GOVERNMENT OF KERALA

GROSS DOMESTIC PRODUCT OF
KERALA AND INDIA
FROM 2004-05 TO 2013-14
BASE YEAR 2004-05

DEPARTMENT OF ECONOMICS AND STATISTICS
THIRUVANANTHAPURAM

PREFACE

The economic growth of a state is assessed and affirmed through the estimate of State Domestic Product (SDP). The resulting growth paves the way for economic development. The State Domestic Product is estimated annually by the Department of Economics and Statistics (DES) based on the guidelines, methodology and definitions prescribed by the Central Statistics Office (CSO) in conformity with the U. N. System of National Accounts(SNA) (1993). The SDP thus prepared by the Department is invariably reconciled with the CSO before finalization.

This present publication reveals the estimates of Gross Domestic Product (GDP), Net Domestic Product (NDP) and Per Capita Income (PCI) of Kerala and India from 2004-05 to 2011-12 and 2012-13(provisional) and 2013-14(quick), both at Current and Constant (2004-05 base year) prices at factor cost. The detailed estimates of sub sectors and methodology of estimation are also included in this issue.

The series of SDP and PCI of Kerala and District Domestic Products (DDP) from 2004-05 have been modified according to the revised rates provided by CSO, Government of India and Population figures are projected based on latest data.

I would like to appreciate the staff of the State Income Division of this department in bringing out this publication. It is hoped that this report would be useful for policy makers, planners, administrators and research scholars.

I welcome suggestions, if any, for further enhancement of the publication.

INTRODUCTION

The concept of National/State Income forms the basis of economic growth. Economic growth deals with various aspects of economic activities in connection with economic development of a nation. The significance of national income lies precisely in the fact that it is a measure of the economic well-being of the community. The national/state income per head is of great importance in the studies relating demand for consumer goods and supply of personal savings. National income calculation tells us the economic progress of a country and it can be used to compare the material standards of living of the people in two countries. National/State income estimate is also important in assessing the taxable capacity of the people. The national/state income data are indispensable instruments of economic planning by providing the success and failure of the plan judged on the basis of the growth of national/state income.

Economic growth is a process by which the real national income and per capita income of a country increases over a period of time. Changes in national income, i.e. goods and services produced over a period of time of members of community, represent the rate of economic growth. A high rate of economic growth raises the standard of living of the people and a low rate of growth lowers it.

The DES is the nodal agency for the coordination of statistical activities in the state. DES annually estimates the SDP and DDP using the concepts and methodology approved by the System of National Accounts (SNA) of the international agencies and finalize after the reconciliation with CSO.

State income is the measurement, in monetary terms of all the goods and services that an economy with in the geographical boundaries of the state, without duplication, within a given period of time, generally a year. The goods cover all possible items like agricultural crops, livestock products, fisheries, forest products, manufacture of materials in the registered and unregistered sectors, construction of buildings, roads etc. Services cover medical and educational services, domestic services, hotels, restaurants, trade, transport and public services etc.

The products in different units and different measures of services produced in the economy are not directly additive in nature. To overcome this difficulty the value of all goods and services produced is measured in monetary terms. The aggregate of all the money value of final goods and services produced in the state during an accounting year represents the

state income. It should be ensured that the measurement of total value of products is counted without duplication while measuring the total.

The income of a state can be measured in three alternative ways, viz., production approach, income generation approach and final utilization approach. The state income accounting starts at the production stage, where the productive units engage capital and labour and turn out goods and services, the total measure of which gives the state product. This production process generates a given amount of money income, which is distributed by the productive units to the two factors of production, viz., labour and capital. The measures of state income in this phase indicate the share of state product distributed to the two factor shares. The income thus received by the factors of production is spent for acquisition of goods and services for consumption or by the producers in acquiring more capital goods and increasing the physical assets of their productive units. The state income by definition is the same whether measured at the point of production or at the point of income generation or at the point of final utilization. The state income can thus be measured in any one of these alternative approaches but if a complete analysis of the economy is the object, then it should be measured by all the three different approaches simultaneously.

For the measurement of state income at the point of production, it is important to remember that the value added by production is to be counted without duplication, i.e. not only the total values of commodities and services produced over a given period of time, but also the value of final products, excluding the value of inputs of all raw materials and services used in the process of production. The method followed for this purpose is to divide the economy into a given set of industrial sectors and estimate the total value of outputs within each sector as well as the total value of inputs of raw materials and services used for production and then estimate the value added by the sectors as the total value of output minus the value of inputs used as intermediate consumption.

STATE INCOME

For the purpose of estimations of SDP the state economy is broadly classified as primary, secondary and tertiary sectors. Estimates of these sectors are prepared individually by adopting one or more of the following approaches.

(i) Production approach (ii) Income approach (iii) Expenditure approach

(i) PRODUCTION APPROACH

In this method, the sum of economic value of all goods and services produced is considered after deducting the inputs consumed in the process of production. This approach

is followed in agriculture, livestock, fishing, forestry and logging, mining & quarrying and manufacturing (registered) sector.

(ii) INCOME APPROACH

In this method the income accrued to the factors of production namely land, labour, capital and entrepreneurship in the form of rent, salaries and wages, interest and profit are taken into account in estimation of value added. This approach is being followed in manufacturing (unregd.), electricity, gas and water supply, trade, hotels & restaurants, transport storage and communication, banking and insurance, real estate, business services, public administration and other Services.

(iii) EXPENDITURE APPROACH

This method is based on the measurement of income at the stage of disposal. In any production process all the items produced are either ultimately consumed or a part of it is saved for further consumption or future production of goods and services. i.e., the total money value of consumption expenditure and the saving gives the income. This approach is used in estimating income from construction sector.

Factor Cost and Market Prices

Production and the income approach measures domestic product at the cost paid to the factors of production and known as domestic product at factor cost. But at the expenditure, value of the product is at market prices, i.e. at the actual prices which, either the consumers or the producers pay for purchase of goods and services, whether for consumption or for capital formation. This measurement of domestic product through the expenditure side is known as domestic expenditure at market prices. This market value of the final expenditure would exceed the total obtained at factor cost by the amount of indirect taxes levied by the government less the value of subsidies given by the government to producers. The domestic product can therefore be measured either at factor cost or at market prices, one differing from the other by the amount of net indirect taxes (i.e. indirect taxes less subsidies). It will be seen that indirect taxes add to the prices paid by the consumers / producers while the subsidies have the opposite effect. It is for this reason that the measurement at market price is obtained after adjustment for net indirect taxes.

Gross & Net Products

There is some wear and tear to the capital goods used in the production process resulting in a reduction in their economic life. This measurement of wear and tear is known as consumption of fixed capital (CFC). The estimate of value added without any adjustment of

consumption of fixed capital is termed as gross domestic product. When an adjustment is made for this wear and tear, the resultant aggregate is known as net domestic product.

Classification of Economy

The UN/CSO classified the entire economic activities into the following sectors and sub sectors and items.

Primary Sector- Agriculture (Agriculture proper & Livestock), Forestry & Fishing, Mining & Quarrying.

Secondary Sector- Manufacturing (Registered & Unregistered), Electricity, Gas , Water supply & Construction.

Tertiary sector- Transport, Storage & Communication, Trade, Hotels& Restaurants, Banking & Insurance, Real Estate, Ownership of Dwelling & Business, Public Administration & Defence, Other Services.

Base Year

To capture the structural changes in the economy, to incorporate results of long term surveys (as they are not included in between), to incorporate latest international standards, to make methodological improvements, to realistically measure the real growth in the economy, we change the base year time to time.

Present Base Year is 2004-05.

AGRICULTURE

The contribution of this sector to the GSDP is estimated in terms of Gross Value Added (GVA) using the production approach and this sector includes agriculture proper, livestock and operation of irrigation system. In respect of the sub-sector agriculture proper, the estimates of value of output are prepared separately for principal crops, minor crops, miscellaneous and unspecified crops & other products and by-product. The estimates of value of output for the livestock sector are prepared separately for the items; milk, meat group, egg, wool and hair, dung, honey and increment in livestock. The estimates of irrigation charges are based on the information available from the state irrigation departments.

FORESTRY AND LOGGING

The GSDP from this sector can be estimated in terms of GVA by following the production approach which involves the estimation of the total value of output at factor cost and deducting there from the various inputs at purchases prices, which are used in the process of production. Since the forests are generally under the administration of government, data on production and prices are not difficult to obtain but in the case of private forests, if any, detailed data could be obtained from the concerned enterprises. For estimating the production of forest produce, which is lifted by the people living in surrounding areas either with permission or through unauthorized means (like minor forest products and firewood), household consumer expenditure surveys and type studies in the habitations around the forests could give the necessary data. Based on an analysis of budget documents of the State Forest Departments for the year 2004-05, input rate in forestry has been revised to 15.6% of the value of output.

Fishing

In the state income accounts, the GVA from the fishing sector is estimated by the production approach. It involves the estimation of total value of output at factor cost and deducting there from the value of various inputs at purchases prices which are used in the process of production. The activities covered in this sector are (i) fishing in ocean, coastal, offshore and inland water for commercial purposes (ii) subsistence fishing in inland water (iii) gathering of sea weeds, sea shells & other ocean and coastal water products and (iv) fish curing. Data on production, prices and value of fish catch are supplied by the Fisheries Department.

Mining and Quarrying

The estimates of GVA in this sector are prepared following the production approach. The value of output of each mineral is calculated at state level and by deducting the value of corresponding inputs GVA is estimated. For calculating the value of output this sector is divided into two broad groups viz., major minerals and minor minerals. The major minerals cover fuel minerals consisting of coal, lignite, petroleum and natural gas and other major minerals i.e. metallic minerals including atomic minerals and non-metallic minerals. The major source of data for fuel minerals is the Indian Bureau of Mines (IBM).

Manufacturing (Registered)

Estimates of GSDP for registered manufacturing are prepared by following the production method. The industry-wise estimates are prepared on the basis of results of Annual Survey of Industries. For the years for which ASI results are not available, the growth observed in the Index of Industrial Production (IIP) of either the State IIP or the all India IIP of the CSO is used at compilation category level. These estimates as prepared undergo changes as soon as ASI results become available.

Manufacturing (Un-Registered)

The unregistered manufacturing segment -being complementary to registered manufacturing segment - covers all those units which are not covered under the registered manufacturing segment. The estimates of GSDP from manufacturing (unregistered) for the base year are compiled by multiplying the workforce engaged in manufacturing unregistered with the value added per worker (VAPW) (compiled at compilation category level separately for rural and urban areas). The value added ratios of unorganized manufacturing sector estimated from NSS 62nd (2005-06) survey. The estimates for the non-MSME segment have been compiled at compilation category level using the value added per worker estimates from NSS 62nd Round results and the corresponding estimates of workforce from the results of EUS, NSS 61st (2004-05) round and Population Census 2001.

Electricity, Gas & Water supply

The economic activities relating to generation, transmission and distribution of electric energy are covered under the electricity sub-sector and the GVA estimates are prepared using the income method. The estimates are based on the analysis of annual accounts of State Electricity Boards and other electricity undertakings located in the State. The value added estimates of central undertakings, viz. National Thermal Power Corporation, National Hydro Power Corporation and Power Grid Corporation made available are also added.

The manufacture of gas in gas works including gobar gas and distribution through mains to household, industrial, commercial and other users are covered under the gas sub-sector and the data sources utilized for the estimation of GVA are the accounts of the Gas Authority of India Ltd. Estimates in respect of gobar (organic) gas were prepared from the data supplied by Khadi and Village Industries Commission.

The activities associated with collection, purification and distribution of water excluding the operation of irrigation system are covered under water supply sub-sector. In the case of government Kerala Water Authority (KWA) and municipal water supply undertakings GVA is to be taken as compensation of employees. To get the GVA from KWA, the annual Financial Statements of KWA are used. Estimates of CFC worked out are added to obtain estimates of GVA.

In the case of electricity and water supply sub-sectors GVA is estimated as the sum of gross factor incomes and as gross output less input in the case of gas sub-sector.

Construction

The ‘construction’ broadly comprises two components namely (i) accounted construction (pucca construction) and (ii) un accounted construction (katcha construction). In each category, both the new construction and repair and maintenance are covered. The output of construction of the total economy is compiled by a composite methodology including both commodity flow approach and expenditure approach and taken as the total production costs of accounted and unaccounted construction. The value of output in, kutcha construction in public sector and private corporate sector is estimated from the data available in annual budget documents of the government and the annual reports of related firms. In the case of household sector the component of kutcha construction works is estimated from the All India Debt and Investment Survey (AIDIS) results. For pucca construction, based on information available from Central Public Works Department, National Building Organisation and survey results, a fixed percentage of material inputs is taken as factor inputs i.e., GVA in the base year and for subsequent years the value of material input is duly adjusted for wage and price indices.

Railways

Estimates of GSDP for railways are considered as part of supra-regional sectors and the national level estimates are allocated to States by the CSO. The GVA at current prices is obtained from the production account as the sum of compensation to employees and gross operating surplus. The GVA thus obtained relates to the entire activity of the government railways.

Gross Domestic Product Originating from Railways (at factor cost) - at current prices (Base Year 2004-05)

Transport other than Railways

The economic activities covered in the sector are

- (1) Road transport:-Mechanized road transport & Non-mechanised road transport
- (2) Water transport (3) Air transport and
- (4) Supporting and auxiliary transport activities

The GVA estimate is prepared by multiplying the labour input (duly adjusted for public sector) with estimated Value Added Per Worker (VAPW) available from the results of Enterprise Survey, for the respective NIC codes, separately for organized (corporate sector) and unorganized segments.

Mechanized road transport: The current price GVA estimate of organized part is prepared by analyzing the annual accounts of Kerala State Road Transport Corporations. The GVA of unorganized

part for the year 2004-05 has been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes.(duly adjusted for public sector).

Non-mechanised road transport:- The non-mechanized road transport have been compiled for the base year as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes.

Water transport:- The base year GVA estimate of organized (public) part has been prepared at current prices by analyzing the water transport part of budget documents and annual accounts of Public Shipping Companies and Inland Water Shipping Companies. Current price GVA estimate of organized (private) part is prepared by analyzing the annual accounts of Private Shipping Companies.

The GVA estimates for unorganized sector have been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes (duly adjusted for public and private organized part). . For subsequent years the constant price estimates are prepared by moving the base year GVA with inter survey average compound growth rate between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS.

(iii) Air transport: Current price GVA estimates are prepared by analyzing the Air transport part of budget documents and annual accounts of Airlines (both public and private), flying and gliding clubs.

(iv) Supporting and auxiliary transport activities: The GVA estimates of ‘supporting and auxiliary transport activities’ are prepared separately for organized (public) and unorganized parts. The GVA estimate of organized part is prepared by analyzing the light houses and light ships part of the budget documents and annual accounts of companies engaged in services incidental to water and air transport like Port Trusts, Inland Water Authority, Dredging Corporation and Airport Authority of India. The Un-organised sector has been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on

Employment-Unemployment Survey of 61st round & Population Census 2001 of the respective NIC codes. . For subsequent years the constant price estimates are prepared by moving the base year GVA with inter survey average compound growth rate between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS.

Storage

The economic activities covered in this sector are Warehousing Corporations, Cold Storage and Storage (not elsewhere classified). The major data sources for preparing estimates for storage and warehousing sector are:

- The budget documents of Central and State Governments relating to storage and warehousing activities;
- Annual reports of Central and State Government enterprises relating to storage and warehousing corporations;
- Enterprise survey results of NSS 63rd round (2006-07);
- Labour Input estimates; and
- Annual survey of Industries (ASI results relating to cold storage)

The GVA estimate of warehousing corporations is based on the analysis of annual accounts of state and central warehousing corporations. The constant price estimates are prepared by deflating the current price estimates with storage index.

The current price GVA estimate for the cold storage is based on the results available from Annual Survey of Industries (ASI). The constant price estimates are prepared by deflating the current price estimates with index of agriculture production.

Storage (n.e.c) an unorganized part and the base year GVA has been prepared as a product of GVAPW of 63rd round of NSSO and workforce estimates based on Employment-Unemployment Survey of 61st round & Population Census 2001.

The GVA per worker of all types of storage category is obtained by subtracting the number of workers in public sector warehousing and cold storage covered under ASI from the total labour input estimates. For subsequent years the constant price estimates are prepared by moving the base year GVA with inter survey average compound growth rate observed between 1999-2000 and 2004-05 Employment & Unemployment surveys of NSS.

Trade, Hotels and Restaurants

The economic activities covered in this sector are wholesale and retail trade in all commodities both produced at home (including exports and imports), Purchase and selling agents, brokers and auctioneers, services rendered by hotels and other lodging places, restaurants, cafes and other eating and drinking places.

The GSDP estimates of both trade sector and hotels and restaurants sector are prepared separately for (a) public part (b) private organised part, and (c) private unorganised part. Current price estimates of GVA in respect of public sector are based on annual budget documents and annual report. In the case of private corporate sector and the co-operatives the estimates are based on sample studies undertaken by the Reserve Bank of India (RBI) and annual report of the National Bank for Agriculture and Rural Development (NABARD) respectively. For the remaining unorganised part of trading activity, estimates for the base year are based on the results of surveys conducted by the NSSO. For other years, estimates in respect of unorganised trade and hotels are compiled by extrapolating the base year estimates with the help of a specially compiled Gross Trading Index (GTI). The GTI is compiled for the commodity producing sectors and imports on the basis of value of output and commodity-wise marketable surplus ratios and trade margins, separately at current and constant prices.

Banking and Insurance

The main activities covered under this sector are banking and insurance which comprises of:

- Commercial banks;
- Banking department of RBI;
- Public non-banking financial corporations;
- Organized non-banking financial companies engaged in trading in shares, investment holdings, mutual funds, loan finance and the like activities;
- Unorganized non-banking financial institutions/undertakings such as professional money lenders and pawn brokers;
- Post office savings banks including operations concerning cumulative time deposits and national saving certificates;
- Co-operative credit societies; and
- Life and non-life insurance activities.

Estimates of GSDP for banking and insurance are considered as part of supra-regional sectors and the national level estimates are allocated to states by the CSO. Annual Reports/Accounts of the Public Sector Banks, Companies and Corporations like Life Insurance Corporation (LIC), State Financial Corporations etc. are major sources of data. The budget documents of Department of Posts provide the necessary data in the case of post office savings and postal life insurance. The gross output of banks and similar financial institutions is estimated in two components viz., actual service charges and the imputed service charges. The GDP from this sector is estimated by income method using readily available source material for each of the sub-sectors.

Real Estate, Ownership of Dwellings and Business Services

Real Estate: The estimates of real estate, legal services and business services (except software development) are prepared using labour input and value added per worker approach. For ownership of dwellings the methodology consists of estimating the gross rental of residential buildings (including owner occupied) and deducting there from the cost of repairs and maintenance to obtain the estimates of GVA. The estimates of Value added for the base year (2004-05) have been prepared using the estimates of VAPW from NSS 63rd round and the estimated workforce of NSS 61st round separately for rural / urban / private corporate and unorganised sectors.

Ownership of Building: In the production boundary of national accounts only two categories of services produced by households for own final consumption are included, namely, services of owner – occupied dwellings; and domestic services produced by employing paid staff;

Business Services:

(1) Renting of machinery and equipment without operator

The estimates of GVA for these activities for the year 1999-2000 have been compiled by using labour input method. The VAPW of rural / urban areas of Enterprise survey, 2006-07 of NSS 63rd Round and labour input estimates based on EUS 2004-05 of the 61st round have been used to prepare the GVA estimates for the base year.

(2) Computer and related activities in Private Sector

The estimates of Value added for the base year (2004-05) have been prepared using the estimates of VAPW from NSS 63rd round and the estimated workforce of NSS 61st round for the unorganised sector and the latest NASSCOM's data for the private corporate sector. The value added per worker of rural and urban areas are projected to subsequent years with the CPI (AL) and CPI (IW) respectively.

(3) Legal activities

The estimates of GVA for legal services for the base year 1999-2000 have been prepared by using the labour input method based on VAPW estimates of NSS enterprises survey of 2006-07 and labour input estimates based on EUS 2004-05 of NSS 61st Round, worked out separately for rural/urban and organized/un-organized segments.

(4) Accounting, Book Keeping and Related activities in Private Sector

The estimates of GVA for accounting and book keeping services etc., in the private sector for the base year 1999-2000 have been prepared by using the labour input method

based on GVAPW estimates of NSS Enterprise survey of 2001-02 and labour input estimates based on EUS 2004-05 of NSS 61st Round, worked out separately for rural and urban areas.

(5) Research and development

The estimates of GVA for this sector in the new series have been prepared by using the data on workforce and VAPW from the results of 61st round and NSS 63rd rounds, respectively. The values added per worker of rural and urban areas have been projected to subsequent years using growth rate.

Public Administration and Defence

Public administration and defence covers services rendered by the general government i.e., Central and State governments, Corporations, Municipalities, District Panchayath, Block Panchayath and Grama Panchayat.

Annual estimates of NVA, which comprises only the compensation of employees, are compiled from the government budget documents. The CFC estimated separately is added to NVA to arrive at GVA estimates.

Other Services

The economic activities covered under this sector are (i)Coaching and Tuition, (ii) Education excluding Coaching and Tuition, (iii)Human health activities including veterinary activities, (iv)Sewage and refuse disposal, Sanitation activities, (v)Activities of membership organizations (+) social work, , (vi) Recreational cultural and sporting activities, (vii) Washing and cleaning of textiles and fur products, (viii) Hair dressing and other beauty treatments, (ix) Funeral related activities, (x) Private households with employed persons, (xi) Custom tailoring, and (xii) Extra territorial organizations and bodies

All the activities are broadly grouped under three segments, namely, public sector, private organized sector, and private unorganized sector. While the estimates of GVA in respect of activities covered under public sector are compiled by analyzing the budget documents and annual accounts of the

concerned units, those of private organized and private unorganized segments are prepared following the labour input method and benchmark-indicator procedures.

Generally the GVA estimates for non-public sector segments are prepared separately for organized segments. Initially estimates are prepared for a benchmark year (usually the base of current national series), and for subsequent years, the benchmark year's GVA estimates are extrapolated with suitable indicators. The benchmark year GVA estimates are prepared as a product of estimated workforce engaged in the economic activity and the estimated value added per worker (VAPW), separately for organized and unorganized segments. For the current NAS series (base year 1999-2000), the workforce estimates are from the NSS 61st round (2004-05) survey results, and the estimates of VAPW are from the results NSS 63rd round (2005-06). The GVA estimates for the base year have been prepared separately for rural/urban areas and also separately for organized/unorganized segments. It may be mentioned that the NSS 63rd round survey results provide the data separately for corporate sector and unorganized sector. For subsequent years, the estimates of workforce in the respective activities have been prepared using the inter survey average compound growth rate of quinquennial Employment & Unemployment surveys as observed between 1999-2000 and 2004-05 of NSS 55th and NSS 61st round survey results.
