

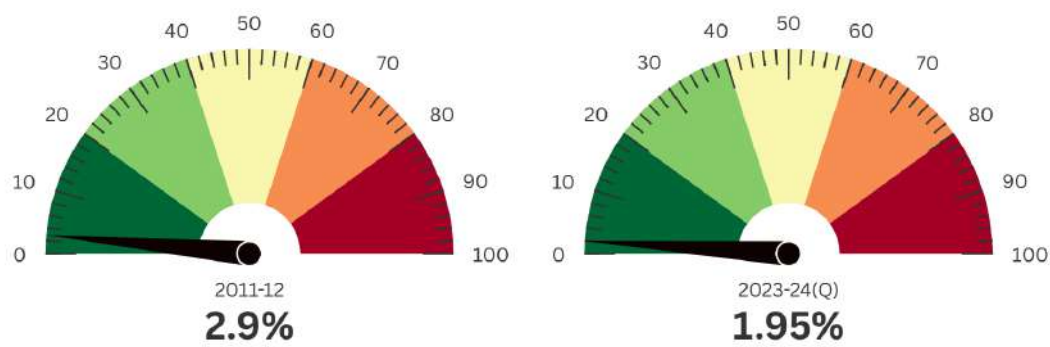

Diagram 3.1

The growth of the primary sector, which stood at 4.52% in 2021-22, is projected to decline to 0.94% in 2022-23 and attained 4.68% in 2023-24. The primary

sector of the state has not exhibited a consistent growth trend in either current or constant price estimates. Diagram 3.2 illustrates the growth rate pattern at constant prices

Primary Sector growth rate at constant prices

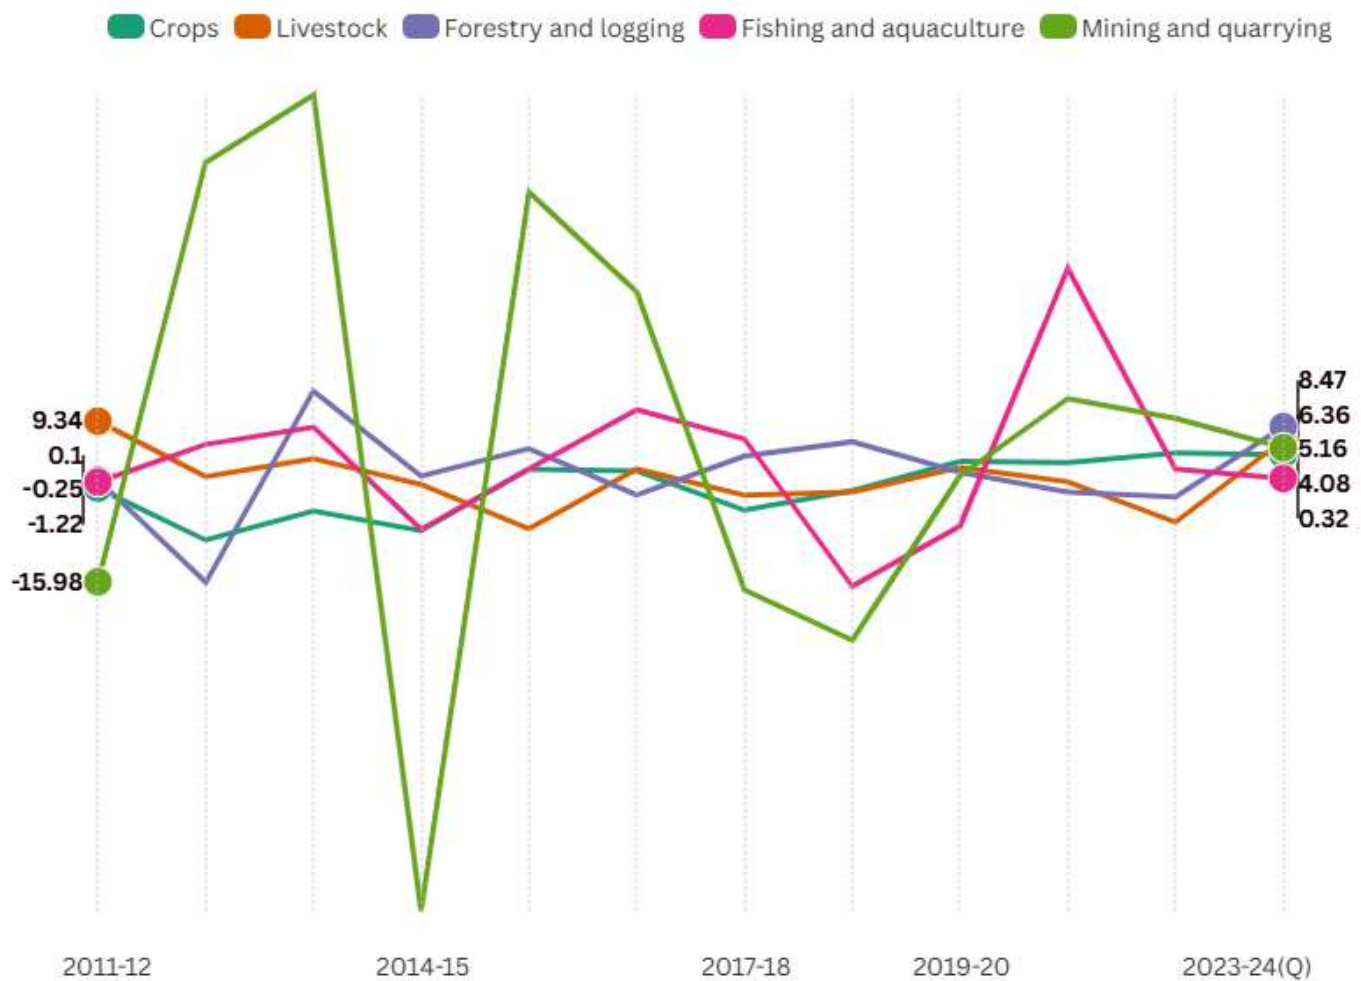

Diagram 3.2

The irregular production observed in certain subsectors during this period has led to sudden increases or declines in estimates, despite the sharp decline experienced during the COVID-19 affected years. While the overall trend of estimates remains positive, its growth

In summary, the contribution of the primary sector has exhibited a declining trend over the period. Among its subsectors, crops emerged as the most significant, contributing 4.27% to the total GSVA in 2021-22, followed by livestock at 3.19%, fishing and

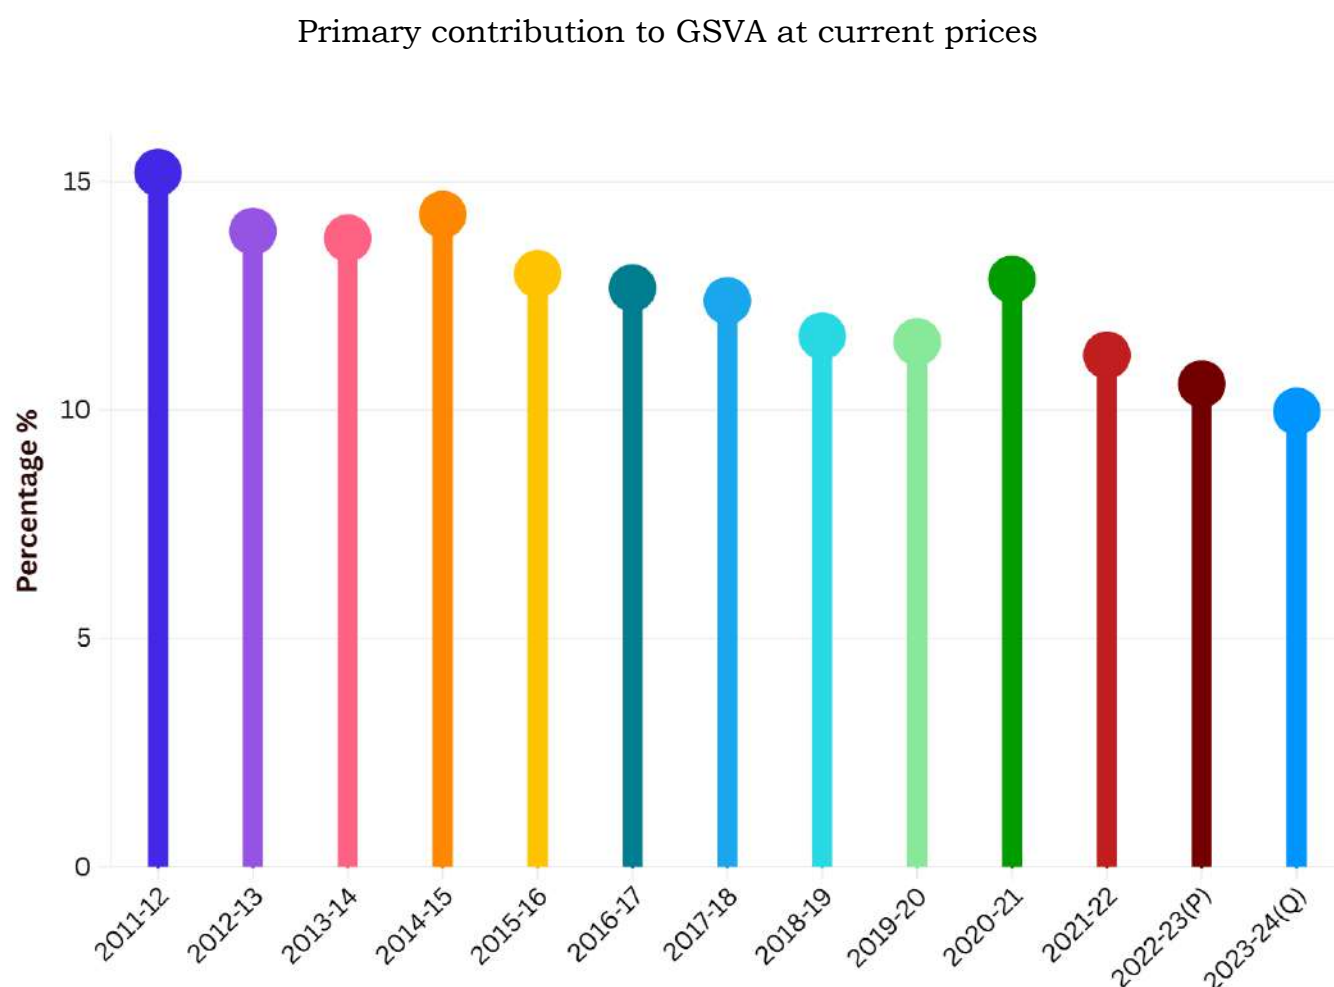

Diagram 3.3

momentum lags behind that of the other two sectors. In 2021-22, the primary sector accounted for 15.20% of Kerala's total GVA at current prices. This share is expected to decrease to 9.97% in 2023-24. Diagram 3.3 illustrates this trend

aquaculture at 1.73%, and forestry and logging at 1.67%. The share of mining and quarrying remained nominal at 0.34%. Crops and livestock continue to be key sectors of the rural economy, serving as vital sources of employment and livelihood.

Agriculture And Allied Sector

The subsectors crops, livestock, forestry and logging, and fishing and aquaculture—are collectively referred to as the agriculture and allied sector. This sector encompasses nearly the entire primary sector in terms of estimates, as it excludes mining and quarrying, which is a nominal contributor in the context of Kerala. Consequently, the growth rate and share of contribution for the

Crops

The crop subsector is the major contributor to the primary sector, accounting for 38% of the GVA in 2021-22 at current price estimates. The GVA for this subsector was ₹35,159.87 crore in 2021-22, indicates the increase to ₹37,964.94 crore in 2022-23, with growth rates of 6.59% and 7.98% respectively. However, the crop sector has demonstrated an inconsistent growth trend over these years. More over constant price estimates reveal negative growth rates in several years, signalling a clear decline of this sector within the economy. Detailed data tables are provided in the Appendix.

Major Contributors of Crop Sector

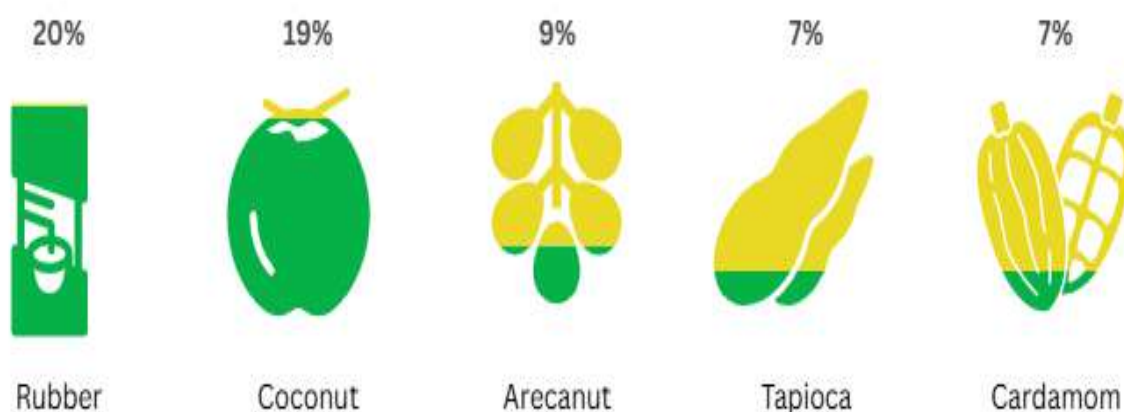

Diagram 3.4

agriculture and allied sector closely mirror those of the primary sector discussed earlier. Tables 3.3 and 3.4 provide an overview of the status of the agriculture and allied sector.

The major crops contributing to the Gross Value of Output (GVO) in Kerala are:

Rubber	20%
Coconut	19%
Arecanut	9%
Tapioca	7 %
Cardamom	7%

These five crops account for around 62 % of total GVO of the state as per 2021-22 finalized estimates.

Table 3.4

Livestock

Livestock sector is the second largest contributor to the primary sector behind crop sector as it has registered 28% of share to primary sector in 2021-22. The livestock sector contributed an average of 3.19% to Kerala's total GVA at current prices in 2021-22, a figure that has remained relatively stable since the base year, where it was recorded at 3.35% in 2011-22. The GSVA at current prices is estimated at ₹25,263.54 crore for 2022-23 compared to ₹26,223.72

crore in 2021-22 reflecting a negative growth rate of 3.66%. A closer analysis highlights significant fluctuations in growth rates over the years, both at current and constant price estimates, indicating a high degree of vulnerability. Detailed data tables are provided in the Appendix.

The major contributor to the GVO of livestock sector is the category meat as it accounted 43% of total GVO of the sector in 2021-22. The category milk is the second largest contributor with a share of 40%.

Diagram 3.6

Forestry and Logging

The GVA for this sector at current prices is estimated at ₹14,211.72 crores for 2022-23 compared to ₹13,756.04 crores in 2021-22. The sector's average contribution to the total GVA at current prices is 1.67% in 2021-22. In 2021-22, its contribution to the primary GVA was about 15%. Growth rates at both current and constant prices display irregular patterns, with estimates fluctuating independently of preceding years' trends. Detailed data tables are provided in the Appendix.

In terms of GVO of the sector 65 % has come from trees outside the forest as per 2021-22 estimates, 31 % is the contribution of the category firewood. Major and minor forest products collectively contribute nearly 2 % of GVO.

Fishing and Aquaculture

The fisheries sector's share in the state's total GVA at current prices has consistently remained below 2% over the years for both current and constant price estimates, registering 1.73% in 2021-22. Similar to the forestry and logging subsector, fishing and aquaculture contributed 15% to the primary sector's total GVA during the same period. Like other subsectors within the primary sector, this sector also displays fluctuations in growth rates over time. Detailed data tables are provided in the Appendix.

Marine fish accounts for the largest share of the Gross Value Output (GVO) in this sector, contributing 57% as per the 2021-22 current estimates. Inland fish constitutes 21% of the share, while prawns contribute 20%.

Forestry and Fisheries GVA at current prices

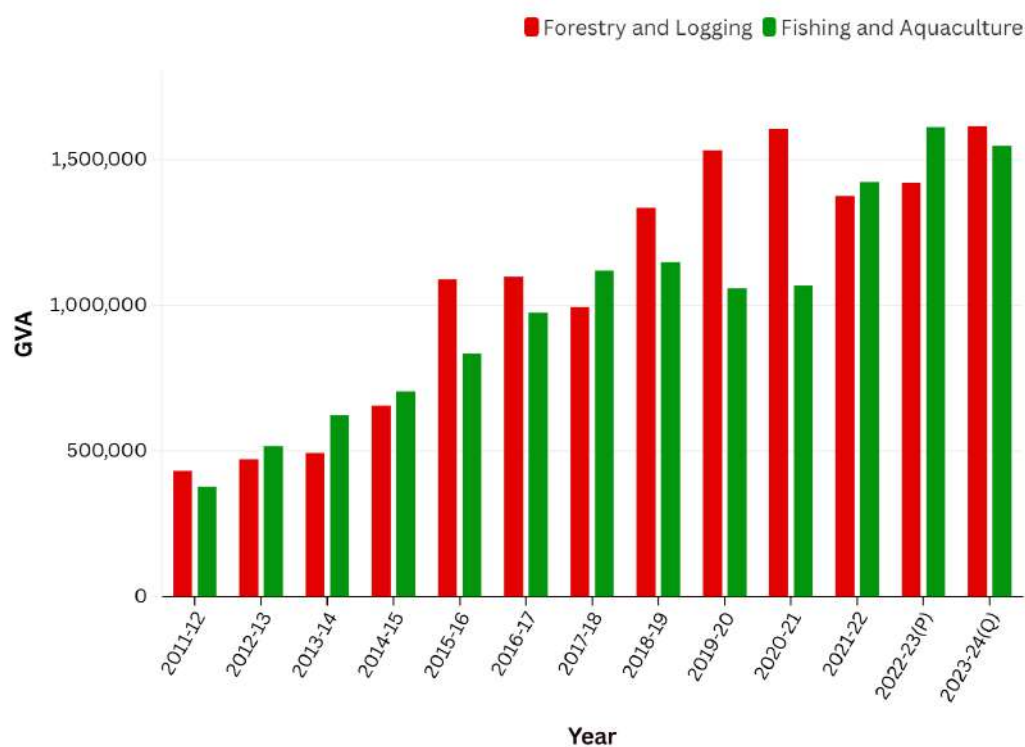

Diagram 3.7

Forestry and Fisheries GVA at constant prices

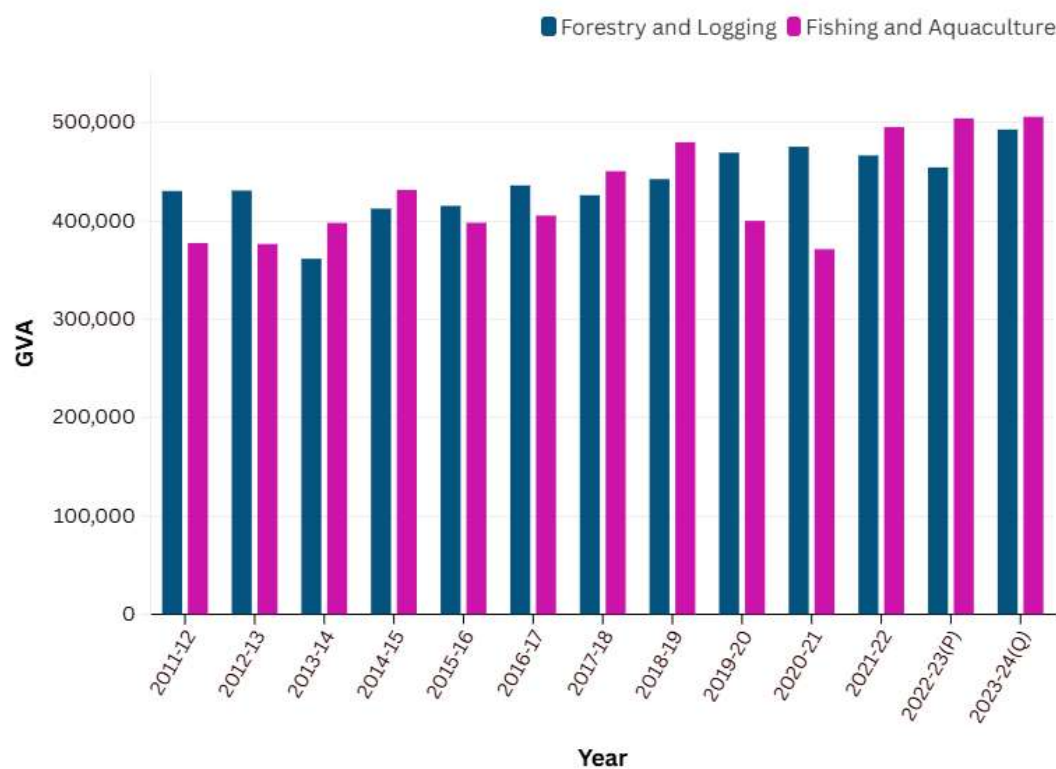

Diagram 3.8

Mining and Quarrying

The sector never achieved 1% of share in state's GVA both at current and constant prices during the period except for the year 2014-15. GVA from this sector for the year 2022-23 is ₹3281.47

crores at current prices and ₹2587.95 crores at constant prices. On an average the sector contributes nearly 5% to Primary GVA. Refer table 3.5 and 3.6 to get a comprehensive picture of this sub sector. Diagram 3.9 portrays the GVA contribution of to GSVA over the years.

Chapter 4

Secondary Sector: GVA and related aggregates

Secondary Sector: An Overview

The secondary sector, also known as the industrial sector, involves transforming raw materials from the primary sector into finished goods or intermediate products. It serves as a crucial link between the primary and tertiary sectors, supporting resource extraction while enabling service delivery within the economy. The

Table 4.2

importance of this sector is evident through its direct and indirect linkages with other sectors, significantly contributing to economic growth and employment. The Secondary Sector encompasses all economic activities related to manufacturing, construction, electricity, gas, water supply, and other utility services, which collectively form the subsectors of this sector. Tables 4.1 and 4.2 provide a comprehensive overview of the sector.

Kerala's secondary sector has consistently contributed to the all-India estimates for this sector. At current

prices, its share was 3.87% in 2011-12 and 3.51% in 2022-23, showing minimal variation over the intervening years. See Diagram 4.1.

In 2021-22, the secondary sector contributed 25.15% to Kerala's total Gross Value Added (GVA) at current prices. In comparison, its share was 27.35% in 2011-12, indicating a gradual decline over the years. This decline reached its lowest point in 2019-20 at 23.30%. While there has been a recent recovery, projections suggest the sector's contribution could fall below 25% in the

coming years. Diagram 4.2 illustrates this trend.

The Manufacturing subsector contributed approximately 9.1%, the

Contribution of Kerala to all India: Secondary Sector

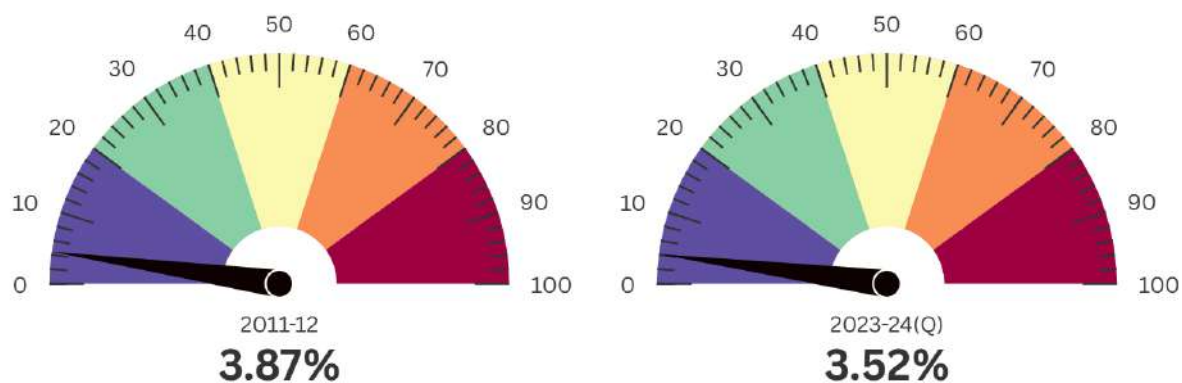

Diagram 4.1

Secondary Sector: Contribution to GSVA at current prices

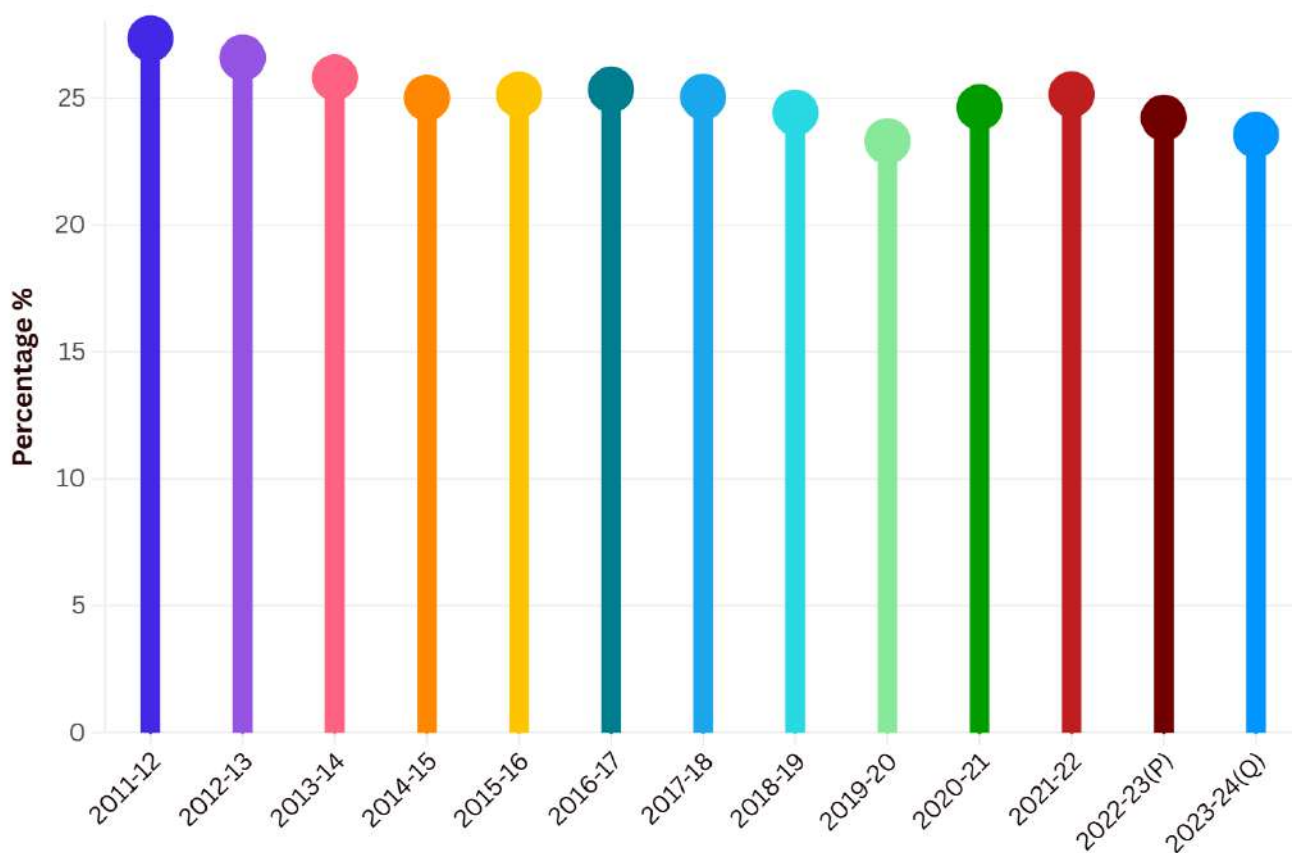

Diagram 4.2

Construction subsector 14.3%, and Electricity, Gas, Water Supply & Other Utility Services 1.6% to Kerala's total GVA in 2021-22 at current prices, based on the finalized estimates. Notably, the Construction subsector has consistently remained the largest contributor over the years.

The Secondary Sector's growth rate in real terms was 8.5% for 2021-22

Additionally, the growth patterns of the state and all-India levels show no significant correlation over the years.

Manufacturing

The Manufacturing subsector contributes approximately 36.5% of the GVA of Secondary Sector. The Manufacturing Sector is divided into organised and unorganised manufacturing.

Secondary Sector growth rate at constant prices

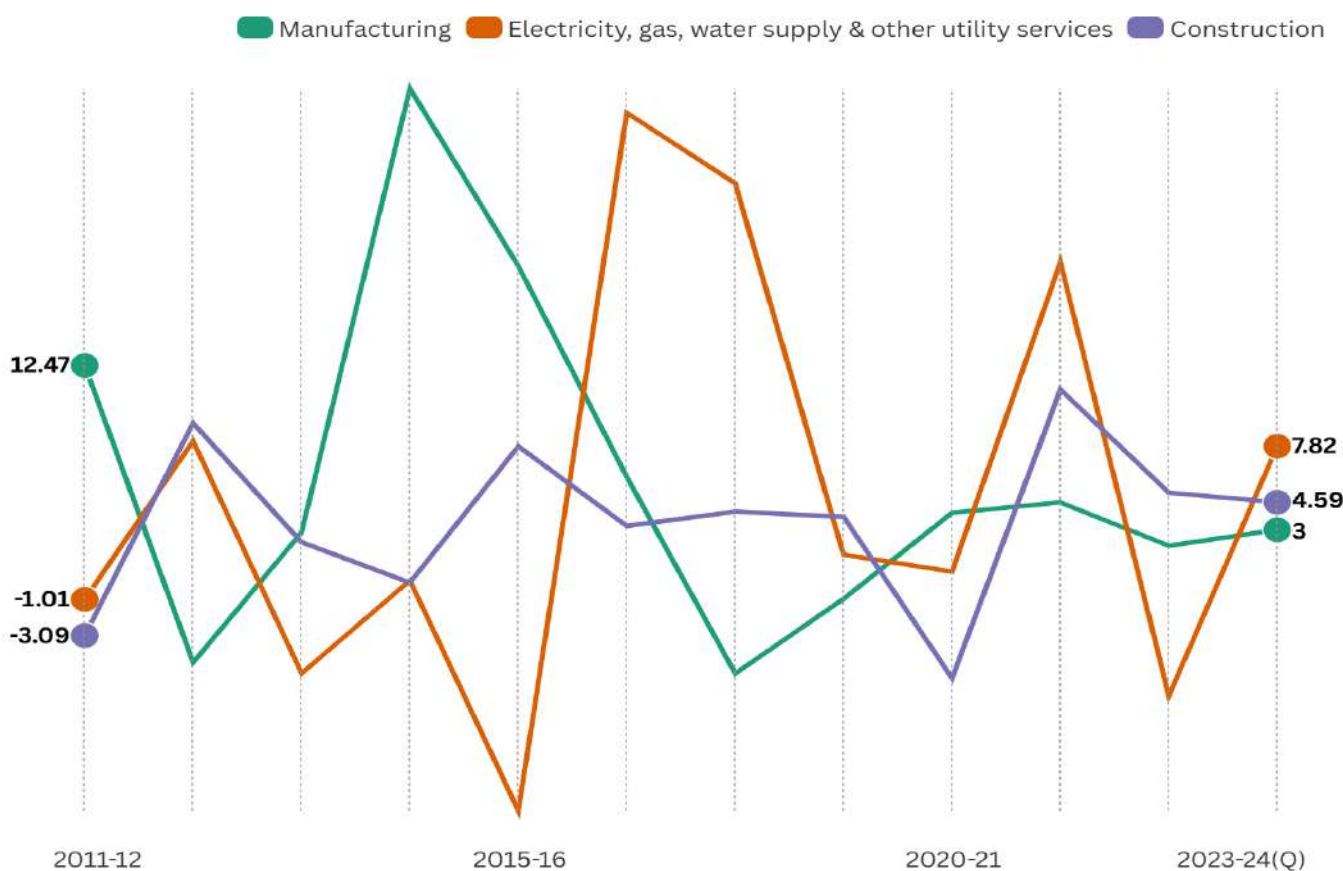

Diagram 4.3

with projections of 3.16% for 2022-23 and 4.06% for 2023-24. In nominal terms, the growth rates were 22.5%, 7.2%, and 8.9%, respectively, for these years. No consistent long-term trend in the growth rate was observed during this period. Interestingly, the three subsectors exhibited irregular fluctuations over the years. Diagram 4.3 illustrates the variability of these subsectors over time in constant price estimates.

The major industries contributing to organised manufacturing GVA include the manufacture of coke and refined petroleum products, chemicals, food products, and rubber and plastic products. These industries account for over 61% of the total organised manufacturing GVA. The unorganised sector GVA is dominated by industries such as tobacco, furniture, textiles, and

wood, which collectively contribute about 57% of unorganised manufacturing GVA.

While the GVA of the Manufacturing Sector has steadily increased in monetary terms, its contribution to the overall state GVA has remained stagnant at 9–10% over the last decade. The sector experienced negative growth during the flood and pandemic years

(2018-19 to 2020-21) but rebounded in 2021-22 with a growth rate of 12.3%, largely due to a low base effect. For 2022-23, the sector is projected to grow by 1.6% at current prices. In real terms, the sector has shown an average growth rate of 3.4% since 2021, signaling a slow but steady recovery. Tables 4.3 and 4.4 provide further details.

Table 4.4

Diagram 4.4 and 4.5 depict the GVA of Manufacturing Sector at current and constant prices over the period.

Electricity, Gas, Water Supply & Other Utility Services

Estimates for this sector are derived through an institutional approach, aggregating data from NDEs, private corporations, and households. The

Electricity subsector is the largest within this group, contributing nearly 60% of GVA. Gas accounts for around 30%, with the remaining contributed by water supply and other utilities such as recycling and waste management. Within the electricity sector, Kerala State Electricity Board Limited (KSEBL) is the major contributor, followed by central NDEs and private firms. Private sector companies dominate the gas subsector, while the Kerala Water Authority is the leading entity in water

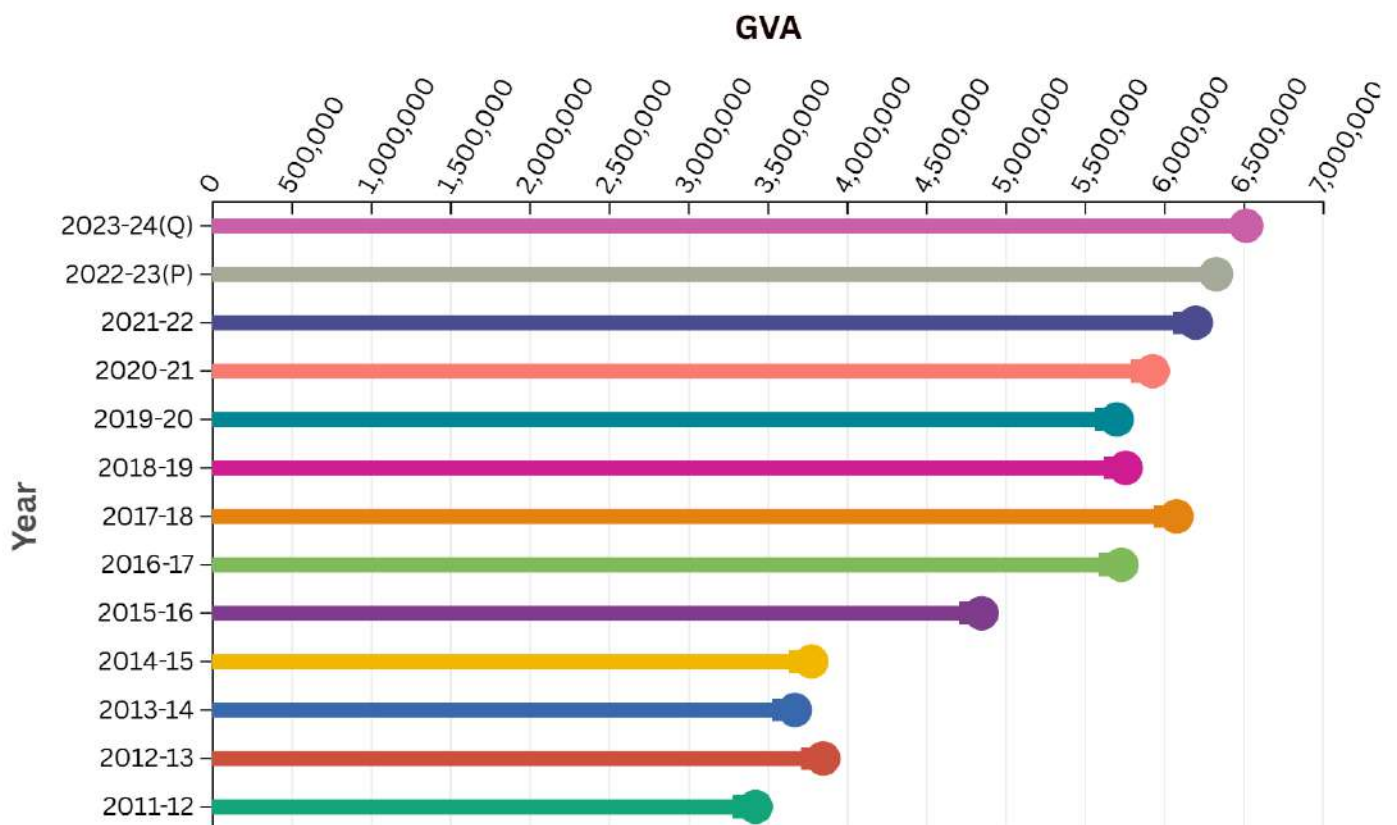

Diagram 4.5

supply subsector. Table 4.5 and 4.6 describe the estimates of this subsector. The GVA of the Electricity, Gas, Water Supply & Other Utility Services sector has grown consistently since 2011-12. In 2021-22, it grew by 18.94%, contributing 1.6% to the total GVA and about 6.5% to the Secondary Sector's GVA.

Diagram 4.6 illustrates the share of contribution of sector to total GVA in Kerala and India.

Table 4.6

Construction

The Construction sector is a major source of employment and a key driver of economic development in Kerala. Construction accounts for 57% of the secondary sector's GVA and contributed 14.3% to the total GVA in 2021-22. The GVA of the construction sector has grown significantly from ₹53087.94 crore in 2011-12 to ₹117906.74 crore in 2021-22. The sector registered a 30.5% growth at current prices in 2021-22 and is projected to grow by 12.16% and 10.72% in 2022-23 and 2023-24 respectively.

In real terms, the growth rate was 11% in 2021-22, with expected growth rates of 5.1% and 4.6% in the following years. Tables 4.7 and 4.8 provide a detailed overview of the construction sector.

As per the current estimates for 2021-22, within the Secondary Sector, the Manufacturing subsector contributed approximately 36.5% of GVA, the Construction subsector accounted for 57%, and Electricity, Gas, Water Supply, and Other Utility Services contributed 6.5%.

Construction Sector : Share of contribution at current prices

Diagram 4.7

Construction Sector : Growth rate at constant prices

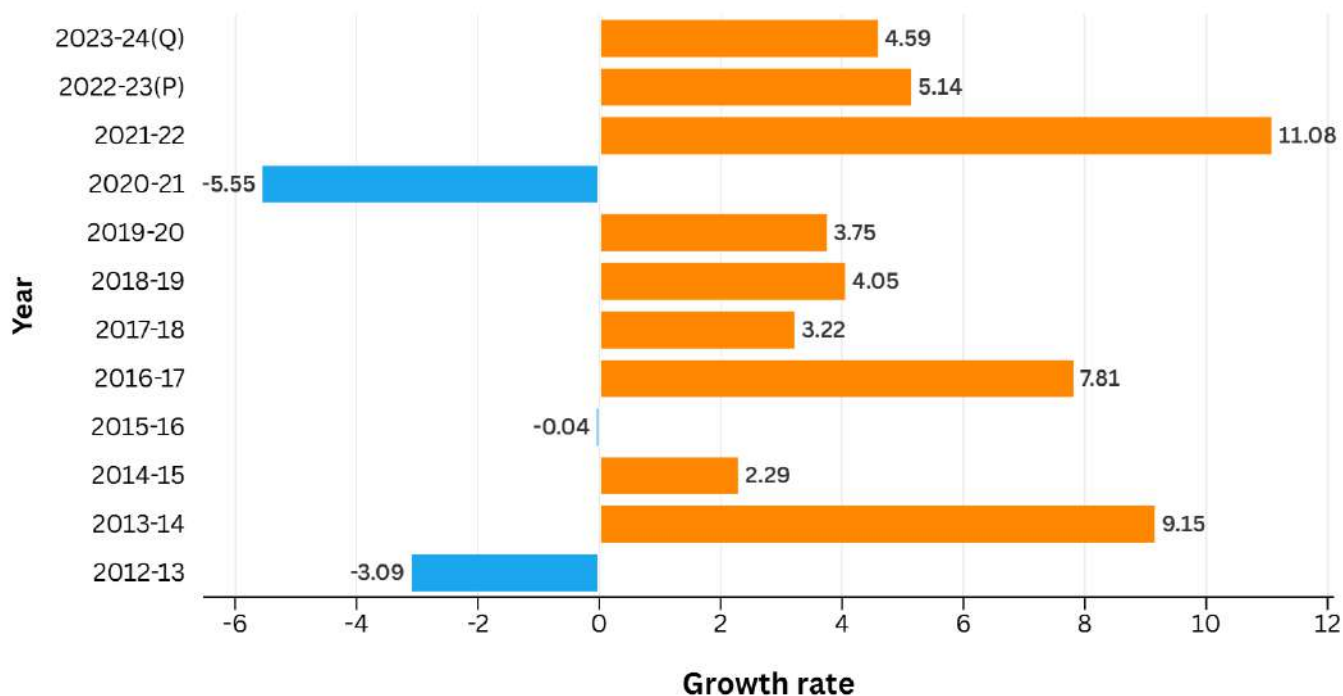

Diagram 4.8

In conclusion, while Kerala's Secondary Sector has shown positive growth in recent years, the overall decline in its

share of GVA, particularly in the Manufacturing subsector raises concerns that need to be addressed.

Chapter 5

Tertiary Sector: GVA and related aggregates

Tertiary Sector: An Overview

The **tertiary sector of the economy**, commonly referred to as the **service sector**, is centered on delivering services rather than producing goods. It encompasses a diverse array of activities, including trade, transport, communication, banking, insurance,

education, and healthcare. These activities are systematically grouped into distinct subsectors within the tertiary sector. This sector plays a pivotal role in economic development by facilitating the efficient functioning of primary and secondary sectors while contributing significantly to employment and GDP in our economy. The tertiary sector is

Table 5.1 and 5.2 provide an over view of estimates of tertiary sector.

Traditionally, Kerala's economy has been heavily reliant on the service sector. This is evident from the data, as the state's GVA contribution from the tertiary sector consistently exceeds national figures. Throughout the series, Kerala's

highly adaptive on technological advancements and urbanization. Furthermore, it is instrumental in enhancing the standard of living and promoting economic diversification.

figures keep 10 percent higher in current price estimates and around 9 in constant price estimates.

In 2023-24, Kerala contributed nearly 5% to India's total GVA from the tertiary sector at current prices, surpassing the contributions of the other

two sectors. This trend has remained consistent throughout the period. Refer to Diagram 5.1 for a detailed illustration.

Contribution of Kerala to all India: Tertiary sector

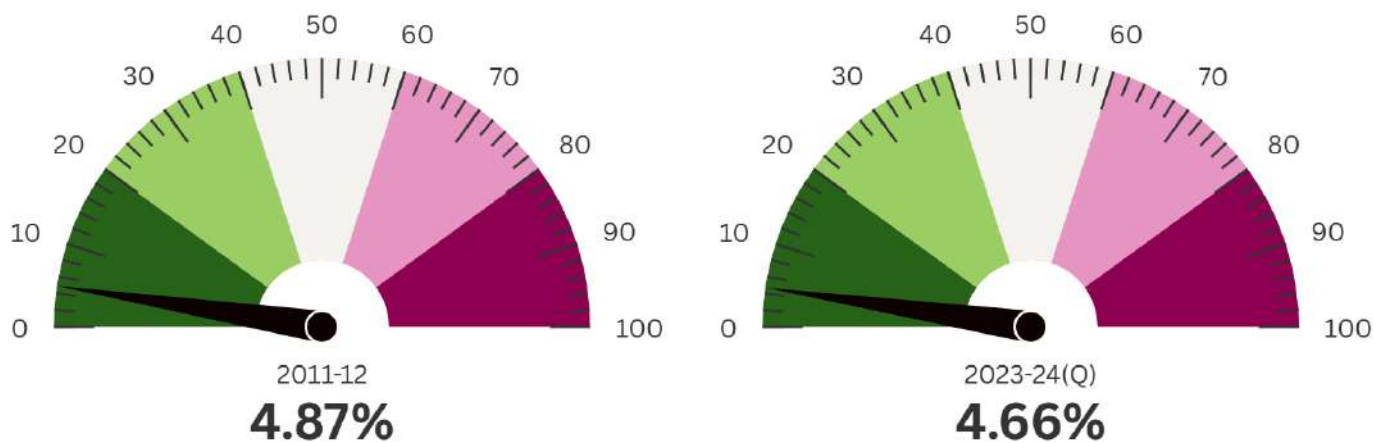

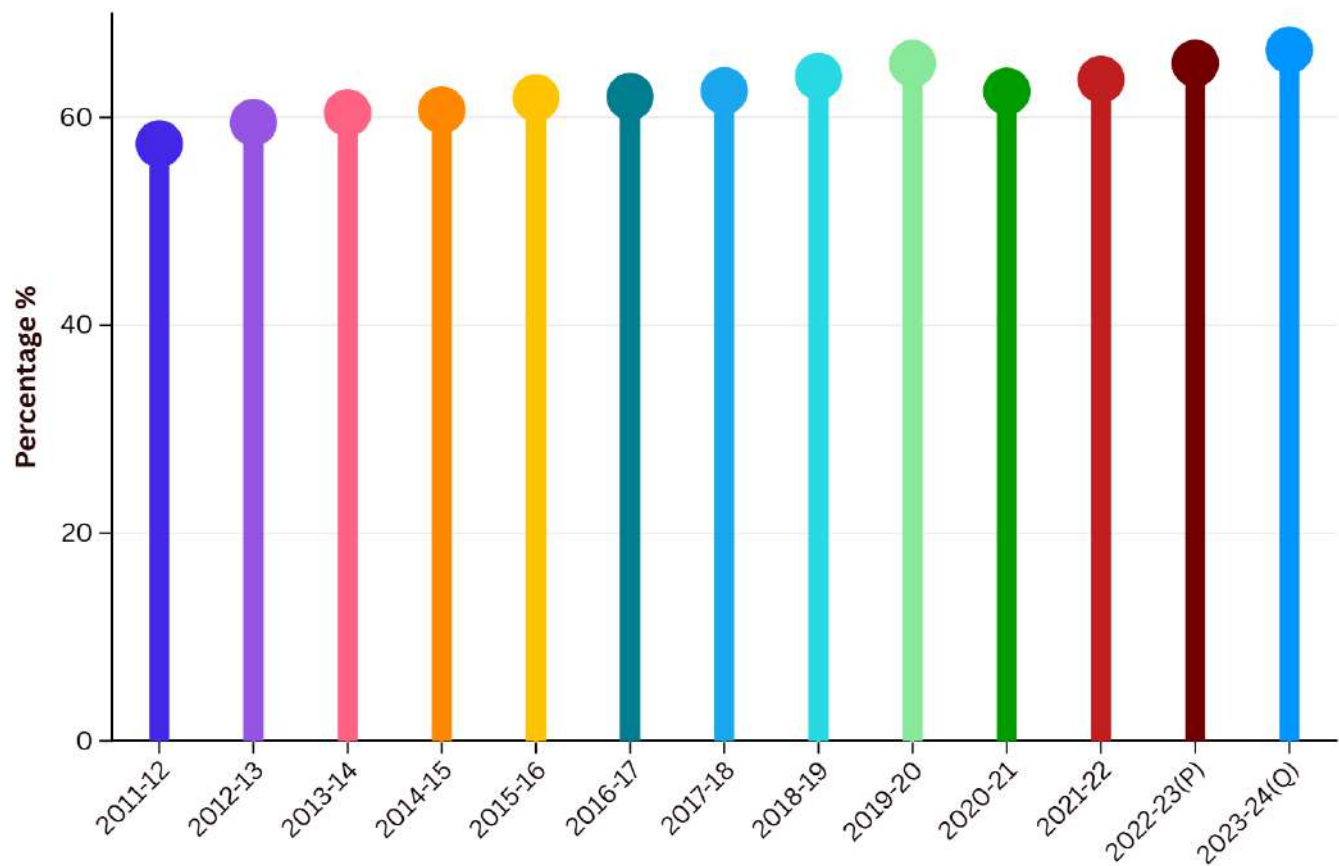

Diagram 5.1

Tertiary: Sector contribution to GSVA at current prices

Year
Diagram 5.2

In 2021-22, the tertiary sector accounted for a GVA of ₹5,23,888.24 crores at current prices, representing 63.65% of Kerala's GSVA. As shown in Diagram 5.2, this share has remained consistent over the years, with a slight long-term increasing trend. A similar pattern of linear growth is observed in constant price estimates. Starting at ₹1,93,221.39 crores in the base year, the constant price estimate for this sector is projected

In summary Trade and Repair Services, Real Estate Ownership of Dwelling and Professional Services, and Other Services are the main GVA contributors of the Service sector which accounted for approximately 27%, 28%, and 18%, respectively, of the total service sector GVA according to the 2021-22 current price estimates. A detailed analysis of these subsectors is provided in the following sections.

Tertiary Sector: Growth rate at constant prices

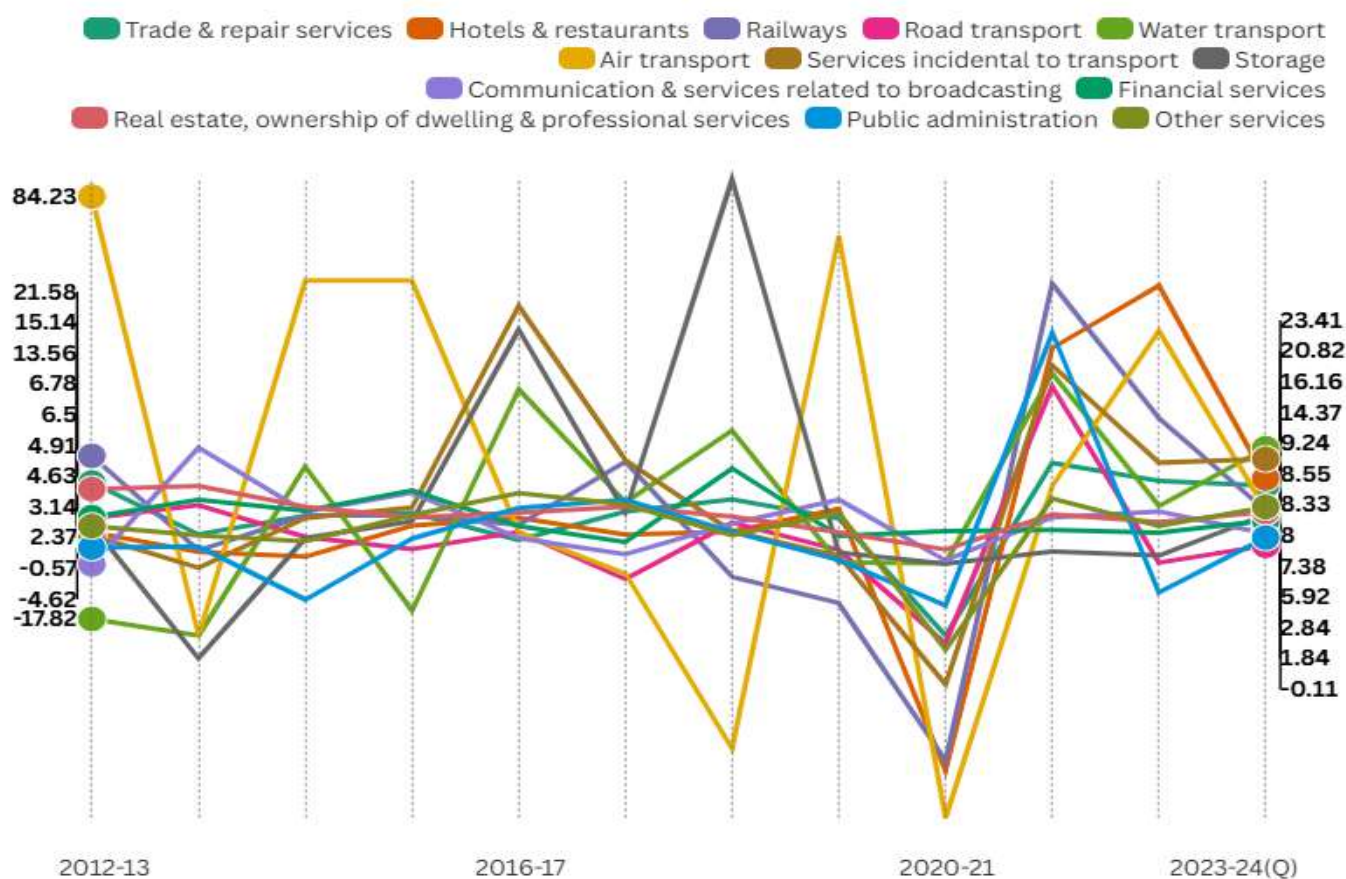

Diagram 5.3

to rise to ₹333577.24 crores in 2022-23 reflecting an overall growth of 73%. Year-to-year growth rates reveal fluctuations over the period, with the scale of these variations differing across subsectors. Diagram 5.3 illustrates this context. Notably, the significant variations observed in recent years can largely be attributed to the impact of the COVID-19 pandemic.

Trade & Repair Services, Hotels & Restaurants

Trade activities encompass wholesale and retail trade of all commodities, including those produced domestically, imported, or exported. This also includes repair services for computers, household goods, and motor vehicles. Meanwhile, the Hotels and Restaurants subsector

covers services related to accommodation, food, and beverages. A comprehensive overview of this subsector is presented in Tables 5.3 and 5.4.

The subsector contributed 18.15% to Kerala's GSVA in 2021-22 at current price estimates. This sector has total GSVA throughout the period, underscoring Kerala's traditional reliance on trade as a key economic activity.

During 2020-21, the GVA of this sector at current prices declined sharply to ₹11,81,63.95 crores from ₹15,21,08.48 crores in 2019-20, marking

a decrease of 22.32%. However, it rebounded in 2021-22, increasing by 26.40% to ₹14,93,60.81 crores. The sector was heavily impacted by the pandemic, particularly in the Hotels and Restaurants subsector, which faced significant declines during 2020-21 due to widespread closures. With the resumption of economic activities post-pandemic, the sector has shown signs of recovery. Despite fluctuations observed over the years, both at current and constant prices, the overall GVA of this sector has exhibited an upward trend since 2011-12.

Table 5.4

Diagram 5.4 illustrates GVA of the sector across the years.

Transport, Storage, Communication & Services Related to Broadcasting

Though this subsector contributes nearly 7% of the total GVA of the state, the relevance of the economic activities under coverage of this subsector is crucial in the economy. Transport and Communication Services are essential for facilitating interlinkages between various sectors and subsectors within the state and with other economies. These services

are crucial for economic growth, enabling the efficient movement of goods, services, and human resources, which enhances trade, connectivity, and market access.

Tables 5.5 and 5.6 provide detailed estimates of this subsector.

GVA : Trade & Repair Services, Hotels & Restaurants

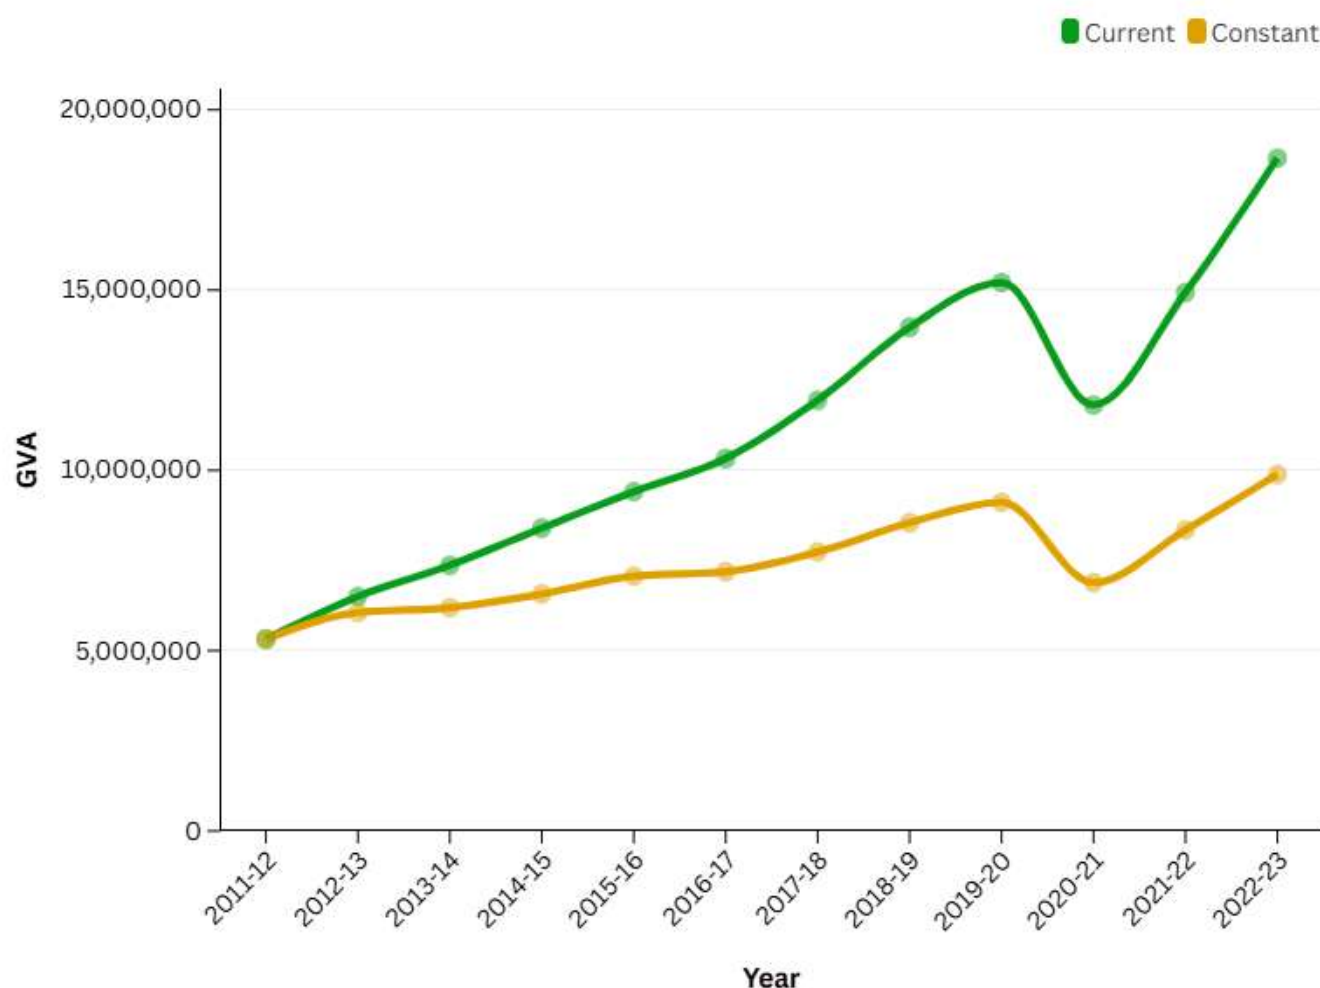

Diagram 5.4

Road Transport is the primary contributor to the Transport sector, accounting for approximately 65% of its GVA. In 2021-22, Road Transport contributed 4.58% to the state's total GSVA, as per current estimates. All other categories, including Railways contributed less than 1% to the state's total GVA. Storage and warehousing contributes marginal 0.02 % of the state's GVA where as communication and service related broadcasting consistently contributed nearly 2% of state's GVA.

While growth rates at both current and constant prices of entire subsector exhibited fluctuations, these variations were notably irregular, particularly during and after the COVID-19 pandemic. Interestingly, the data reveals a gradual decline in growth rates for the sector over the years, highlighting a downward trend.

Financial Services

The subsector Financial Services is a cornerstone of economic development, playing a vital role in mobilizing savings, facilitating investments, and ensuring efficient allocation of resources. It includes banking, insurance, capital markets, and other financial intermediaries, which collectively support businesses and promote entrepreneurship. By providing credit

and risk management solutions, this subsector enables sustainable growth, stabilizes the economy, and fosters financial inclusion, contributing significantly to employment generation and the overall Gross State Value Added (GSVA).

The Financial Services subsector contributed 7.68% to the Tertiary Sector and 4.89% to Kerala's GSVA in 2021-22, as per current estimates. Tables 5.7 and 5.8 provide a comprehensive overview of this subsector.

Table 5.8

Kerala's contribution to the national GVA of financial services has consistently remained between 3% and 4% over the years at current price estimates. The same trend has observed with a slightly lower percentage observed in constant price estimates. The subsector exhibited positive growth throughout the period, often surpassing the national growth rate, particularly in the initial years of the series. However, this trend shifted in recent years, especially at constant price estimates. See the diagram 5.6.

Real Estate, Ownership of Dwellings and Professional Services

This subsector holds significant importance in the context of Kerala, as it has consistently been the second-largest contributor to the state's overall GVA in recent years. Ownership of Dwelling is the primary GVA contributor to this sector, accounting for more than 75% of its total contribution across the years. Tables 5.9 and 5.10 provide a detailed representation of this subsector's performance.

Table 5.10

In 2021-22, Kerala contributed 4.13% to the national GVA of this subsector, according to current estimates. Although this share has remained relatively consistent, a slight decline has been observed over the years. This subsector has demonstrated significant

positive growth at a higher scale in both current and constant prices over the last decade. Notably, the sector now shows signs of recovery from the decline experienced during the COVID-affected years.

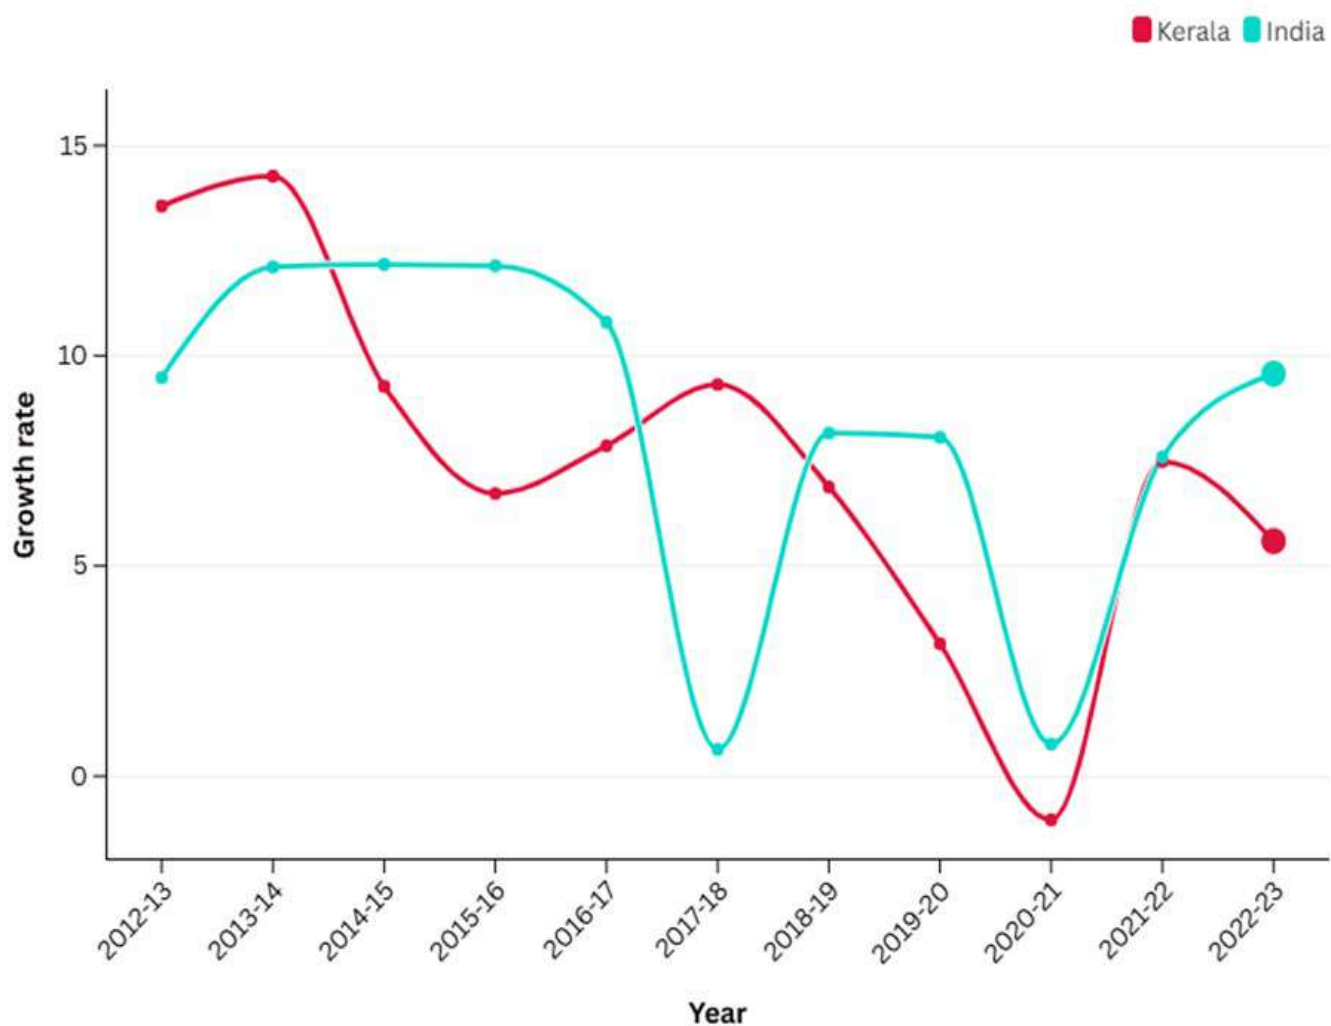

Diagram 5.7

Public Administration

The subsector Public Administration plays a crucial role in the compilation of GDP as it encompasses government activities related to policy implementation, administration, defence, and public safety. It reflects the economic value of services provided by

government institutions at various levels, contributing significantly to the overall Gross Value Added (GVA). This subsector ensures effective governance, supports social infrastructure, and underpins the functioning of other sectors, making it an indispensable component of GDP estimation. Tables 5.11 and 5.12 provide an overview of this subsector.

Table 5.11

In 2021-22, the Public Administration subsector contributed 7.45% to the Tertiary Sector and 4.74% to Kerala's GSVA, according to current price estimates marking the highest share recorded from this subsector.

Its contribution has consistently hovered between 3.5 and 5 percentage of state's GVA over the years, remaining below the national average. The sector has exhibited a fluctuating growth rate at both current and constant prices.

Table 5.12

GVA of Public Administration sector

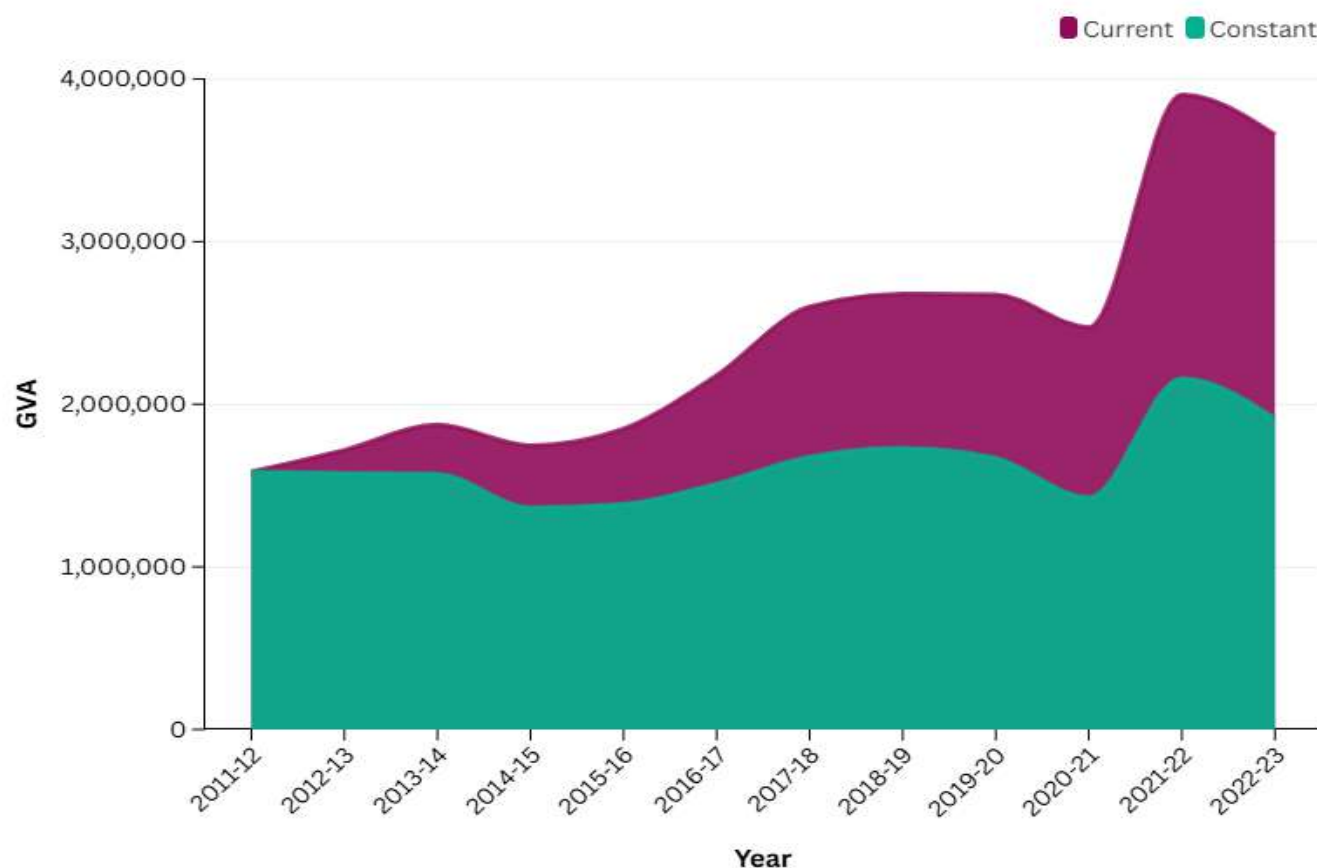

Diagram 5.8

Other Services

The subsector Other Services is vital in GDP compilation as it encompasses a diverse range of activities, including education, healthcare, entertainment, recreation, and personal services. These services contribute significantly to employment generation and economic activity, reflecting the socio-economic development of a region. By capturing the economic value of essential and discretionary services, this subsector plays a critical role in measuring the overall economic performance and well-being of a population within the GDP framework. Estimates are compiled at Public Corporations, Private Corporations and Private unincorporated sector. See Tables 5.13 and 5.14.

The Other Services sub sector is the third-largest contributor to Kerala's overall GVA, accounting for an 11.38% share in 2021-22, based on current price estimates. The GVA of this sector has grown by 161% since the base year, increasing from ₹39,650.96 crores to ₹103359.88 crores in 2022-23. Growth rates at both current and constant prices have shown a positive trend in all years, except for the COVID-affected 2020-21 year.

The sector's contribution to the state's total GVA remains significantly higher than the national average, which is expected for a state like Kerala, known for its leadership in education and health indicators. However, this gap has been steadily narrowing over the years.

Table 5.14

Other services Sector : GVA and share of contribution

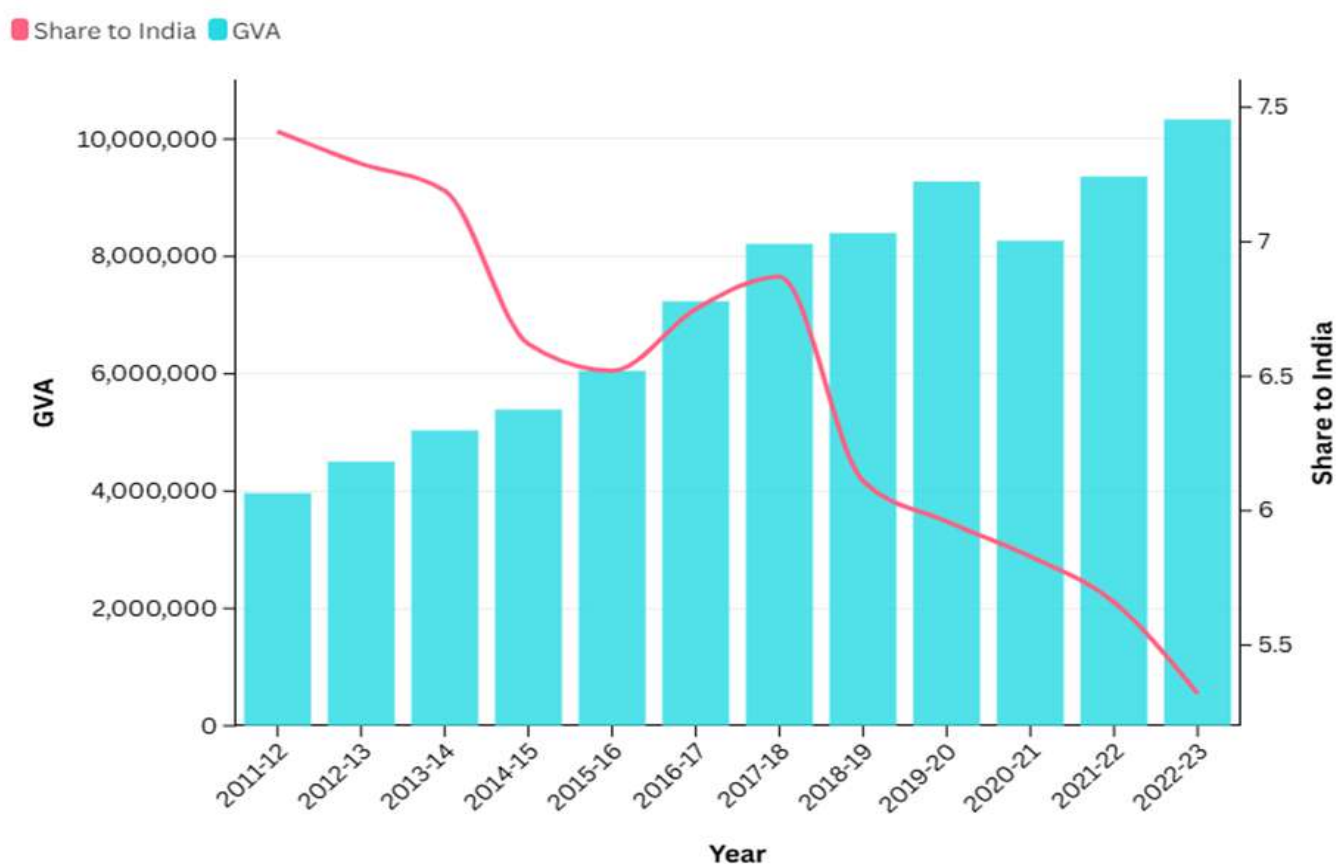

Diagram 5.9

The tertiary sector plays a pivotal role in Kerala's economy, showcasing its significance as a driver of economic growth, employment generation, and socio-economic development. Over the years, this sector has consistently contributed the largest share to the state's Gross Value Added (GVA),

outpacing both the primary and secondary sectors. As a front-runner in human development indicators, Kerala's service-driven economy is well-positioned to harness the potential of the tertiary sector for inclusive and sustainable growth in the years ahead.

Chapter 6

District Domestic Product

District Domestic Product (DDP), often referred to as district income, is a crucial indicator of a district's economic potential and growth, serving as a key tool for formulating regional policies. Despite its importance, the compilation of district-level estimates using a bottom-up approach remains challenging due to limited availability

Table 6.1

of granular data. Consequently, estimates for many sectors are derived by allocating state level figures to districts based on specific indicators. Thus, the reliability and comparability of district-level estimates depend significantly on the selection of appropriate indicators.

Kerala has been preparing DDP estimates alongside GDP and related aggregates for the 2011-12 series. The district-level estimates include:

- Gross District Domestic Product (GDDP) and Net District Domestic Product(NDDP) at current and constant prices
- Growth rates of GDDP and NDDP at current and constant prices
- Sector-wise contributions to GDDP and NDDP at current and constant prices

The district-wise DDP estimates are presented in Tables 6.1 and 6.2, providing a detailed overview of the economic contributions and performance

of each district. The tables clearly highlight that the top five districts significantly contributing to Kerala's GDP are Ernakulam, Thiruvananthapuram, Thrissur, Malappuram and Kollam. Collectively, these districts account for over 50% of

the state's total GDP every year. Notably, Ernakulam consistently stands out as the largest contributor, with a share of 12–14% annually. In contrast, Wayanad stays as the least contributor, contributing approximately 2% of the state's GDP. See diagram 6.1 and 6.2.

Table 6.2

GDDP over the years at current prices

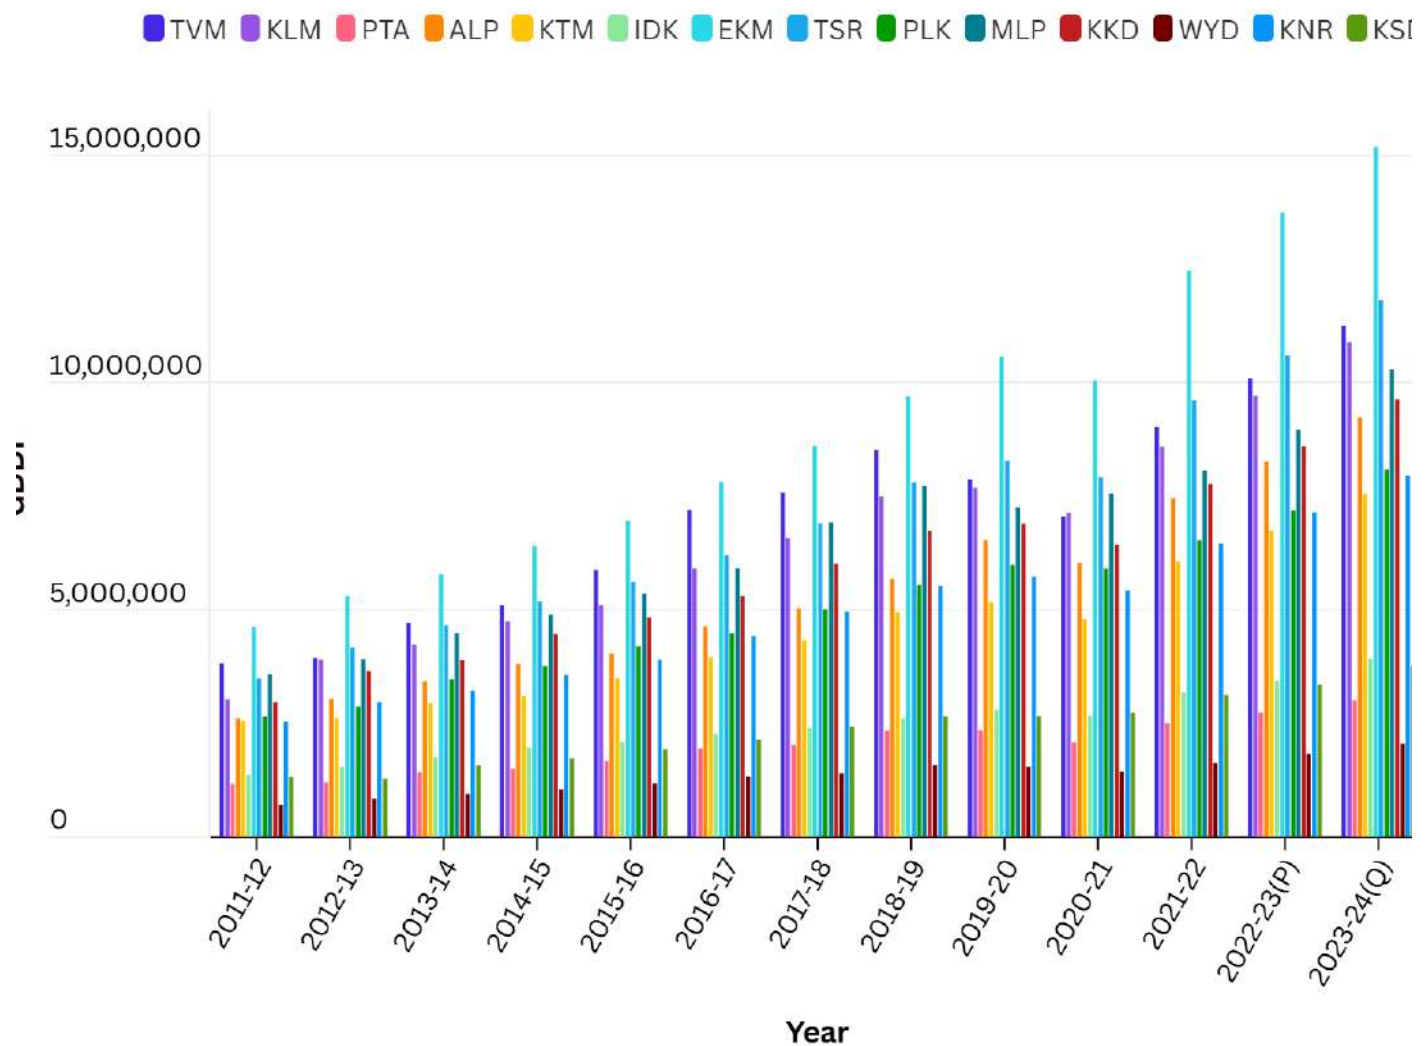

Diagram 6.1

Top five districts contributing GSDP at current prices

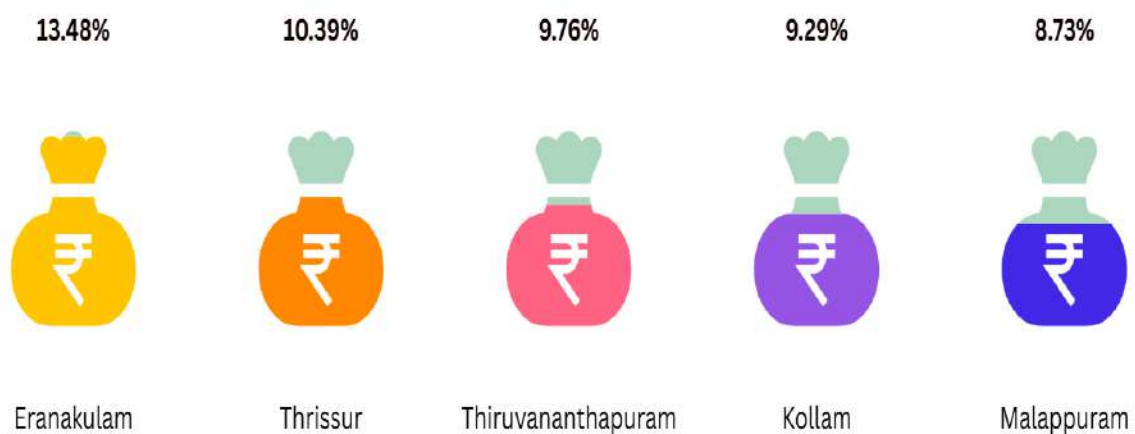

Diagram 6.2

Tables 6.3 and 6.4 present the growth rates over the years. No consistent trend is observed in the growth rates across districts, as fluctuations are irregular. Districts such as Kollam, Alappuzha, Thrissur, Ernakulam, and Kozhikode have exhibited higher growth rates compared to others. All districts have shown a tendency to recover and achieve positive growth following the significant decline experienced during the Covid-affected year 2021.

In summary, all districts have experienced fluctuations in growth rates over time. Notably, no district has consistently maintained a growth rate higher or lower than the state's overall growth rate, highlighting the variability among districts as per constant price estimates. Kollam and Alappuzha fell below the state's average only four times during the period, whereas Idukki exhibited this tendency more frequently, falling below the average eight times.

Table 6.4

Performance of districts across various sectors:

The primary sector predominantly utilizes the production approach for estimating DDP, as district-level production and price data are available for most items across its subsectors. The Gross Value of Output (GVO) for all subsectors is compiled at the district level, with the exception of the Forestry and Logging subsector. For components such as Intermediate Consumption and other related elements that are not available at the district level, state-level estimates are allocated using reliable district-level indicators. The subsequent tables and diagrams provide a detailed district-level overview of the primary sector.

When district-level data is unavailable, state-level estimates are allocated to districts using specific indicators while compiling the District Domestic Product (DDP) in the secondary sector. The indicators used are district wise number of workers engaged in concerned sectors, District wise employee cost from Kerala State Electricity Board Limited Budget Estimates, district wise water connections. Similarly, for the tertiary sector, an indicator-based allocation method is used to derive district-level estimates. Key indicators include workforce estimates associated with various subsectors.

District performance varies across sectors and subsectors, influenced by regional policies, resource availability, and geographical features. While differences between districts are often marginal in many subsectors, notable shifts have occurred over time. At the beginning of the series, Ernakulam, Kottayam, Idukki, Palakkad, and Kollam

were the top five contributors to the

state's GVA in the primary sector. These districts were not the top contributors of all subsectors as others had replaced them. Collectively, these major districts accounted for 48.5% of the GVA in 2011-12 at current prices. By 2021-22, the leading districts were Idukki, Ernakulam, Malappuram, Palakkad, and Kollam, contributing 46.9% together. Throughout this period, Wayanad and Alappuzha consistently maintained the

A similar trend was observed in the secondary and tertiary sectors, with district performances across subsectors fluctuating over the years. Despite this variability, some districts maintained a strong position throughout the period. In the secondary sector, Ernakulam, Thiruvananthapuram, Kollam, Malappuram, and Kozhikode were the top five contributors in 2011-12, collectively accounting for 52.34% of the state's GVA in this sector. By 2021-22, Thrissur and Alappuzha entered the top five, replacing Thiruvananthapuram and Malappuram, with a combined share of 55.88%.

In the tertiary sector, the top five contributors in 2011-12 were Ernakulam, Thiruvananthapuram, Thrissur, Malappuram, and Kozhikode, with a combined share of 53.74%. However, by 2021-22, Kollam replaced Kozhikode, with the top five districts accounting for 43.49%. Wayanad, Pathanamthitta, and Idukki consistently struggled to improve their positions in both the secondary and tertiary sectors.

GDDP Growth rate at constant prices

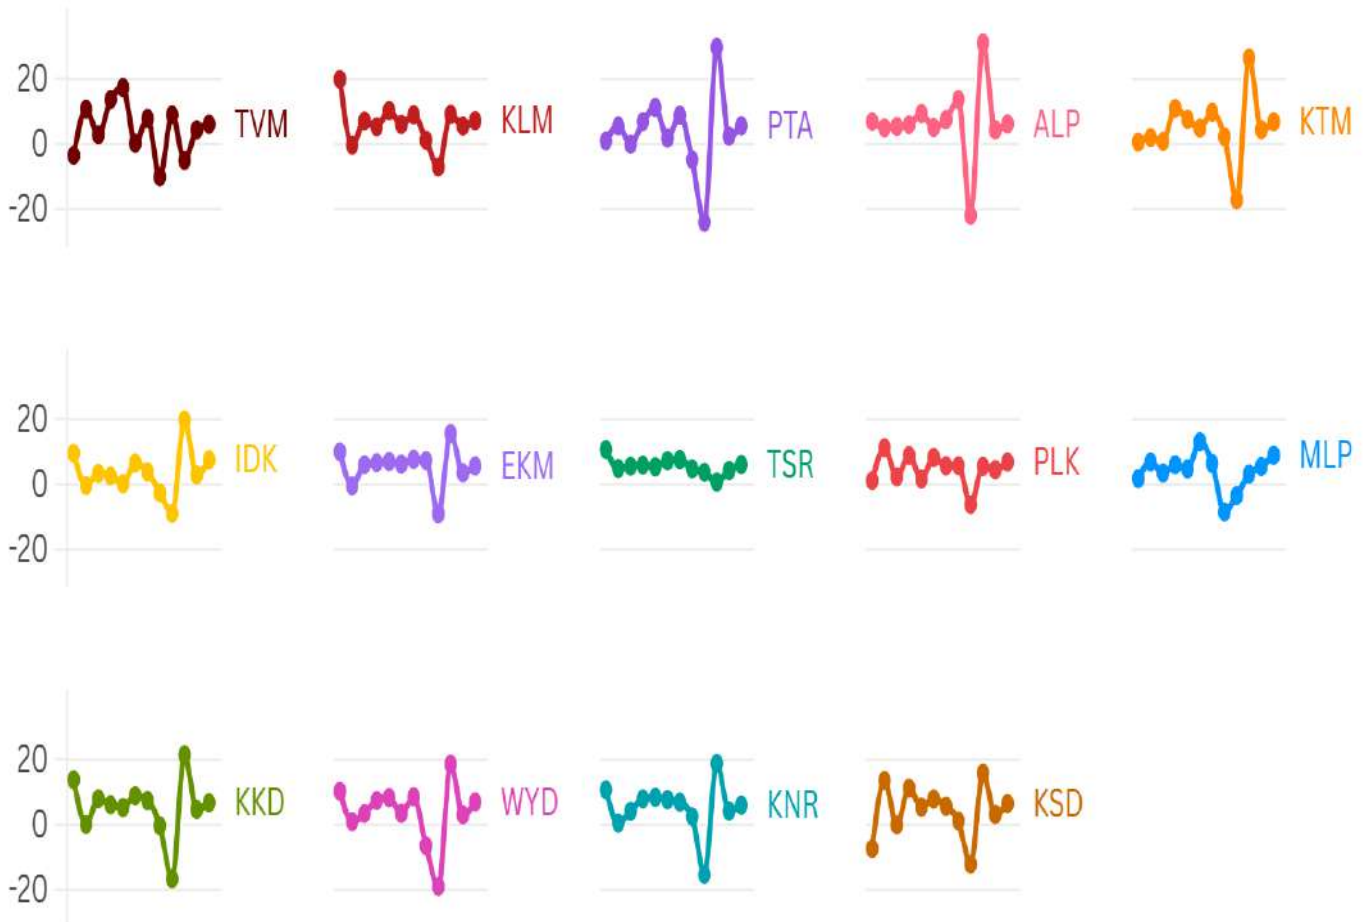

Diagram 6.3

Per Capita GDDP

Per Capita GDDP (Gross District Domestic Product) refers to the average economic output or income generated per person within a specific district over a given period. It is calculated by dividing the total GDDP of the district by its population. This metric provides insights into the standard of living, economic productivity, and development level of the district. Tables 6.5 and 6.6 provide details of PCGDP.

The pattern observed in Per Capita GDD remains notably consistent. Ernakulam consistently holds the top position, while Malappuram consistently ranks at the bottom in current price estimates.

Districts such as Kannur, Kozhikode, Palakkad, Pathanamthitta, Kasaragod, Wayanad, and Malappuram have consistently remained below the state average. With the exception of Thiruvananthapuram, which fluctuated in some years, the remaining districts have consistently stayed above the state average. Refer diagrams 6.4 and 6.5 for further details.

Abbreviations

A

AIDIS	All India Debt and Investment Survey
ASI	Annual Survey of Industries

C

CBRI	Central Building Research Institute
CCS	Cost of Cultivation Studies
CCF	Chief Conservator of Forest
CFC	Consumption of Fixed Capital
CIS	Change in Stocks
CPI	Consumer Price Index
CPI (AL)	CPI (Agricultural Labourers)
CPI (IW)	CPI (Industrial Workers)
CPI (UNME)	CPI (Urban Non-Manual Employees)
CSO	Central Statistics Office

D

DCU/DE	Departmental Commercial Undertaking/Departmental Enterprises
DDP	District Domestic Product
DES	Department of Economics and Statistics
DR	Deposit Rate

E

EUS	Employment and Unemployment Survey
-----	------------------------------------

F

FISIM	Financial Intermediation Services Indirectly Measured
FSI	Forest Survey of India

G

GCF	Gross Capital Formation
GDDP	Gross District Domestic Product
GDP	Gross Domestic Product
GFCE	Government Final Consumption Expenditure
GFCF	Gross Fixed Capital Formation
GG	General Government
GSDP	Gross State Domestic Product
GSVA	Gross State Value Added.
GVA	Gross value Added
GVAPW	Gross value Added Per Worker
GVO	Gross Value of Output

H

HS	Harmonized System of Classification of Commodities and Codes
----	---

I

ICFRE	Indian Council for Forest Research Education
IBM	Indian Bureau of Mines
IMF	International Monetary Fund
IOT	Input Output Tables

K

KSEBL	Kerala State Electricity Board Ltd.
-------	-------------------------------------

L

LI	Labour Input
LR	Lending Rate

M

MCA	Ministry of Corporate Affairs
-----	-------------------------------

MF	Mutual Funds
MOSPI	Ministry of Statistics and Programme Implementation

N

NABARD	National Bank for Agriculture and Rural Development
NAS	National Accounts Statistics
NASSCOM	National Association of Software and Service Companies
NDCU/NDE	Non-Departmental Commercial Undertaking/Non-Departmental Enterprise
NDDP	Net District Domestic Product
NDP	Net Domestic Product
NFCS	Net Fixed Capital Stock
NGNBFC	Non-Government Non-Banking
NIC	National Industrial Classification
NIT	Net Indirect Tax
NNI	Net National Income
NPCMS	National Product Classification for Manufacturing Sector
NPI	Non-Profit Institutions
NRCM	National Research Centre on Meat
NSDP	Net State Domestic Product
NSO	National Statistics Office
NSS	National Sample Survey
NSSO	National Sample Survey Office
NVA	Net Value Added
NX	Net Export of Goods & Services

O

OECD

Organization for Economic
Cooperation and Development

P

PCI

Per Capita Income

PCGDP

Per Capita Gross Domestic Product

PFCE

Private Final Consumption
Expenditure

PIM

Perpetual Inventory Method

POSI

Net Profit on Sale of Investments

R

RBI

Reserve Bank of India

RGI

Registrar General of India

RR

Reference Rate

ROW

Rest of the World

RRB

Rural Residential Buildings

S

SAD	State Accounts Division
SASA	State Agricultural Statistics Authority
SDP	State Domestic Product
SME	Small and Medium Enterprises
SNA	System of National Accounts

T

TOF	Trees Outside Forest
TTM	Trade and Transport Margins

U

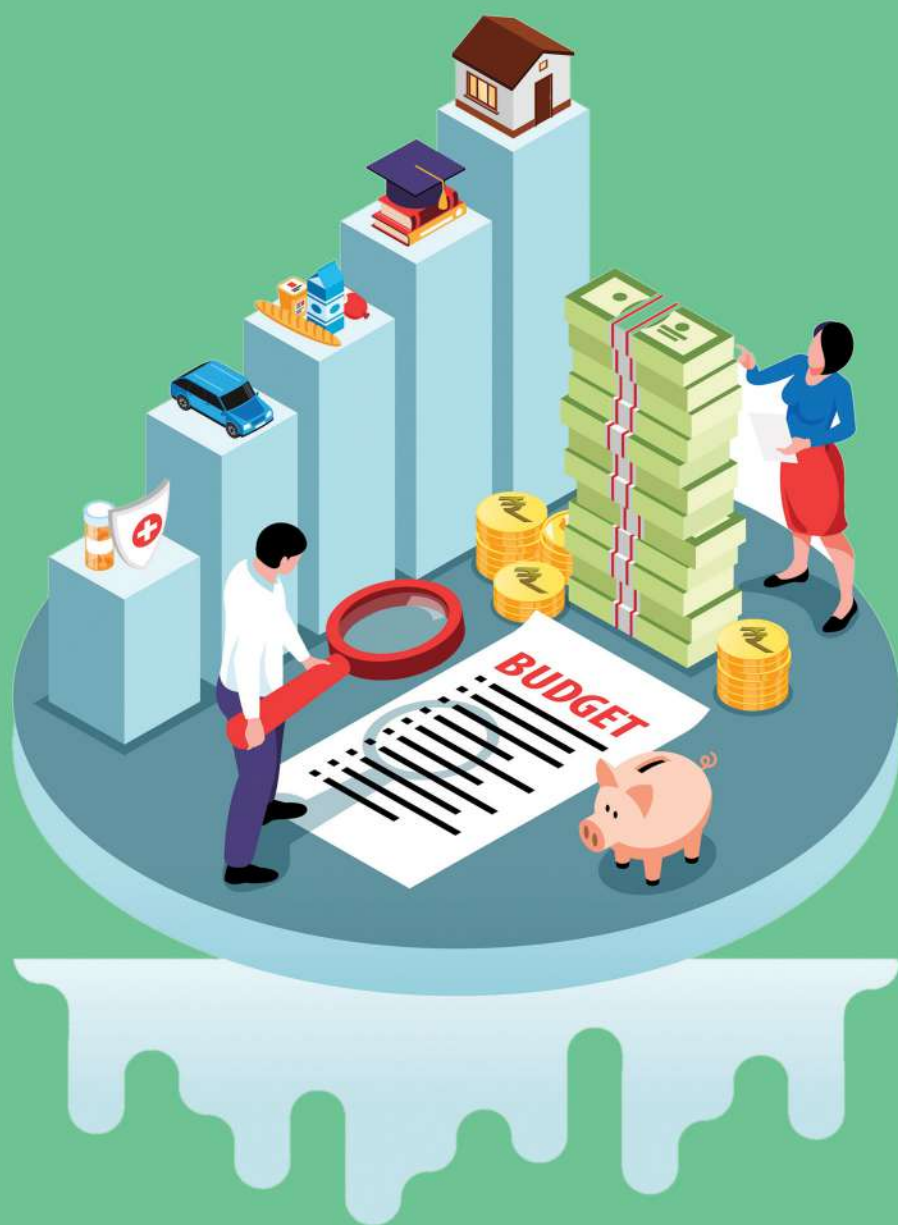

UTI	Unit Trust of India
TTM	Trade and Transport Margins

V

VAPW	Value Added Per Worker
VAPEW	Value Added Per Effective Worker

W

WPI	Wholesale Price Index
