Preface

Index numbers are statistical tools used to measure and express changes in a variable or a group of related variables over time or across different locations. They simplify complex data, making it easier to compare and analyze trends. It is a technique of estimating general trends in price, production and other economic and social variables. Governments use index numbers to formulate and evaluate policies related to inflation, wages, and economic development.

Department of Economics & Statistics compute different types of indices, including Consumer Price Index (IW&AL), CPI (R/U/C), Wholesale Price Index (For agricultural commodities), Wage Index and Parity Index.

“Report on Analysis of Indices - 2022” contains Index number of wages of skilled workers and agricultural workers 2022 and Consumer price index of rural, urban and combined, month wise general indices for the year 2022 (base 2011-12=100), District wise combined index of 2022, CPI (IW & AL) 2022 and Parity index for the year 2022. It is prepared by the collective efforts of the officers working in the Price Division of this Directorate. I appreciate the keen interest and efforts taken by Shri Rajendran Nair S. Assistant Director, in preparing this report under the supervision and guidance of Shri G. S. Rajath, Additional Director (Prices). Their dedication and collaborative work have significantly contributed to the quality and depth of this report.

INTRODUCTION

Index numbers are devices for measuring differences in magnitude of a group of related variables. They are used to compare the level of certain phenomenon between different times or between different places or between categories such as persons or objects. It is a technique of estimating general trends in prices, production and other economic and social variables and has been rightly called the “Economic Barometers”. Most of the current indices are indicators of changes over time in respect of economic characteristics like prices, output, wages etc. These are termed as price indices, production indices, wage indices etc. All indices have statistics but one can have statistics without an index. And these statistics that do not associate to an index can also help in the formation of the right execution of plan. A price index reflects the overall change in a set of prices paid by a consumer or a producer, and is conventionally known as a Cost-of-Living Index or Producers Price Index as the case may be. In simple form Index numbers are a statistician's way of expressing the difference between two measurements by designating one number as the "base", giving it the value 100 and then expressing the second number as a percentage of the first.

CONSUMER PRICE INDEX NUMBERS.

Department of Economics & Statistics compute different types of indices, including Consumer Price Index (IW&AL). These Indices are not adequate to analyses the consumption pattern of the general population over a period of time. Therefore it is recommended by Expert committee on price and price indices to derive a new Consumer price index (Rural, Urban and combined) with a wide range. Consumer price index is designed to measure the changes over time in the level of retail prices of a fixed set of goods and services consumed by an average family of a defined population group at a particular place. Retail price of commodity is defined as the price which the ultimate consumer pays for relatively small transactions of the commodity .The consumption pattern and the prices paid by consumer will normally vary from family to family.

WAGE INDEX

The data on daily wages of various categories of agricultural labourers are being collected from 20 villages in the state .The wage index is prepared using wage .The wage indices are being prepared for the following categories .

1. Skilled labour
 - (a)Carpenter
 - (b) Mason
2. Paddy filed labour
 - (a)Bunding(Men)
 - (b)Transplanting(women)
3. Other agricultural labour
 - (a) Tilling
 - (b)Head load (women)

Consumer Price Indices (Rural / Urban / Combined)

Department computes CPI (R/U/C) with base year 2018. Indices of 14 districts are calculated, Rural Urban and Combined. There are 149 centers including 71 rural and 78 urban centers. These reports contain District- wise Rural Urban and Combined Indices, Kerala Rural Urban and Combined Indices.

PARITY INDEX NUMBERS

Parity index numbers indicate the level of the prosperity of the farmers .It indicates state of affairs of the farmers receiving value for their products and expending money for cultivation of the crops and for their own living .It is the ratio of the index of prices received by the farmers and the index of prices paid by the farmers, expressed as percentage.

WHOLESALE PRICE INDEX (WPI).

The wholesale prices being collected under the Market Intelligence Scheme are utilized for computing WPI for agricultural commodity .In the calculation of the index 17 important agricultural commodities are included .Commodity wise, Group/sub group wise wholesale price indices are being prepared by this department

Consumer Price Index (AI &IW) With Base 2011-12=100 - Year 2022

The centre-wise month-wise General Index for 2022 shows an overall upward trend across most centres, with moderate fluctuations during the year. Index values were generally lower in the first quarter and began to rise from April, reaching peak levels between June and September in many centres. Pathanamthitta recorded the highest index values throughout the year, peaking at 210 in September, indicating comparatively higher price levels, while Palakkad consistently showed the lowest index range, remaining below 185 for most months. Centres such as Chalakkudy, Thrissur, Kannur, and Kasaragod also maintained relatively high and stable index levels during the mid-year period. A slight easing or stabilization of the index is observed in the last quarter in several centres, though December values remained higher than those at the beginning of the year. Overall, the data indicate a mid-year escalation in the general price index across Kerala centres in 2022, followed by mild stabilization toward the year end.

Table 01 illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

Consumer Price Index (R/U/C)2022 Kerala Combined

The monthly indices for Food and Beverages exhibit slight fluctuations throughout the year. The index starts at 117.07 in January and peaks at 121.80 in June. Minor dips occur in February (116.07) and November (119.49). It reflects a peak mid-year trend. June records the highest index.

The indices for Pan, Supari, and Intoxicants display a consistent upward trend. January begins, with a steady climb in December. Minor dips occur in September and October. The index shows a steady upward trend from January (117.33) to December (122.80). Notable increases occur in June (119.69) and December.

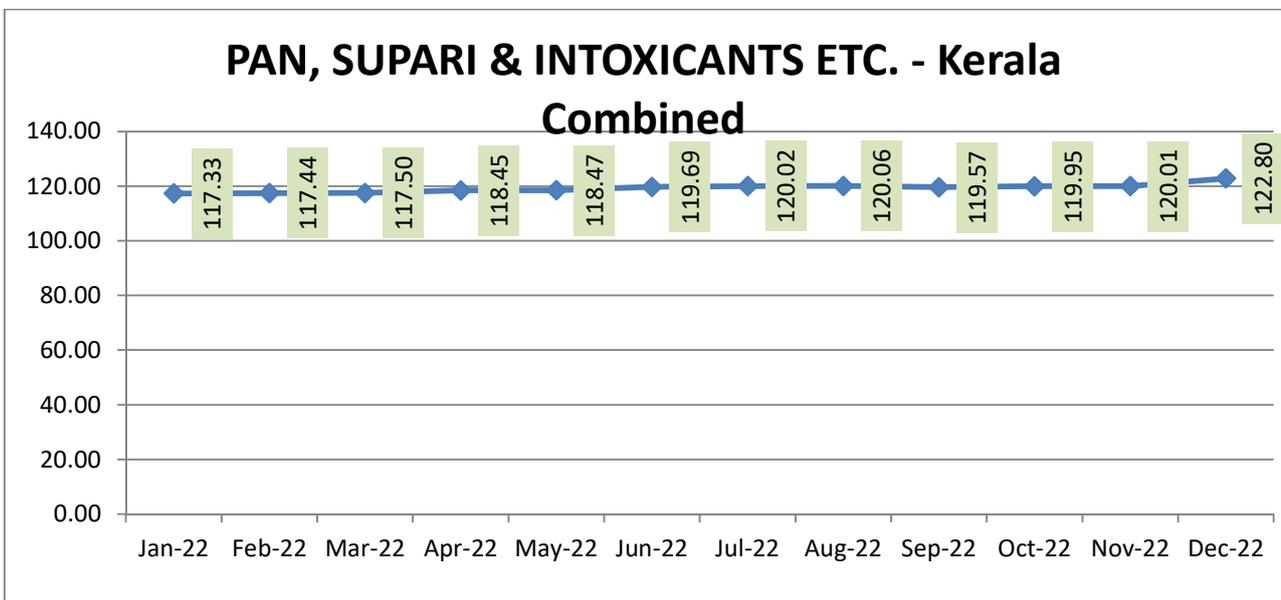

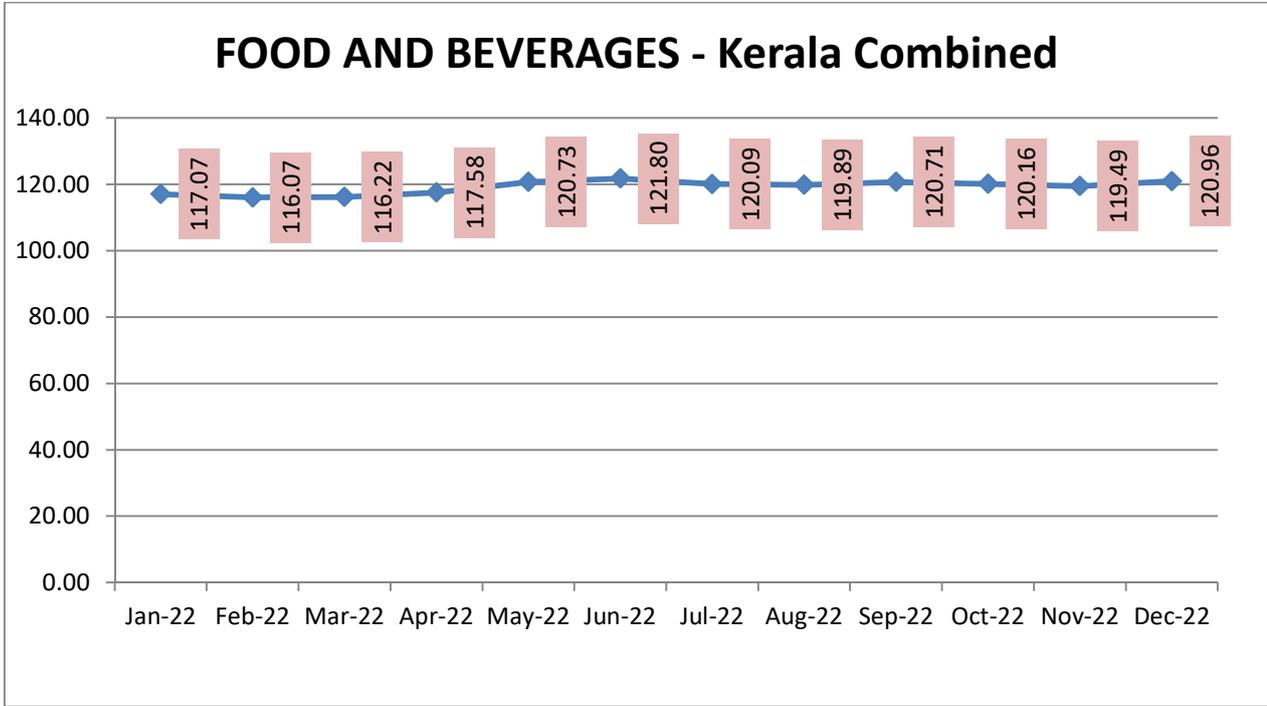

Clothing and Footwear category exhibits a steady and predictable rise in indices. January starts, and the index increases monthly, peaking in December. The index starts at 109.87 in January and increases steadily, reaching 115.49 in December. A steady rise is observed across all months, with key growth phases between May and July.

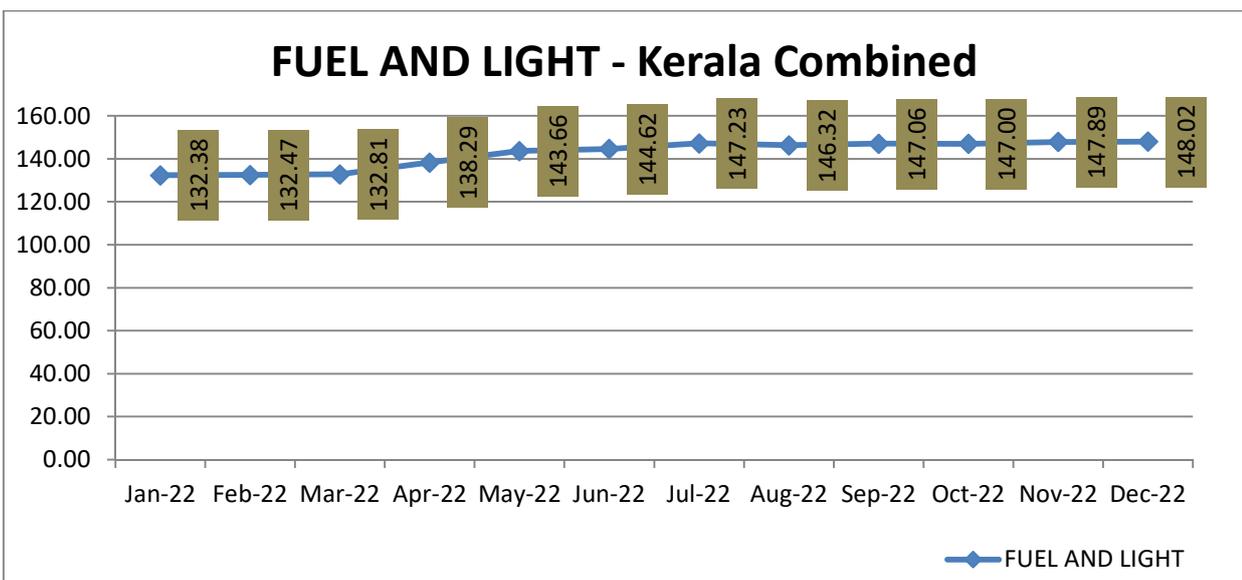

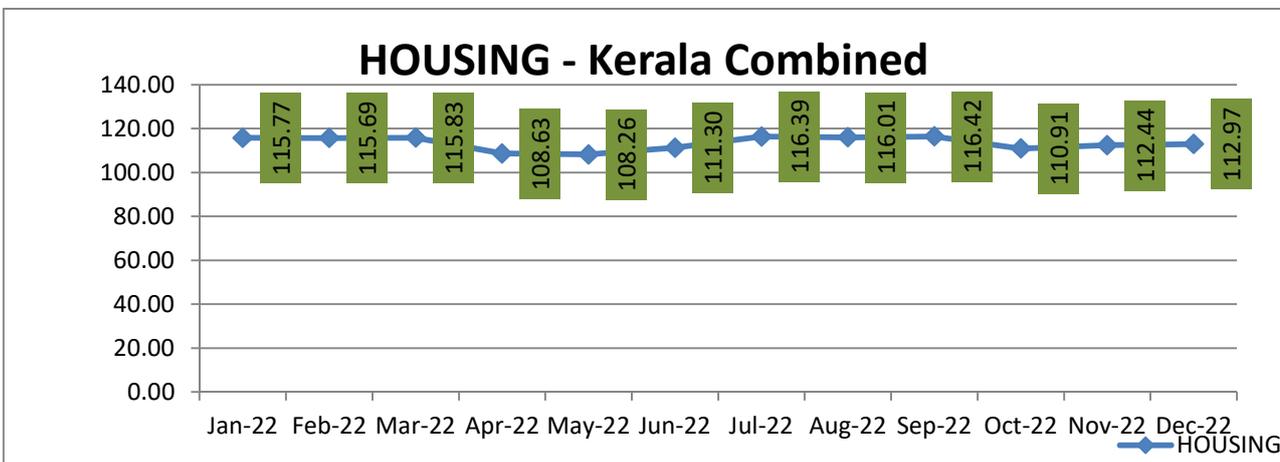

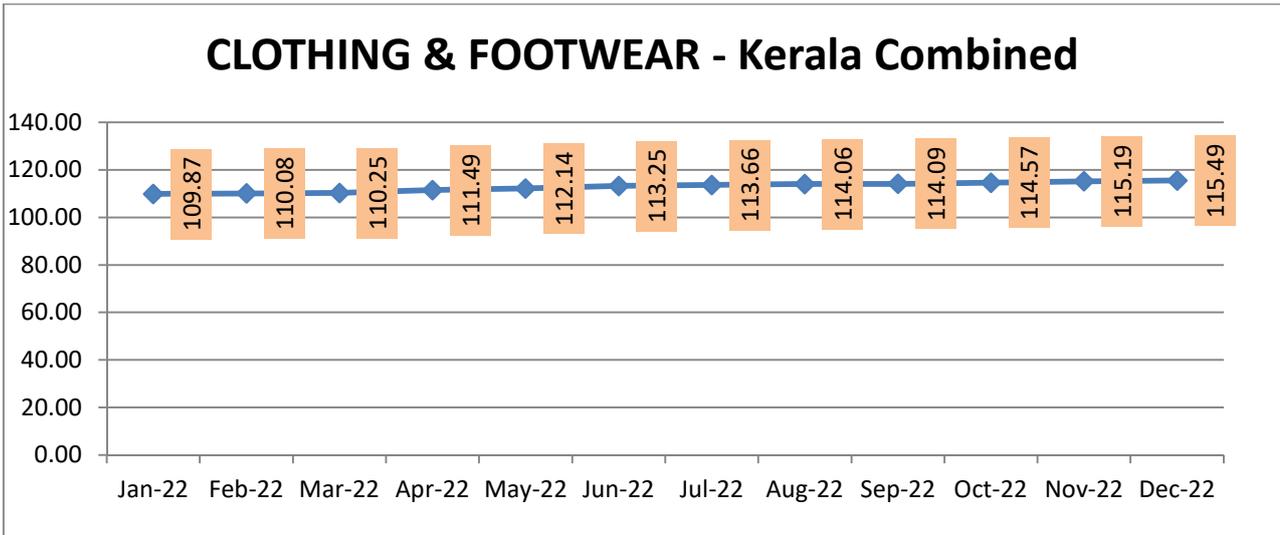

Housing indices show some irregularities during the year. While January begins, April and May drops significantly likely reflecting seasonal or economic adjustments. Post-April, the indices recover steadily in June to September. The year ends, marking a partial recovery from earlier fluctuations. The index fluctuates noticeably, starting at 115.77 in January, dipping in April (108.63), and recovering to 112.97 in December. The lowest value is recorded in May (108.26), while recovery begins in June (111.30)

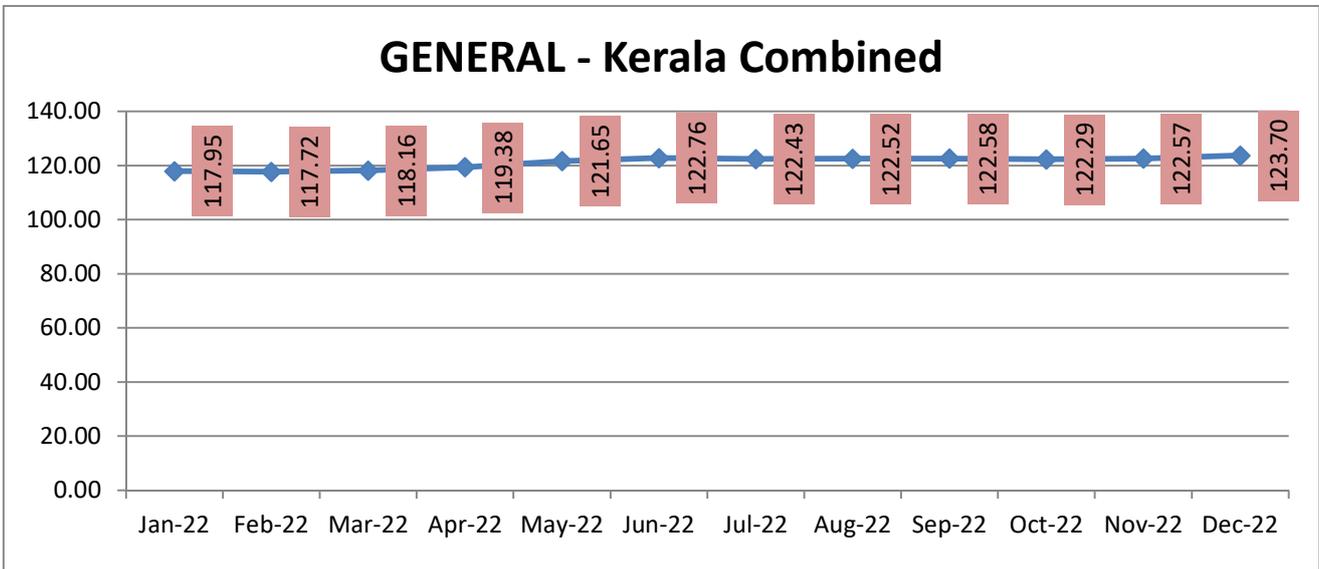

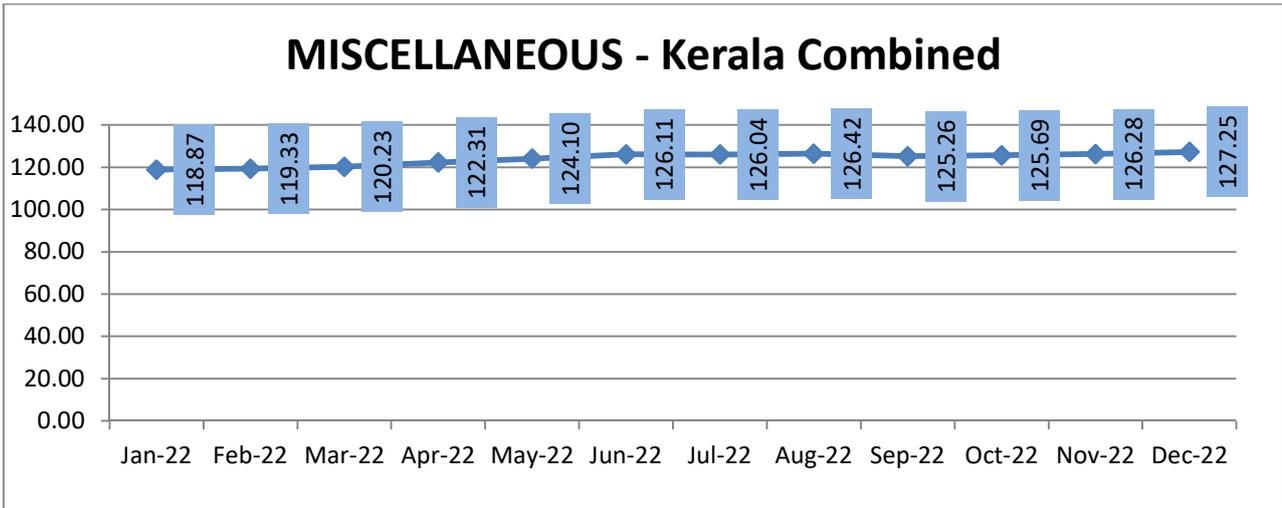

Fuel and Light indices display a sharp upward trend. Starting in January, the index rises consistently, peaking in December. The most notable increase occurs in December. This category starts at 132.38 in January and peaks at 148.02 in December. Significant rises are observed between April (138.29) and July (147.23), reflecting increased demand or price changes.

Miscellaneous indices experience consistent growth throughout the year. Noteworthy increases occur in April to August. Minor fluctuations are observed in throughout the year. The index grows consistently, starting at 118.87 in January and reaching 127.25 in December. Key growth periods occur in April (122.31) and October-November, with a stable rise observed throughout the year. The General index indicates a balanced upward trend. Starting in January, it rises steadily, peaking in December. The mid-year period shows stable values. The overall index begins at 117.95 in January and increases to 123.70 in December. The peak values occur in June (122.76) and December, indicating strong economic activity during these months.

Table 02 illustrates the dataset pertaining to the Consumer Price Index (R/U/C)2022 Kerala Combined.

CONSUMER PRICE INDEX(R/U/C) FOR THE YEAR 2022 KERALA

The Food and Beverages indices reflect minor differences between rural and urban areas. The indices are stable. The rural index starts at 117.16 in January, slightly higher than the urban index (116.86). Both indices peak in June, with rural at 121.96 and urban at 121.35, before stabilizing towards December. In at 117.16 January, while the urban index is slightly lower than rural. Both indices show a similar upward trend by May.

Pan, Supari & Intoxicants category exhibits a gradual increase throughout the year, with a slightly higher urban index. Rural areas begin the year with an index of 116.96, marginally lower than the urban index of 118.49. The rural index shows a sharper increase in December (123.32) compared to urban areas (121.16). By June, both indices converge slightly, with rural and urban. December records the highest values for the year rural and urban. Rural indices show sharper increases in the final month, while urban indices maintain a steady pace.

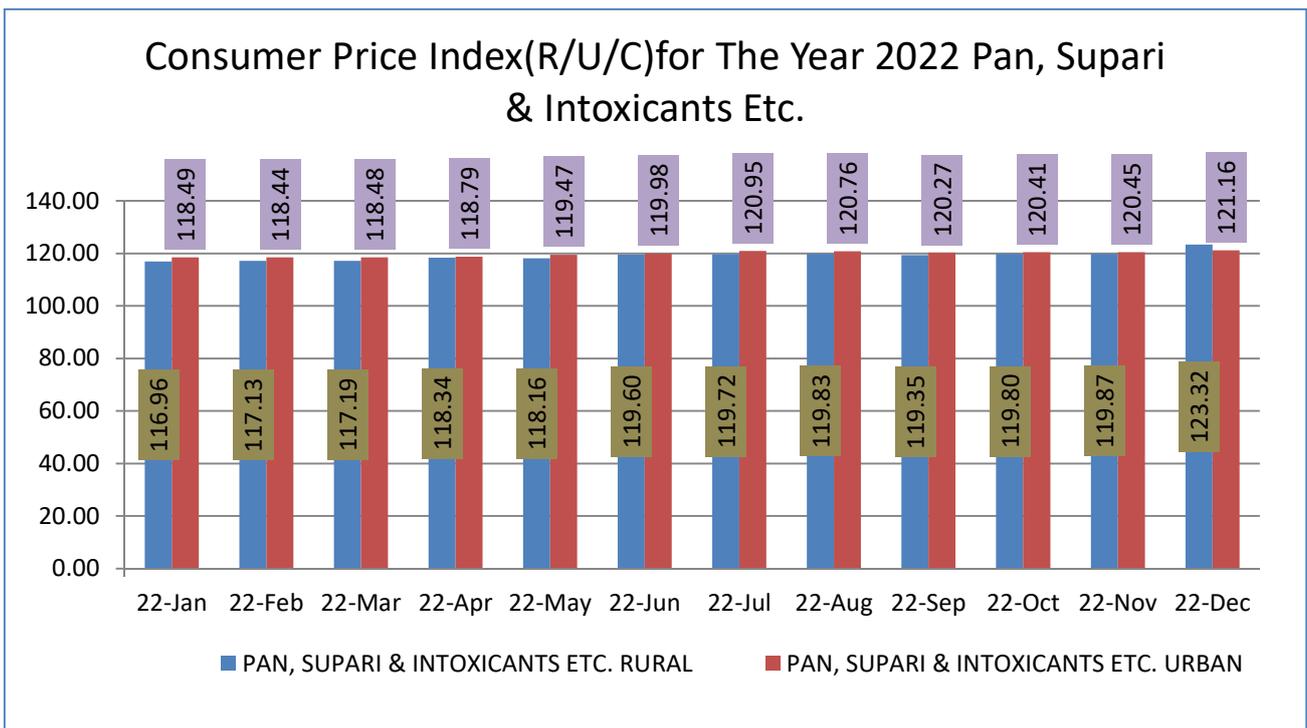

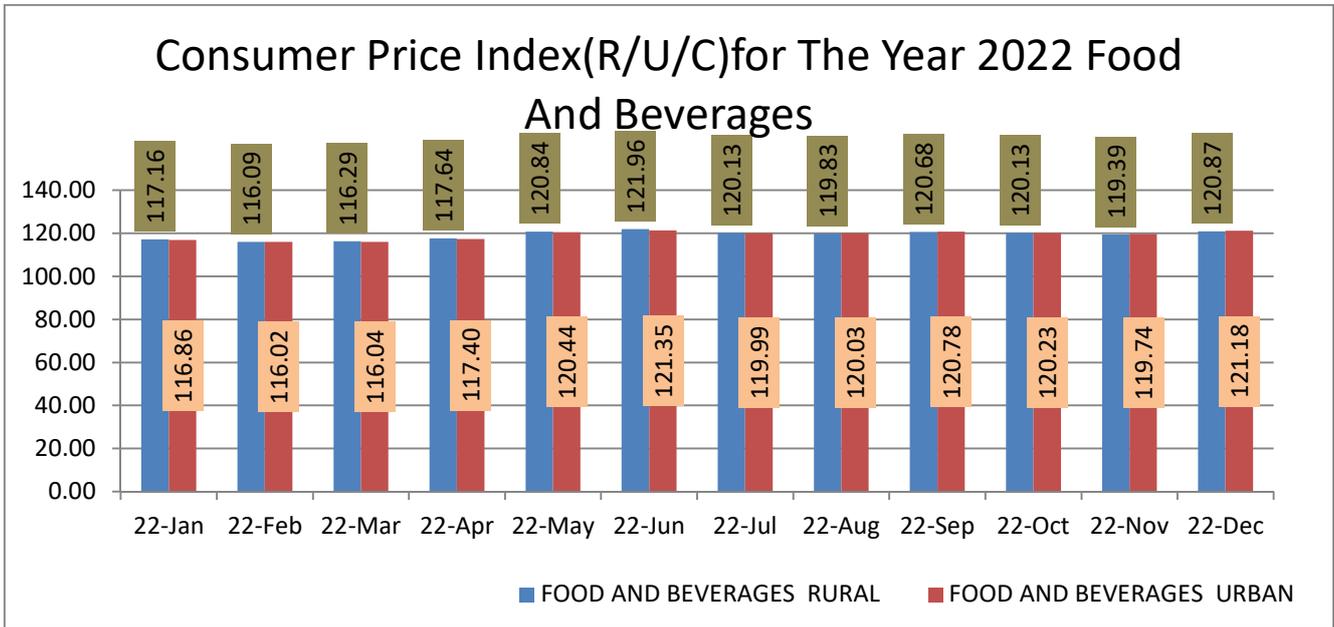

The indices for Clothing and Footwear show steady upward trend with rural indices consistently higher, rural indices are higher throughout the year, starting at 110.41 in January, compared to 108.53 in urban areas. Growth is steady in both regions, peaking in December at 115.90 (rural) and 114.46 (urban). Rural and urban areas see slightly sharper growth, particularly between June and December. Housing indices only provide urban data, which shows volatility mid-year. Housing indices shows dips sharply in April and a strong recovery occurs by July.

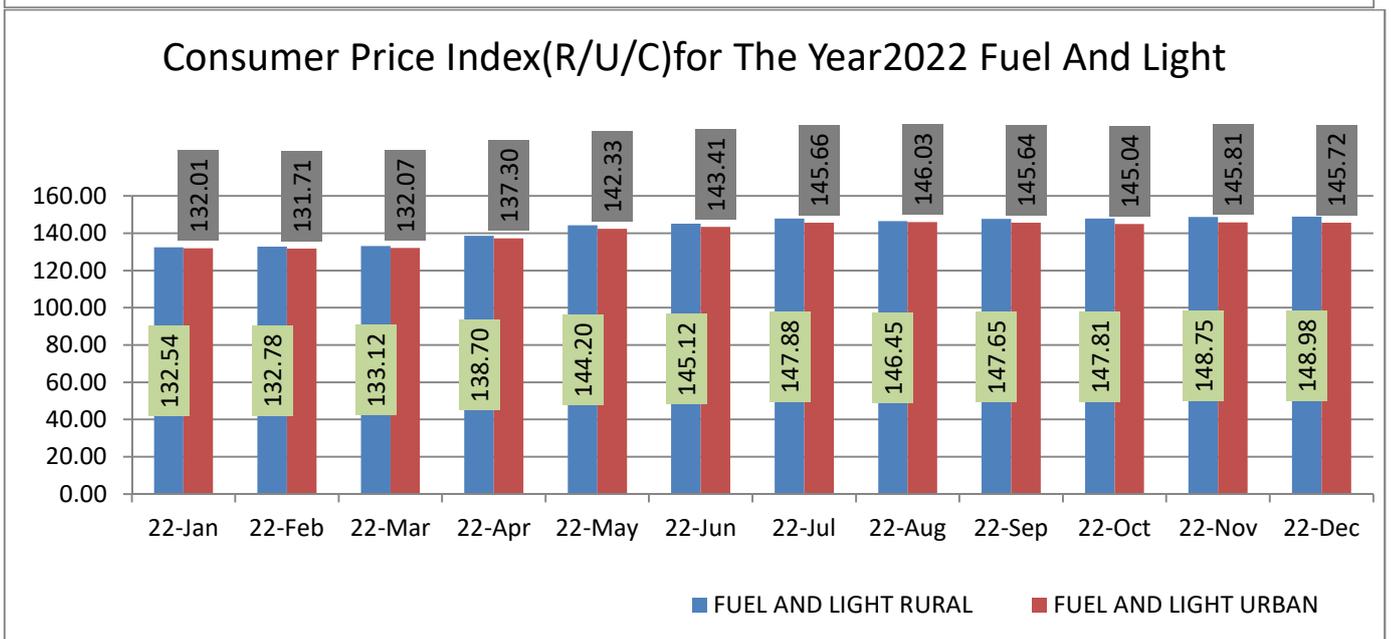

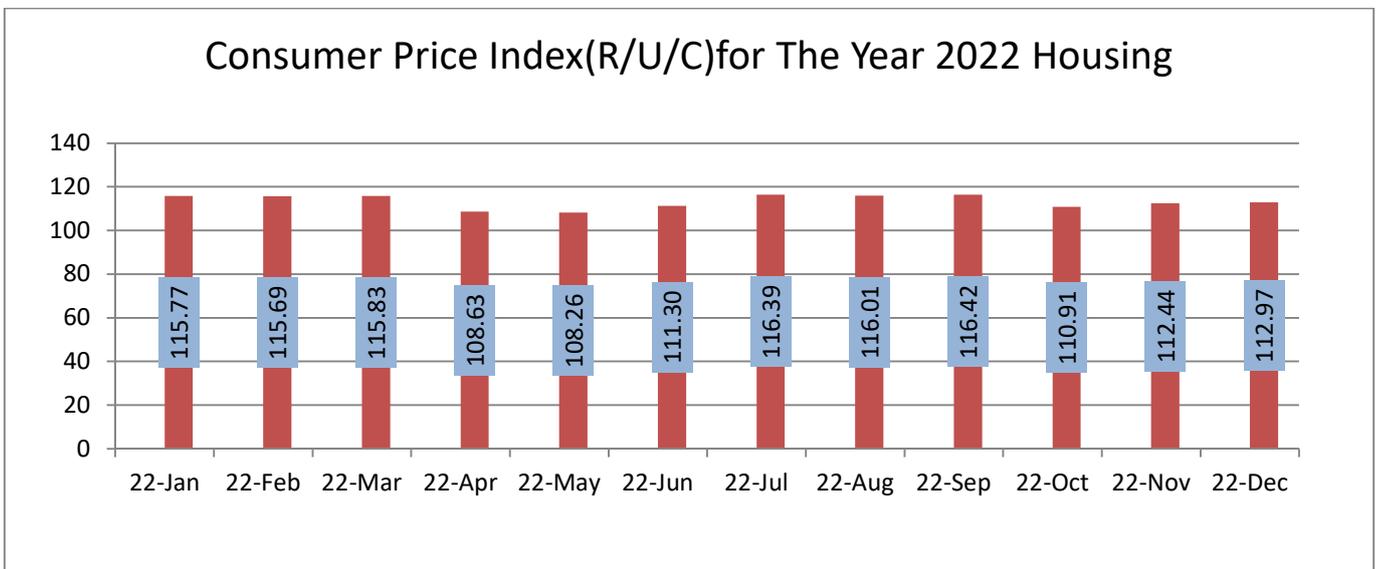

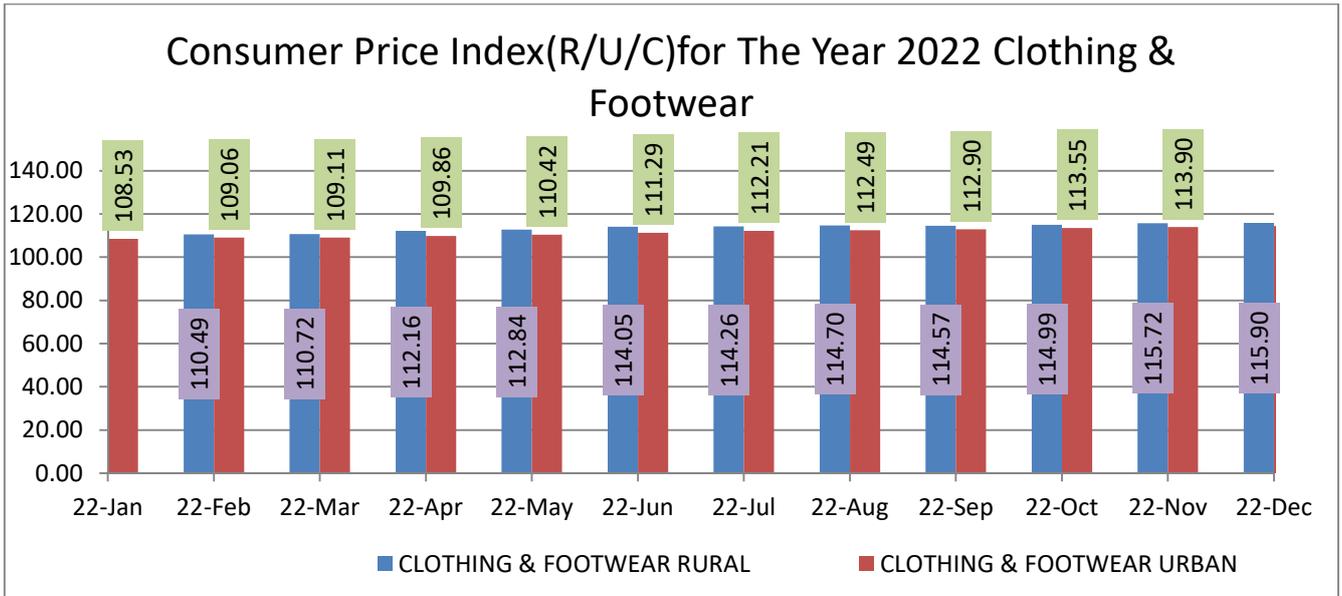

Fuel and Light indices show consistent increases, rural areas consistently report higher indices than urban areas throughout the year. January values are 132.54 (rural) and 132.01 (urban). The rural index peaks at 148.98 in December, while the urban index ends at 145.72. with rural indices notably higher. Urban indices show a highest in august and lowest in February.

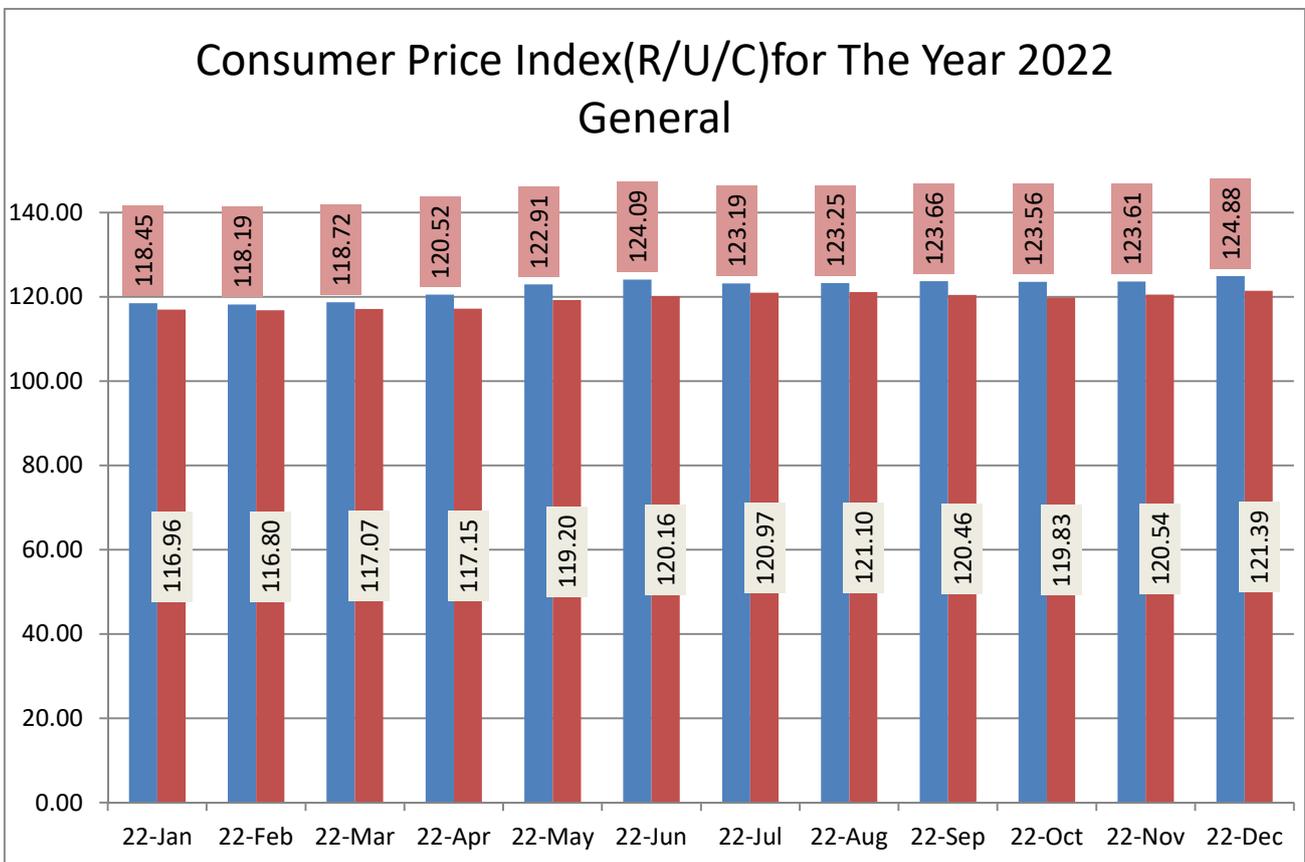

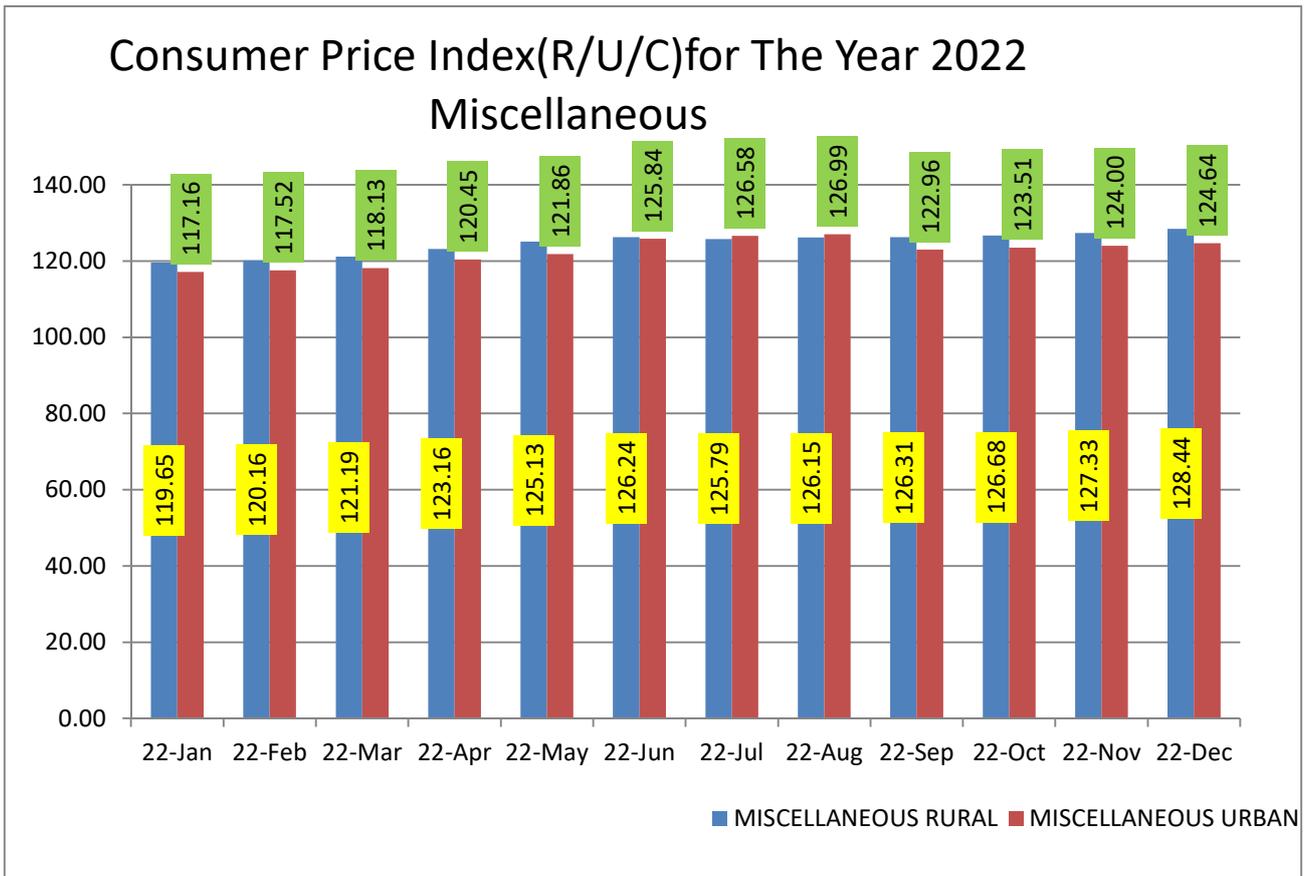

Miscellaneous indices demonstrate consistent growth in both regions, with rural areas maintaining higher value in June marks significant increases rural and urban. By December, the indices peak in rural. Rural indices start at 119.65 in January and grow consistently to 128.44 by December. Urban indices begin at 117.16 and rise to 124.64 over the same period.

The General index reflects a steady upward trend across rural and urban regions: mid-year peaks occur in June with rural and urban. By December, the indices peak in rural and urban. The rural general index is higher than the urban index throughout the year. It starts at 118.45 (rural) and 116.96 (urban) in January, peaking in December at 124.88 and 121.39, respectively.

Table 03 illustrates the dataset pertaining to the Consumer Price Index(R/U/C) For the Year 2022 Kerala.

DISTRICT WISE - CONSUMER PRICE INDEX (R\U\C)2022 RURAL&URBAN

THIRUVANATHAPURAM

The Food and Beverages Index for rural shows fluctuate slightly throughout the year, peaking in June before stabilizing in December. Rural indices start at 119.09 in January and rise steadily to 121.71 in December. Urban indices begin at 117.19 in January and end higher at 125.10 in December. In urban areas, rises gradually, reaching a peak in December. This upward trend in urban areas indicates a steady increase in food and beverage while rural areas remain relatively stable after mid-year.

The Pan, Supari & Intoxicants Index in rural a shows almost no variation throughout the year. In urban exhibits rises steadily, peak in December and display a marginal increase in rural areas and stronger growth in urban areas. Rural indices remain steady at 127.12 throughout most of the year, with a small increase to 128.43 in December. Urban indices begin at 124.53 in January and experience a gradual increase, ending at 130.23 in December.

The Clothing and Footwear Index in rural areas shows steady growth. In urban areas, the index increases gradually and constant throughout the year. The rural index grows at a faster pace compared to urban areas. Rural indices start at 120.85 in January and rise steadily to 124.52 by December. Urban indices are lower, starting at 111.25 in January and increasing marginally to 113.26 by year-end.

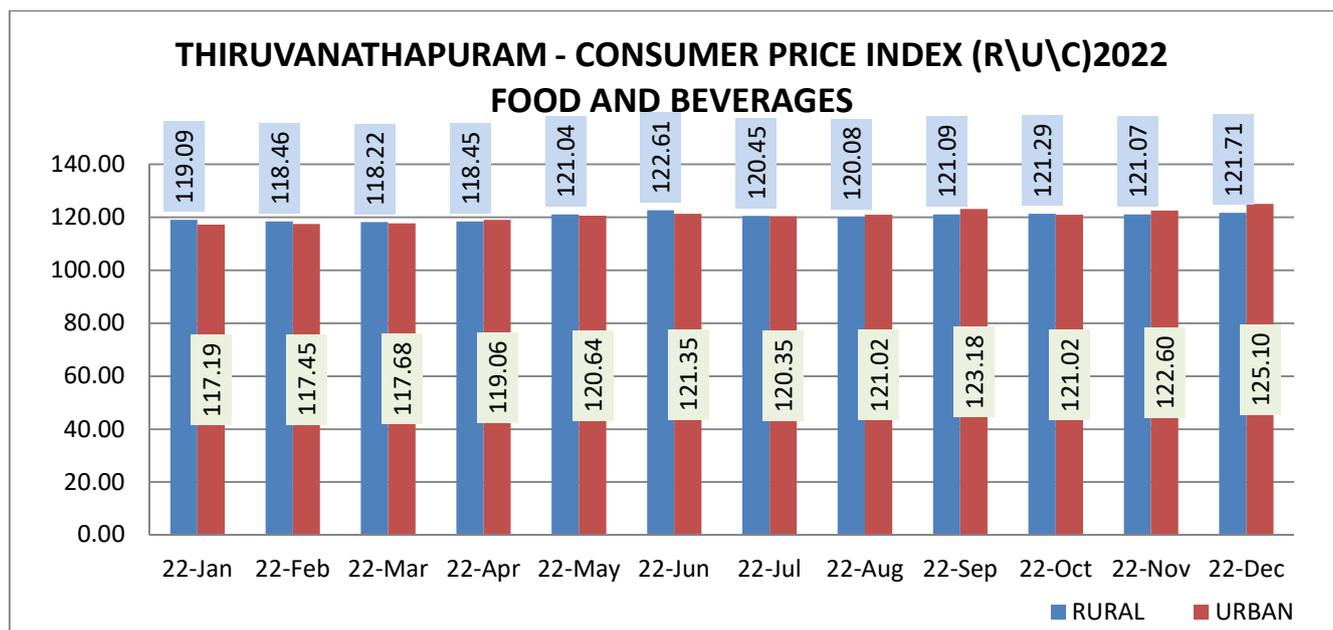

The Housing Index for urban areas, increases slightly in March, and then drops in April. It rises again mid-year, peaking in September. The housing index in urban areas begins at 119.67 in January and fluctuates throughout the year. It dips to 112.92 in April.

The Fuel and Light Index in rural areas shows consistent growth. It peaks in November in urban areas, the index rises steadily, consistent from august to December. Both rural and urban regions reflect strong upward trends, but the growth rate is higher in rural areas. Rural indices show a significant rise, starting at 161.88 in January and ending at 180.56 in December. Urban indices begin lower at 133.72 in January but follow a similar upward trend, closing at 151.46 in December.

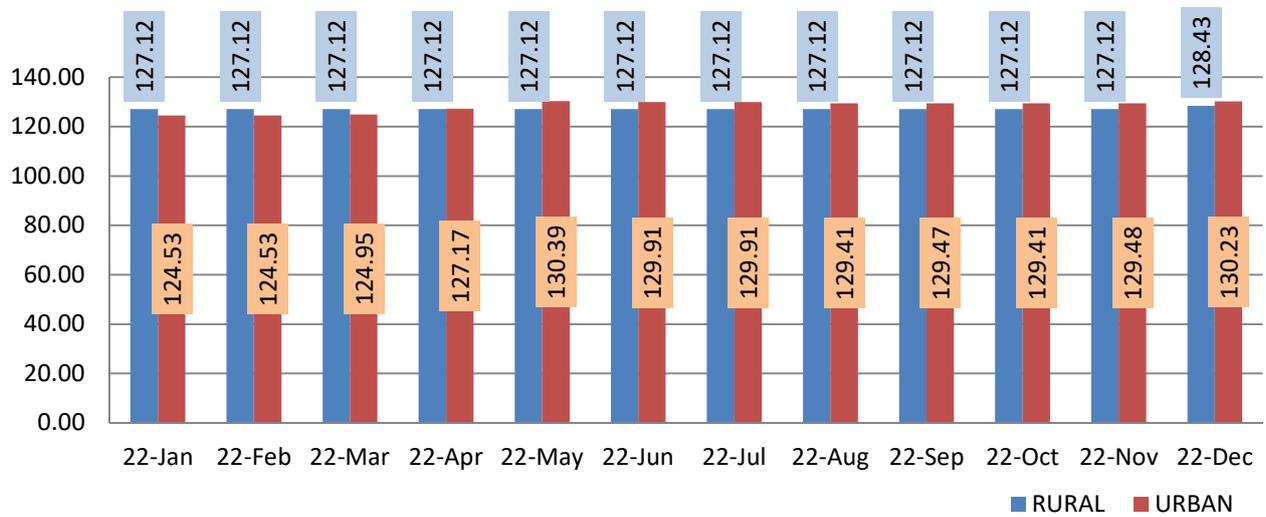

The Miscellaneous Index in rural areas shows steady growth throughout the year. In urban areas, the index, peaks in August and November, and stabilizes in December. This indicates a sharper rise and fall in urban areas compared to the consistent upward trend in rural regions. Rural indices start at 124.48 in January and climb steadily to 131.65 in December. Urban indices begin at 117.31 in January and increase to 121.37 by December, with noticeable fluctuations in the latter half of the year.

The General Index for rural areas starts in January and rises gradually throughout the year. In urban areas, the index grows steadily, peaking in September. This overall upward trend reflects sustained growth in the general price or consumption levels in both rural and urban areas. Rural indices start at 123.65 in January and rise to 128.91 by December. Urban indices begin at 118.10 and end at 122.28, reflecting slower but steady growth.

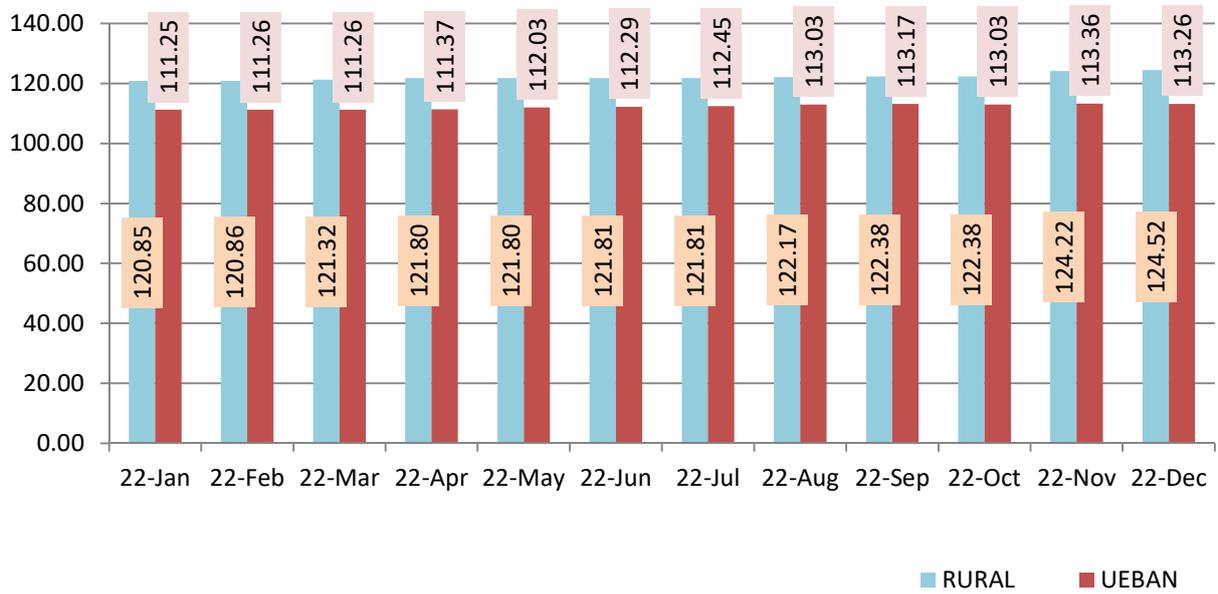

Table 04-A illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022.

THIRUVANATHAPURAM - CONSUMER PRICE INDEX (R\U\C)2022 GENERAL

CONSUMER PRICE INDEX (R\U\C) 2022 KOLLAM

The Food and Beverages Index in rural areas decreases slightly in February, and then fluctuates throughout the year. It peaks in June. In urban areas, the index lowest in March, and then increases steadily, peaking in November. The urban index demonstrates more volatility compared to rural regions, which show a gradual upward trend. Rural Index: The index fluctuates moderately throughout the year, starting at 118.30 in January and ending at 123.31 in December. It peaks in June at 124.61. Urban areas experience a steadier trend, starting at 117.29 in January, peaking at 122.60 in November, and dropping slightly to 120.80 in December.

The Pan, Supari & Intoxicants Index in rural areas remains stable from January to March, increases slightly in June, and jumps significantly in December. In urban areas, the index remains stable through September, peaks in November, and falls back in December. Rural areas witness a sharp surge in December, while urban regions maintain relative stability except for a peak in October and November. The rural index remains relatively stable from January (117.72) to October (122.91). However, it surges significantly in December, reaching 146.89. Urban indices stay consistent, ranging between 116.52 (May) and 121.63 (December). The index rises slightly towards the end of the year.

The Clothing Index in rural areas rises steadily, peaking in September and October, stabilizing in November and December. In urban areas, the index increases slightly through mid-year. This indicates consistent growth in both rural and urban regions, with urban areas showing higher values in the later months. Rural indices grow steadily, starting at 108.41 in January and reaching 113.92 in December. The highest growth occurs between March and May. Urban indices follow a similar trend, starting at 109.75 in January and rising to 117.29 in December.

The Housing Index in urban areas fluctuates through the months, and peaks in October. The lowest point occurs in August. The urban housing index fluctuates throughout the year, starting at 117.03 in January and ending at 113.97 in December. The index peaks in October at 121.21, likely driven by seasonal factors or increased housing activity.

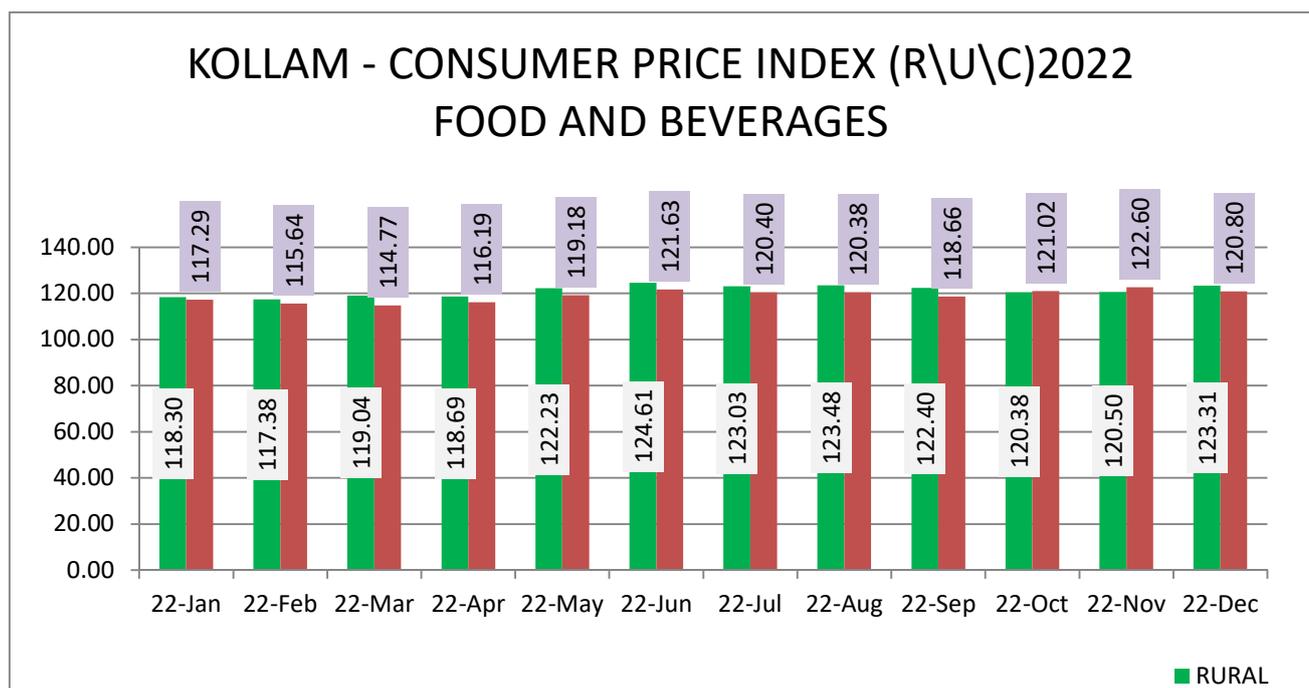

The Fuel and Light Index in rural areas, decreases slightly in March, and then rises steadily, peaking in November. In urban areas, the index, peaks in November, and drops in December. Both regions show strong mid-to-late year increases, indicating rising fuel and light costs, especially in rural areas. The rural index starts at 129.19 in January and rises to a peak of 152.05 in November before slightly declining to 151.45 in December. The increase between May and

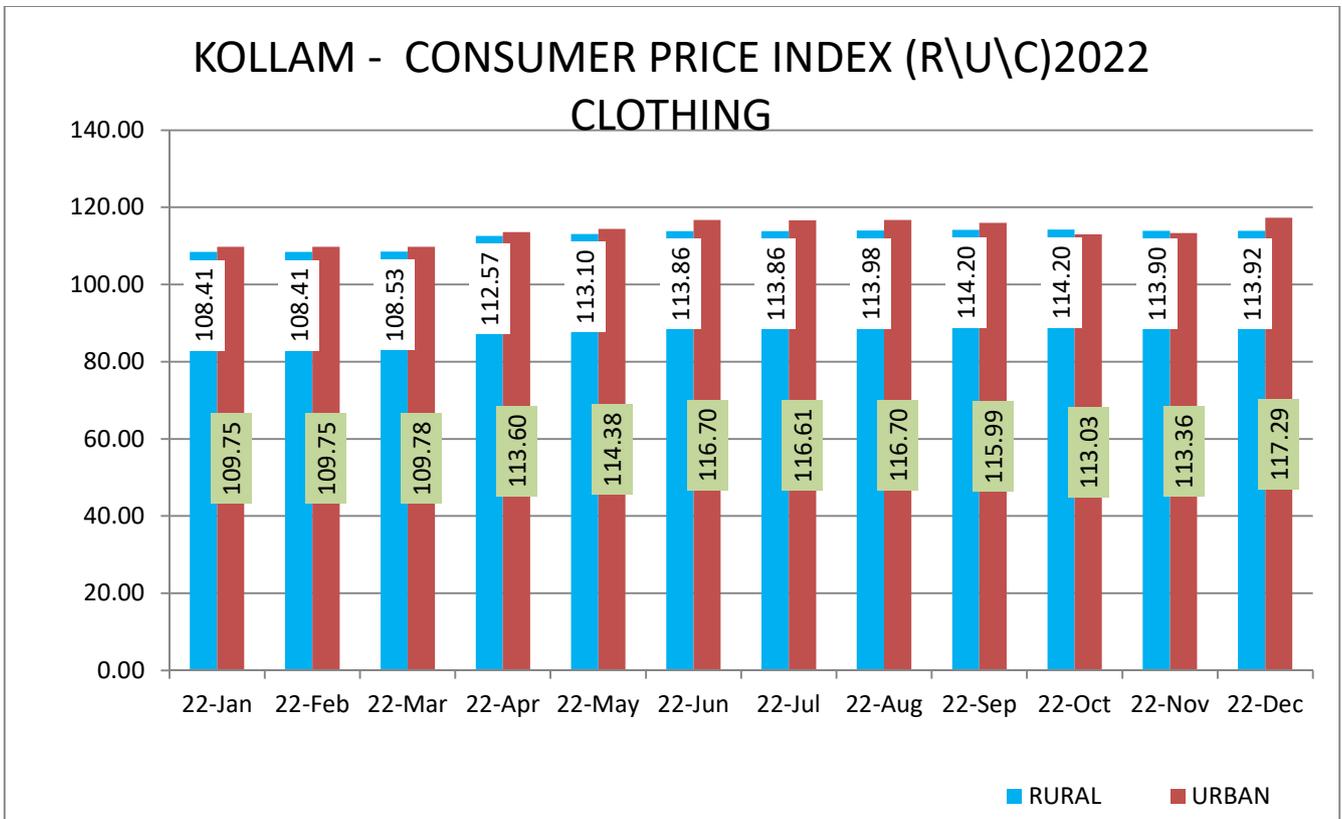

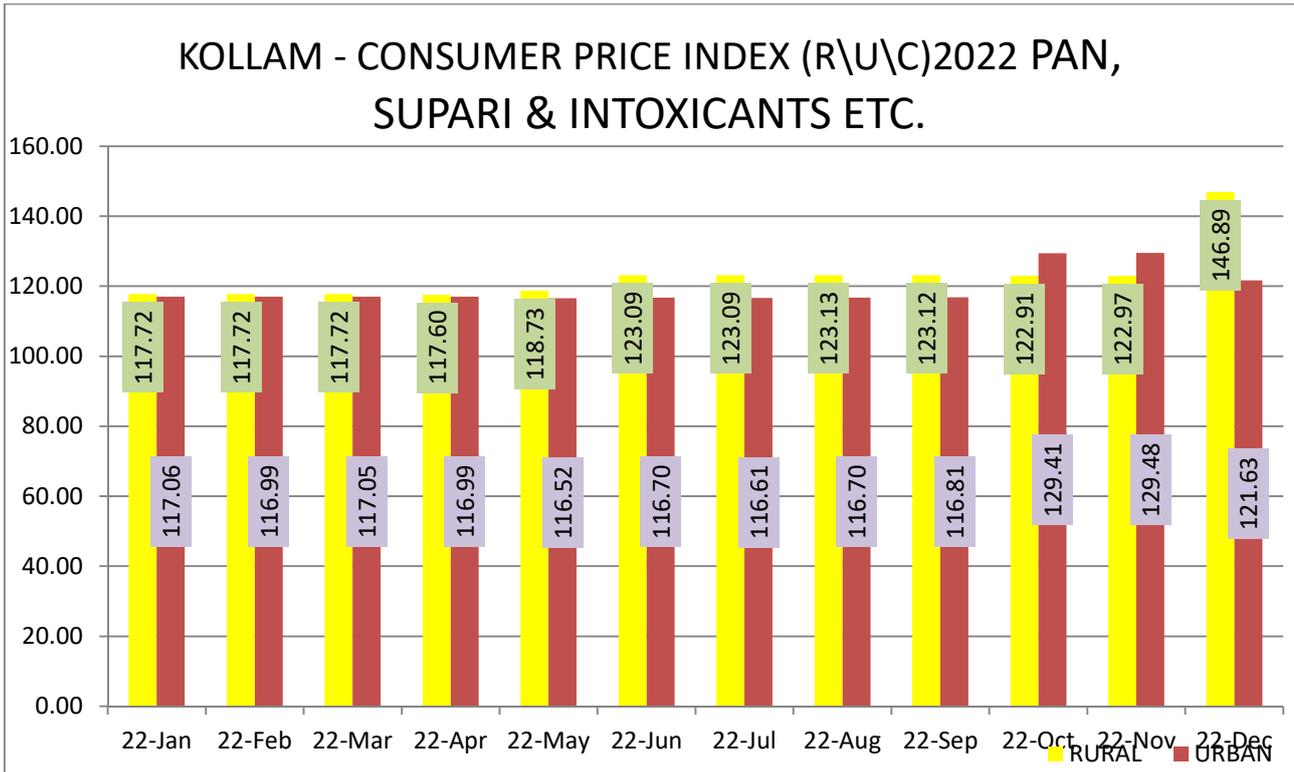

November is particularly significant. The urban index starts higher at 140.40 in January, peaks in October and November (151.34 and 151.86, respectively), and then drops to 142.02 in December.

The Miscellaneous Index in rural, increases steadily throughout the year, and peaks in December. In urban areas, the index peaks significantly in October. Urban areas experience a sharp spike mid-year, while rural areas exhibit a gradual upward trend. Rural indices show steady growth, starting at 116.70 in January and ending at 126.43 in December. Urban indices are consistently higher than rural indices, starting at 120.82 in January and peaking in October at 143.11 before declining to 131.23 in December

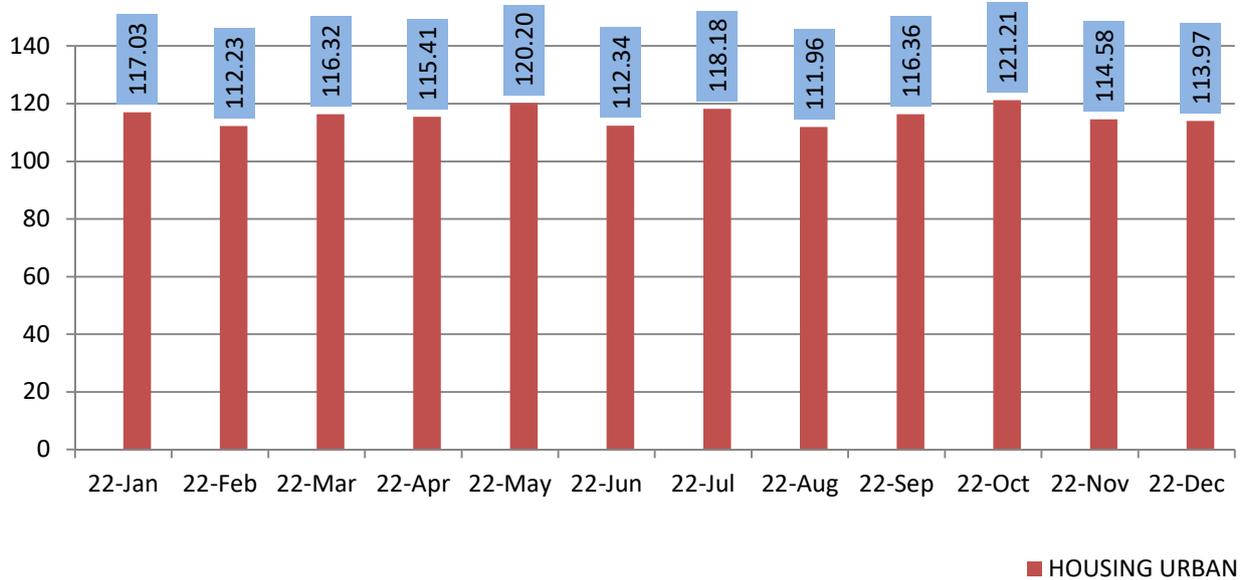

The General Index for rural areas showing slightly stronger growth throughout the year. In urban areas, the index, fluctuates slightly, and peaks in December.

Table 04-B illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022.

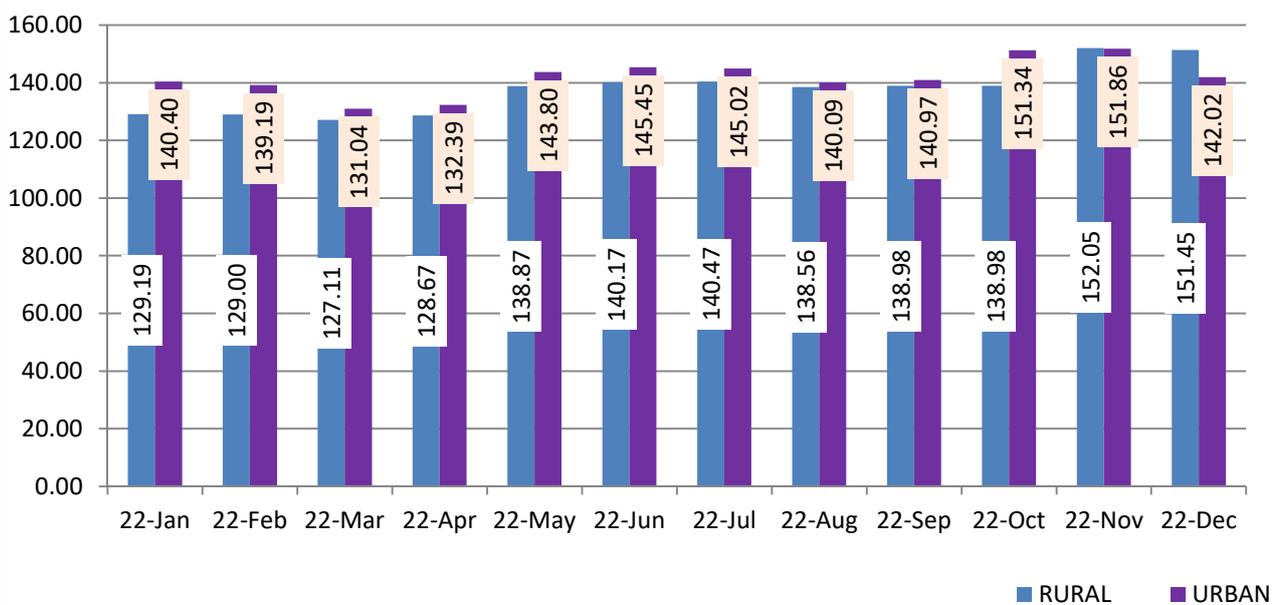

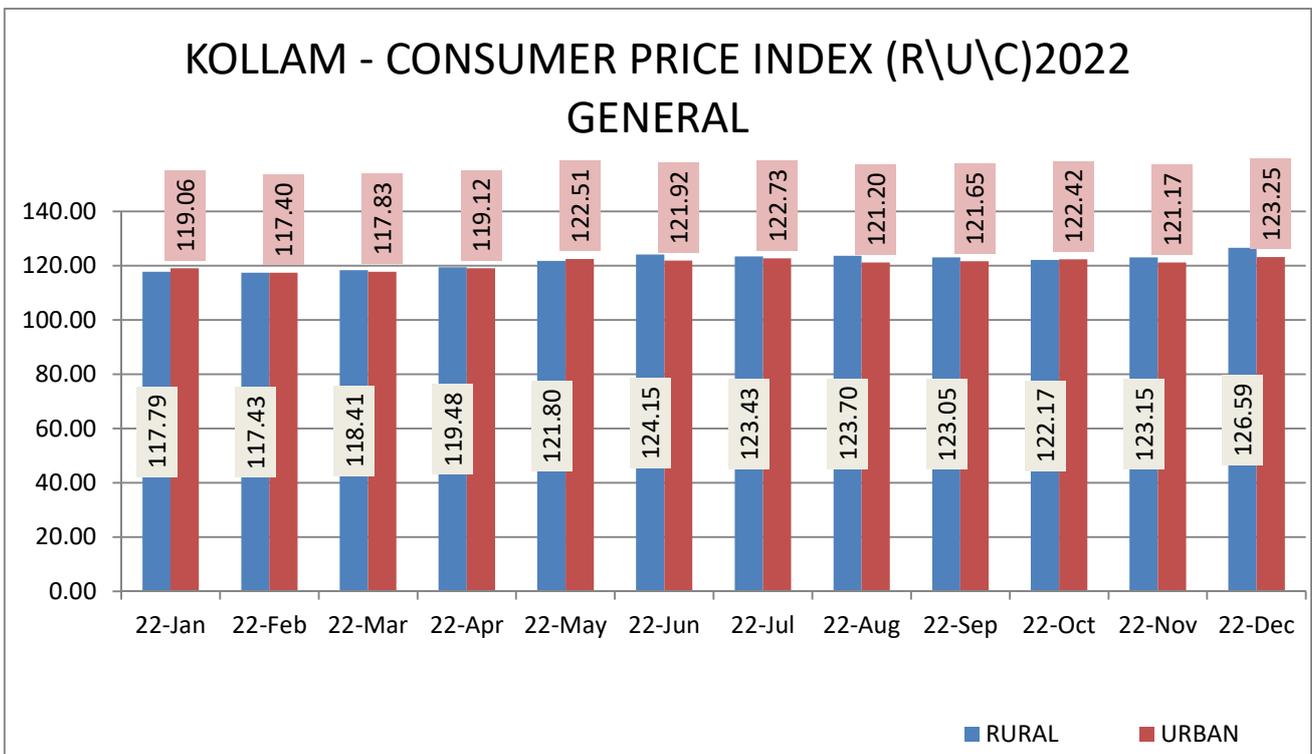

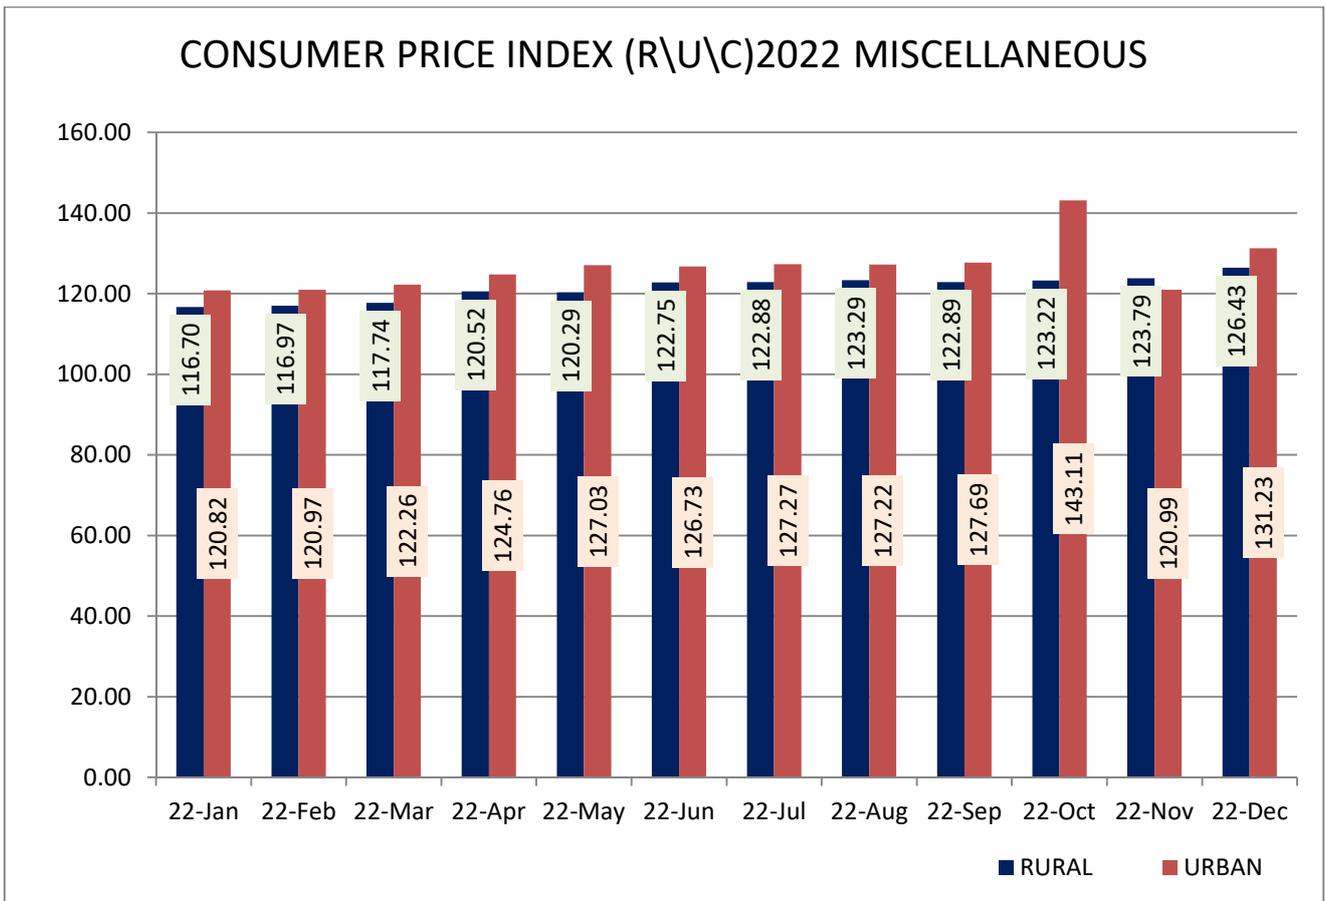

KOLLAM - CONSUMER PRICE INDEX (R\U\C)2022 HOUSING

KOLLAM - CONSUMER PRICE INDEX (R\U\C)2022 FUEL AND LIGHT

CONSUMER PRICE INDEX (R\U\C) 2022- PATHANAMTHITTA

The Food and Beverages Index in rural areas rising gradually in May. It peaks mid-year in June and July, then stabilizes through September, October and November.. In urban areas, the index rises steadily in June, and remains relatively stable until November. The index reaches its peak in December indicating higher food and beverage costs toward the year-end. Urban areas show sharper increases than rural areas. The rural index remains steady at the beginning of the year, starting at 116.49 in January and gradually increasing to 123.25 in December. The highest growth occurs in May and June, with indices rising to 122.15 and 122.34. Urban indices exhibit a similar trend, starting at 114.70 in January and peaking at 126.66 in December. The increase between November and December is particularly notable.

.The Pan, Supari & Intoxicants Index in rural areas remains constant from January to April, drops in May, and stabilizes again until September. The index increases in October and ends the year in December, showing a late-year rise. In urban areas, the index remains stable until September. The values increase slightly in November and December. Rural areas show more fluctuations compared to urban areas, which remain stable with minor increases. Rural indices show little fluctuation, maintaining a consistent value of 116.90 for most months. A modest increase appears in October (121.75) and peaks in December at 122.32. The urban index is stable around 109.89 for the majority of the year but sees a jump in November (114.87) and maintains this level in December.

The Clothing & Footwear Index in rural areas rises steadily throughout the year. The index peaks in December, showing consistent upward growth. In urban areas, the index peaks in November and December. Urban areas consistently maintain higher values than rural areas, reflecting a stronger trend of price increases. Rural indices show steady growth, starting at 113.65 in January and ending at 120.29 in December. The most significant rise occurs from April to May, reflecting seasonal demand. Urban indices follow a similar trend, starting at 116.45 in January and peaking at 122.26 in December. A steady increase from July to December is evident.

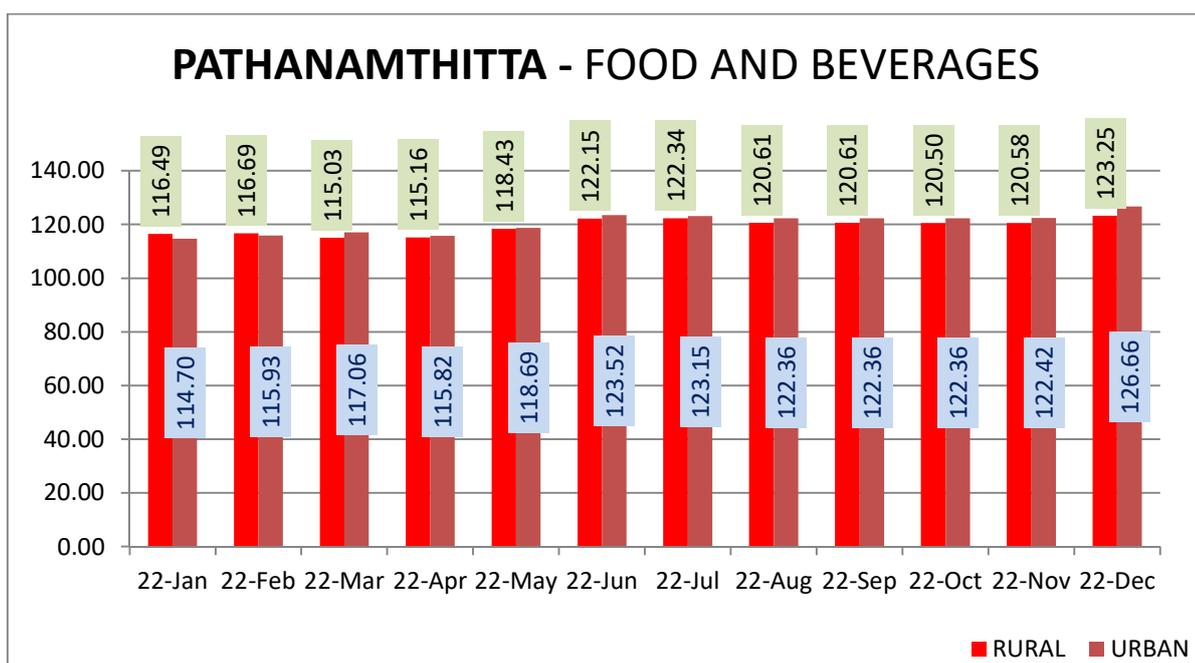

The Housing Index in urban fluctuates slightly throughout the year. A notable drop in May. Housing costs show modest growth overall. The urban housing index fluctuates throughout the year, starting at 102.45 in January and ending at 105.97 in December. The highest value is observed in December, while May reports 0.00, likely indicating missing or unavailable data.

The Fuel and Light Index in rural areas, rises consistently throughout the year, and peaks in December. This reflects a steady increase in fuel and energy costs in rural regions. In urban areas, the index follows a similar upward trend, and peaks in November, ending slightly lower in December. Urban areas experience slightly higher fuel and light costs compared to rural areas, particularly in the latter half of the year.

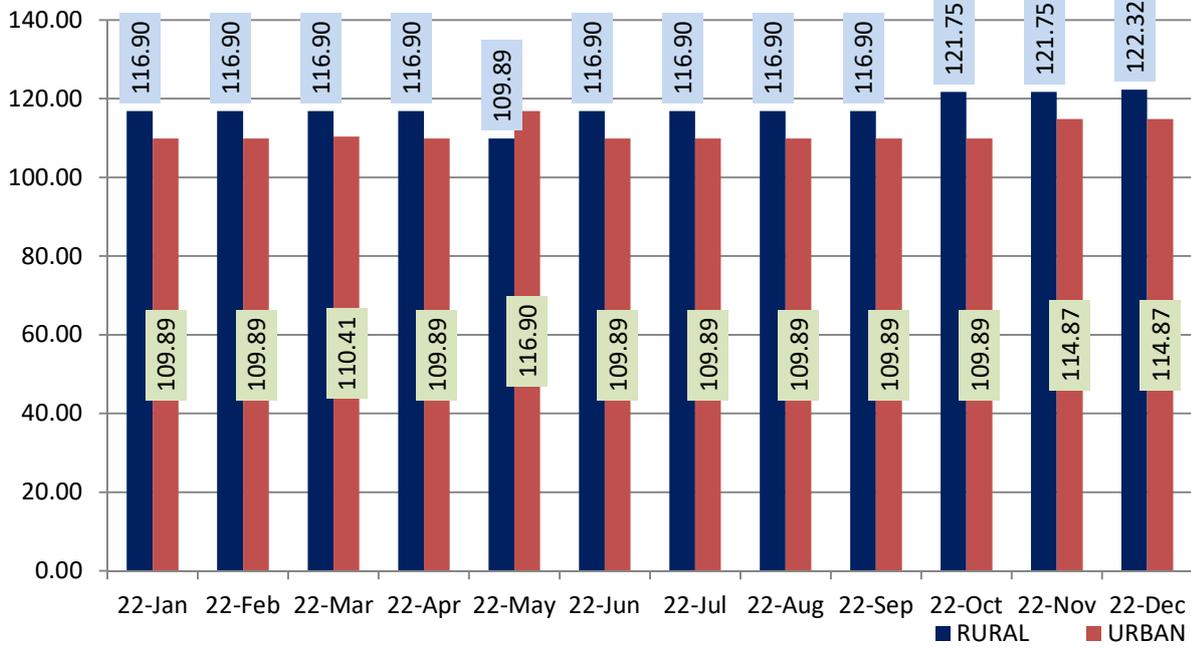

The Miscellaneous Index in rural increases steadily in December. The growth is consistent throughout the year in urban areas, the index, remains stable through mid-year, and rises in December. While urban areas show more stability initially, they experience notable increases toward the year-end. The rural index exhibits steady growth, starting at 116.30 in January and ending at 123.55 in December. The most notable rise occurs between April and May. Urban Index: Urban indices also show growth, starting at 115.61 in January and reaching 123.33 in December.

General Indies in rural values consistently remain higher than urban values throughout the year. The urban values remain relatively stable after May, fluctuating slightly but showing minor increases toward end of the year. The rural general index begins at 117.60 in January and steadily rises to 125.05 in December, with a noticeable increase from May to June. Urban indices follow a similar trend, starting at 113.57 in January and ending at 122.43 in December. Urban areas see a slight dip in mid-year before recovering toward the end.

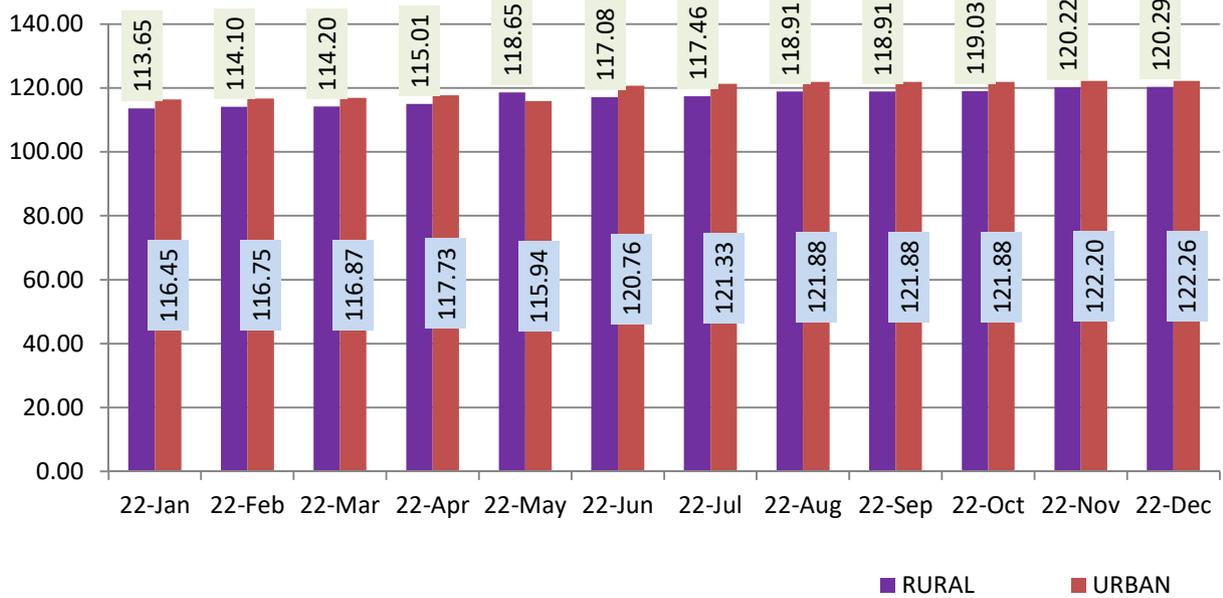

Table 04-C illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022.

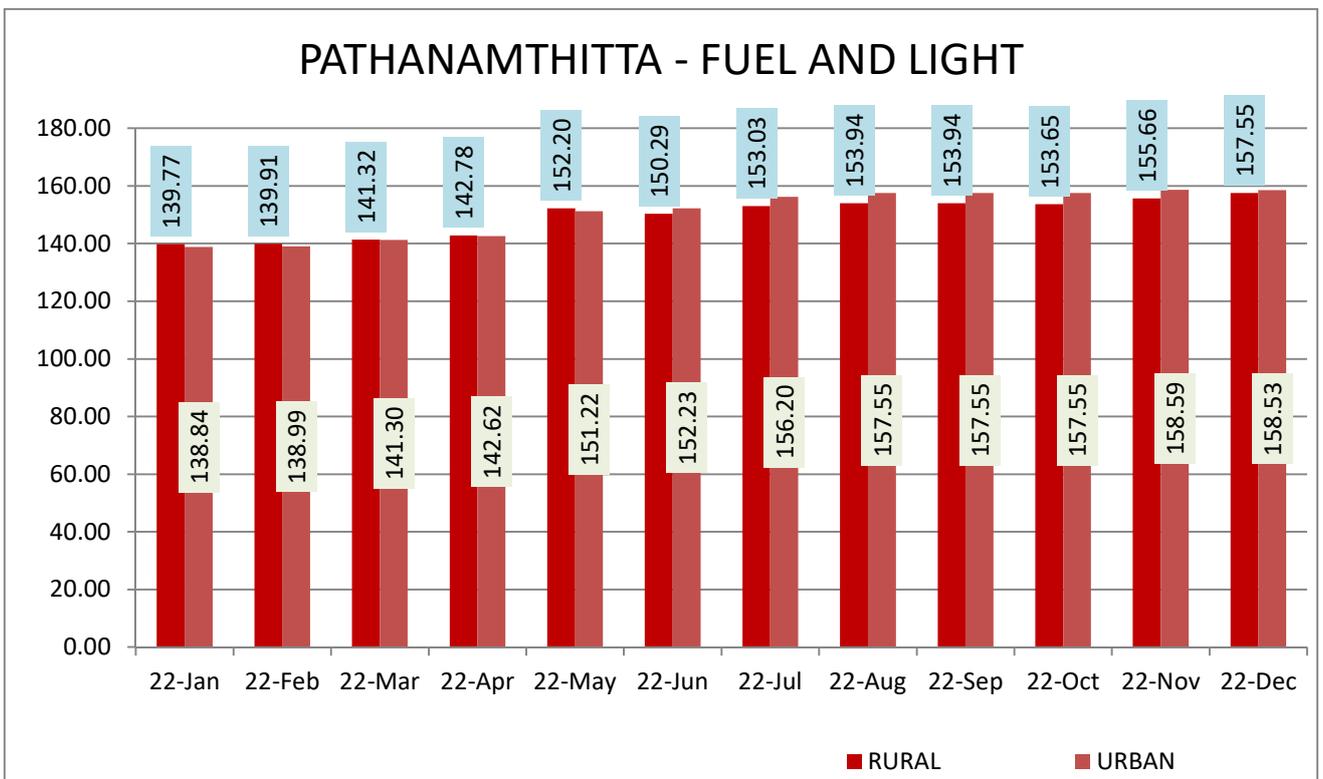

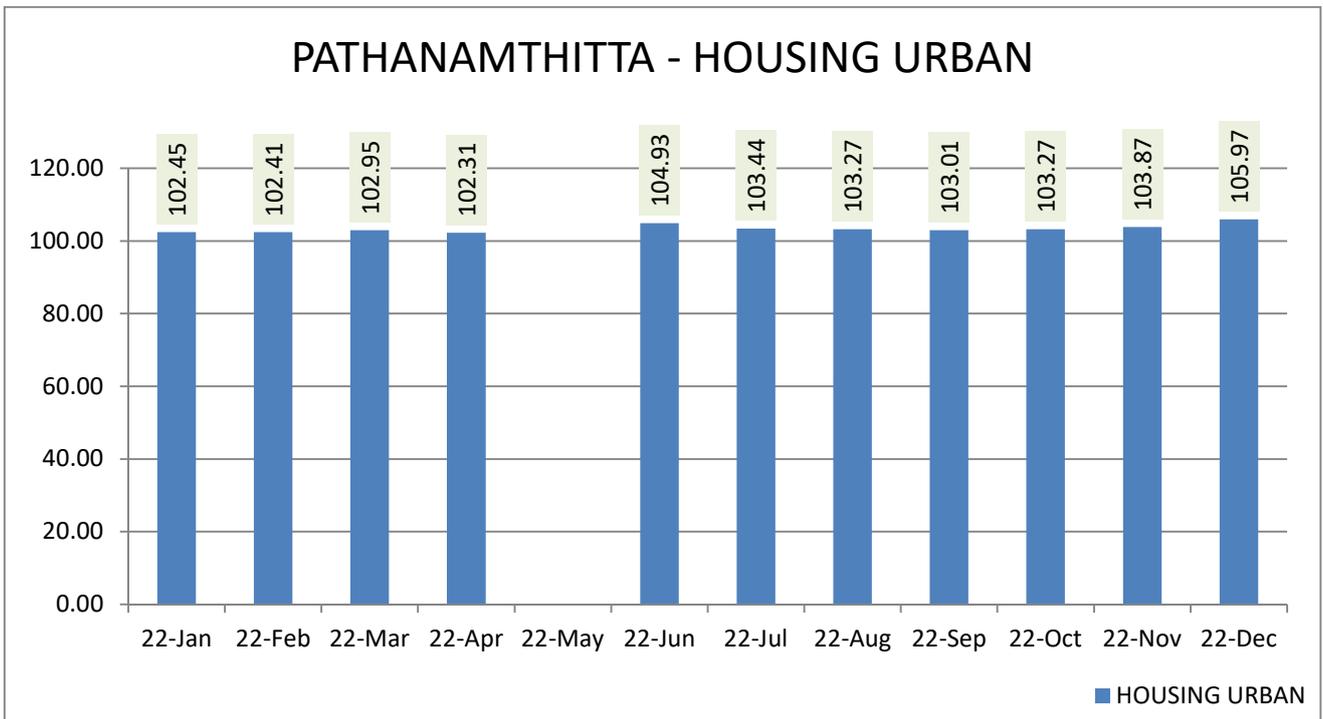

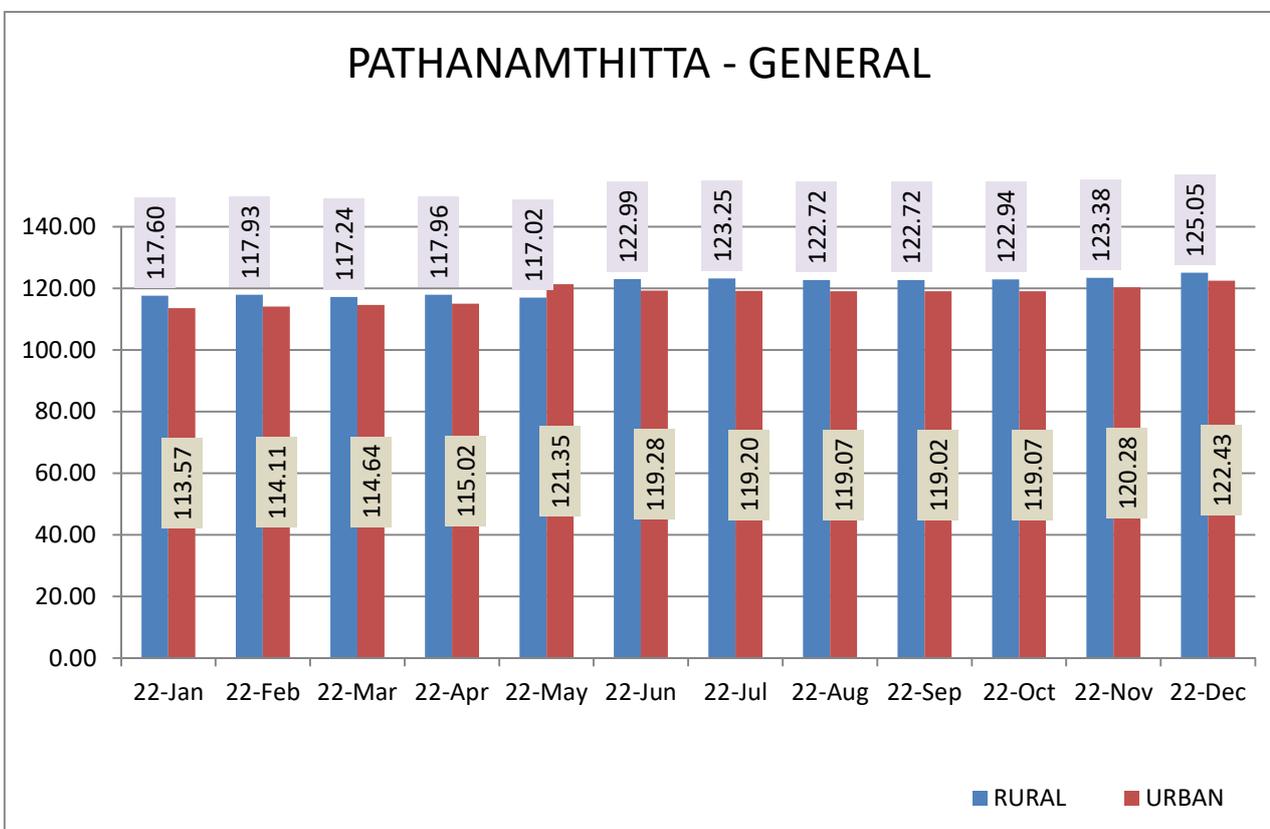

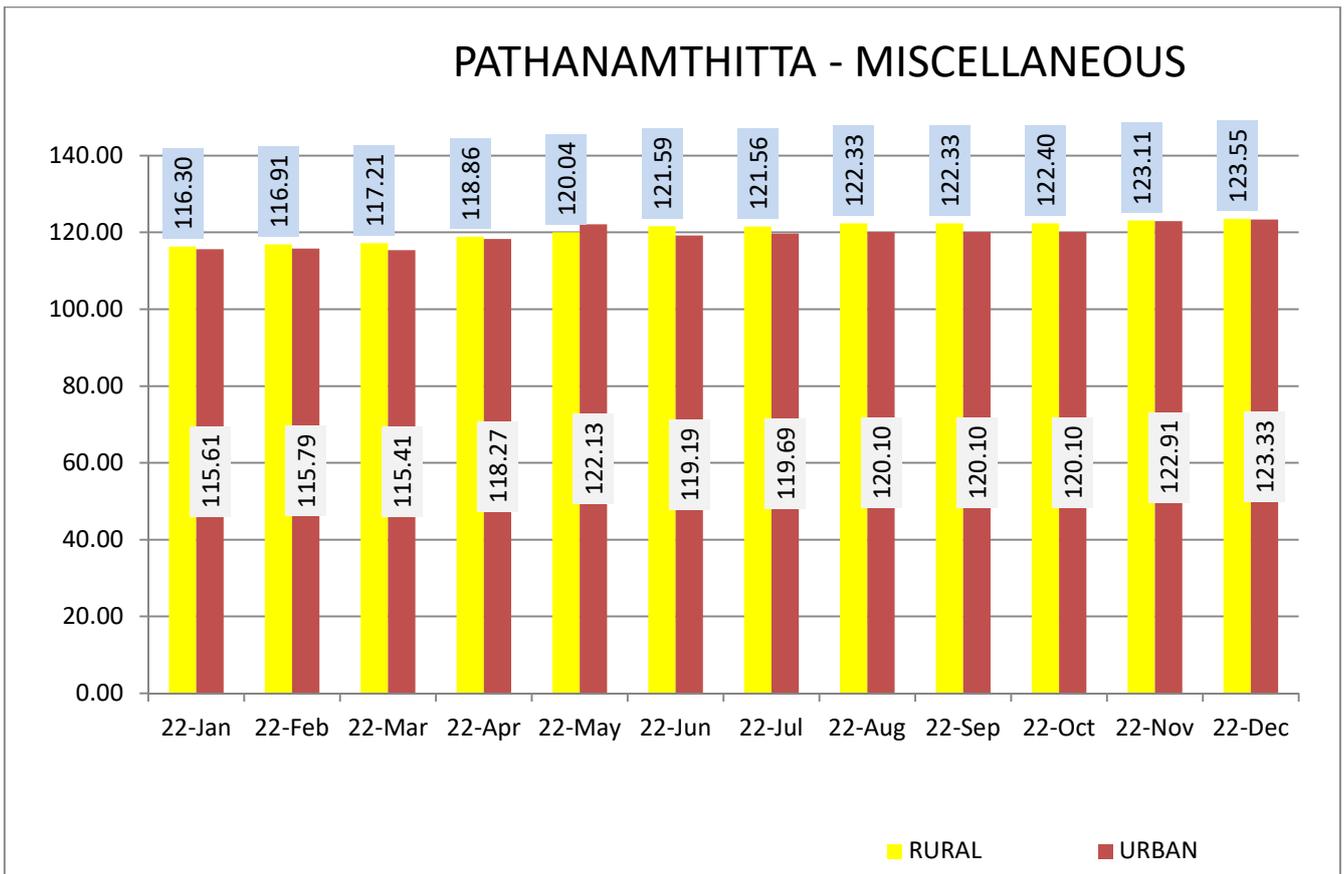

PATHANAMTHITTA - PAN, SUPARI & INTOXICANTS ETC.

PATHANAMTHITTA - CLOTHING & FOOTWEAR

CONSUMER PRICE INDEX (R/U\C) 2022 ALAPPUZHA

The Food and Beverages category demonstrates consistent monthly variations across both rural and urban areas. Rural indices remain higher than urban indices for most months, with the rural peak in June and urban peak in September. Both rural and urban indices exhibit a steady rise until May, followed by fluctuations, the rural index starts at 117.44 in January and fluctuates throughout the year, peaking at 123.98 in June before settling at 122.10 in December. The index shows noticeable increases in May and June. The urban index starts at 116.06 in January and ends at 120.38 in December. It exhibits a dip in June (115.69) but recovers steadily toward the year's end.

The Pan, Supari & Intoxicants category maintains stable trends, with rural indices consistently for most months except December, where it increases slightly. Urban indices fluctuate more, peaking at July and dipping notably in September. The rural index remains stable at 120.79 for most of the year, with a slight increase in December (121.15). The urban index fluctuates between 115.13 and 121.31, with the highest values recorded in June and July. It shows some inconsistency across months, particularly a dip in September and November (115.13).

The Clothing & Footwear category shows gradual upward trends in both rural and urban indices. Rural indices peak at August while urban indices maintain higher values throughout, peaking at August to December. The rural index starts at 106.04 in January and gradually increases to 107.63 in December, showing steady but minimal growth. The urban index starts at 110.59 in January and ends at 114.45 in December. A significant rise occurs from May to June, reaching 113.87 and stabilizing thereafter.

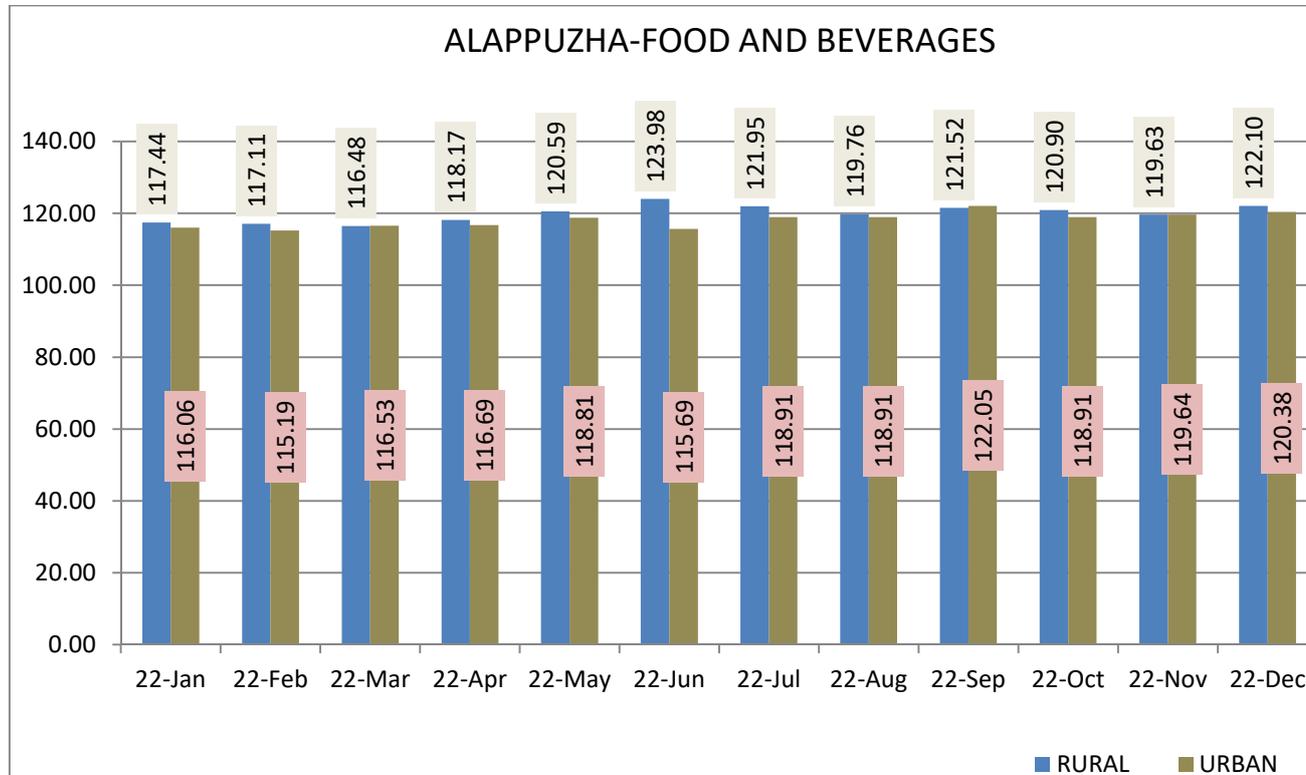

The Housing index is recorded only for urban areas, showing steady fluctuations. The housing index begins at 105.03 in January, peaks at 110.49 in September, and ends the year at 105.17 in December. Fluctuations are evident, with a dip in April (103.38) and notable increases in the second half of the year.

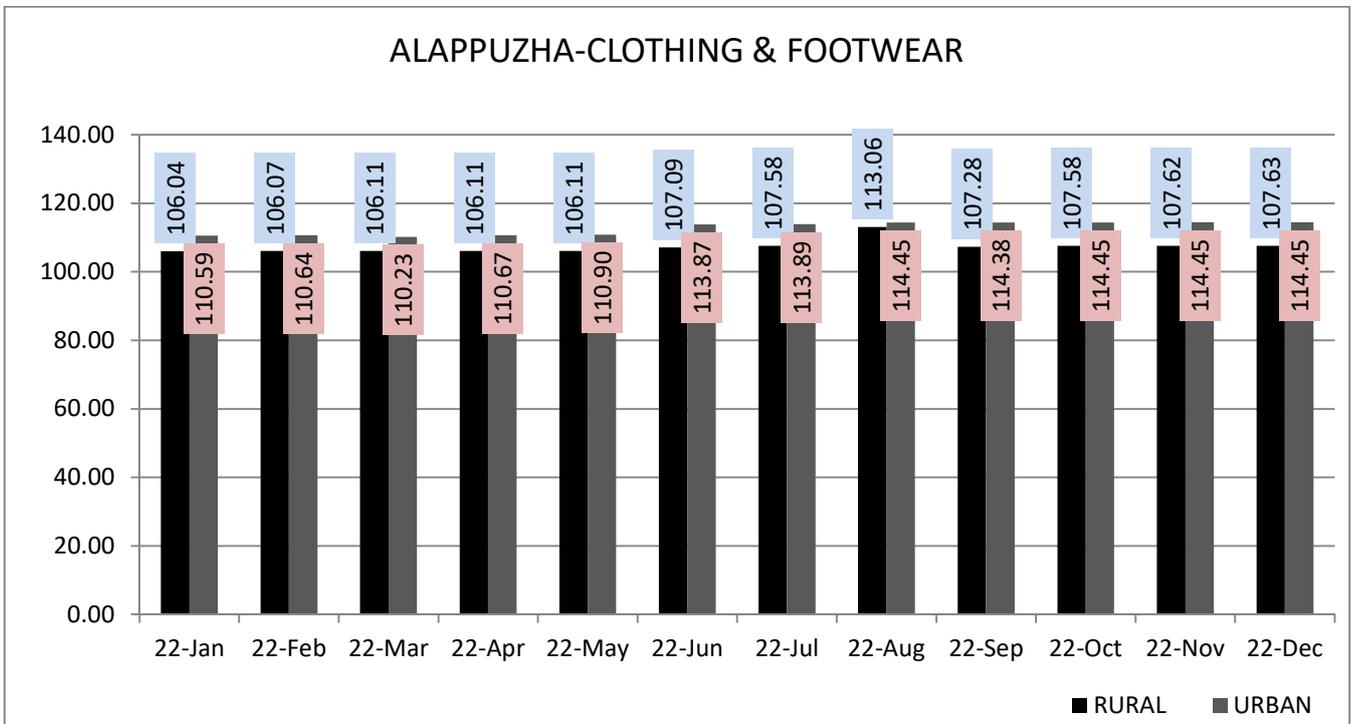

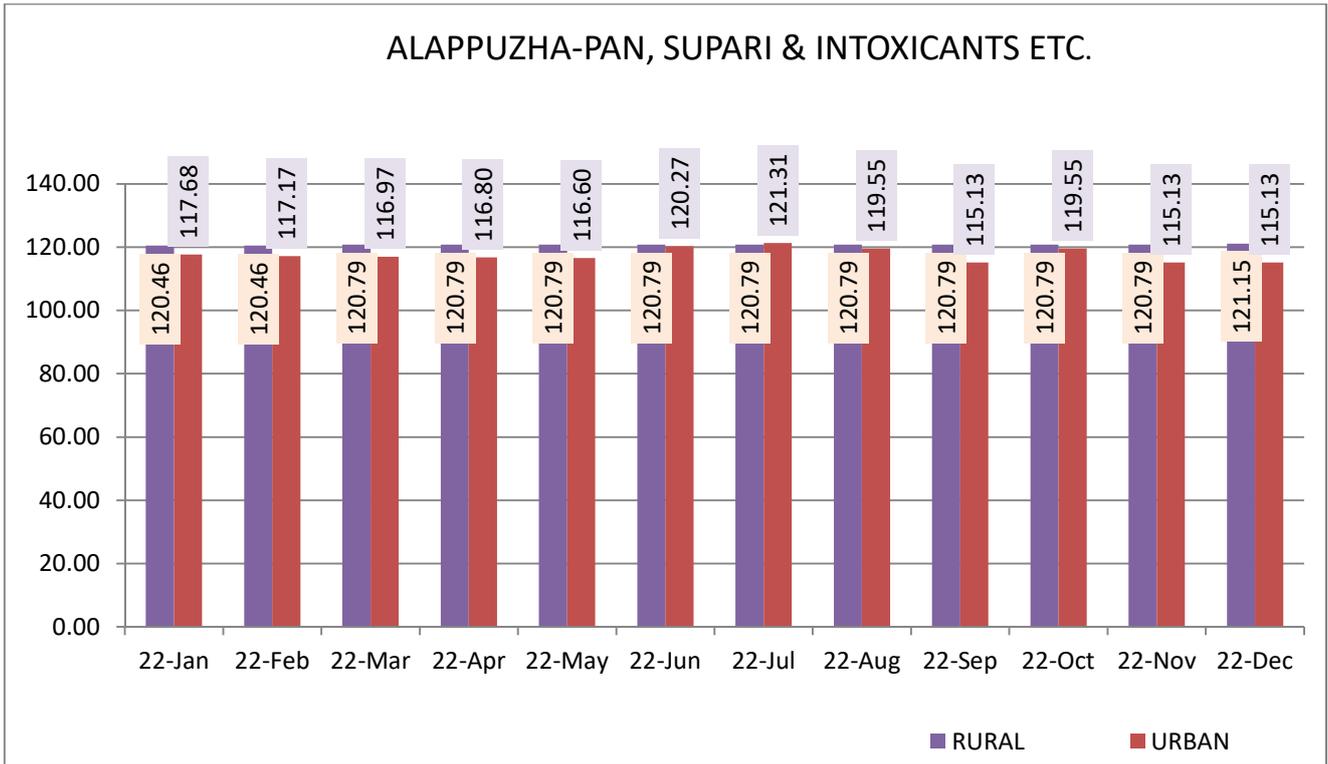

The Fuel and Light category presents distinct trends, with both rural and urban indices showing sharp rises until July. Urban indices slightly decline afterward, ending at December. The rural index starts at 137.84 in January and rises steadily throughout the year, peaking at 154.60 in October and November. The urban index starts at 140.44 in January, reaches its peak of 154.91 in August and October, and declines slightly to 151.71 in December.

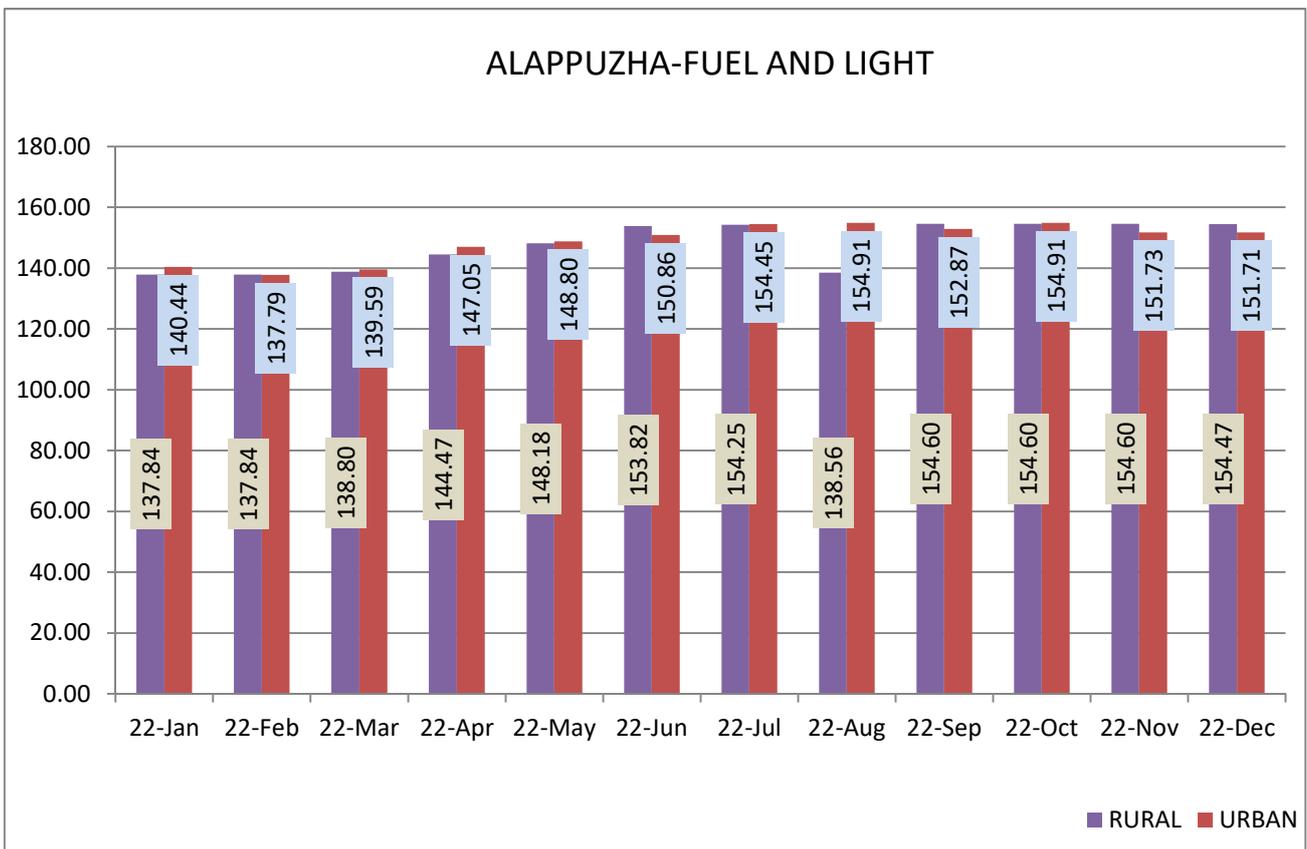

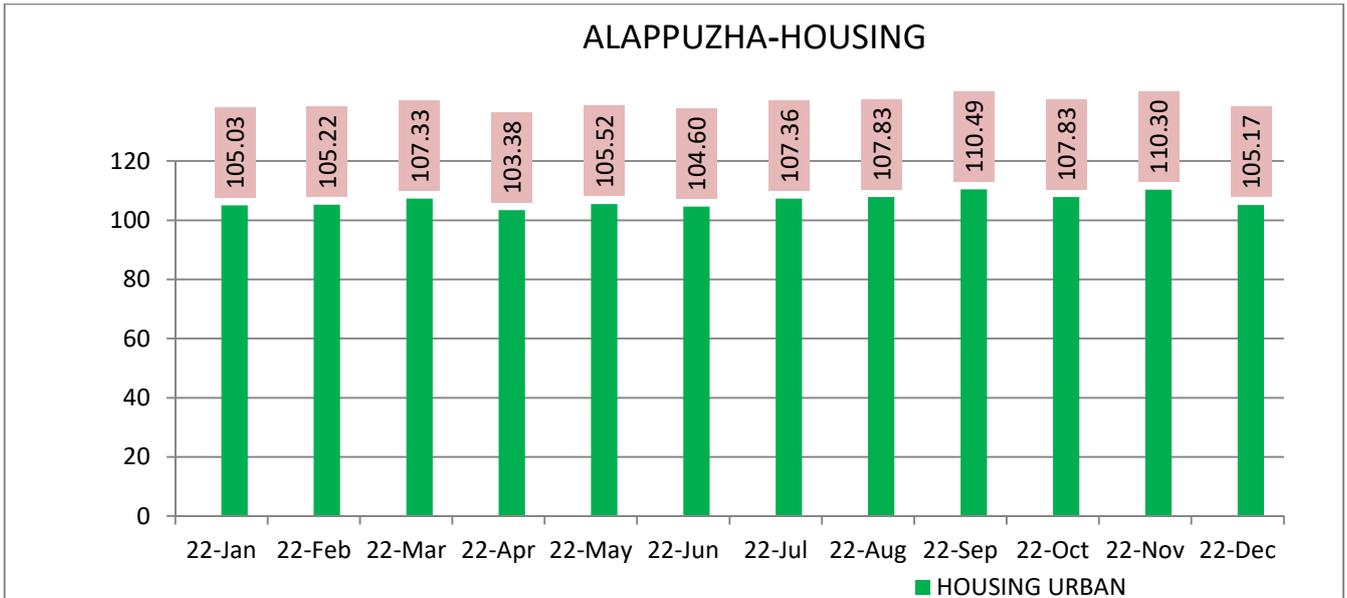

The Miscellaneous category highlights consistent growth in both rural and urban indices. Rural indices peak in August while urban indices culminate in December. The rural index increases steadily from 114.72 in January to a peak of 123.70 in August. A slight decline is observed in the latter months, with the index ending at 120.25 in December. The urban index follows a similar pattern, rising from 118.18 in January to 123.70 in August and ending at 124.80 in December.

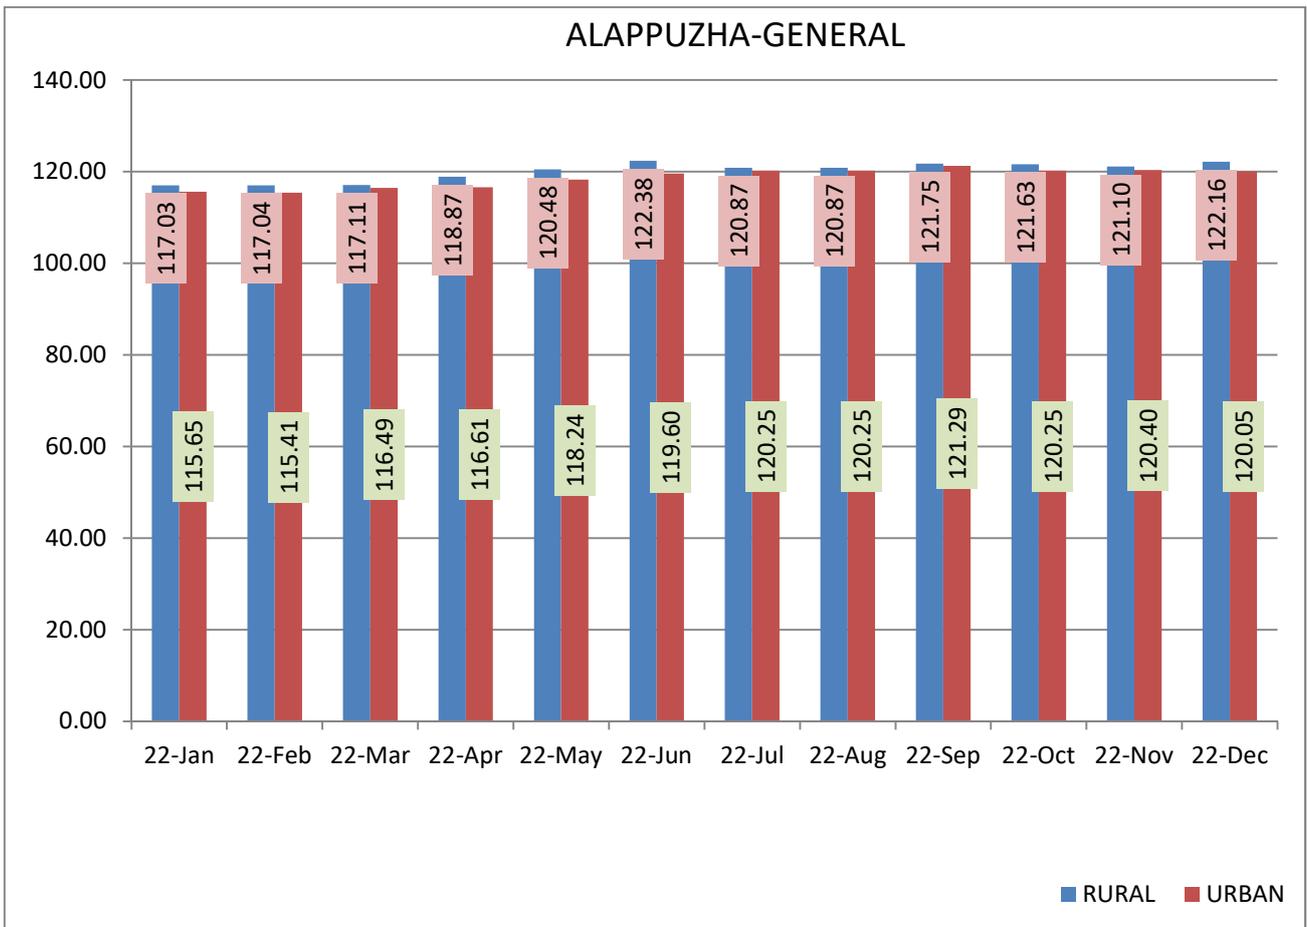

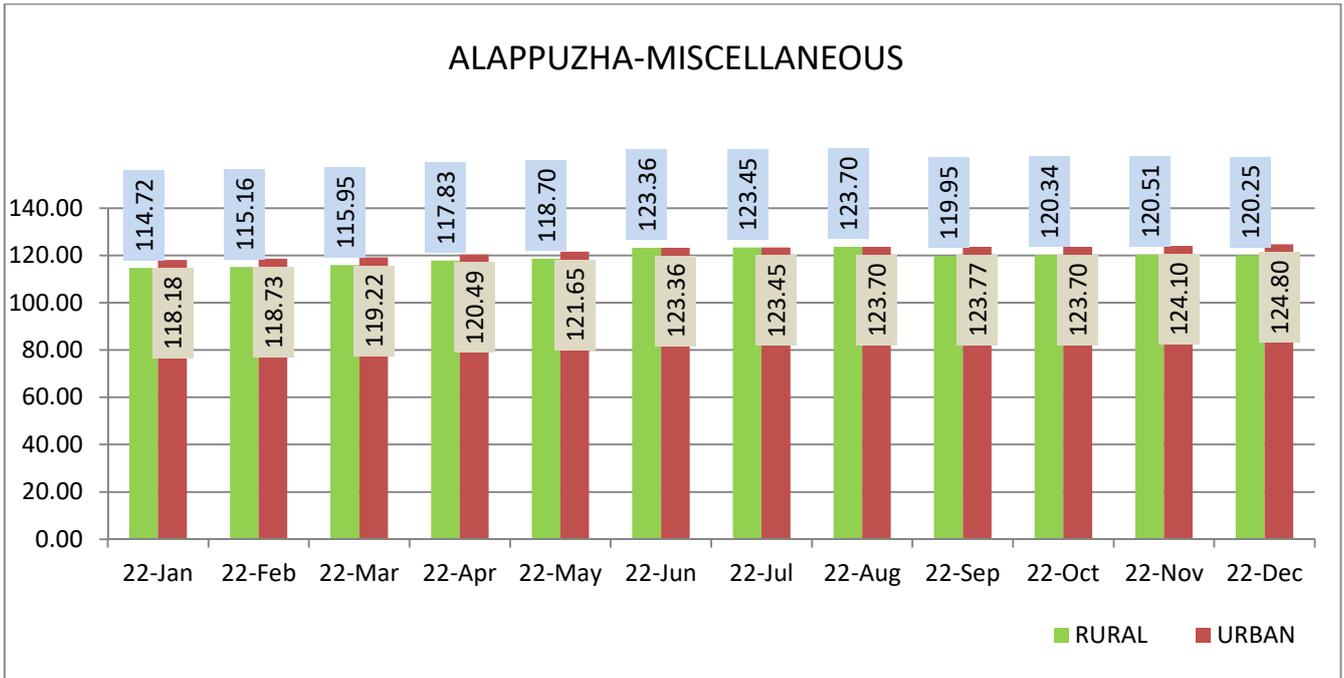

The General Index integrates all categories, showing synchronized growth trends for both rural and urban areas. The general trend reflects a balanced progression with notable increases during mid-year months. The rural general index starts at 117.03 in January and peaks at 122.38 in June before ending at 122.16 in December. The largest increases occur in May and June. The urban index starts at 115.65 in January, rises to 121.29 in September, and ends slightly lower at 120.05 in December.

Table 04-D illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022.

CONSUMER PRICE INDEX (R/U\C) 2022 KOTTAYAM

The Food and Beverages category shows fluctuations in both rural and urban areas, with the rural indices generally higher than the urban indices. Both rural and urban trends increase from January through June, The rural sector exhibits a steady increase with minor fluctuation until December, while urban figures show more variability, with a slight decline in November. The rural index starts at 117.71 in January and peaks at 124.83 in June. A gradual decline follows, ending at 120.55 in December. The urban index begins at 117.68, peaks at 119.87 in July, and declines slightly to 116.61 in December.

The Pan, Supari & Intoxicants category maintains a stable trend, particularly in rural areas, where indices remain constant for most months. Urban indices remain more stable, with a peak in December. The rural index shows stability throughout the year, fluctuating between 114.60 in January and 118.53 from June to August. It ends the year steady at 118.03. The urban index remains relatively constant, starting at 116.57 in January and ending at 118.81 in December, with minimal fluctuation.

The Clothing & Footwear category displays gradual increases in both rural and urban areas. Rural indices peak in December, while urban indices remain consistently lower, peaking in December. Urban indices show a steadier increase compared to rural areas, where rural indices show more pronounced growth in the second half of the year. The rural index begins at 112.30 in January and rises steadily throughout the year, ending at 122.58 in December. The urban index starts at 108.00 in January, increases gradually, and finishes higher at 117.80 in December.

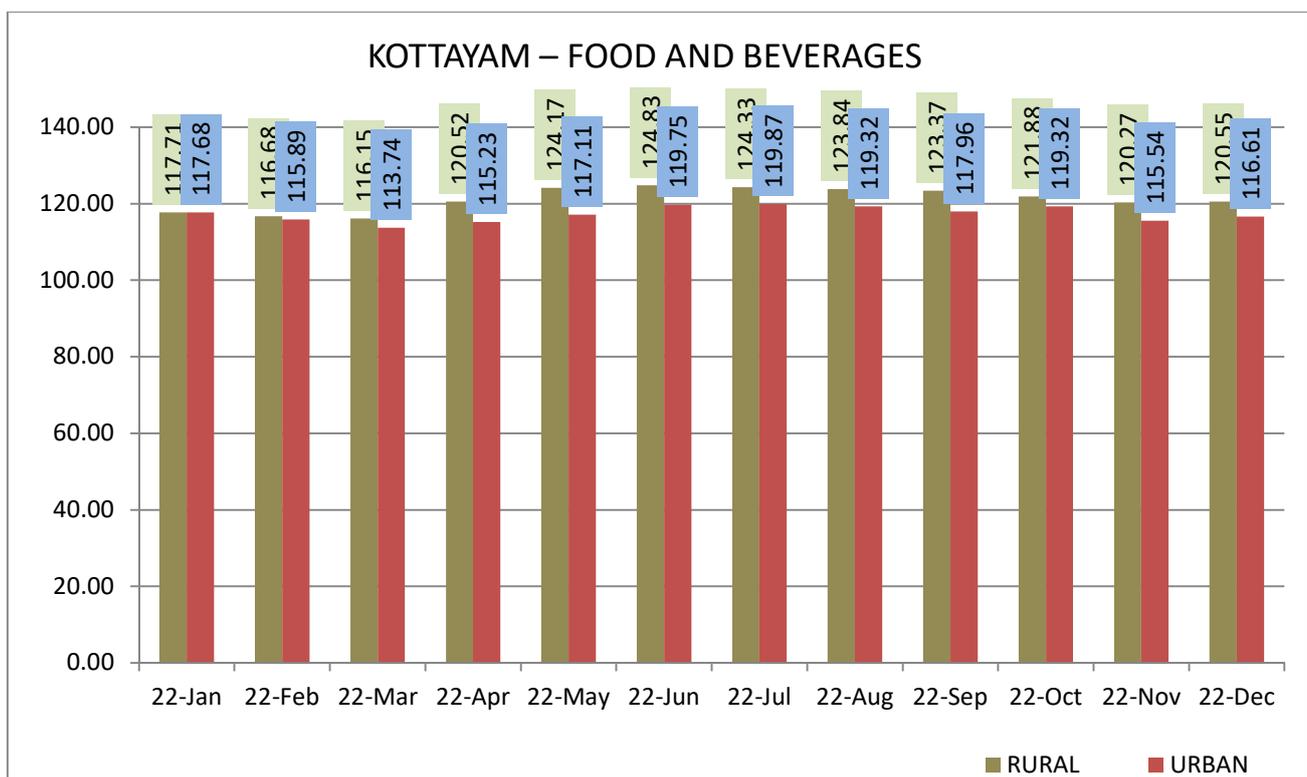

The Housing index is only available for urban areas and shows steady increases throughout the year, peaking in November. The housing index begins at 106.35 in January and peaks at 117.42 in November. The index ends the year slightly lower at 116.51 in December.

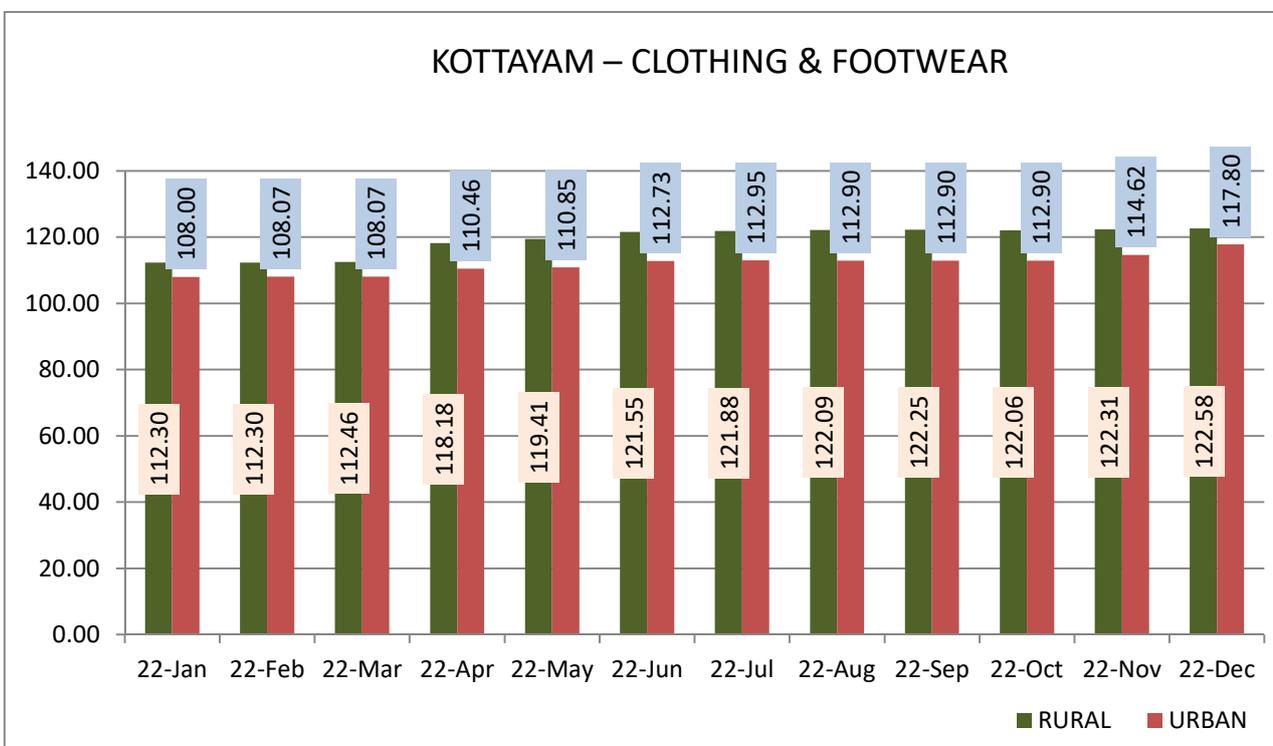

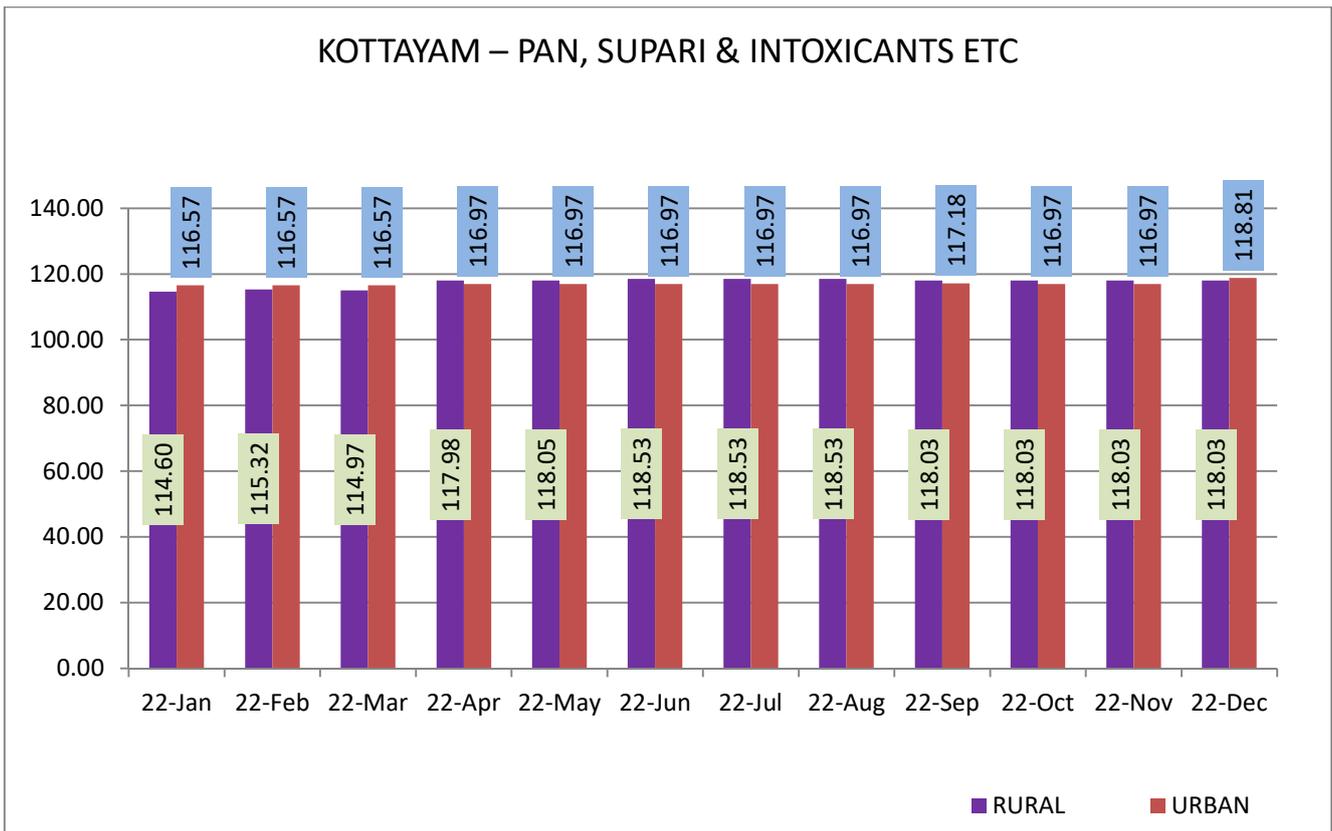

The Fuel and Light category shows considerable growth in both rural and urban indices, with urban values consistently higher. Urban fuel and light expenses peak in November, while rural indices peak from onwards ,urban indices see significant increases from January to November followed by a slight dip in December. The rural index starts at 133.32 in January and steadily increases to 153.46 from October to December. The urban index begins at 152.32 in January, rises sharply to 174.75 in November, and then declines to 159.68 in December.

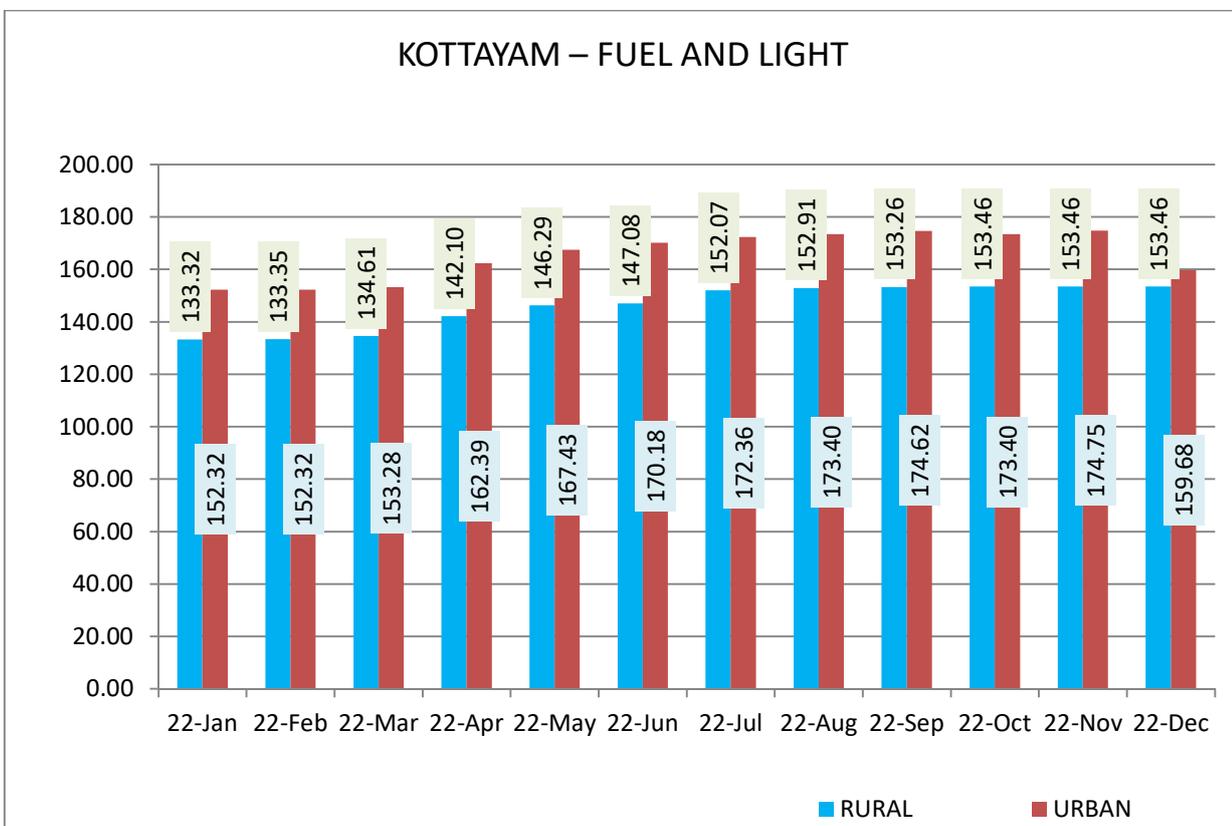

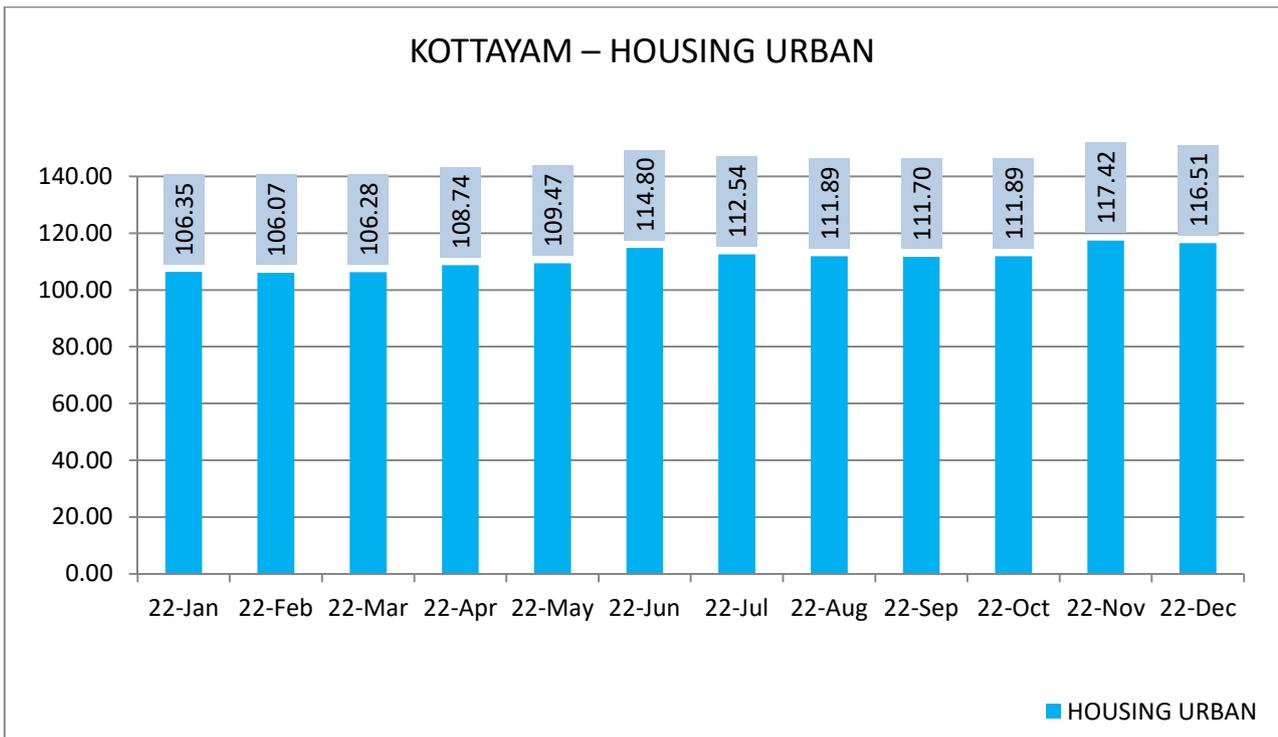

The Miscellaneous category shows a steady upward trend across both rural and urban areas. Rural indices reach their peak in December, while urban indices also show a consistent increase, reaching a peak in December. The rural index begins at 122.10 in January and consistently rises, ending at 129.88 in December. The urban index starts at 113.05 in January and shows a steady increase, ending at 120.61 in December.

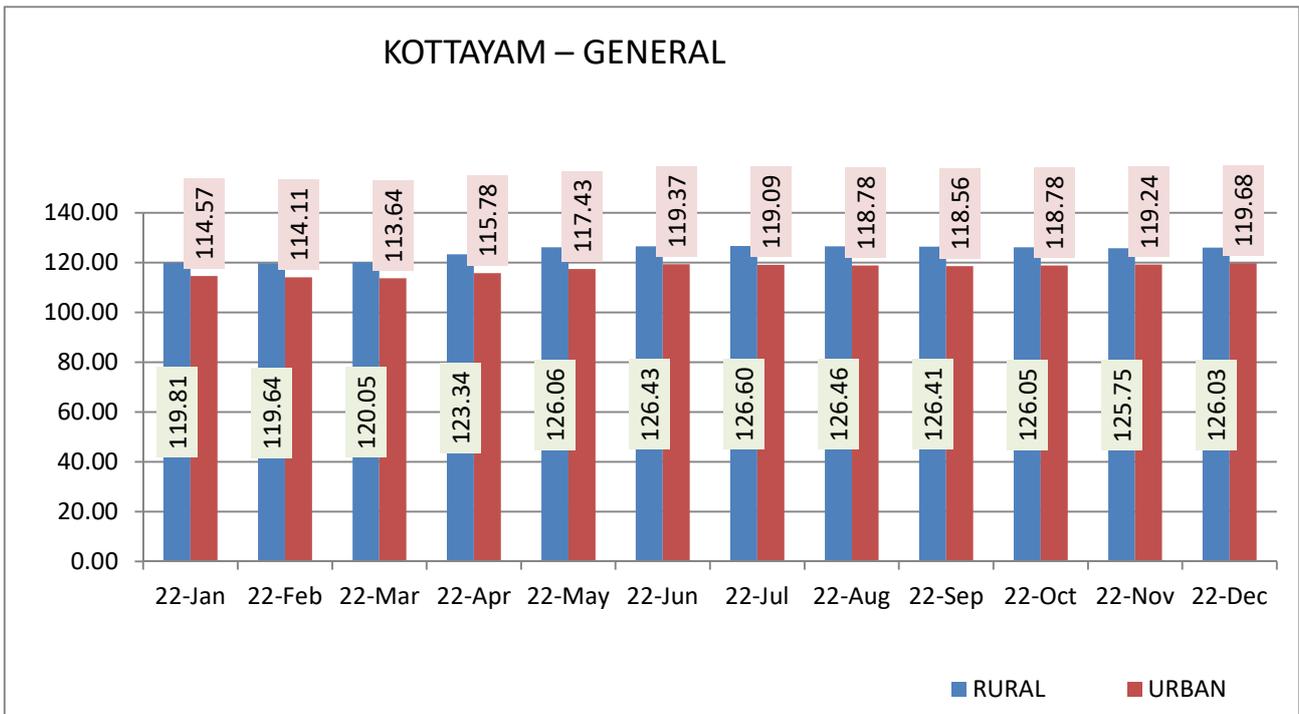

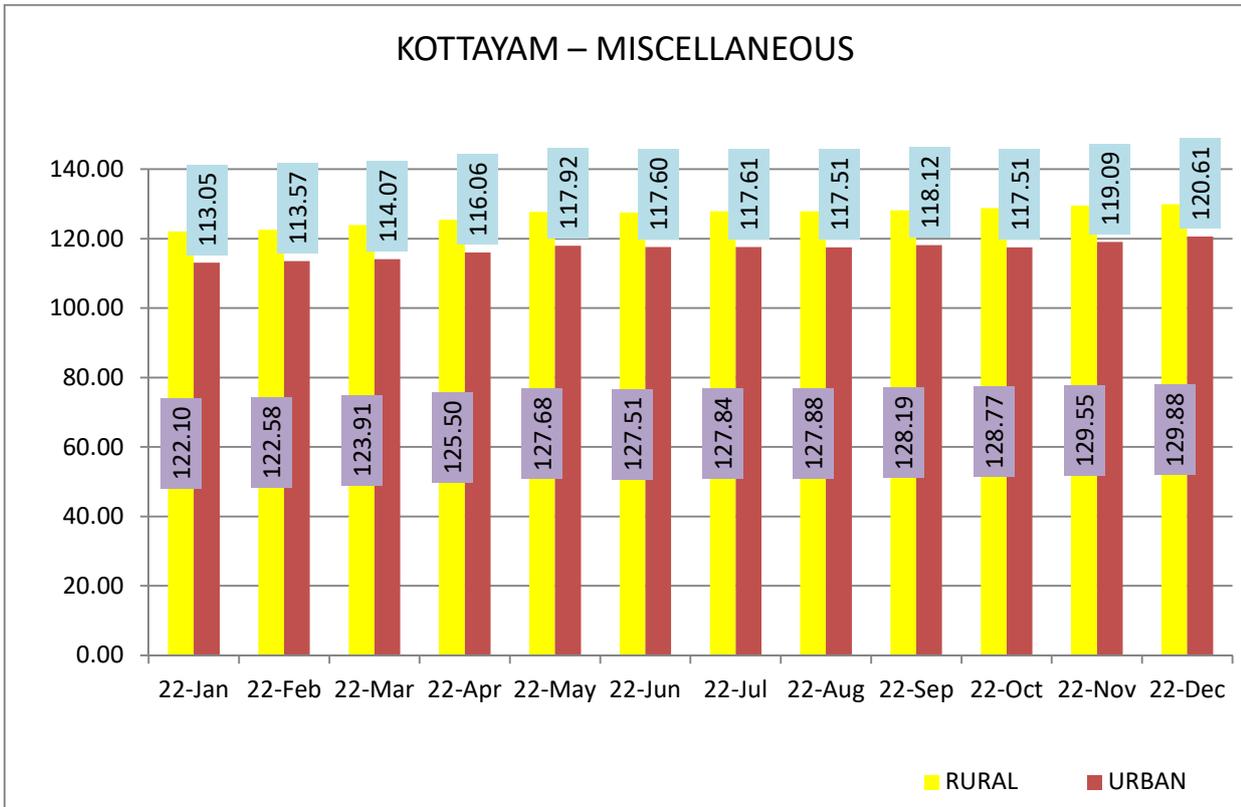

The General Index reflects the overall trend across all categories. Rural indices peak in July while urban indices peak in December. Both rural and urban indices show a steady rise from January through May, followed by slight fluctuations. The general index for rural areas starts at 119.81 in January, peaks at 126.60 in July, and ends slightly lower at 126.03 in December. The urban index starts at 114.57, peaks at 119.37 in June, and ends at 119.68 in December.

Table 04-E illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022.

CONSUMER PRICE INDEX (R\U\C) 2022 **IDUKKI**

The Food and Beverages category shows consistent growth in both rural and urban areas throughout the year. Rural indices experience a slight decline in February, followed by a steady increase that peaks in December. Urban areas show a stronger increase in November and December. The rural index starts at 118.13 in January, dips to its lowest at 114.79 in March, and peaks at 120.57 in October and November before ending slightly lower at 120.54 in December. The urban index starts at 116.09, steadily rises through the year, and ends at 125.08 in December, reflecting consistent growth.

The Pan, Supari & Intoxicants category remains stable across both rural and urban areas, particularly in rural areas where the index fluctuates only slightly between January and June. Urban indices are more consistent, with slight increases in December. The rural index remains relatively stable, starting at 110.64 in January and ending at 111.32 in December, with minor fluctuations throughout the year. The urban index also shows stability, starting at 109.01 and ending at 109.96, with minimal variation.

The Clothing & Footwear category shows consistent growth in both rural and urban areas, with rural indices increasing from January to November, before slightly decreasing in December. Urban indices show more minor fluctuations. The gradual increase in both areas, particularly in the second half of the year. The rural index begins at 107.80 in January, peaks at 113.05 in October and November, and ends slightly lower at 112.10 in December. The urban index starts at 104.52, rises gradually to 108.45 in November and December, showing consistent growth.

The urban housing index showing gradual growth throughout the year. This indicates a steady rise in housing-related costs, particularly noticeable in June and December. The housing index starts at 103.61 in January, climbs steadily to a peak of 115.77 in December, with significant increases from May to June and November to December.

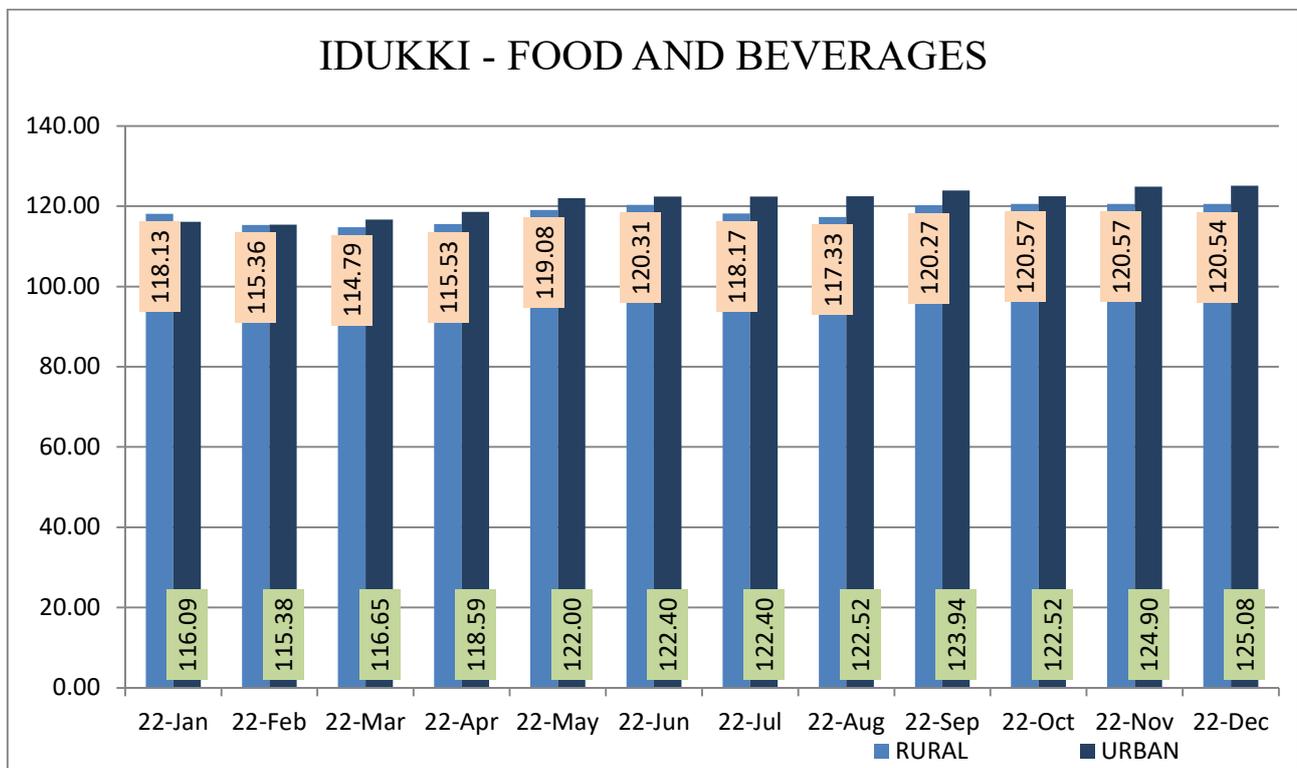

The Fuel and Light category exhibits significant growth in both rural and urban indices, with urban areas showing lower values compared to rural areas. Rural indices increase steadily, peaking in July and staying high throughout the year. The rural index starts at 137.63 in January, peaks at 150.33 in August, and ends at 148.66 in December. The urban index starts at 125.40, peaks at 136.89 in July, and declines slightly to 132.42 in December.

The Miscellaneous category shows strong and steady growth in both rural and urban areas. Rural indices rise from January to December, with significant increases during the second half of the

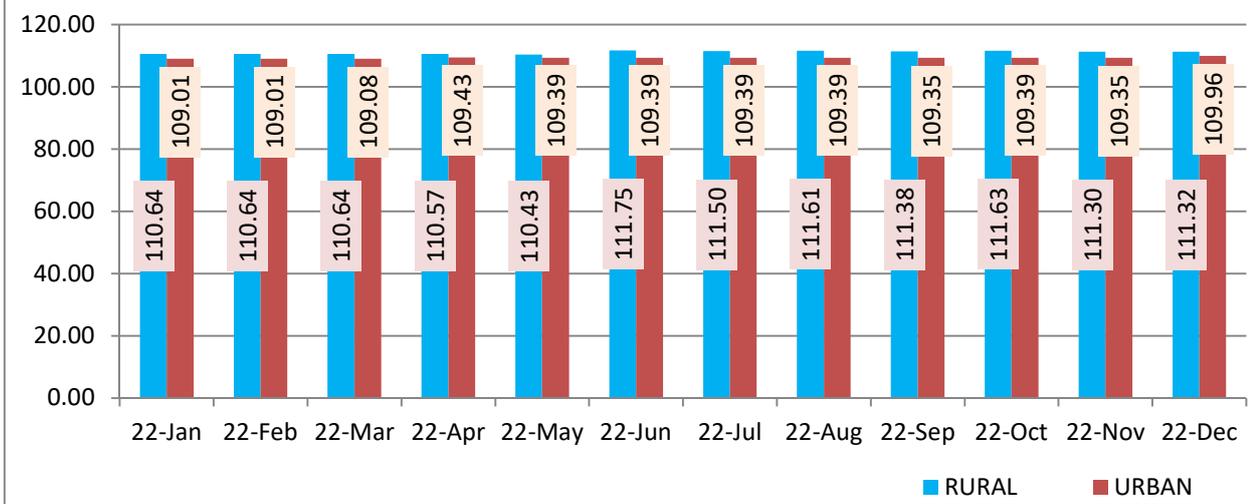

year. Urban indices also experience consistent growth. The rural index begins at 114.60 in January and rises steadily throughout the year, ending at 131.65 in December. The urban index starts at 116.57, rises consistently, and ends at 121.37 in December.

The General Index combines the trends from all categories. Rural indices show consistent growth from January to December, while urban indices show a slower. The rural general index begins at 116.60 in January, peaks at 122.21 in December, with steady growth throughout the year. The urban index starts at 113.95, rises gradually, and ends at 121.23 in December. The general trend reflects a growing economy with higher living costs in both rural and urban areas, although the rural areas experience a slightly faster rate of growth in the general index.

IDUKKI - CLOTHING & FOOTWEAR

CONSUMER PRICE INDEX (R\U\C)2022 ERNAKULAM

The Food and Beverages category shows a steady increase in both rural and urban areas. Rural indices shows steadily rise to December, with the highest increase occurring in September and October. Urban indices exhibits a continuous rise, before slightly declining in November. In the Rural areas, the CPI for Food and Beverages starts at 118.35 in January and increases steadily throughout the year, reaching 124.37 in December, reflecting a consistent rise in prices. Similarly, in Urban areas, the CPI begins at 118.63 in January, experiencing a slight decline to 117.84 in March, but rebounds to 124.06 by December. Urban prices show minor fluctuations, but the overall trend is an upward movement, closing the year at a similar level as rural areas.

The Pan, Supari & Intoxicants category shows stability in rural areas rising slightly in December. However, urban indices are more consistent, for the first six months, peaking in July onwards, before slightly increasing in December. Pan, Supari & Intoxicants remain relatively stable in rural and urban areas, In Rural areas, the index for Pan, Supari & Intoxicants shows a slight increase from 118.33 in January to 119.41 in December, remaining relatively stable over the year. In Urban areas, the prices of Pan, Supari & Intoxicants are mostly constant at 120.43 until July, when they increase to 123.09, then slightly dip in December to 123.57, showing steady but moderate increases throughout the year.

The Clothing & Footwear index sees consistent growth in both rural and urban areas. Rural indices rise from January to December, with noticeable increases from May to December. Urban indices show a consistent for half of the year slower increase. Rural areas experience a moderate increase in Clothing & Footwear prices, starting at 107.72 in January and rising to 114.87 in December. The prices fluctuate month-to-month, peaking in November and December. In Urban areas, the CPI starts at 107.63 in January, showing a slight upward movement with some fluctuations. By December, it reaches 114.02, with the most significant rise happening in November.

The Housing index fluctuates throughout the year, begins at 110.96 in January and fluctuates over the year. The prices reach a low of 105.61 in April, and then rise again to 111.33 in August and October. However, the price decreases in November to 105.72 before closing at 108.53 in December.

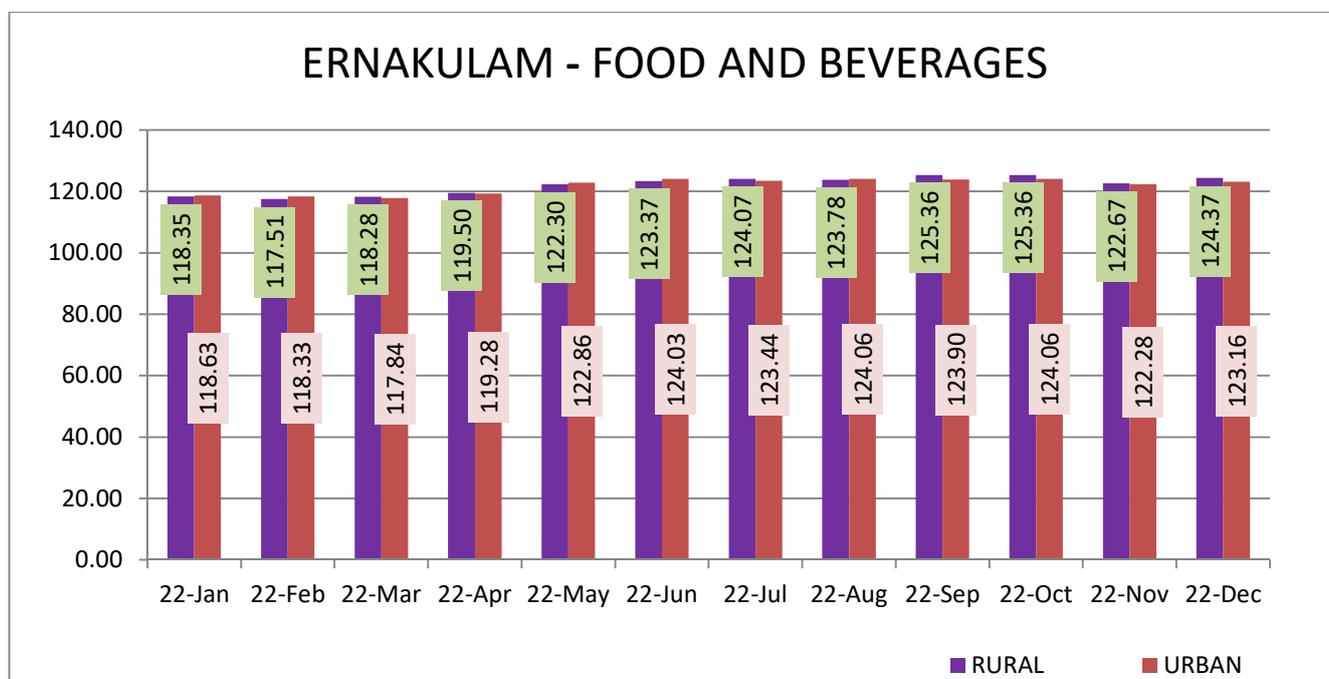

The Fuel and Light category shows significant increases in both rural and urban areas. Rural areas show significant fluctuations in Fuel and Light prices, starting at 134.15 in January, experiencing a sharp rise from April (148.39) to July (164.38), before slightly decreasing to 150.66 in December. In Urban areas, the CPI begins at 133.22 in January and increases steadily,

reaching 149.74 in July, peaking in the middle of the year. The price then stabilizes at 148.76 towards the year-end, showing less volatility than the rural areas. Urban indices follow a similar pattern, with a peak in July before slightly decreasing in the later months. The increases, especially in the summer months,

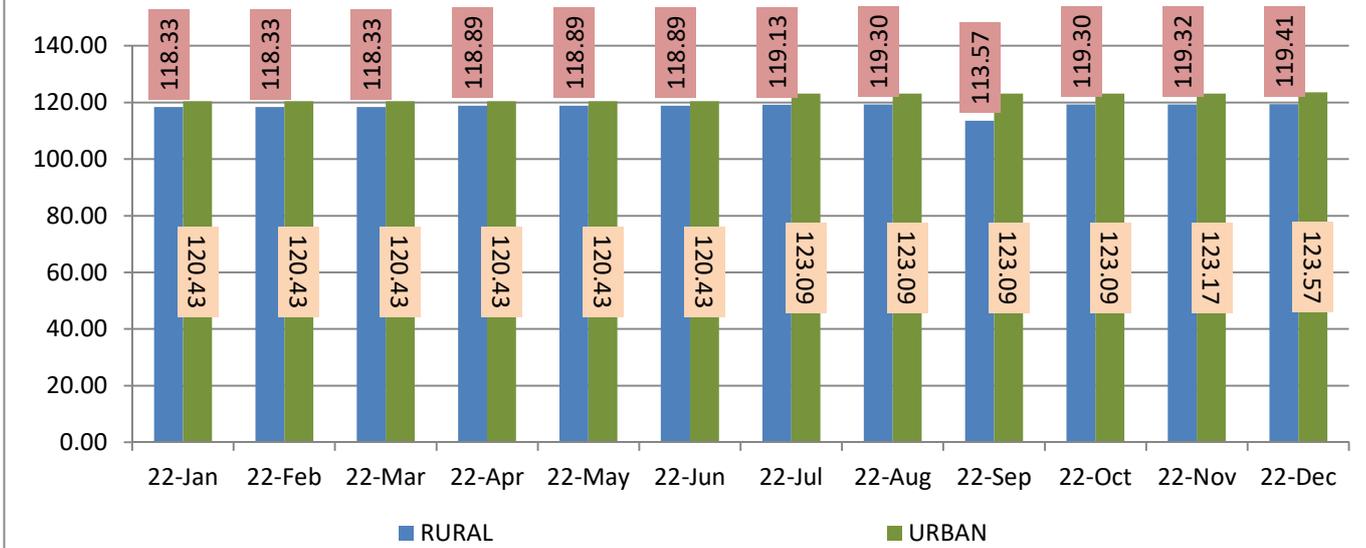

The Miscellaneous category shows strong growth in both rural and urban areas. Rural indices show consistent increases throughout the year. Urban indices show a similar upward trend. In Rural areas, miscellaneous goods show a steady increase, starting at 119.03 in January and rising to 128.46 in December, with a consistent upward trend throughout the year. Similarly, in urban areas, prices begin at 117.52 in January, rising gradually to 126.59 in December, with a similar steady increase observed.

The General Index reflects a composite of all categories, showing steady growth in both rural and urban areas. The general growth in both regions highlights broader economic expansion, with rural areas showing a stronger upward trend across most months. The Rural CPI begins at 118.85 in January and consistently rises, reaching 126.69 in December, mirroring the trends in other categories with some fluctuations. The Urban CPI shows a similar trend, starting at 116.58 in January and ending the year at 121.81 in December, demonstrating a gradual increase.

CONSUMER PRICE INDEX (R\U\C) 2022 PALAKKAD

The Food and Beverages category shows consistent growth in both rural and urban areas. Rural indices slight fluctuations observed throughout the year. Rural prices fluctuate throughout the year, starting at 116.67 in January and reaching a peak of 119.79 in December. Urban prices show a similar trend, starting at 119.47 in January and rising to 124.04 in December. Urban indices also demonstrate steady growth, from January to December. The peak for rural areas occurs in July while urban areas experience the highest point in December.

In the Pan, Supari & Intoxicants category, rural areas show steady indices, Rural prices are relatively stable, starting at 118.18 in January and experiencing a noticeable increase from April onward, peaking at 124.06 in July before slightly declining to 120.21 in December. Urban prices show a decreasing trend from January to April, with a more stable level from May to December, with slight fluctuations, and ending at 119.60 in December. Urban areas exhibit relatively consistent values. A notable peak in July for rural areas contrasts with the steady values in urban areas

The Clothing & Footwear category sees considerable fluctuations, especially in rural areas. Rural indices show a significant rise in July. Rural prices exhibit minor fluctuations throughout the year, starting at 106.42 in January and increasing to 107.65 in December. Urban prices show a more consistent rise from 109.65 in January to 123.16 in July, with a slight decline in the last few months, ending at 122.78 in December. Urban indices follow a more consistent upward trend with a noticeable peak in July.

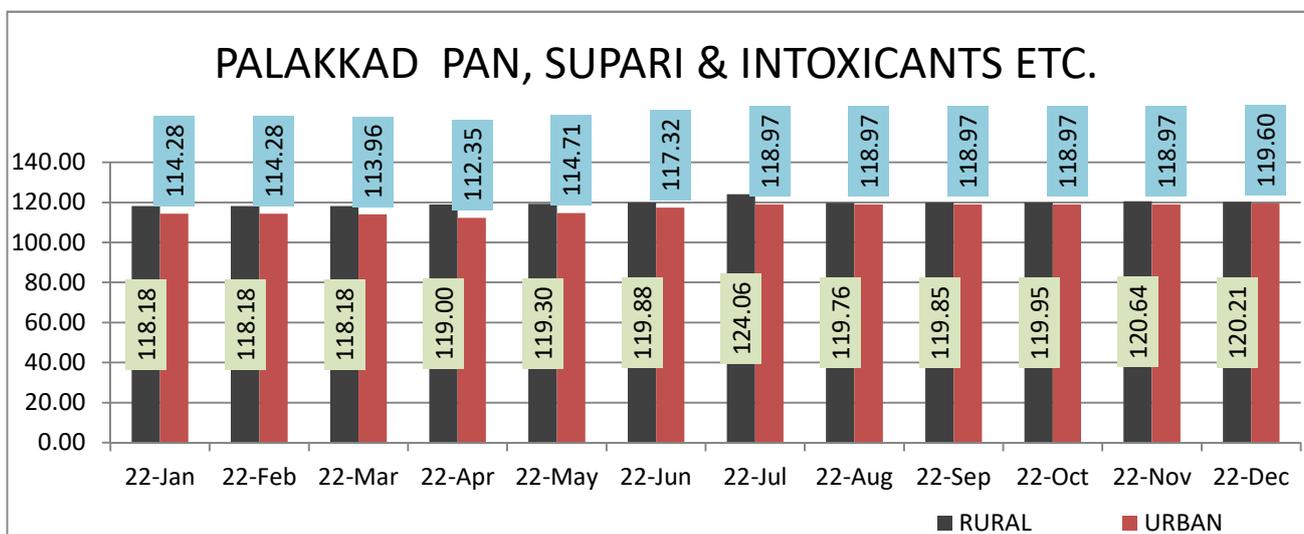

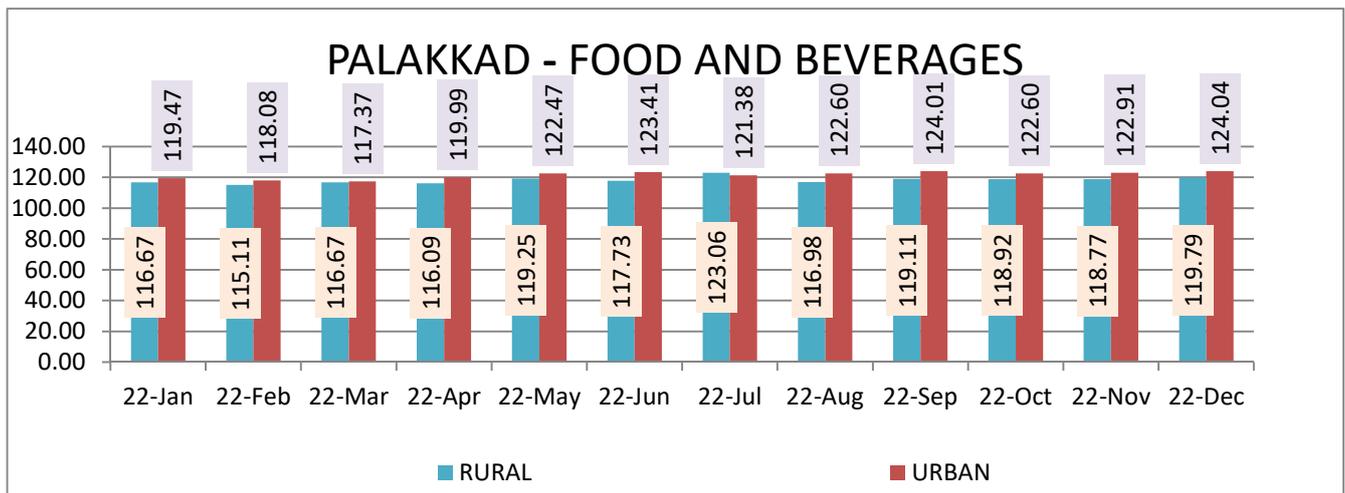

The Housing category in urban areas demonstrates slight fluctuations, The peak occurs in July and the decline toward the year-end. Rural housing prices are not provided, but urban housing prices show a steady decline from 113.71 in January to 111.65 in December. Urban housing prices decrease gradually through the year, indicating a reduction in housing costs in urban areas.

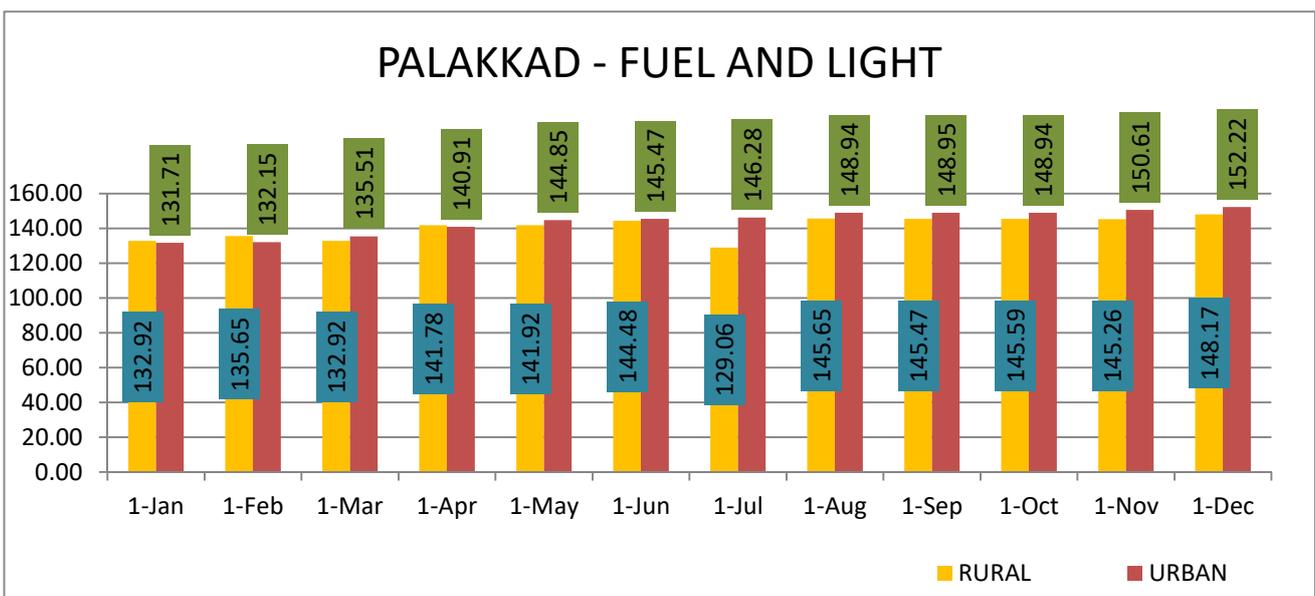

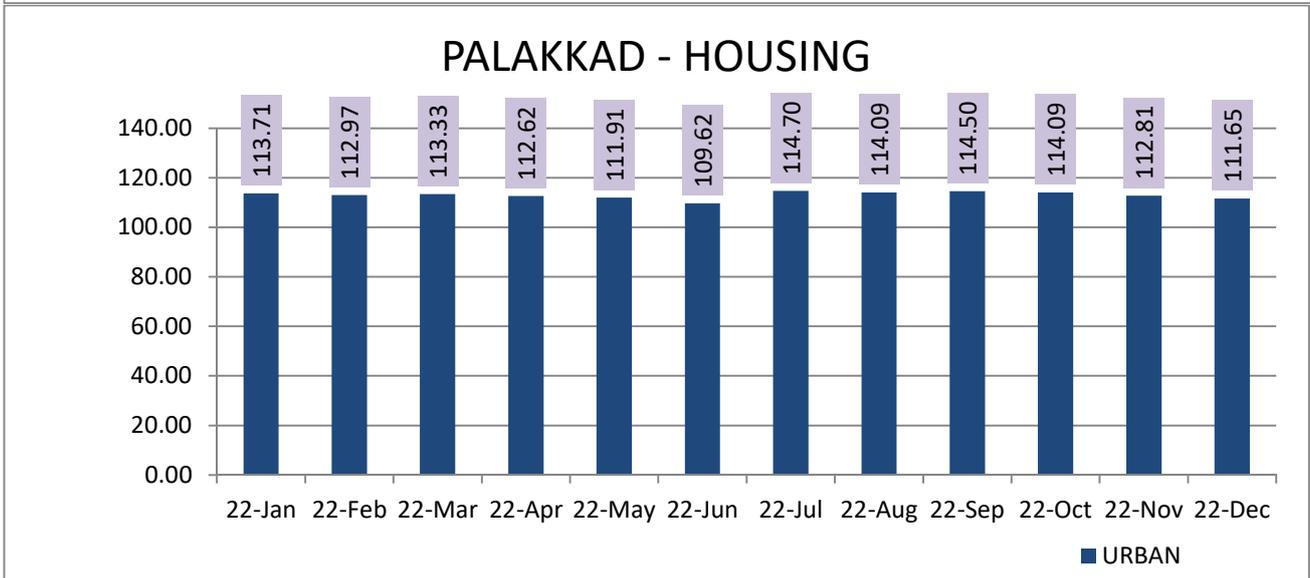

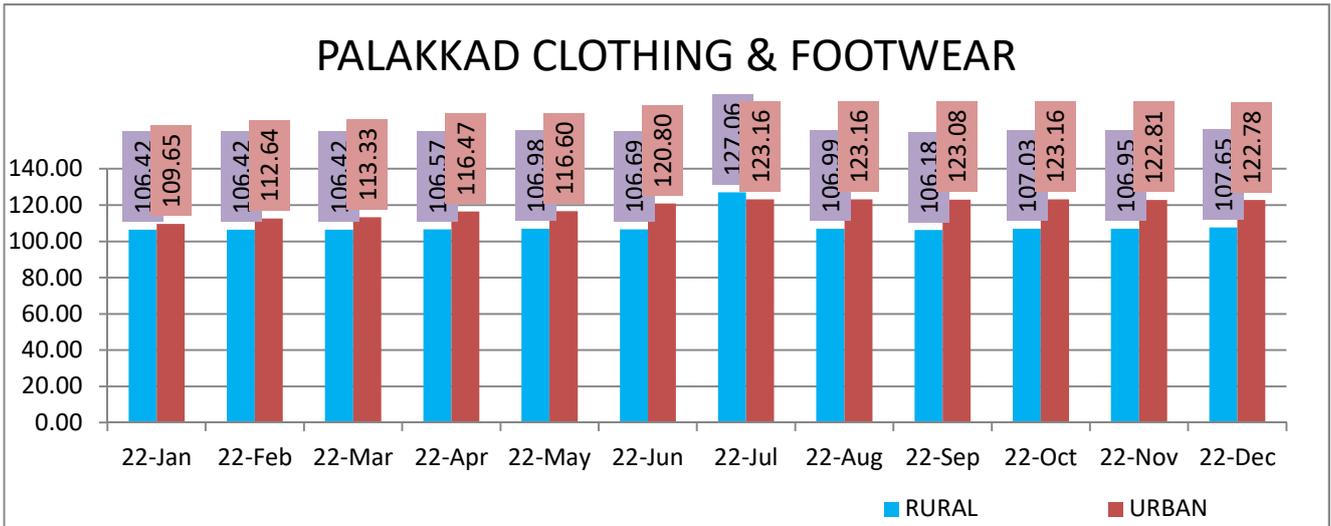

The Fuel and Light category shows a significant rise in both rural and urban areas throughout the year. Rural indices conveys steady growth up to June then dip in July. Rural fuel and light prices rise from 132.92 in January to 148.17 in December, with minor fluctuations during the year, particularly in the months of May through November. Urban prices also see a steady increase from 131.71 in January to 152.22 in December, with urban prices generally higher than rural prices throughout the year. Urban indices also show growth with a noticeable increase in July. Both rural and urban areas see the highest peaks in December.

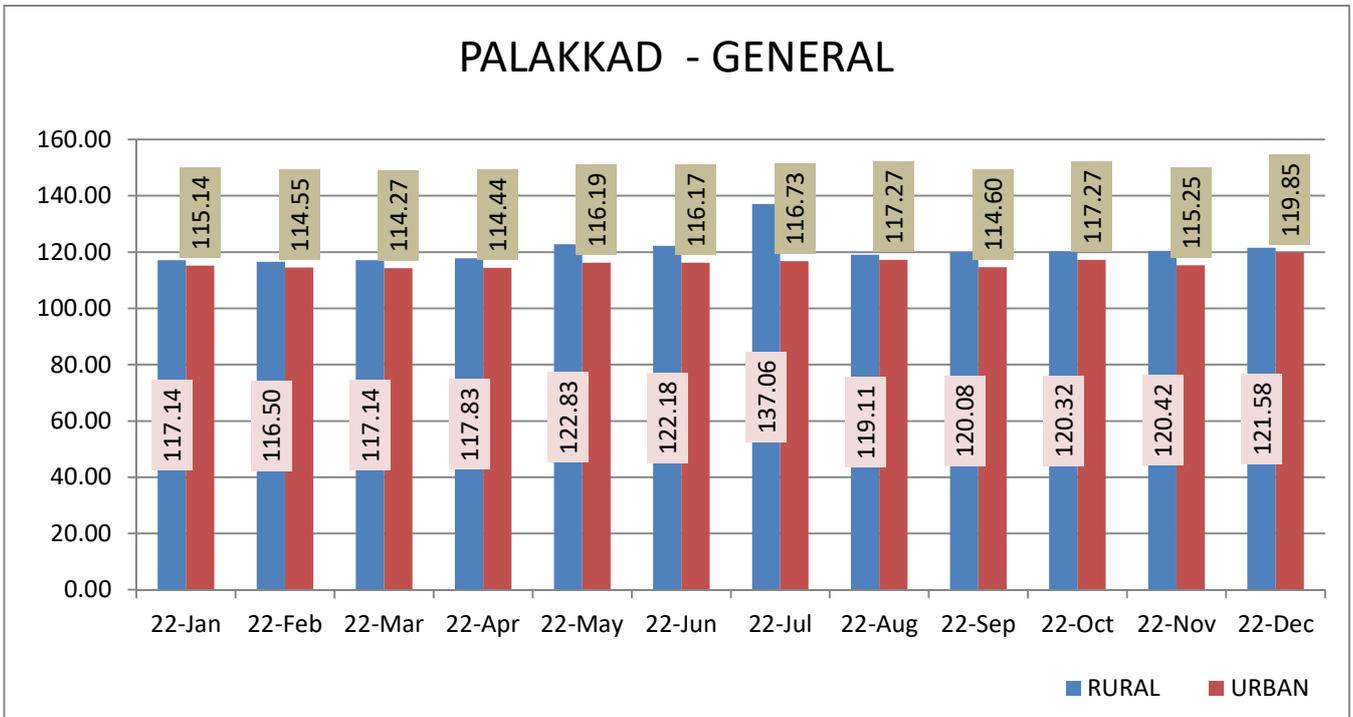

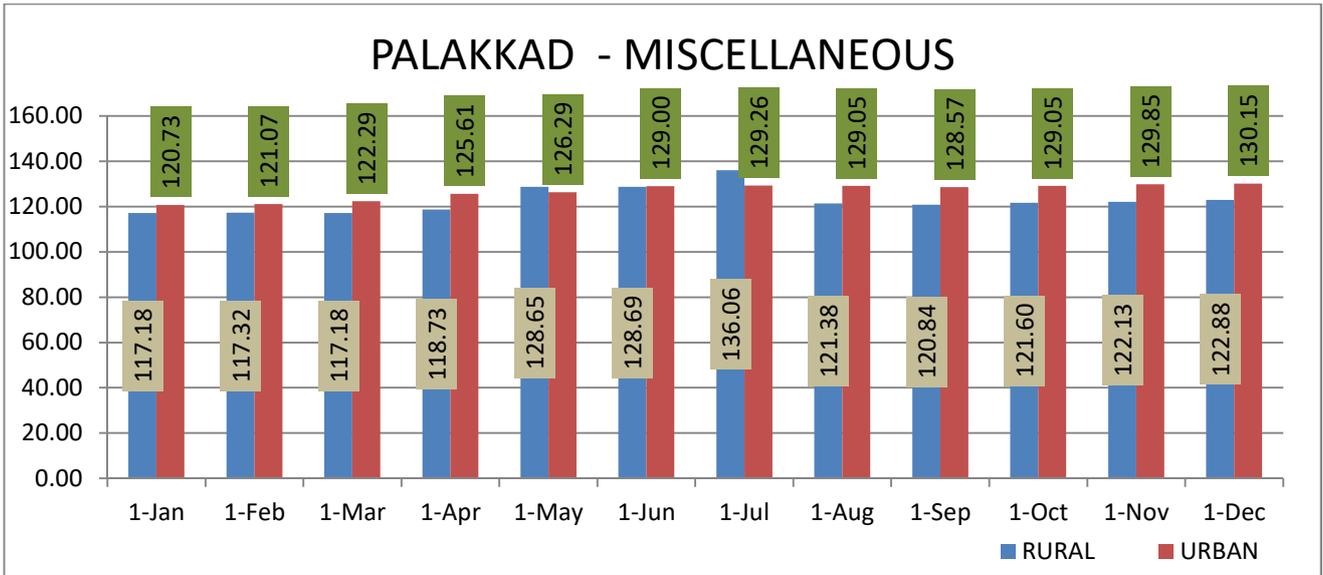

The Miscellaneous category shows steady growth in both rural and urban areas. Rural indices start exhibits with a peak in July. Rural prices show a steady increase from 117.18 in January to 122.88 in December, with significant rises observed between June and July. Urban prices also show an increase, starting at 120.73 in January and ending at 130.15 in December, with more stable increases in the latter half of the year. Urban indices show a similar upward trend.

The General Index demonstrates a steady increase in both rural and urban areas. Rural prices fluctuate slightly, starting at 117.14 in January and reaching 121.58 in December. Urban prices are relatively lower, starting at 115.14 in January and reaching 119.85 in December. Rural indices conveys with the largest increase occurring in July. Urban indices exhibit with a slight dip in September.

Table 04-I illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

CONSUMER PRICE INDEX (R\U\C)2022 MALAPPURAM

The Food and Beverages category shows consistent growth in both rural and urban areas. Rural indices shows with slight fluctuations observed throughout the year. Rural prices show slight fluctuations throughout the year, starting at 114.475 in January and reaching 116.894 in December. Urban prices exhibit a somewhat more stable trend, starting at 113.54 in January and ending at 114.56 in December. Urban indices also demonstrate steady growth, from January to December. The peak for rural areas occurs in middle year. While urban areas experience the highest point in June.

In the Pan, Supari & Intoxicants category rural areas show steady indices. Rural prices remain stable for the first few months, starting at 111.382 in January and reaching 117.747 in December. Urban prices are relatively stable throughout the year, starting at 112.88 in January and slightly decreasing to 113.90 in December. Urban areas exhibit relatively consistent values. A notable peak in July for rural areas contrasts with the steady values in urban areas, suggesting periodic spikes in consumption, particularly in rural regions.

The Clothing & Footwear category sees consistent and steady growth especially in rural areas. Rural indices show a significant rise in July before stabilizing in December. Rural prices show a steady increase, starting at 105.942 in January and ending at 107.641 in December. Urban prices are slightly more variable, starting at 105.32 in January and reaching 108.59 in December. Urban indices follow a more consistent upward trend, with a noticeable peak in December.

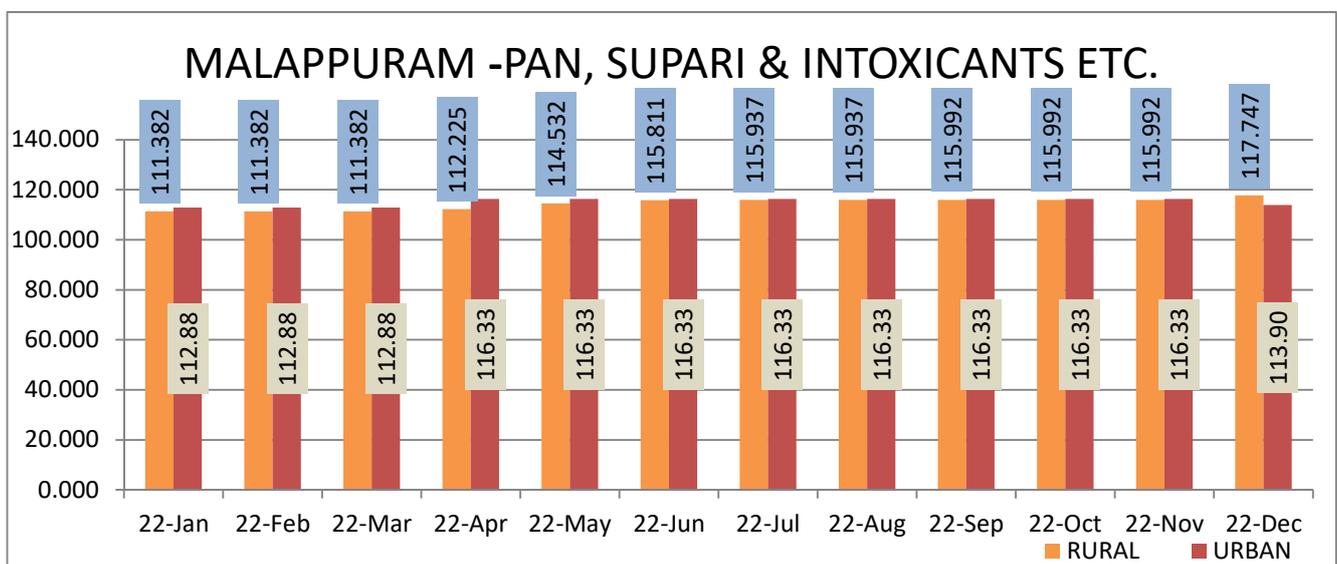

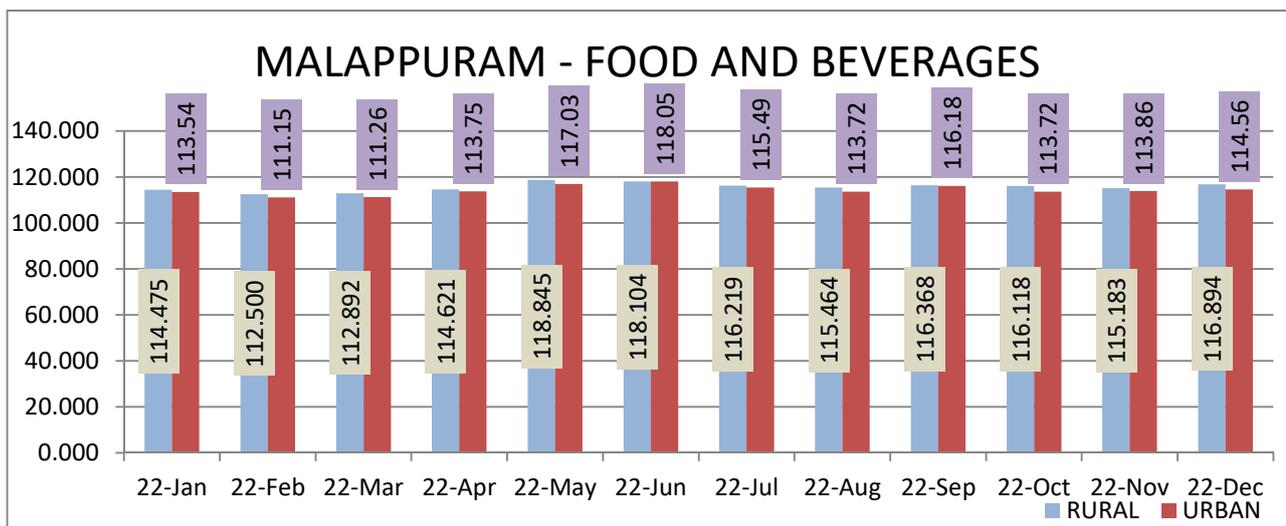

The Housing category in urban areas demonstrates slight fluctuations, with indices starting in January and falling by December. Urban housing prices start at 106.94 in January, experiencing slight fluctuations throughout the year, and end at 106.98 in December. Urban housing prices exhibit a decline in the second half of the year, with an overall decrease towards December, highlighting a slight reduction in costs during this period. The peak occurs in July and the decline toward the year-end.

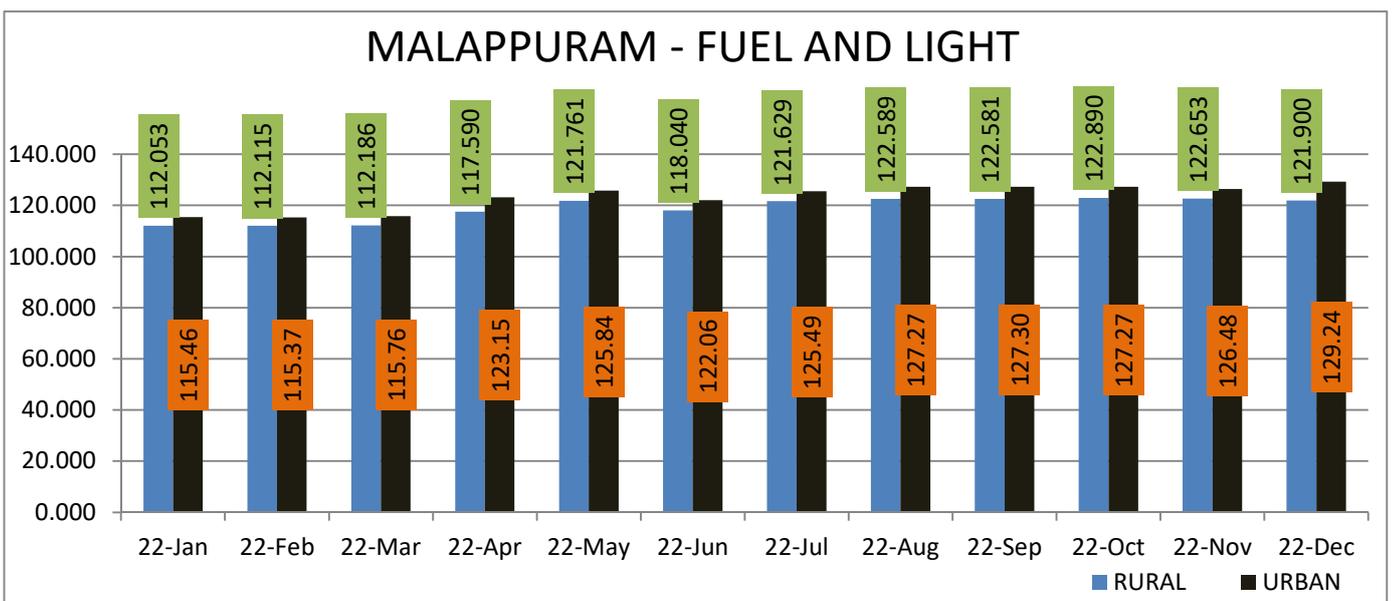

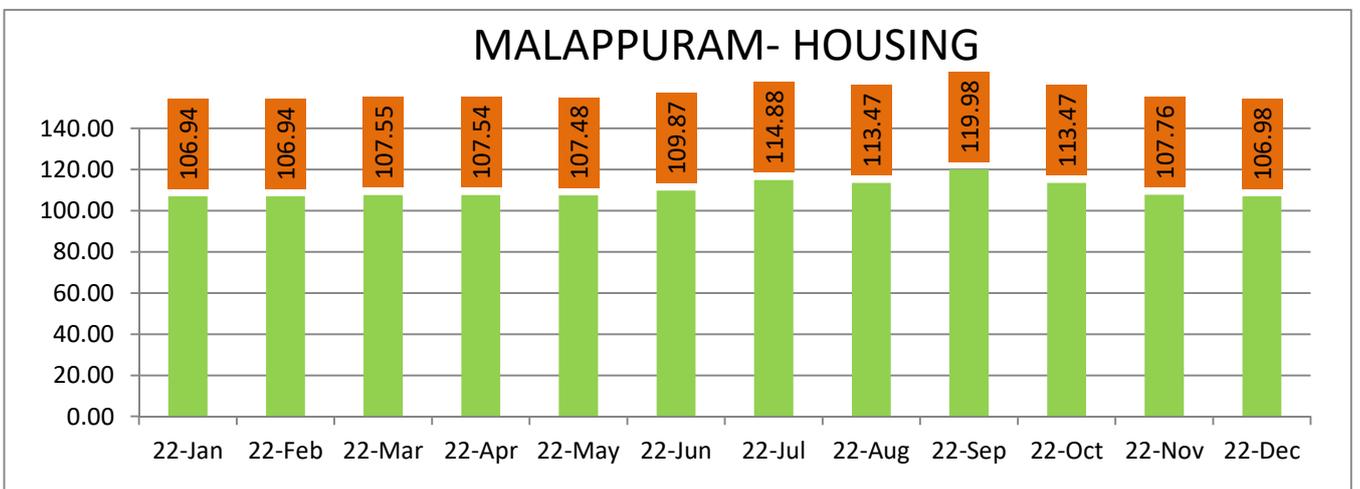

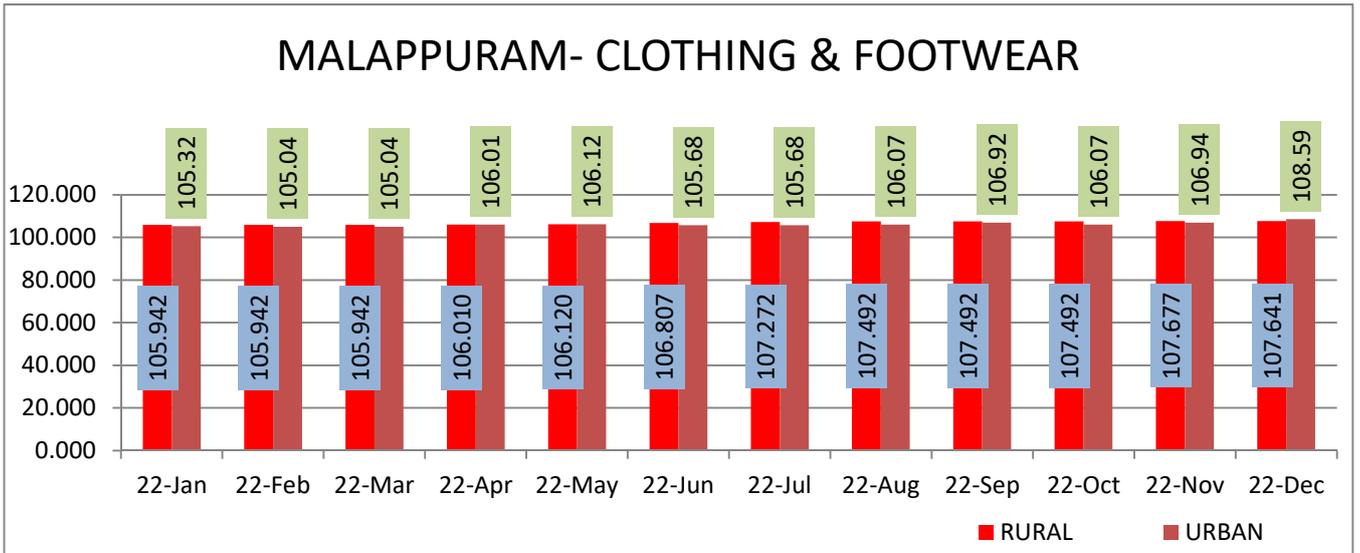

The Fuel and Light category shows a significant rise in both rural and urban areas throughout the year. Rural indices start in January and with fluctuations peaking in July. Rural fuel and light prices start at 112.053 in January and experience consistent increases, peaking at 122.890 in October before slightly decreasing to 121.900 in December. Urban prices begin at 115.46 in January and experience a steady rise, peaking at 129.24 in December. Urban indices also show growth, from January to December, with a noticeable increase in July.

The Miscellaneous category shows steady growth in both rural and urban areas. Rural indices start in January and increase by *December*, with a peak in June. Rural prices show steady growth throughout the year, starting at 127.331 in January and ending at 135.457 in December. Urban prices also increase, from 115.23 in January to 124.16 in December. Urban indices show a similar upward trend. Both rural and urban areas see the highest peaks in December.

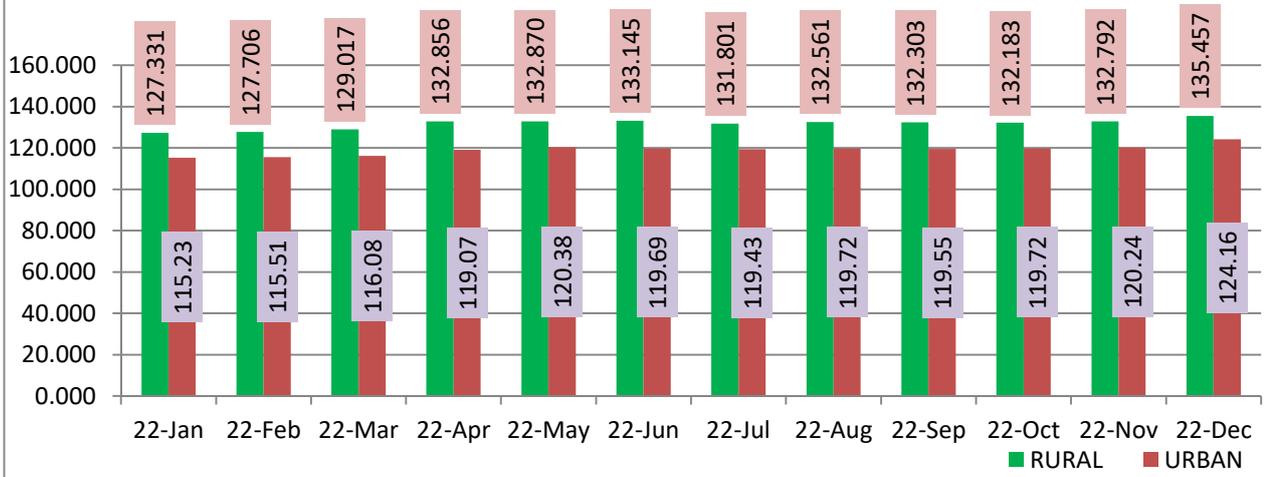

The General Index demonstrates a steady increase in both rural and urban areas. Rural indices start in January and rise by December, with the largest increase occurring in July. Rural general prices rise from 119.481 in January to 124.808 in December, showing consistent growth across the year. Urban general prices exhibit a similar trend, starting at 112.35 in January and ending at 116.44 in December. Urban indices shows with a slight dip in august and peak in September.

MALAPPURAM- GENERAL

CONSUMER PRICE INDEX (R\U\C)2022 KOZHIKODE

The Food and Beverages category shows moderate growth across both rural and urban areas. Rural indices fluctuate from January to December, with the highest value occurring in June. Rural prices show a slight upward trend, starting at 115.48 in January and ending at 117.26 in December. The highest point occurs in May at 122.99, followed by a slight dip towards the year's end. Urban prices start at 116.03 in January, dip slightly to 115.49 in February, and remain fairly stable with a slight increase toward the end of the year, finishing at 117.85 in December. Urban indices start in January, dip in February, and end in December, showing a consistent but modest upward trend.

In the Pan, Supari & Intoxicants category, rural indices remain relatively stable, Rural prices show consistent pricing, starting at 110.10 in January and maintaining similar levels through most months, ending at 112.97 in December. Urban prices are higher, beginning at 121.09 in January and steadily increasing throughout the year, reaching 123.76 by December. Urban indices show a more consistent trend, starting in January and gradually increasing by December. Both rural and urban areas show a steady consumption pattern throughout the year, with urban areas consistently maintaining higher values.

The Clothing & Footwear category shows a steady but minimal increase in both rural and urban areas. Rural indices convey, with a peak in November. Rural prices start at 108.00 in January and increase gradually, peaking at 116.73 in December. There is a slight increase throughout the year, with a notable rise in November. Urban prices start at 104.26 in January and despite some increases, stay lower compared to rural prices. By December, they reach 109.59. Urban indices are more consistent, starting in January and reaching by December. The slight increase in rural areas, particularly toward the end of the year.

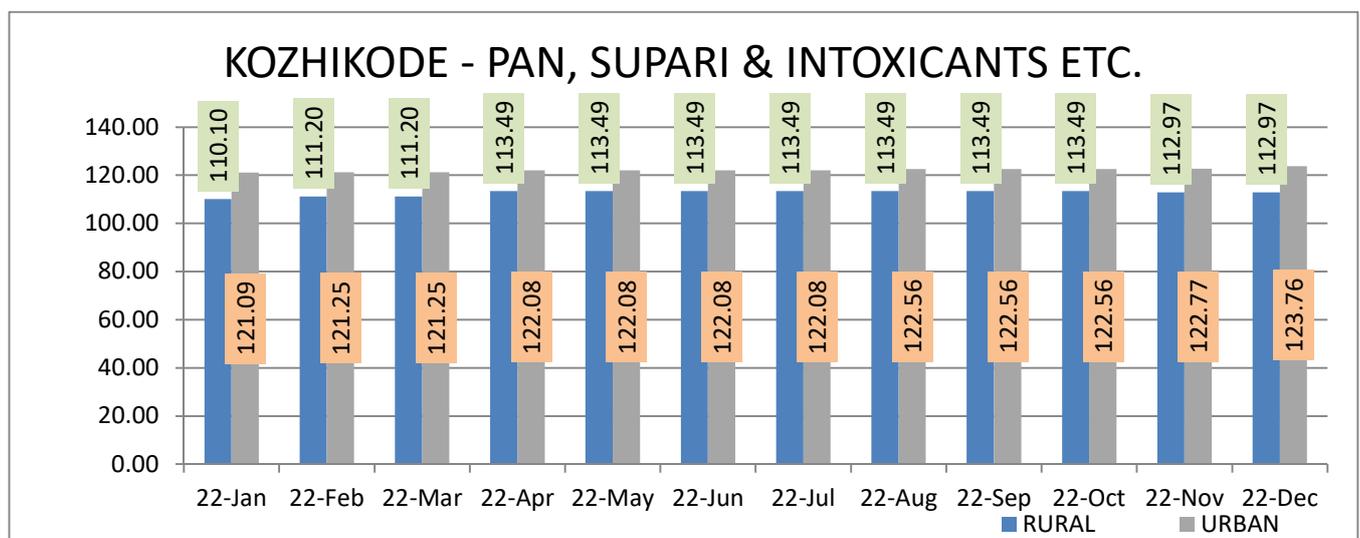

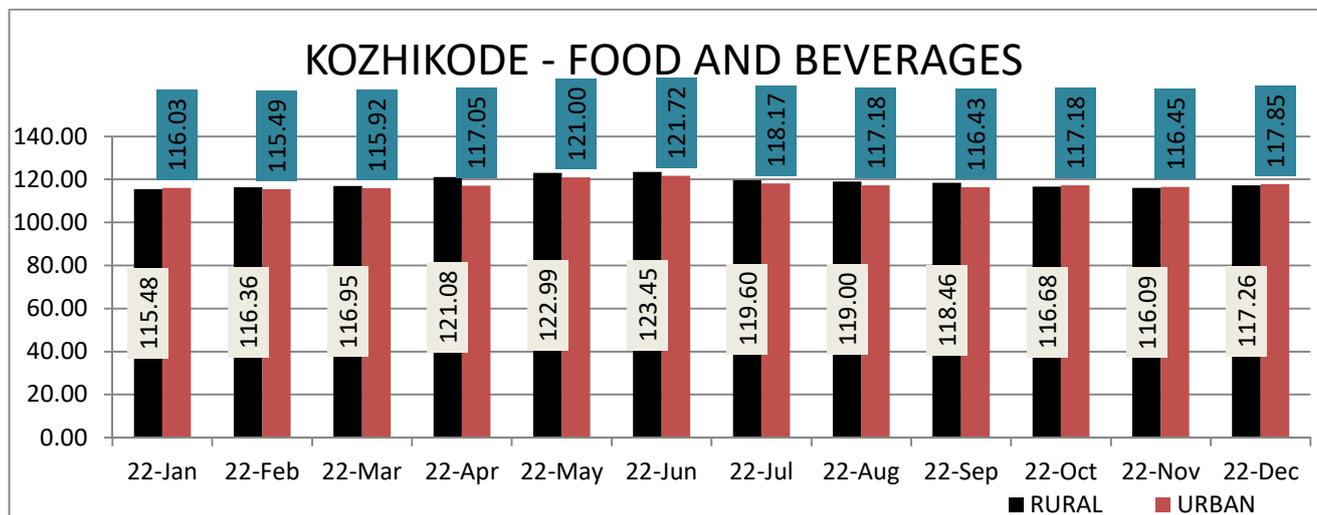

The Housing category reveals steady trends in urban areas. Prices begin at 140.91 in January and dip significantly in April to 114.13, marking the most significant fluctuation of the year. The prices gradually recover and rise steadily to 122.22 by December. The indices fluctuating slightly,

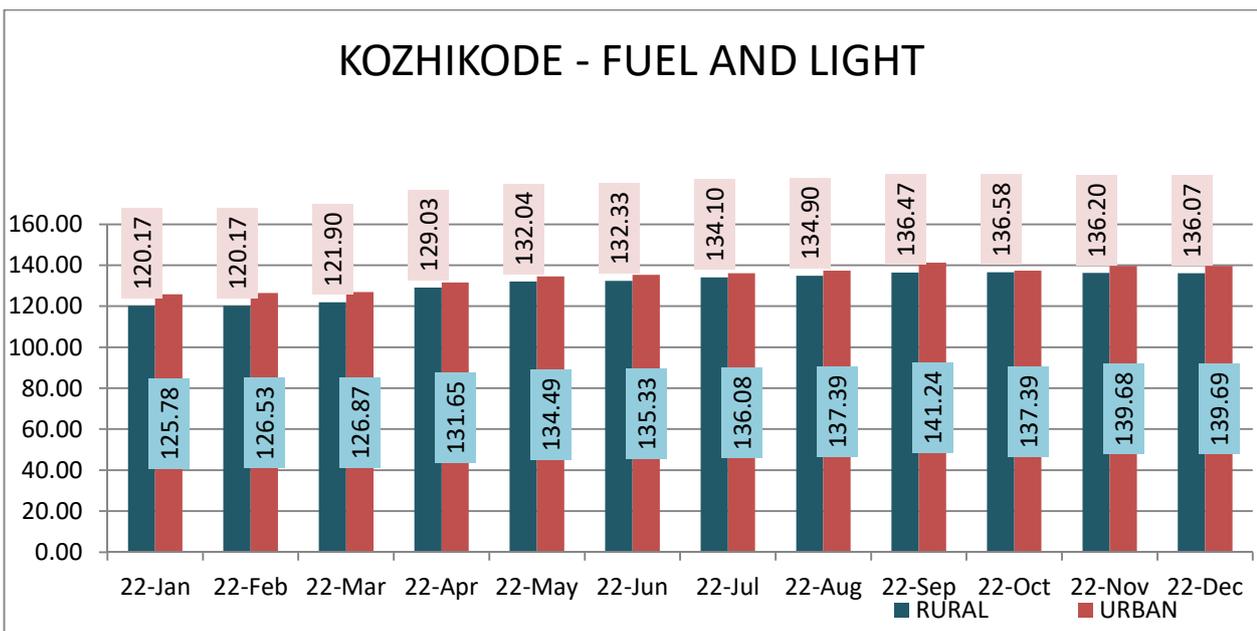

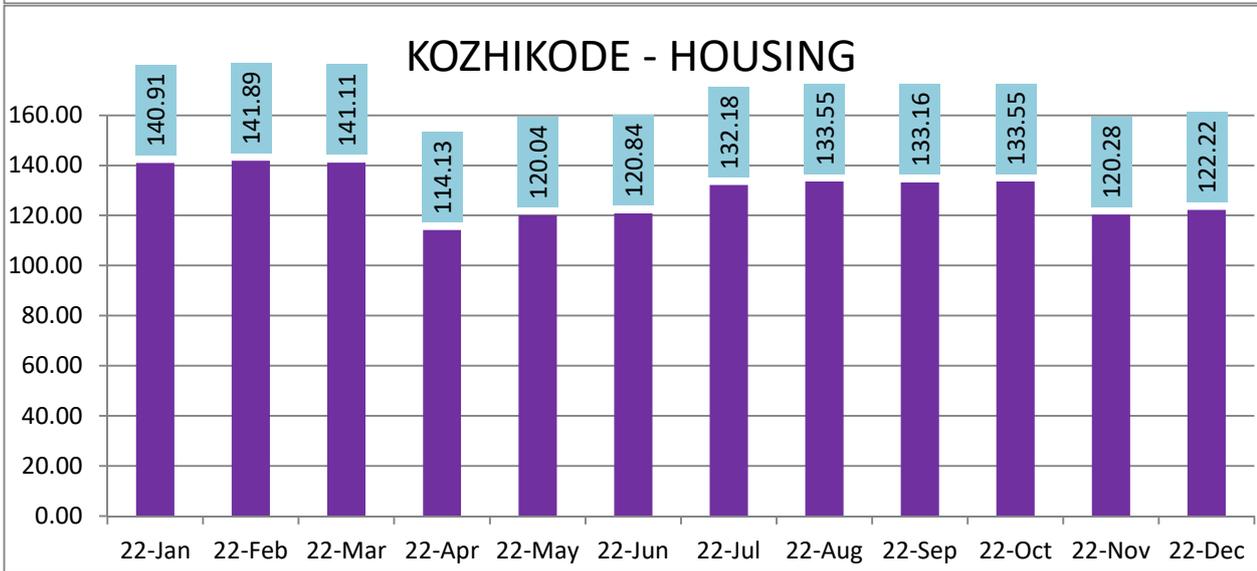

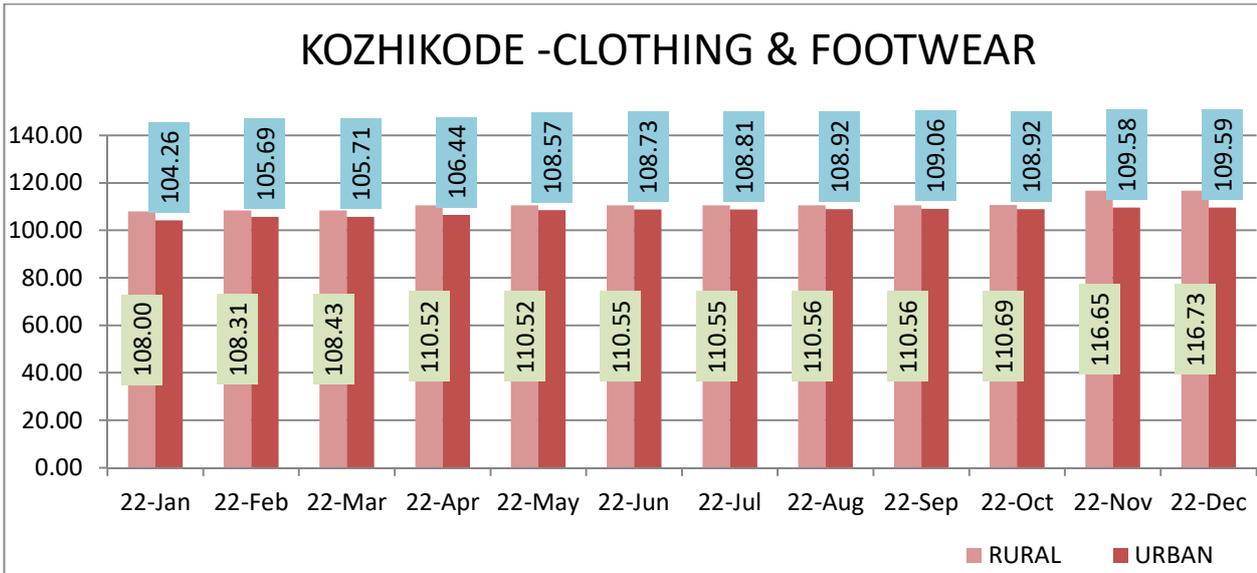

The Fuel and Light category shows substantial growth in both rural and urban areas throughout the year. Rural indices begin in January and increase steadily by December. Urban indices show a similar upward trend, the peak in September and continued growth through the year.

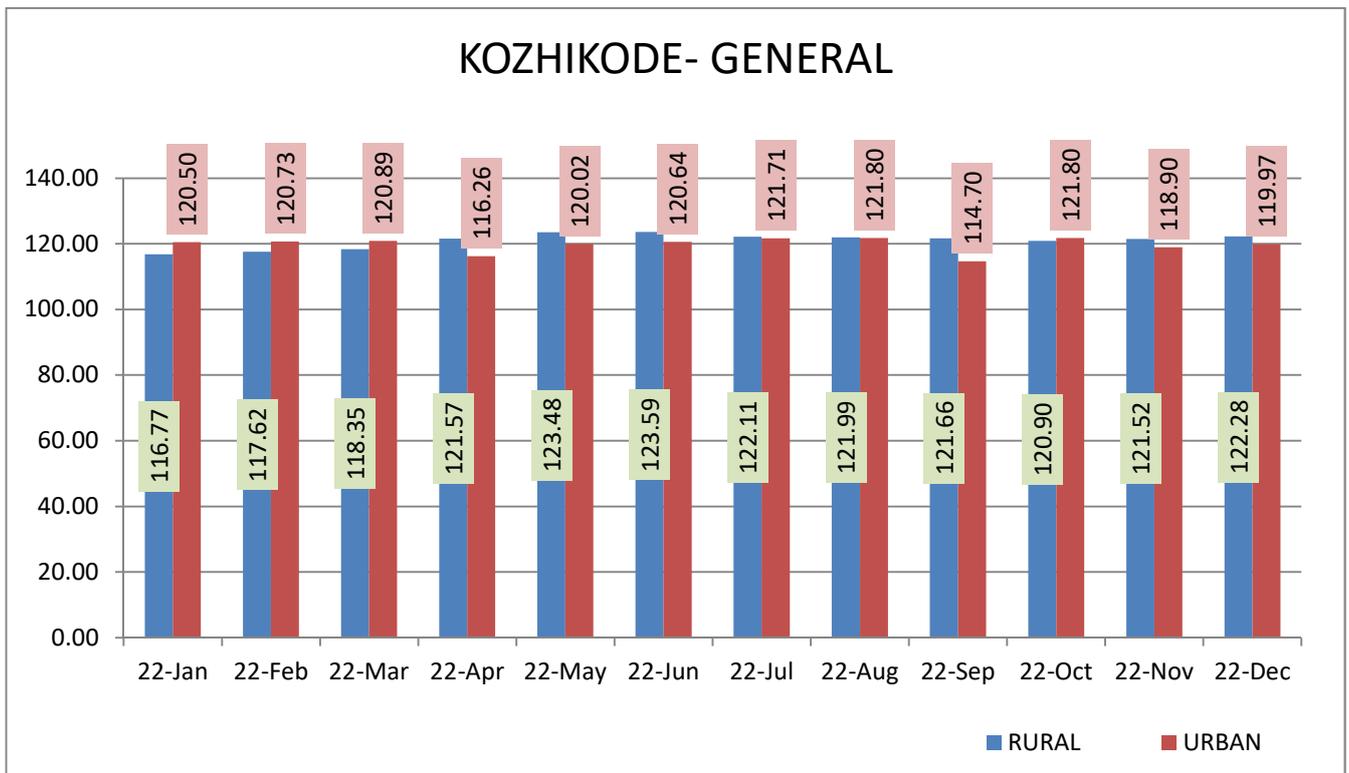

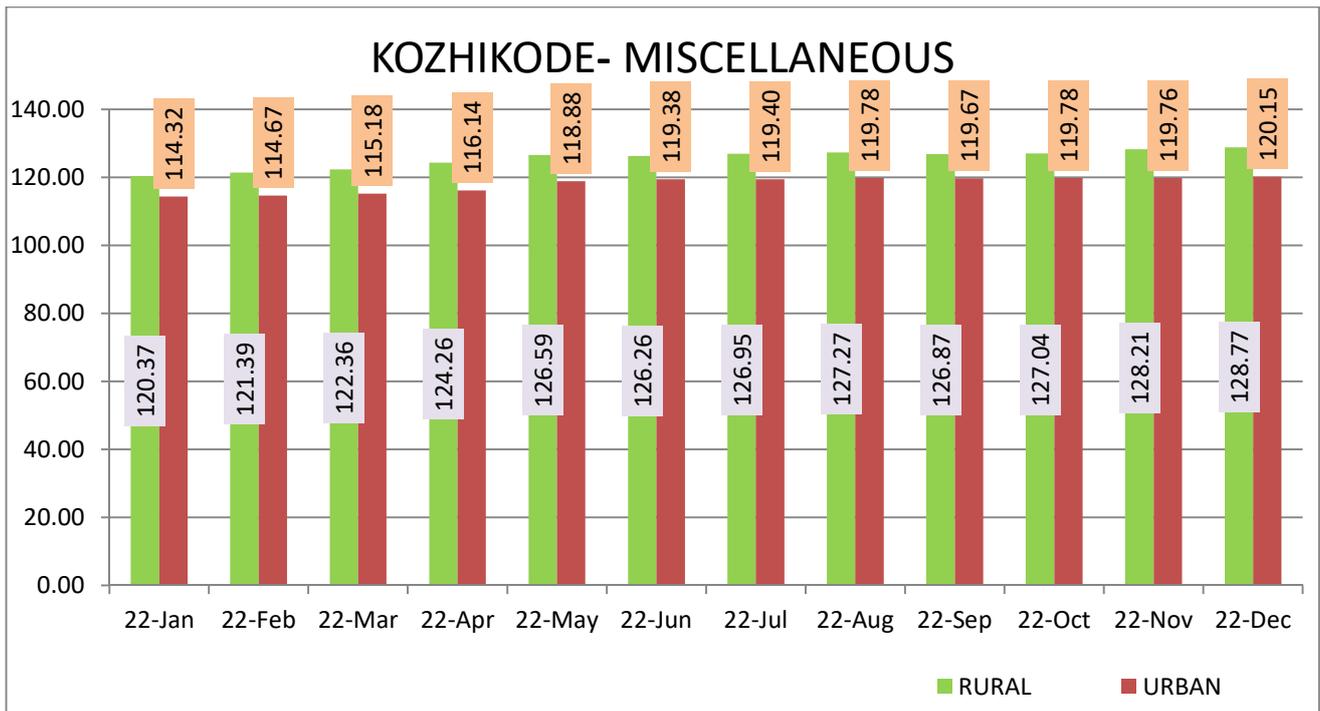

The Miscellaneous category experiences steady growth in both rural and urban areas. Rural indices range from in January to December, with consistent increases each month. Rural prices begin at 120.37 in January and steadily increase throughout the year, ending at 128.77 in December. Urban prices follow a similar pattern, starting at 114.32 in January and ending at 120.15 in December. Urban indices, showing a more gradual but consistent increase.

The General Index exhibits growth across both rural and urban areas. Rural indices start in January and rise by December, with the highest value in May and June. Rural general prices start at 116.77 in January and show steady increases throughout the year, peaking at 122.28 in December. Urban general prices start at 120.50 in January and remain relatively stable, with minor fluctuations. They end at 119.97 in December. Urban indices, indicating steady growth.

Table 04-K illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

CONSUMER PRICE INDEX (R\U\C)2022 WAYANAD

The Food and Beverages category shows a steady growth trend across both rural and urban areas. In rural areas Prices for food and beverages start at 115.48 in January and rise gradually to 122.99 by May, indicating an upward trend. A slight dip occurs in July (119.60), followed by another increase, reaching 117.26 by December. Urban prices begin at 116.03 in January and follow a similar trajectory, with a peak of 123.45 in June. From July onwards, the prices slightly decrease but remain stable, ending the year at 117.85. Urban indices start in January, peak in May and stabilize in December. This indicates higher fluctuations during the first half of the year and relative stability in the latter half, reflecting seasonal consumption patterns.

The Pan, Supari & Intoxicants category exhibits minor fluctuations in both rural and urban areas. Rural indices remain consistent, beginning in January and rising slightly in December. Prices start at 110.10 in January and show a steady rise, reaching 113.49 from April to October, with no further changes through December. Urban: Prices start at 121.09 and remain relatively stable through the first half of the year. In the second half, there is a slight increase, peaking at 123.76 in December. Urban indices show similar stability, but slightly dip in December.

The Clothing & Footwear category shows marked growth in rural areas and stability in urban areas. Rural indices increase from January to December, with consistent growth throughout the year. Urban indices start in January, despite minor and consistent monthly fluctuations,

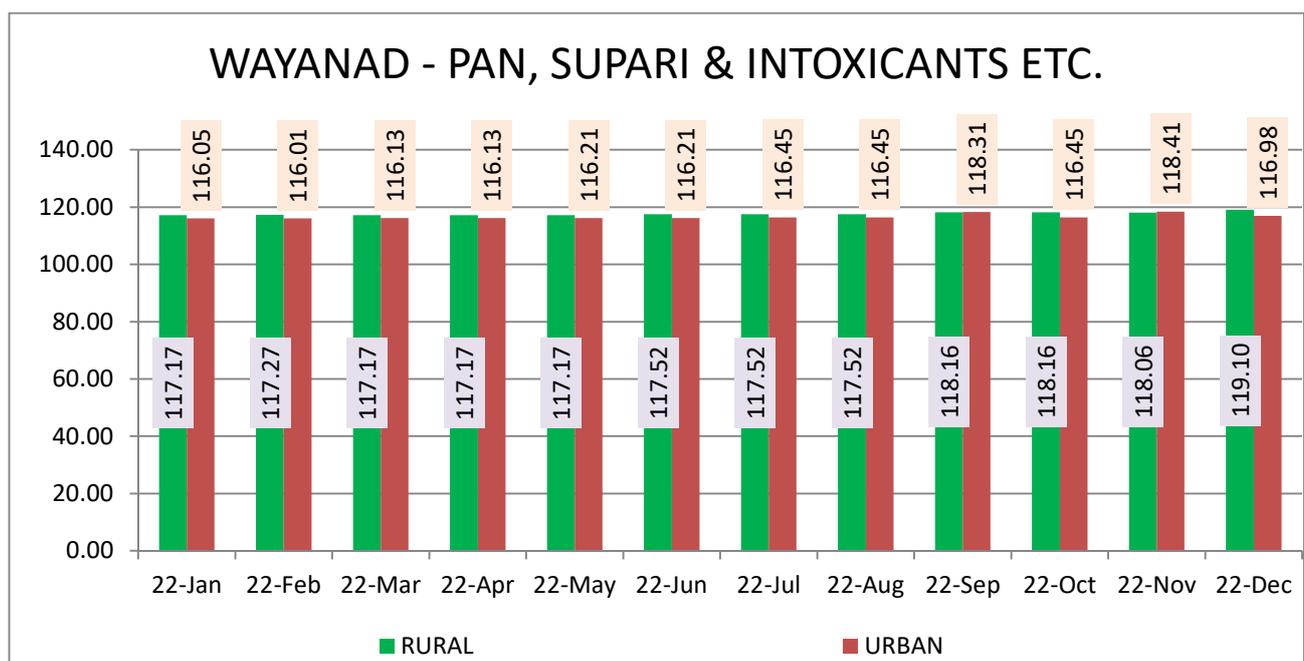

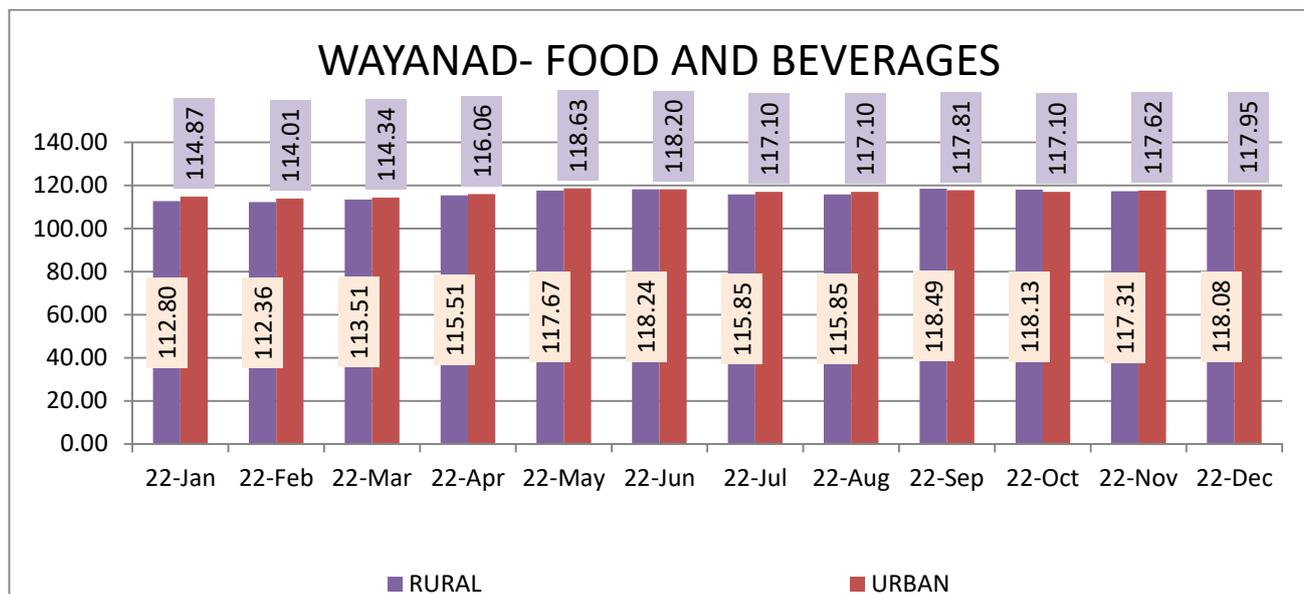

The Housing index for urban areas demonstrates notable fluctuations throughout the year. Prices begin at 140.91 in January and dip significantly in April to 114.13, marking the most significant fluctuation of the year. The prices gradually recover and rise steadily to 122.22 by December. The indices start in January, decline in April and May, and then recover in September.

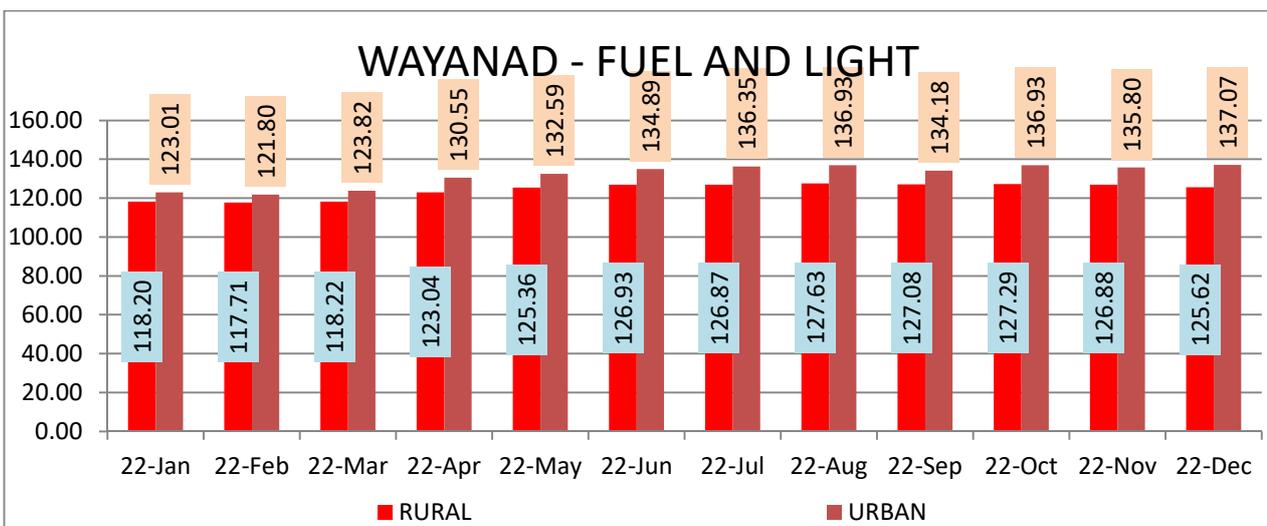

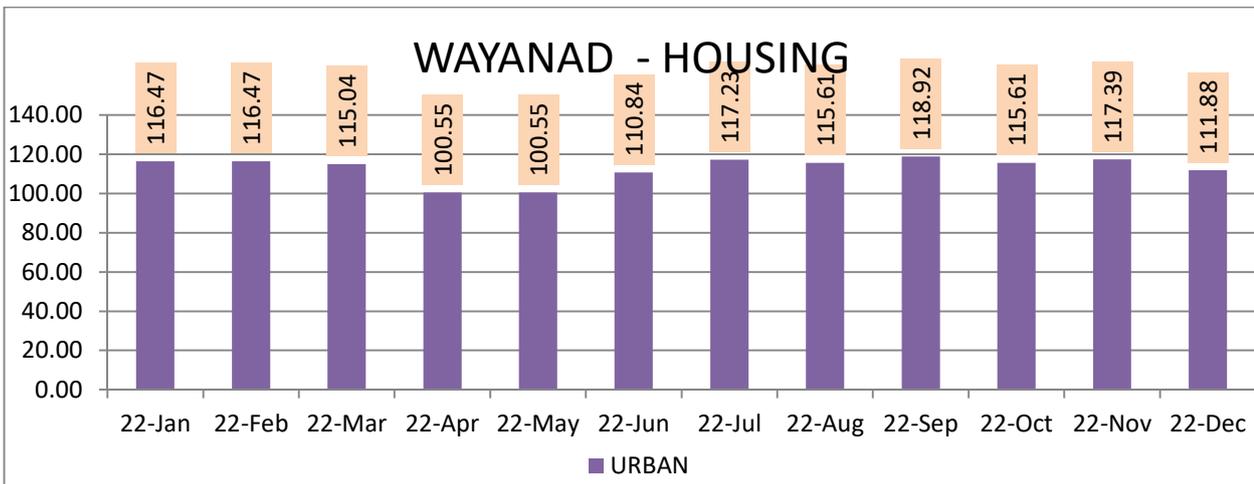

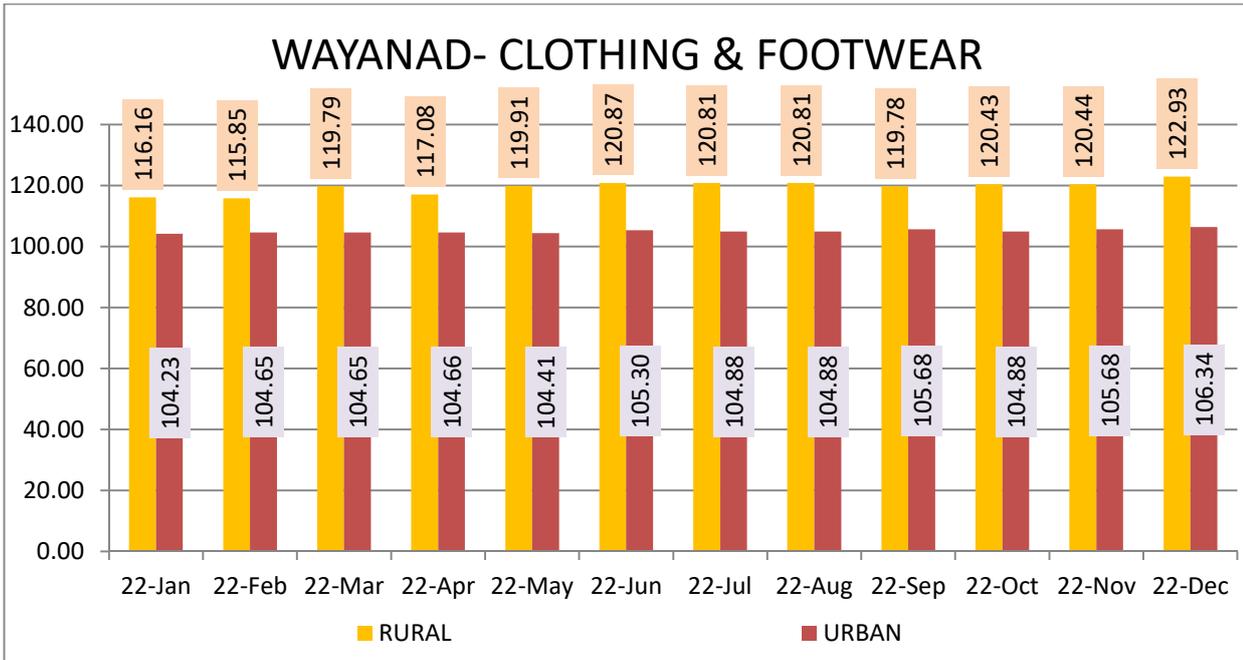

The Fuel and Light category reflects steady growth in rural areas and significant fluctuations in urban areas. Rural indices begin in January, rise in August, and taper slightly in December. Urban indices increase more prominently, starting in January, peaking in December, with consistent increases throughout the year.

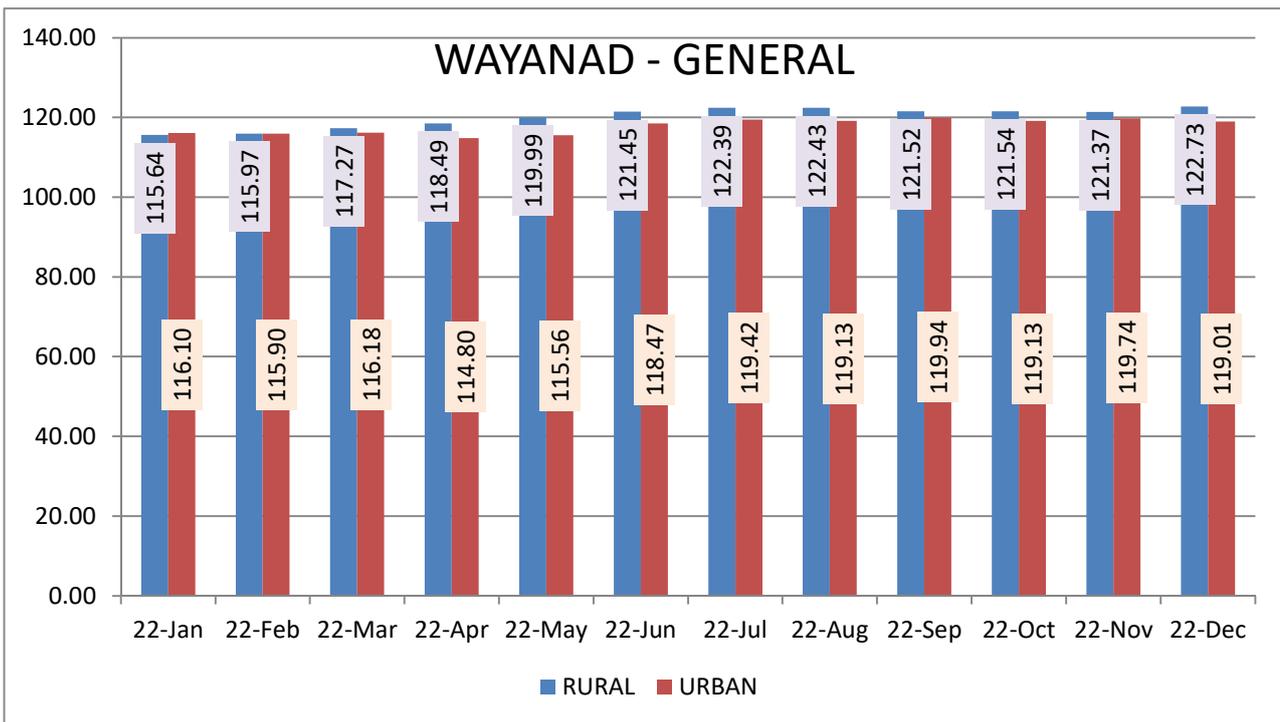

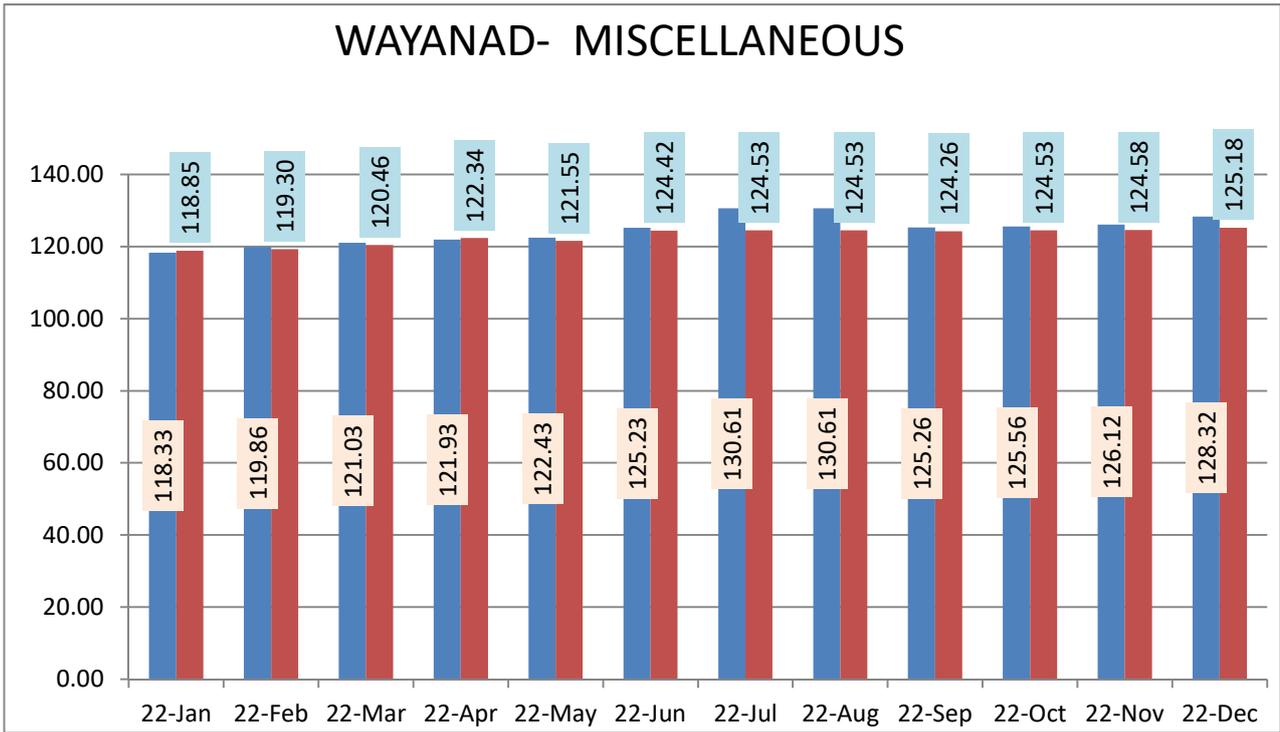

The Miscellaneous category exhibits steady growth in both rural and urban areas. Rural indices increase from January to December, with notable jumps in July. Rural: Prices begin at 120.37 in January and increase steadily, peaking at 128.77 in December. Urban prices start at 114.32 and rise gradually, reaching 120.15 in December. Urban indices show smaller increases, starting in January and rising by December.

The General Index shows moderate growth in rural areas and more stability in urban areas. Rural indices prices start at 116.77 in January and show a consistent upward trend throughout the year, reaching 122.28 in December. Urban prices start at 120.50 and remain relatively stable with moderate fluctuations, ending at 119.97 in December. Urban indices fluctuate slightly, beginning in January and ending in December. The urban trends indicate steadier economic conditions with less pronounced growth compared to rural areas.

Table 04-L illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

CONSUMER PRICE INDEX (R\U\C) 2022 KANNUR

The Food and Beverages category exhibits seasonal variation with a clear upward trend in both rural and urban areas. Prices start at 117.10 in January and increase through May (122.67). After June, prices fluctuate, peaking at 123.63 in June and dropping to 115.79 in November before rising again to 118.53 in December. Urban prices start at 112.90 in January and show a gradual increase, reaching 120.07 in June. After June, the prices fluctuate slightly, ending the year at 115.84. The mid-year increase in both regions highlights heightened consumption during this period, followed by stabilization towards the year-end.

Pan, Supari & Intoxicants shows marginal increases, with rural indices consistent moving from January to December. Urban indices remain relatively stable, starting in January and closing slightly lower in December.

Clothing & Footwear In rural areas, indices reflect significant growth, starting in January, peaking in November, and concluding in December. Prices begin at 126.98 and show steady increases throughout the year, peaking at 138.08 in November before dropping slightly to 137.45 in December. Urban prices start at 109.66 and show a gradual increase, peaking at 116.00 in December. Urban areas show slower, steady growth from January to December, with a noticeable jump in October.

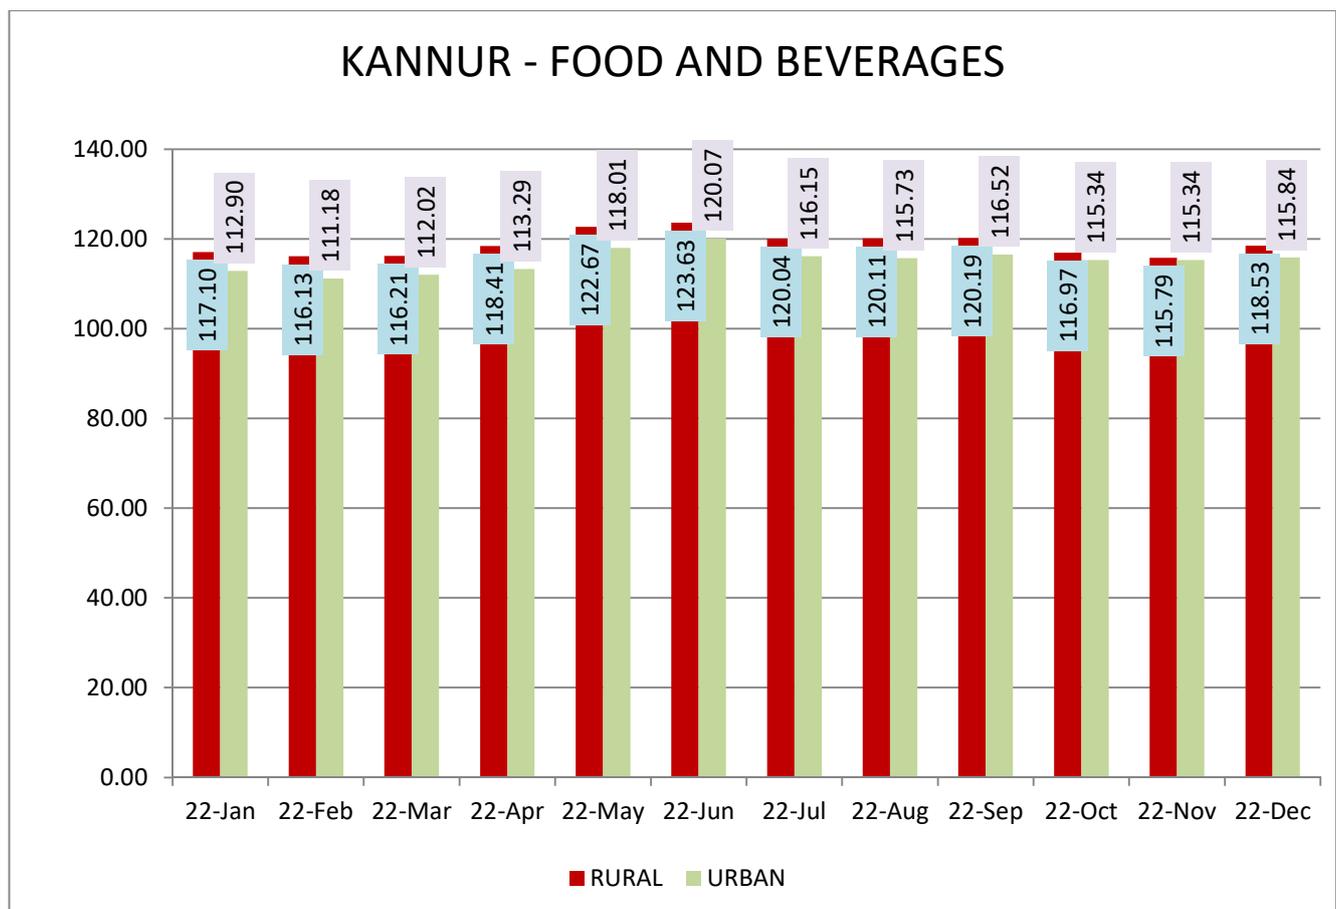

The Housing index for urban areas shows significant volatility. Urban housing prices start at 110.95 in January and fluctuate, dropping sharply to 100.39 in April, followed by a gradual recovery. By December, the prices stabilize at 114.50.

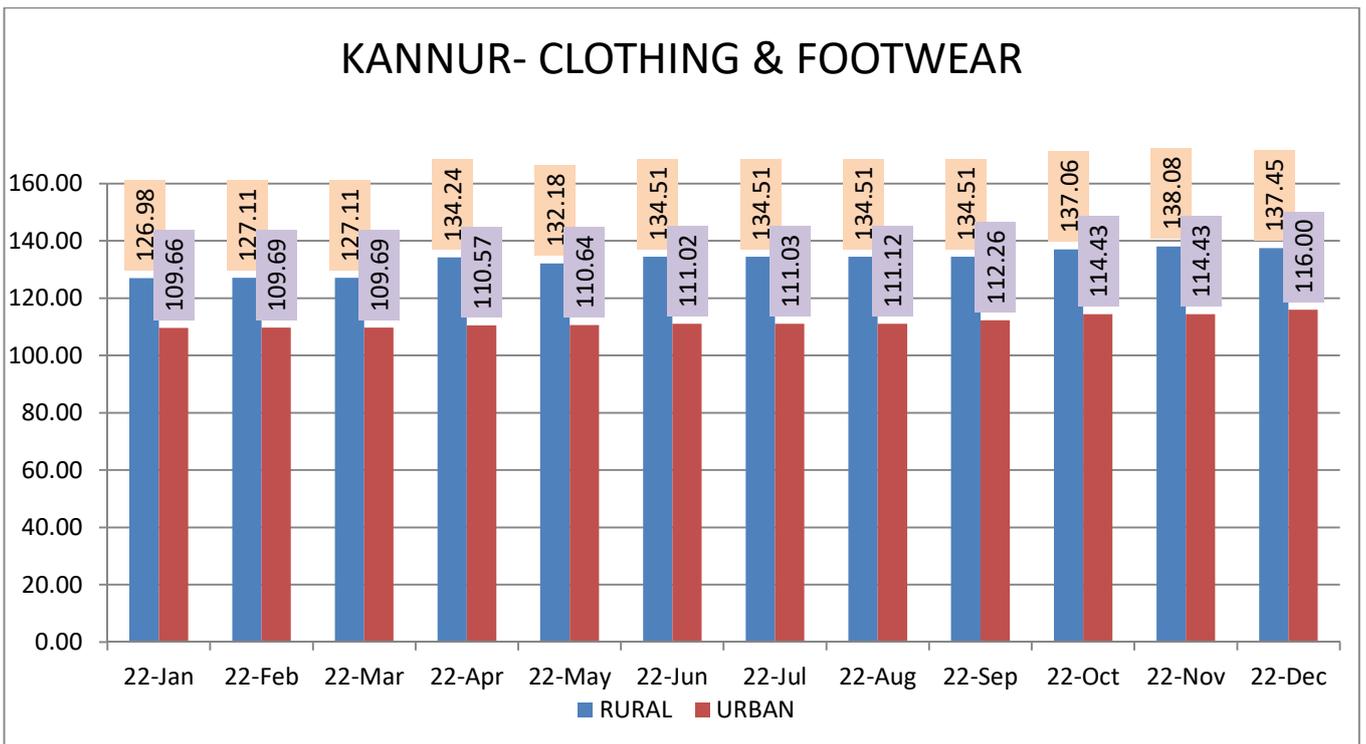

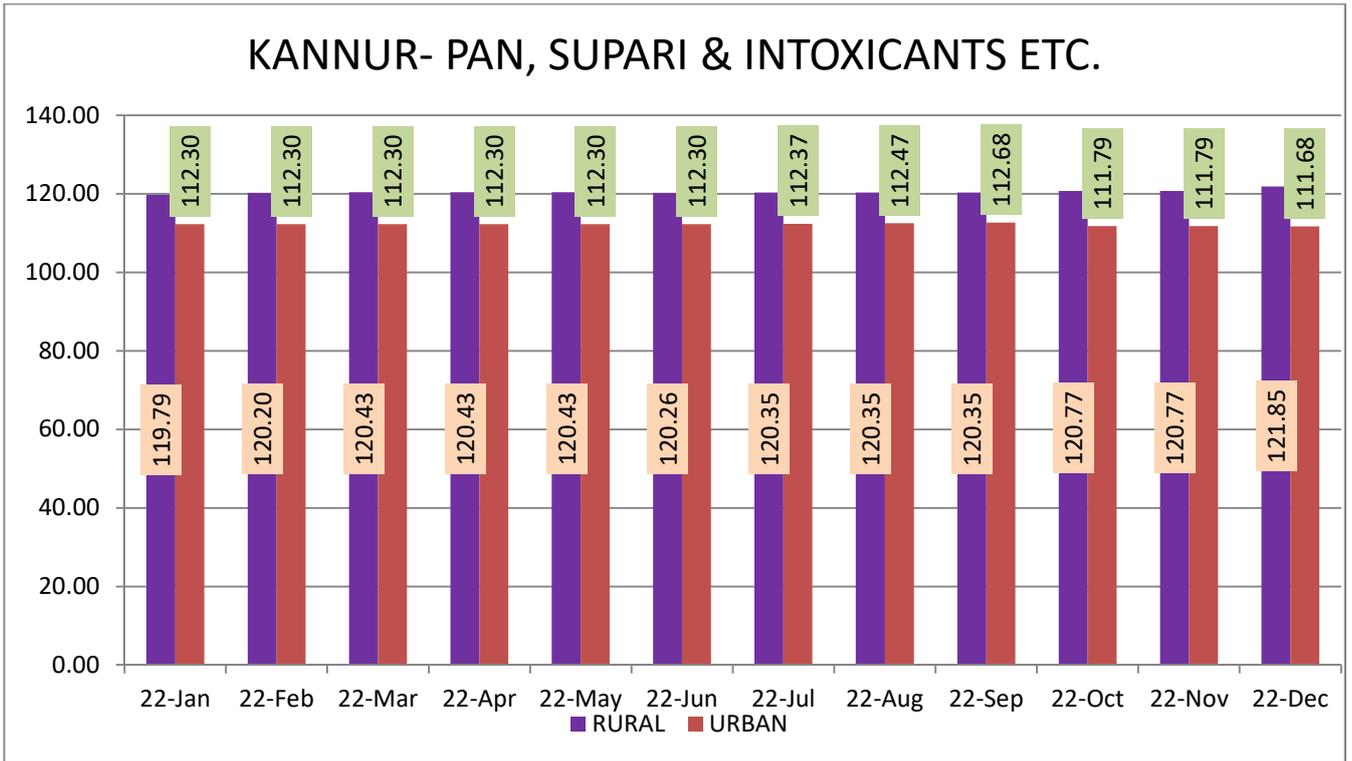

The Fuel and Light category displays marked increases in rural areas and more moderate growth in urban areas. Fuel prices start at 140.12 and rise steadily, peaking at 157.22 in May. Afterward, prices drop slightly but remain high, ending at 150.23 in December. Urban fuel prices begin at 128.88 and show a steady increase, reaching a peak of 140.81 in August. Prices then drop, ending at 137.47 in December. Urban indices begin in January, peak in mid-month of the year, and stabilize in December.

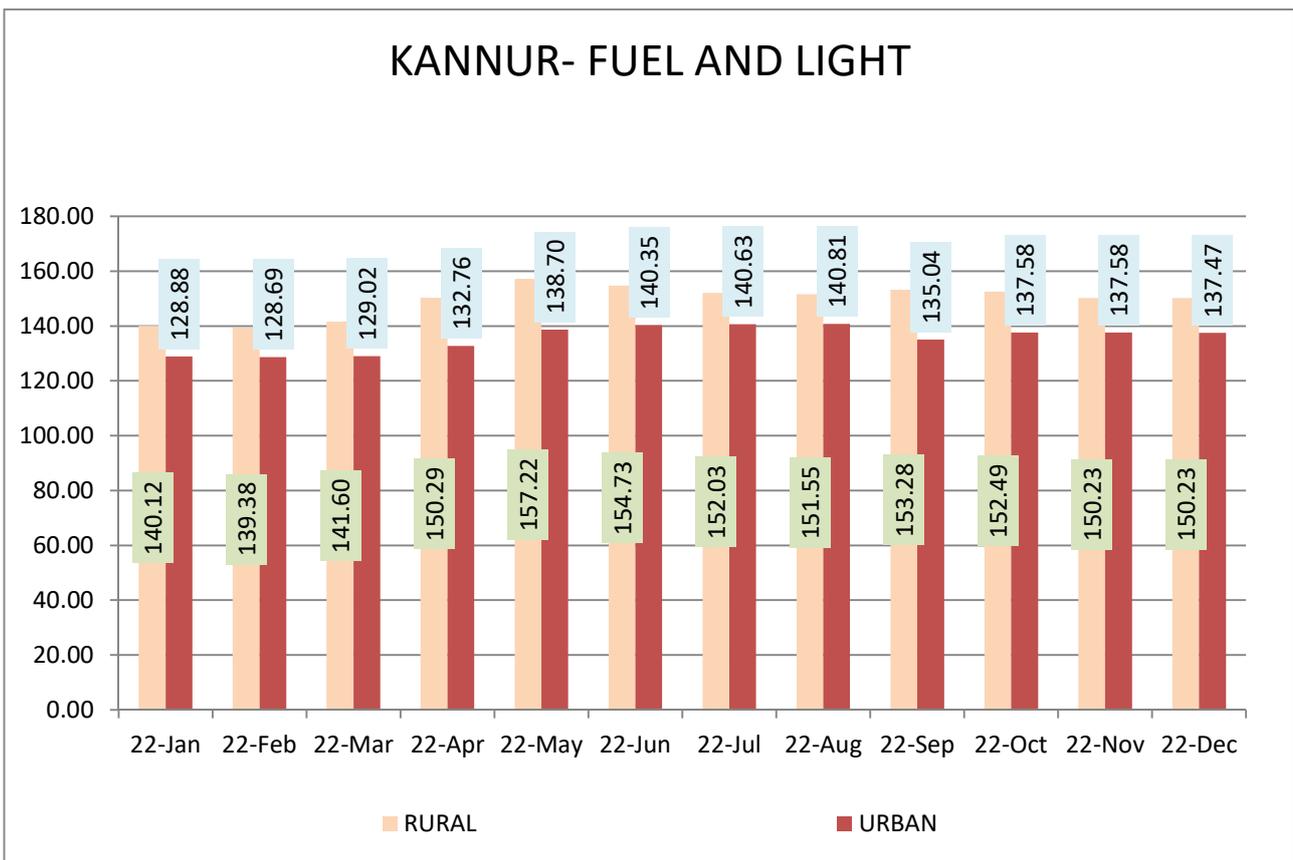

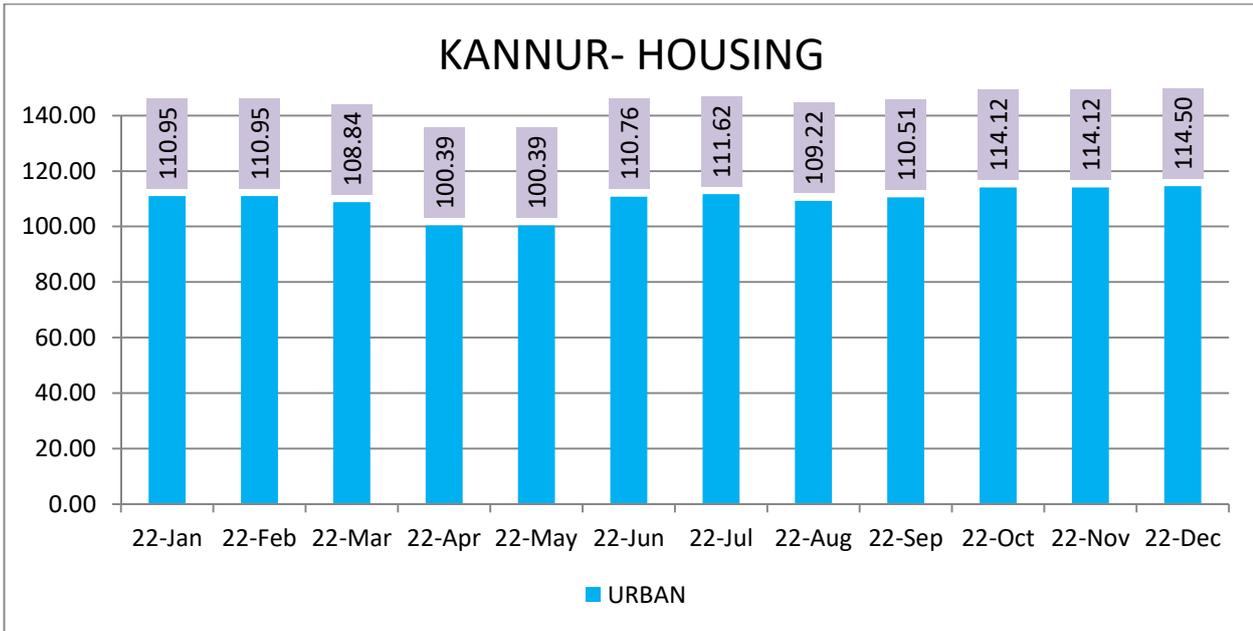

The Miscellaneous category shows consistent growth in both rural and urban areas. Rural indices rise from January to December, with notable jumps in September and October, then consistent latter months. Prices start at 117.90 and show steady increases throughout the year, reaching 128.90 in December. Urban prices start at 114.72 and increase gradually, reaching 121.43 by December. Urban indices follow a similar pattern, increasing from January to December.

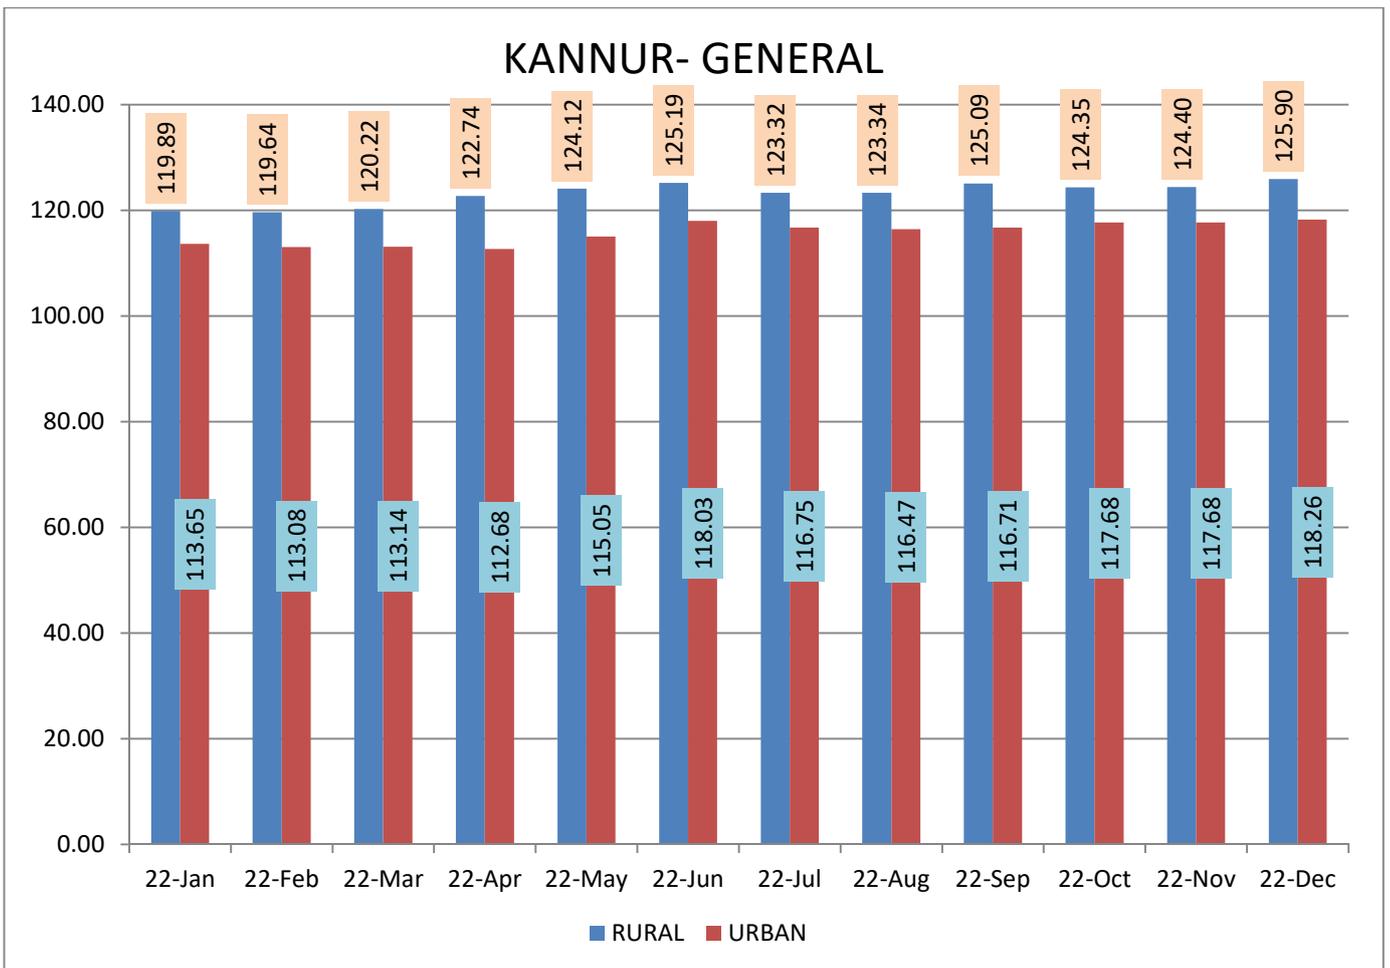

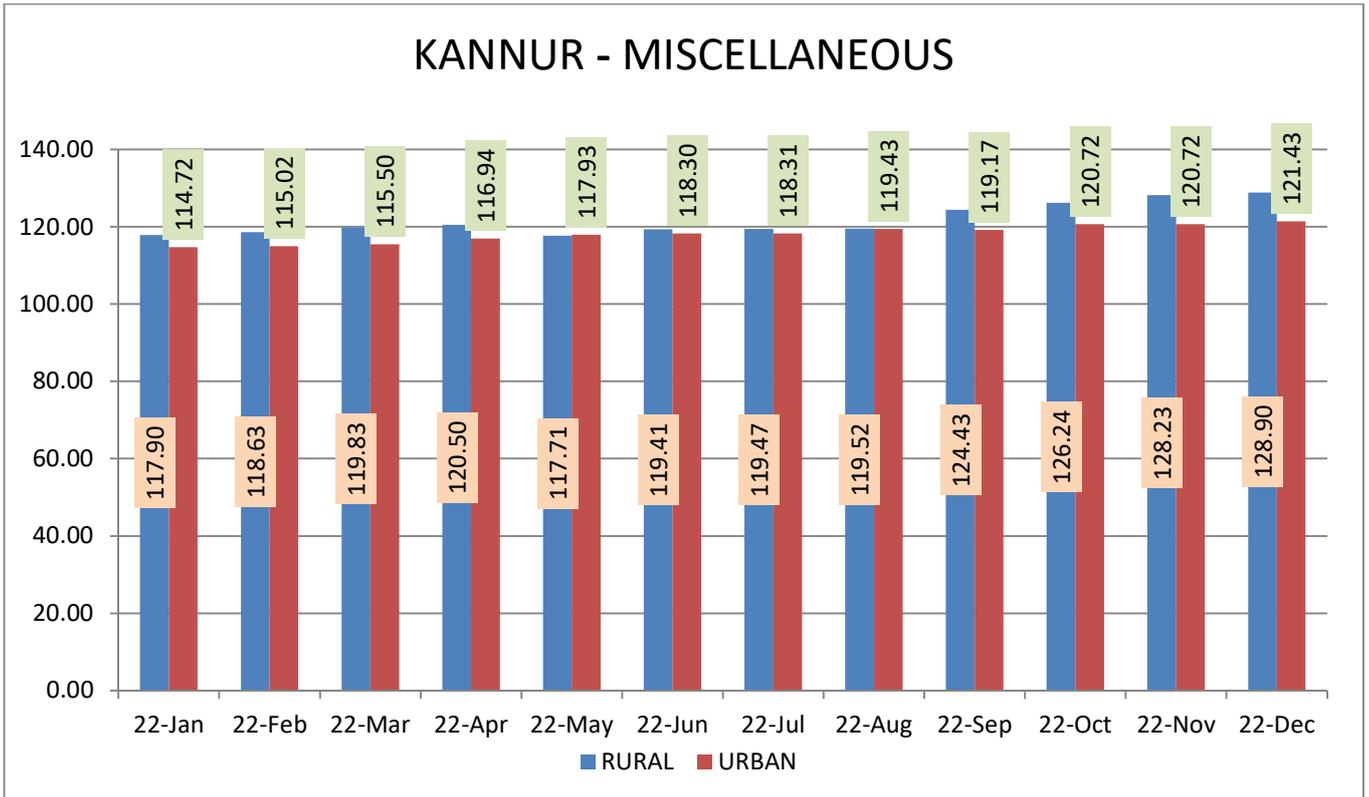

The General Index highlights overall economic trends, with rural indices consistently increasing from January to December. Prices start at 119.89 in January and increase gradually, peaking at 125.90 in December. Urban prices begin at 113.65 and show a moderate increase, reaching 118.26 in December. Urban indices show slower growth, starting in January and rising in December.

Table 04-M illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

CONSUMER PRICE INDEX (R\U\C) 2022 KASARAGOD

The food and beverages category shows notable seasonal trends in both rural and urban areas. Rural indices peak in June (124.08) and urban indices in June (123.79). The lowest indices are recorded in February for rural (115.35) and urban (115.36) areas. Urban areas also experience a mid-year in June. This reflects heightened demand during mid-year, possibly due to harvest-related activities and festive consumption, followed by normalization in later months.

Pan, Supari & Intoxicants Etc. demonstrates in rural index begins in January and climbs steadily in December. The rural index steadily increases from January (115.15) to December (121.91). Similarly, the urban index rises from 104.06 in January to 109.02 in December. Urban areas follow a similar pattern, starting in January and ending in December, with a noticeable uptick in the second half of the year.

Clothing & Footwear in rural areas show stability in the first half of the year, A noticeable rise is observed in July for rural (110.96) and in August for urban (114.71). The highest indices are in December, with rural at 113.88 and urban at 116.36. Urban indices start in January, and gradually increase by December, with noticeable gains from August onwards.

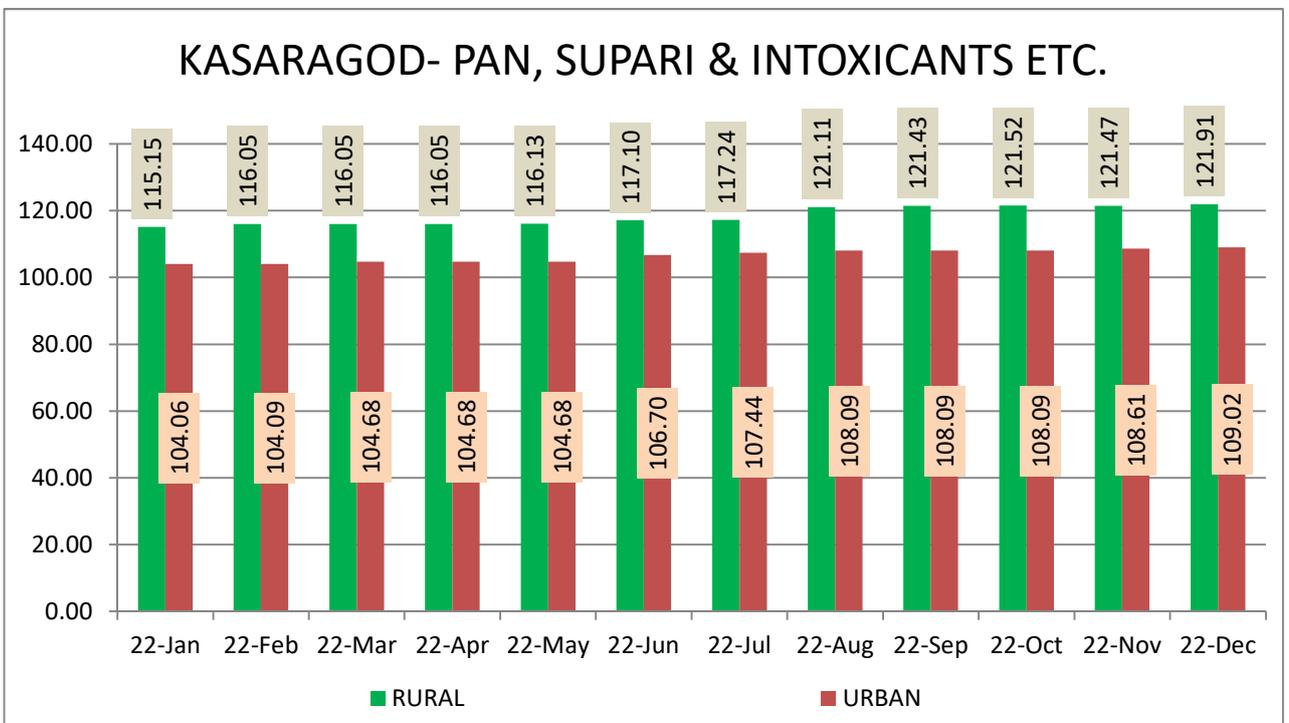

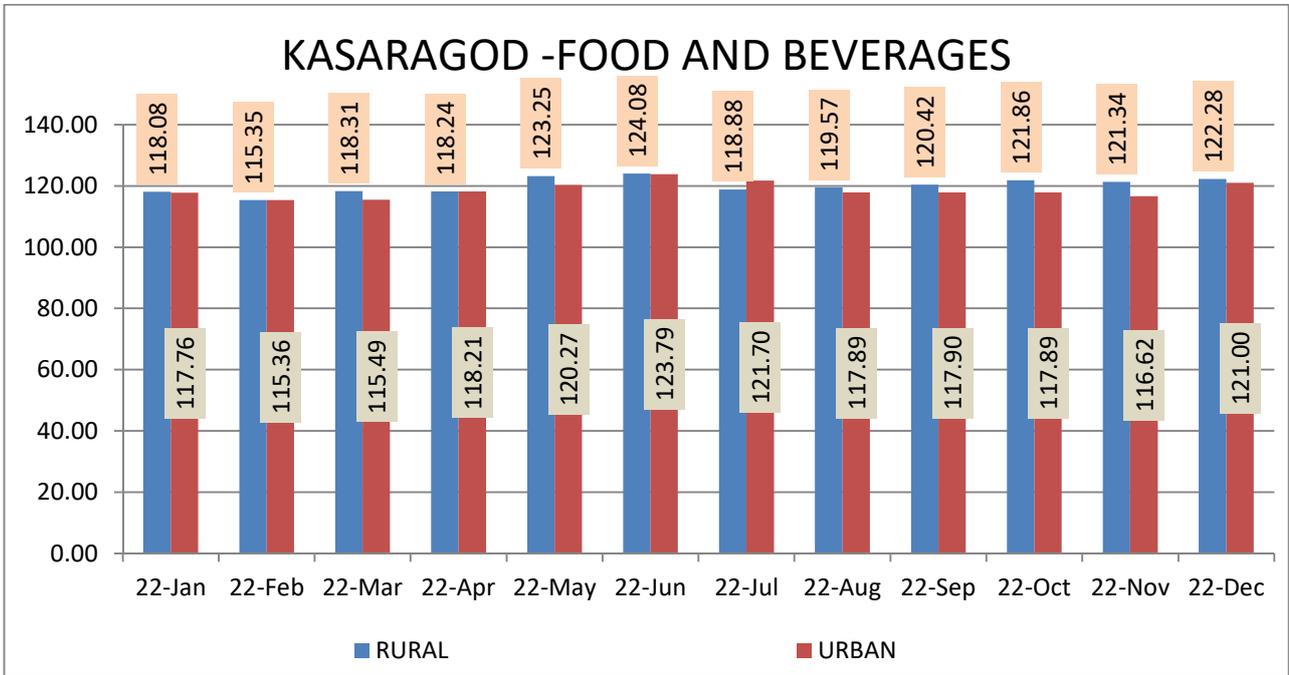

Housing in urban housing index demonstrates marked fluctuations throughout the year. The index peaks in September (139.38), while the lowest value is in April (101.42). A sharp increase is observed from June (128.41) to July (134.90). Starting increasing and consistent from January to September, and small dip in October, It peaks in September

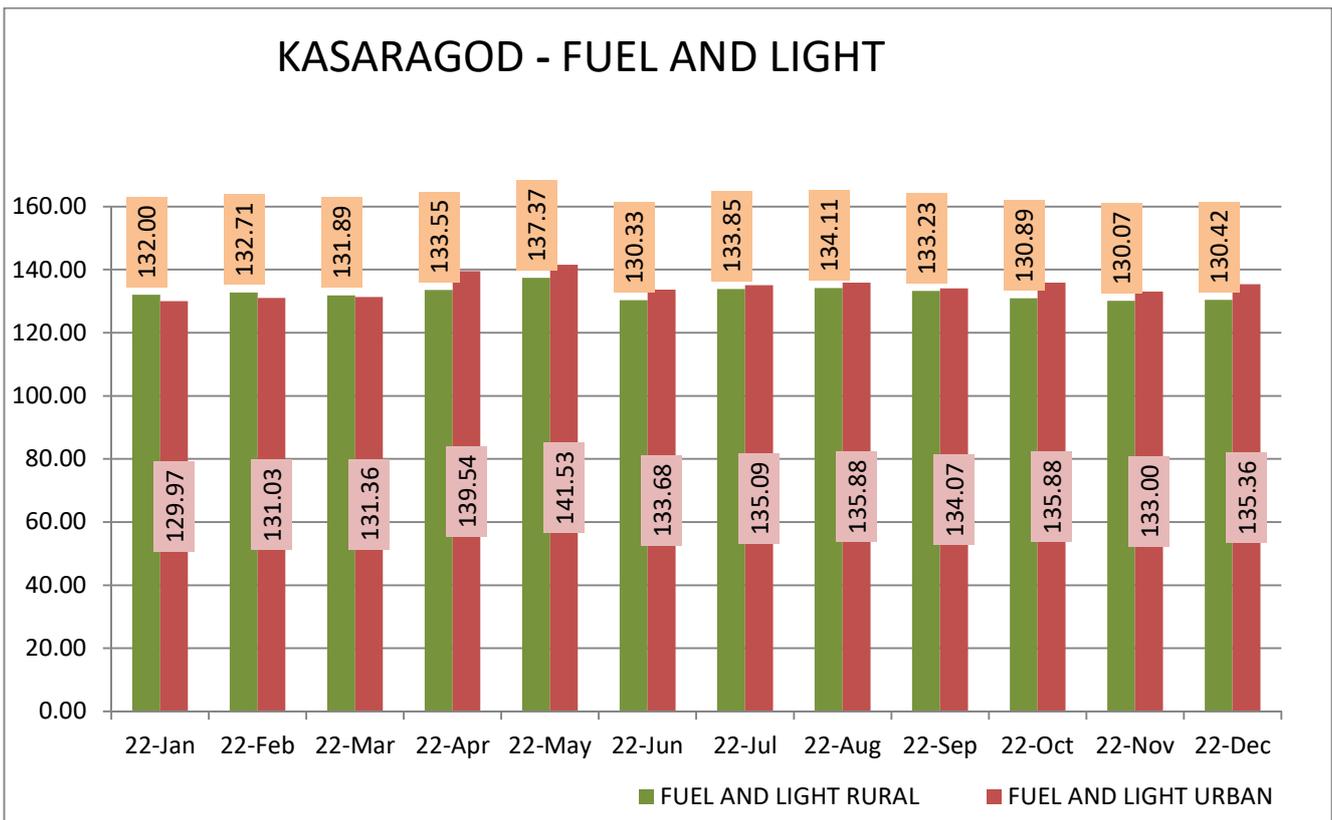

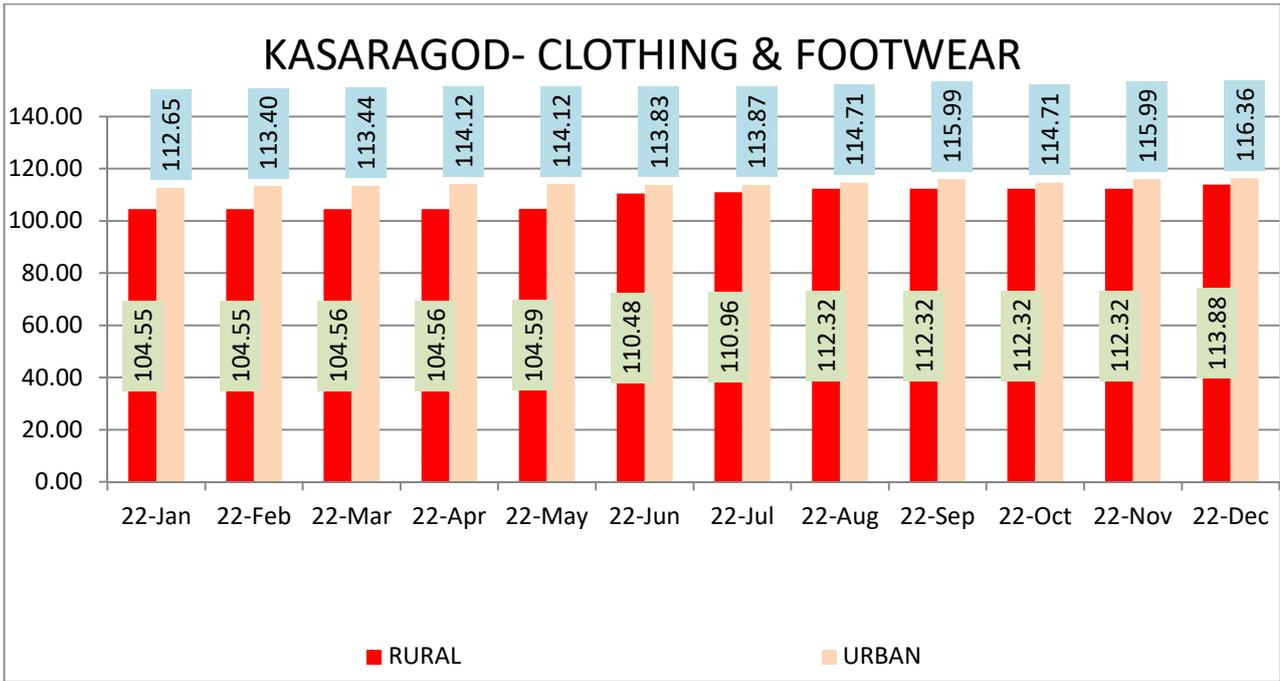

Fuel and Light in Rural areas start in January, peak in May, and decline by December. It reflects more pronounced fluctuations. Rural indices start at 132.00 in January, peaking at 137.37 in May, and end at 130.42 in December. Urban indices follow a similar trend, beginning at 129.97 in January and peaking at 141.53 in May. Urban areas also experience a mid-year, high in May and slightly fluctuate throughout the year

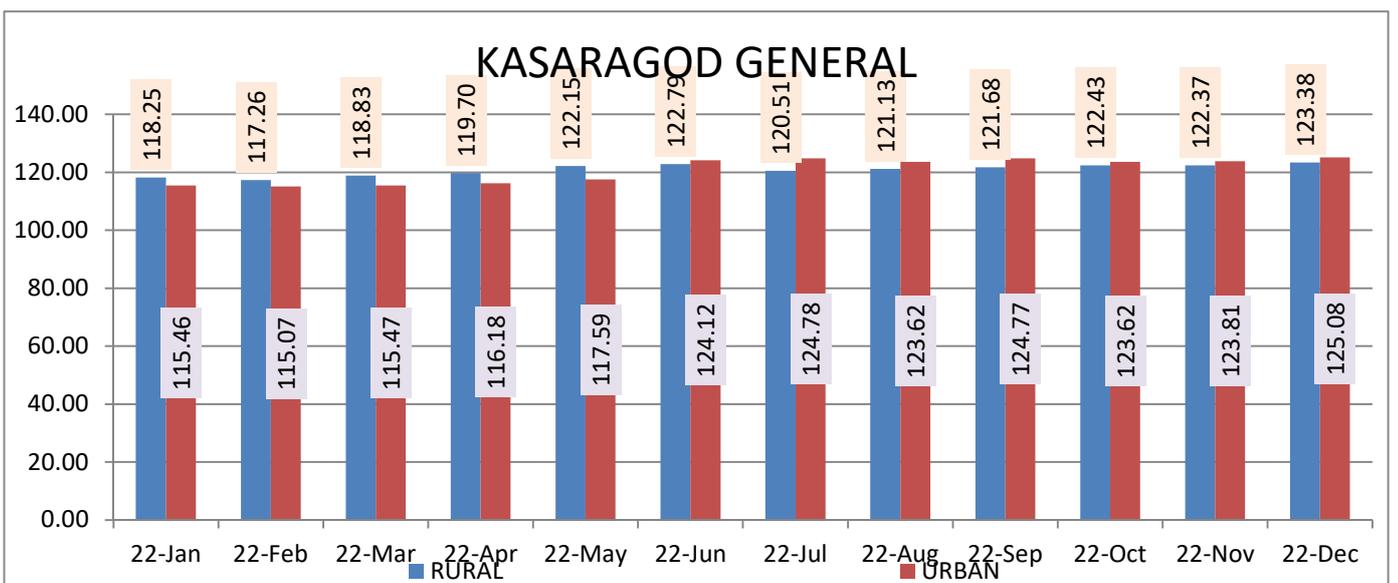

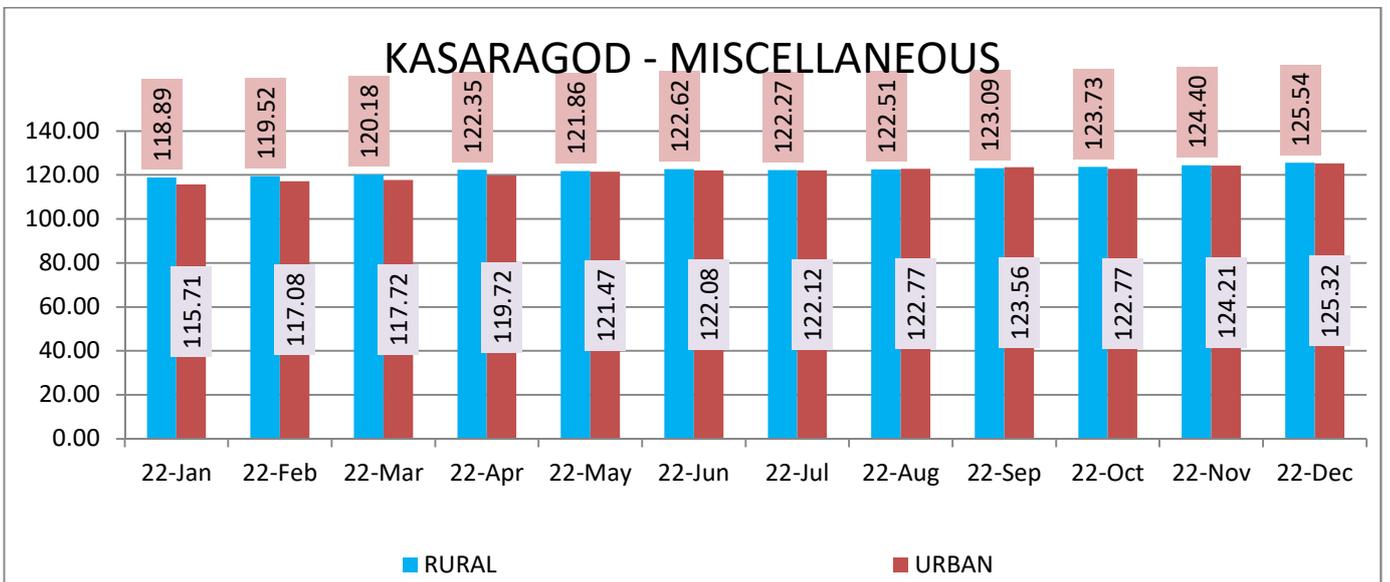

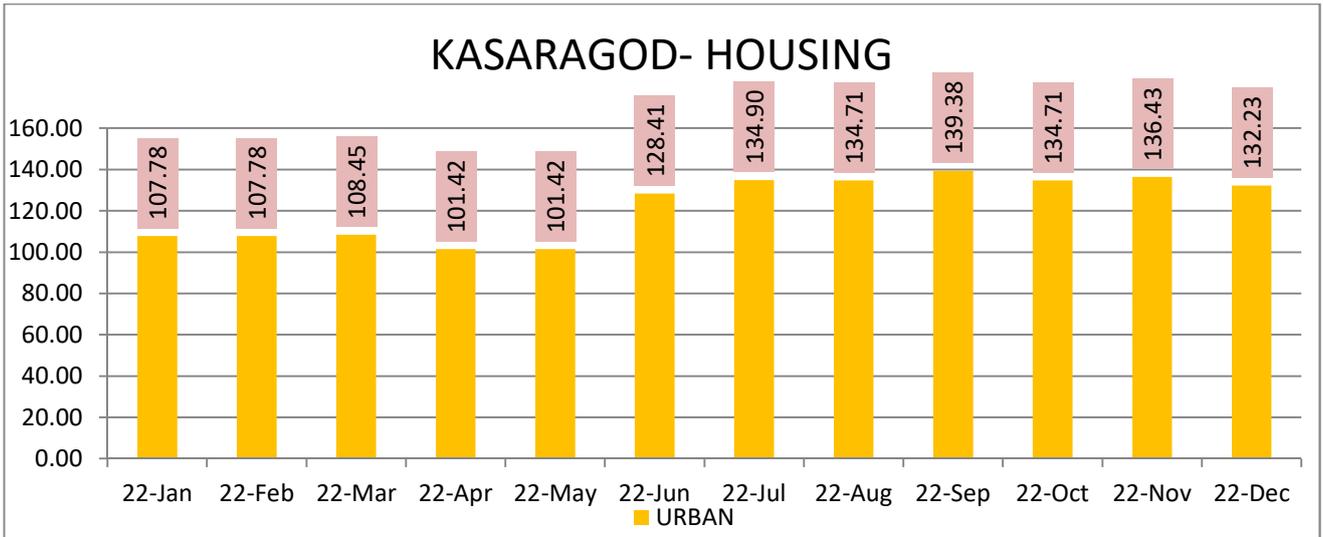

Miscellaneous index in Urban and rural indices remain fairly aligned, with slight urban dominance toward the end of the year. Both categories peak in December, with rural indices at 125.54 and urban at 125.32.

General index shows in Rural indices gradually increase, peaking in December (123.38). Urban indices show similar trends but rise more sharply, ending the year at 125.08.

Table 04-N illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

PARITY INDEX FOR THE YEAR 2022

The Index of Price Received by Farmers fluctuates throughout the year. The highest value is recorded in March (10062), followed closely by October (9856). The index is relatively stable but shows minor fluctuations, with a slight decline during the monsoon months (July: 9608, August: 9577). It starts in January, peaks in March, and gradually declines through the middle months, reaching its lowest in September. A recovery follows in October but the index declines by December. This trend indicates that farmers experience their highest prices during the first quarter, followed by stabilization in later months.

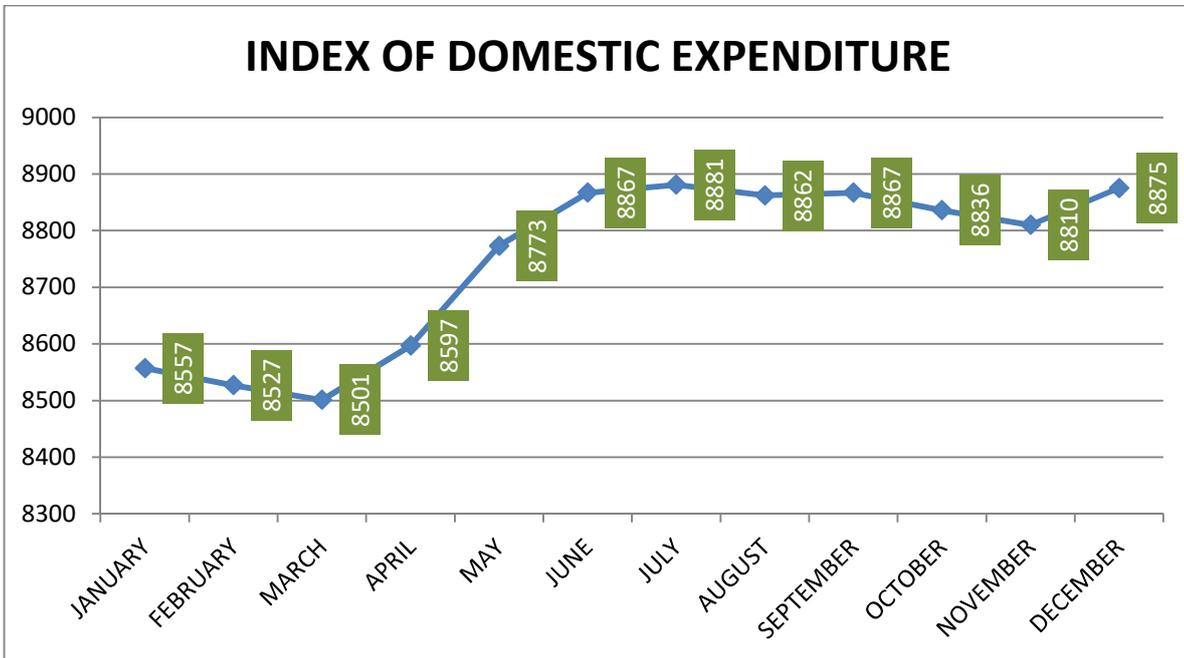

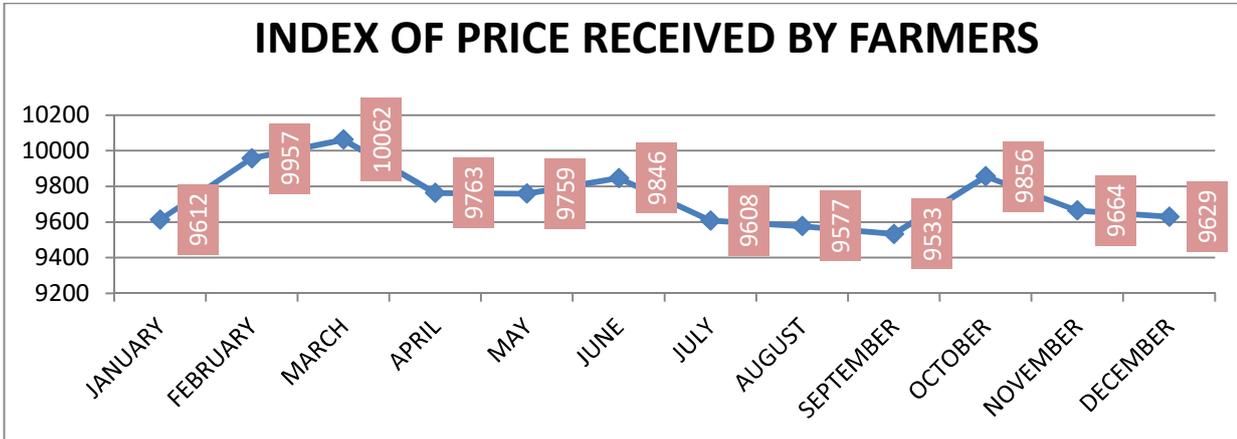

The Index of Domestic Expenditure remains relatively stable throughout the year, with minor fluctuations. The index remains relatively stable, with values ranging between 8501 (March) and 8881 (July). A noticeable increase occurs from April (8597) to June (8867), suggesting higher domestic costs in this period. It begins in January, drops slightly in March, and peaks in July. A slight reduction during the final months from August to December.

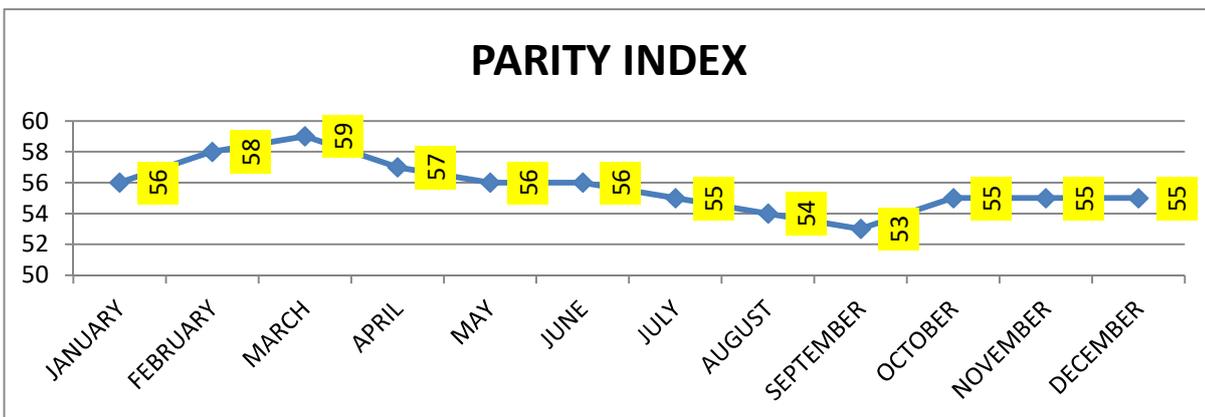

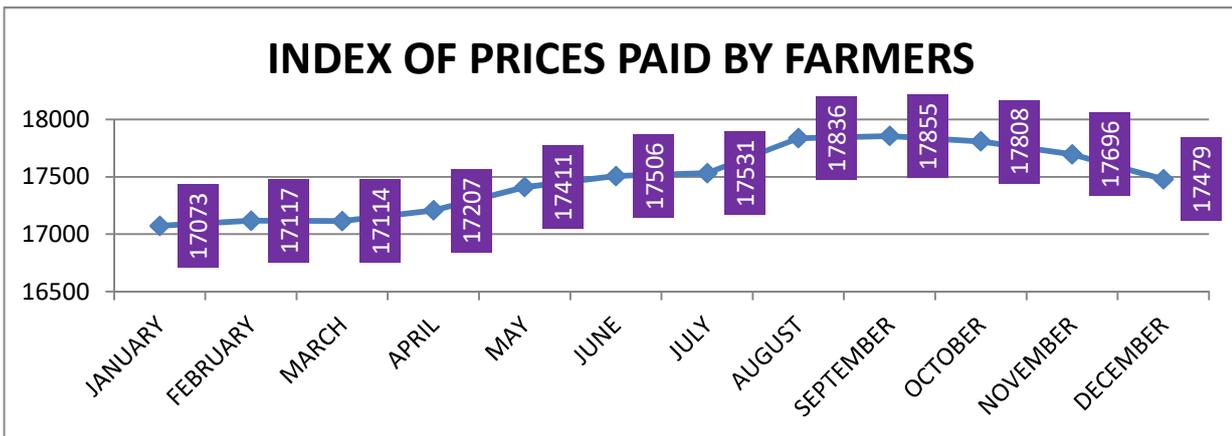

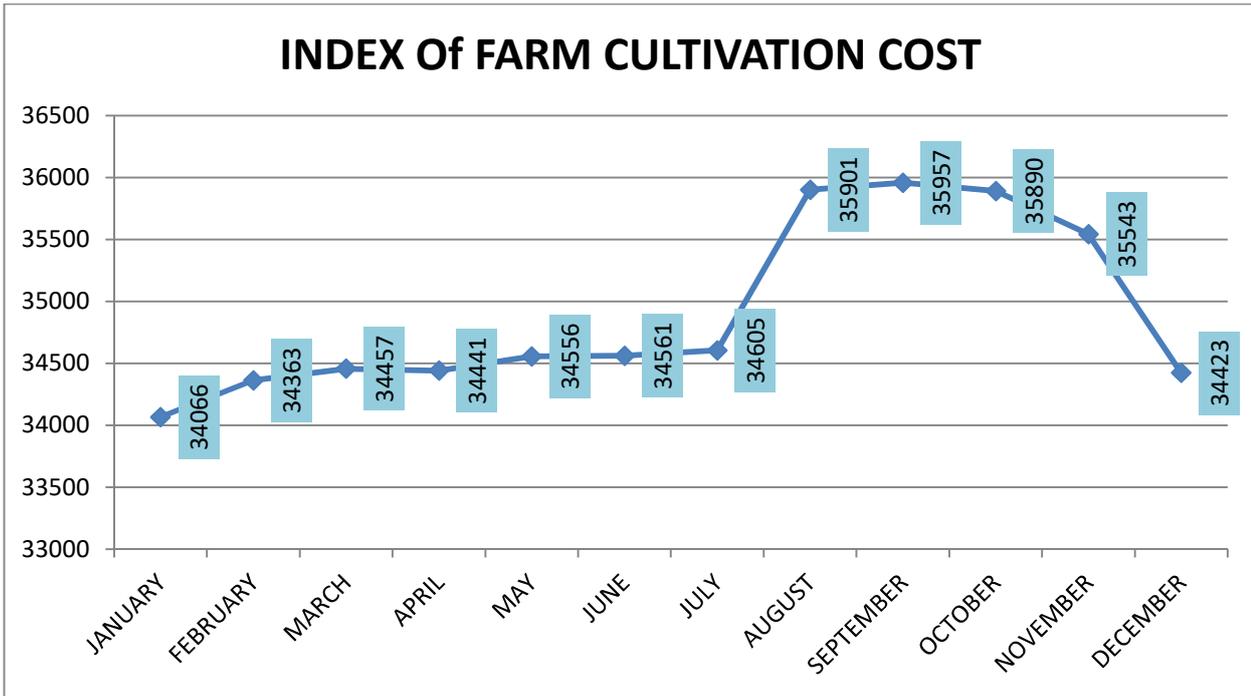

The Index of Farm Cultivation Cost increases consistently during the year. It starts in January and reaches its peak in September. The cost of farm cultivation shows a steady upward trend, peaking in September (35957). There is a significant rise in August (35901) and September. The index shows a slight decline in October and November before ending in December. The data highlights a steady cost escalation until September, followed by a slight reduction during the final months.

The Index of Prices Paid by Farmers steadily rises during the year. The prices paid by farmers for goods and services rise consistently throughout the year, peaking in September (17855). A slight decline occurs in the last quarter, with the index ending in December. This upward trend indicates an increasing financial burden on farmers as the year progresses.

The Parity Index, which measures the ratio of prices received to prices paid by farmers, shows a consistent downward trend. The parity index starts at 56 in January, peaks in March (59), and gradually declines to 53 in September. The index stabilizes from October to December. This trend reveals that farmers face narrowing margins, particularly during the middle of the year.

Table 05 illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

COMMODITY WISE WHOLESALE PRICE INDEX FOR THE YEAR 2022-KERALA

RICE: The WPI for rice demonstrates a consistent upward trend throughout the year. Starting at 123.7 in January, it peaks in November at 155.5 before slightly declining to 154.4 in December. It begins in January and peaks in November. A slight drop occurs in December

Tur Dal: The index of Tur Dal remains relatively stable in the first half of the year, fluctuating between 68.5 and 70. It experiences a significant rise in August (78.9) and peaks in November at 82.3, likely due to seasonal factors or supply constraints.

Banana: The WPI for banana fluctuates significantly, peaking in March (152.1) and again in June (181). A notable drop occurs in October (144.3).

Pineapple: The Pineapple index is highly volatile. The index shows high volatility, with a sharp rise in March (180) and August (215.9). Prices stabilize toward the end of the year, settling at 136.9 in December.

Mango: Mango prices follow a seasonal pattern, peaking in February (231.5) and August (186.8). The index drops significantly in December (112.5).

Tapioca: The WPI for tapioca shows a continuous increase from January (134.1) to September (270.5), highlighting rising costs or scarcity.

A slight decline occurs in the final months, settling at 231.9 in December.

Coconut: The WPI for coconut remains stable throughout the year, fluctuating between 133.9 and 146.6. Copra prices decline steadily in the first half, from 149.5 in January to 128.9 in September, before stabilizing in December at 135.3.

Pepper and Turmeric show minimal fluctuations, with pepper remaining relatively steady between 74.4 and 78.1. Turmeric experiences a gradual decline in the first half, reaching its lowest at 79.4 in August before recovering slightly to 84.9 in December.

Rubber: Rubber prices peak in June (159.5) but show a significant decline in the second half, ending at 123.7 in December. This drop could be linked to global market trends or reduced demand.

Coffee: Coffee prices steadily rise throughout the year, peaking in October (171) before settling at 154.6 in December.

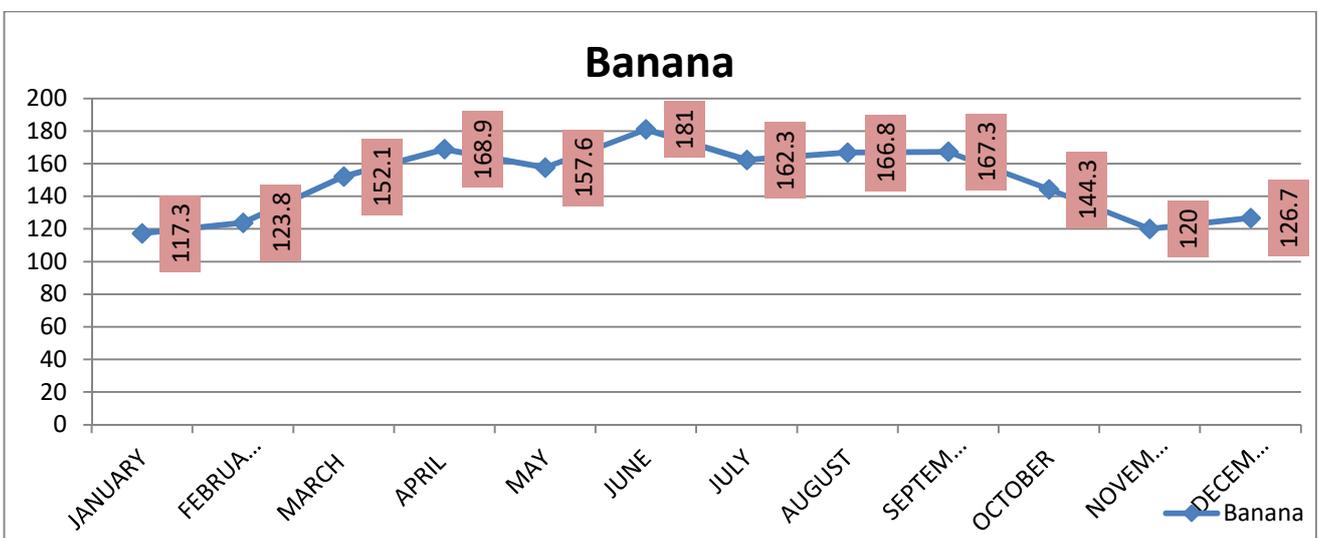

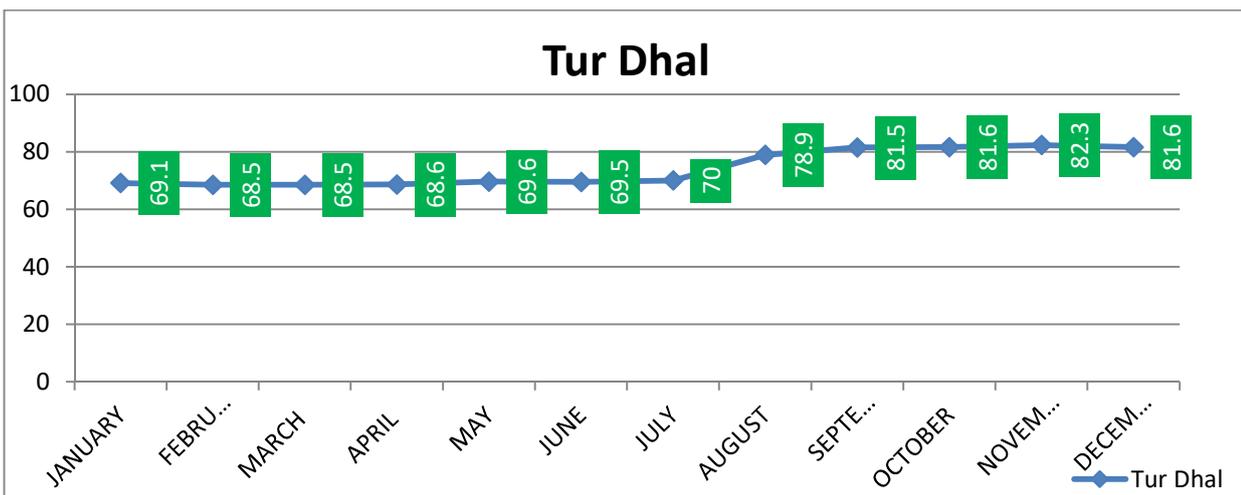

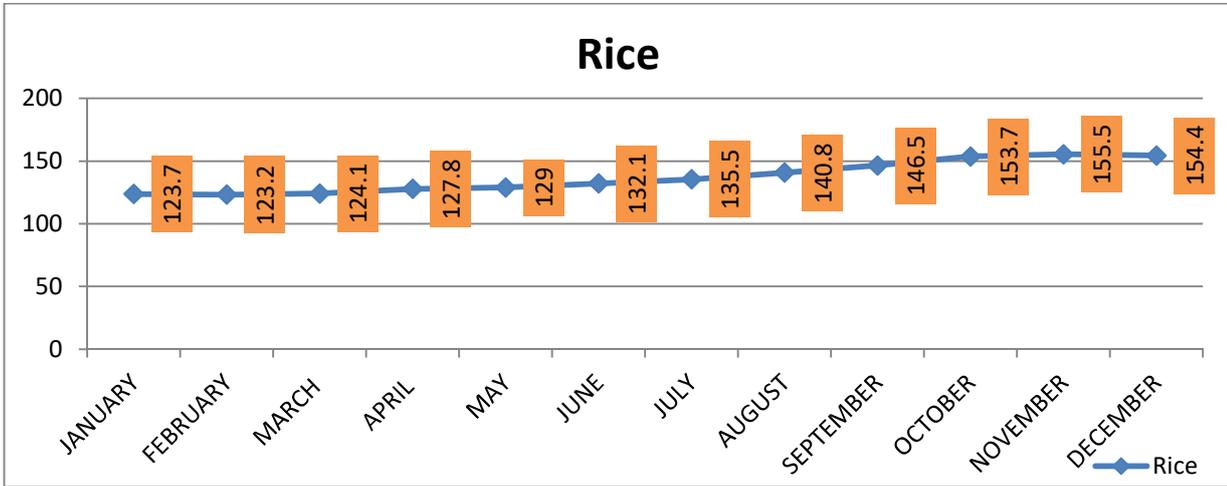

Tea: Tea prices are more volatile, with highs in April (146.5) and lows in December (118.5).

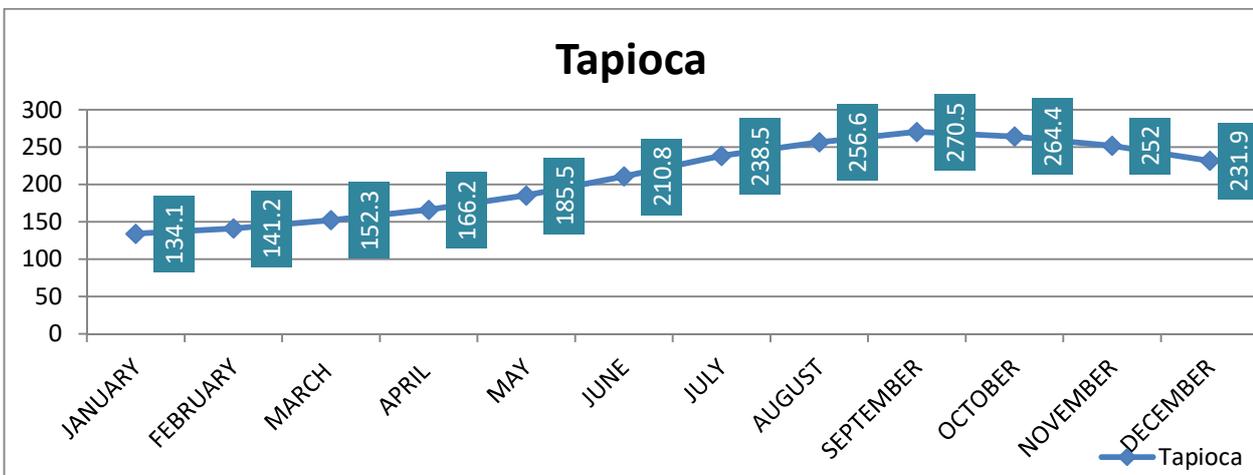

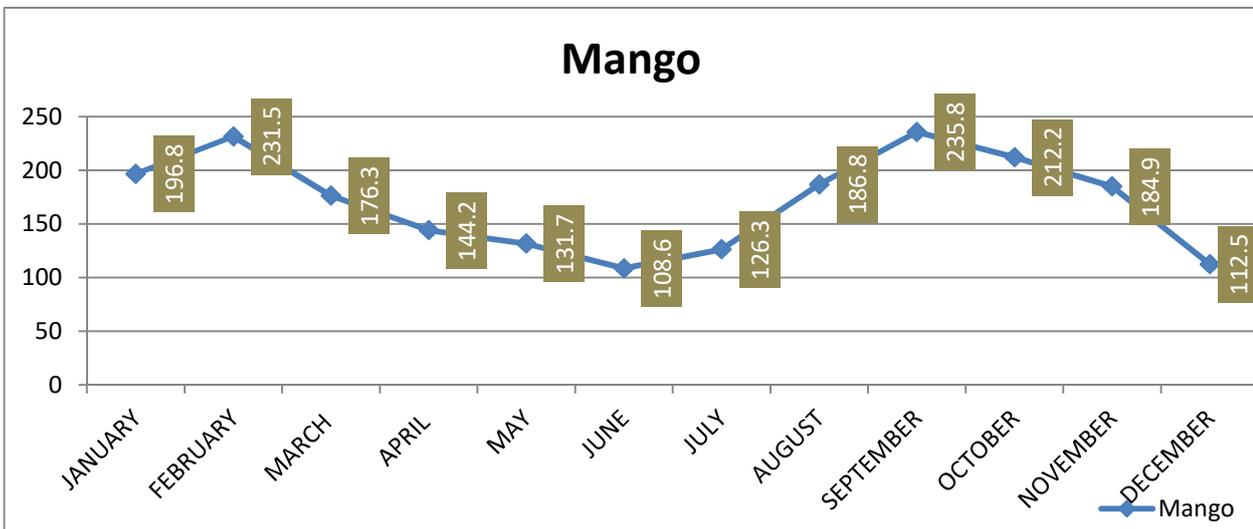

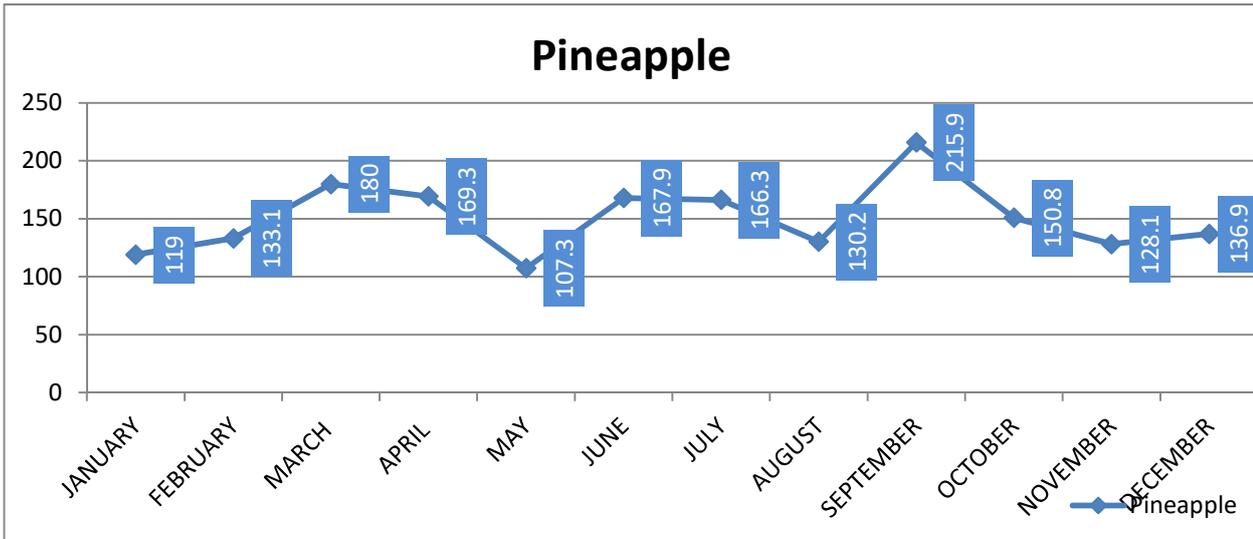

Arecanut: Arecanut shows sharp increases from January (185.7) to August (286.8), followed by a steep drop to 174.5 in December.

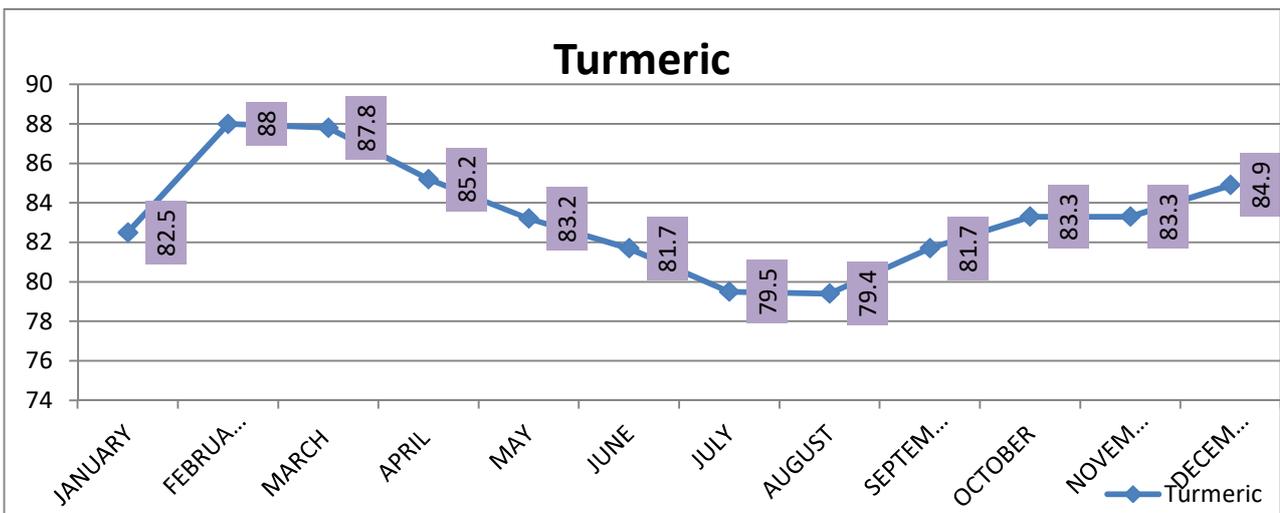

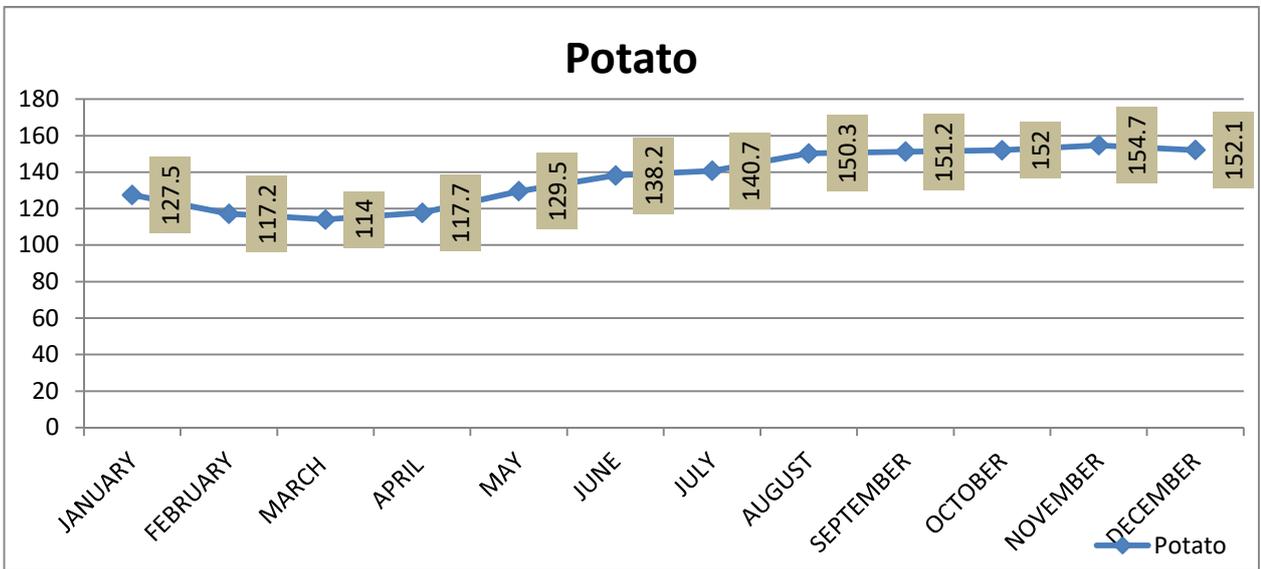

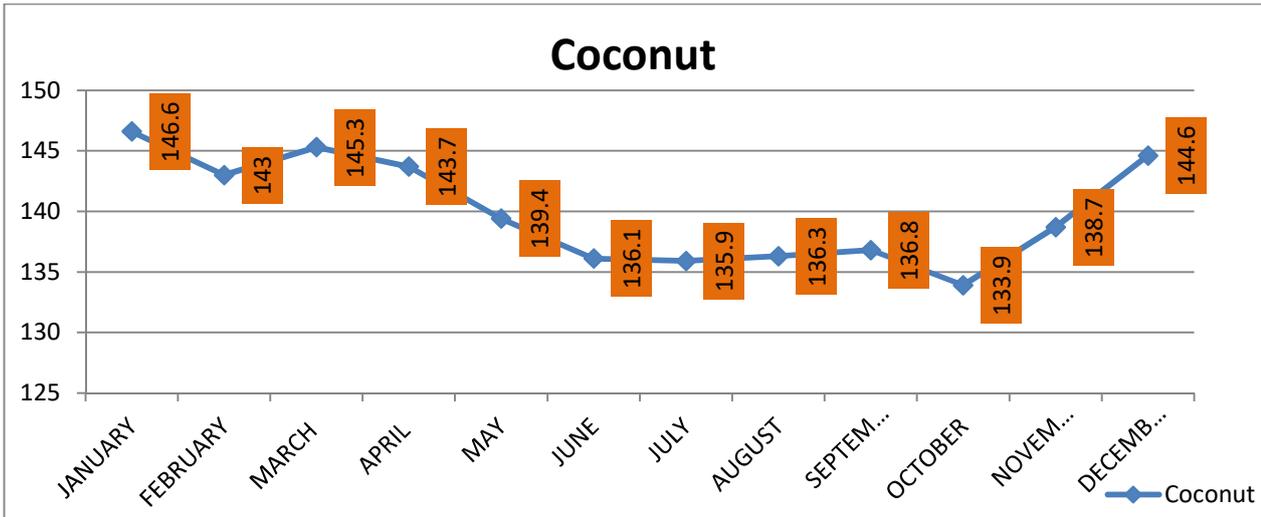

Dried Chilli: Dried Chilli prices rise consistently, peaking in November (229.1) before dropping slightly in December (213.3).

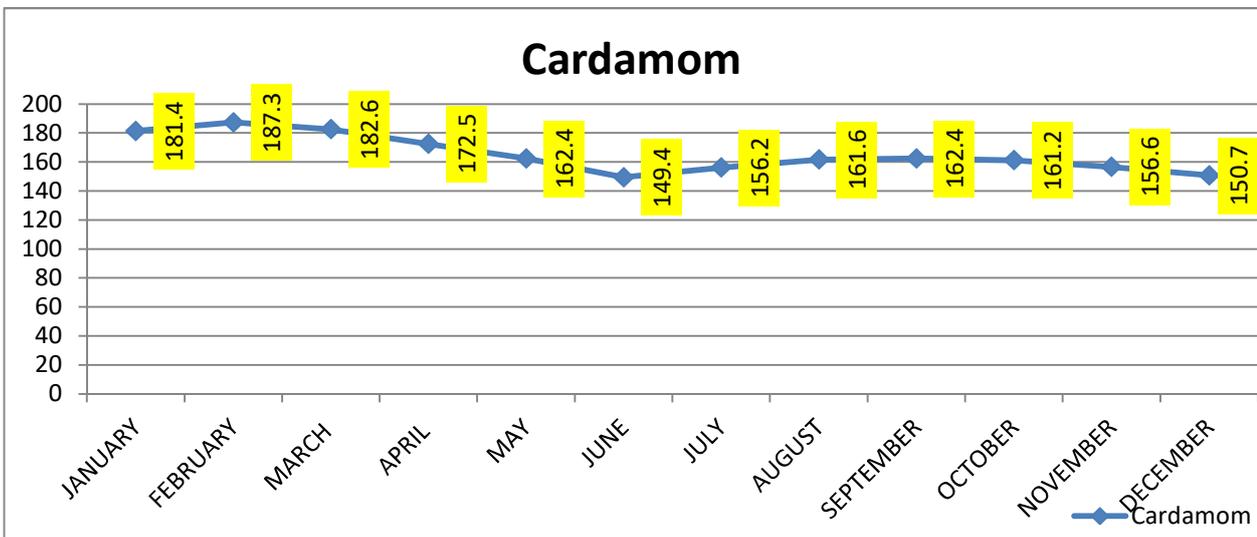

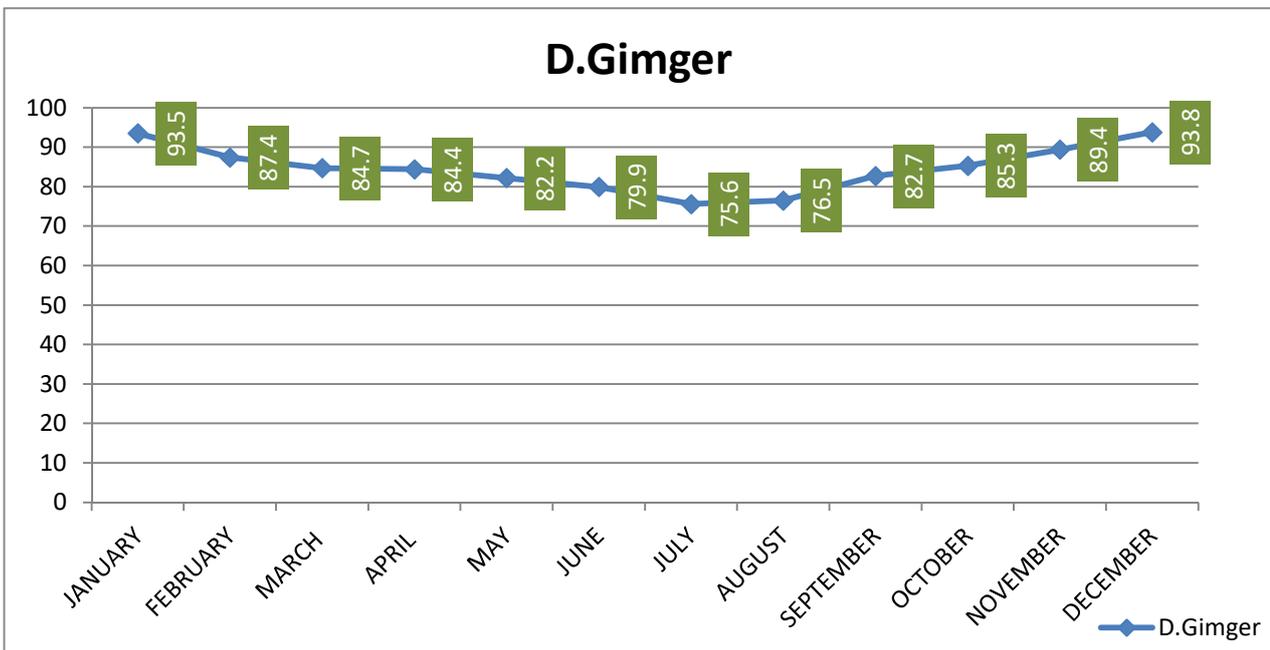

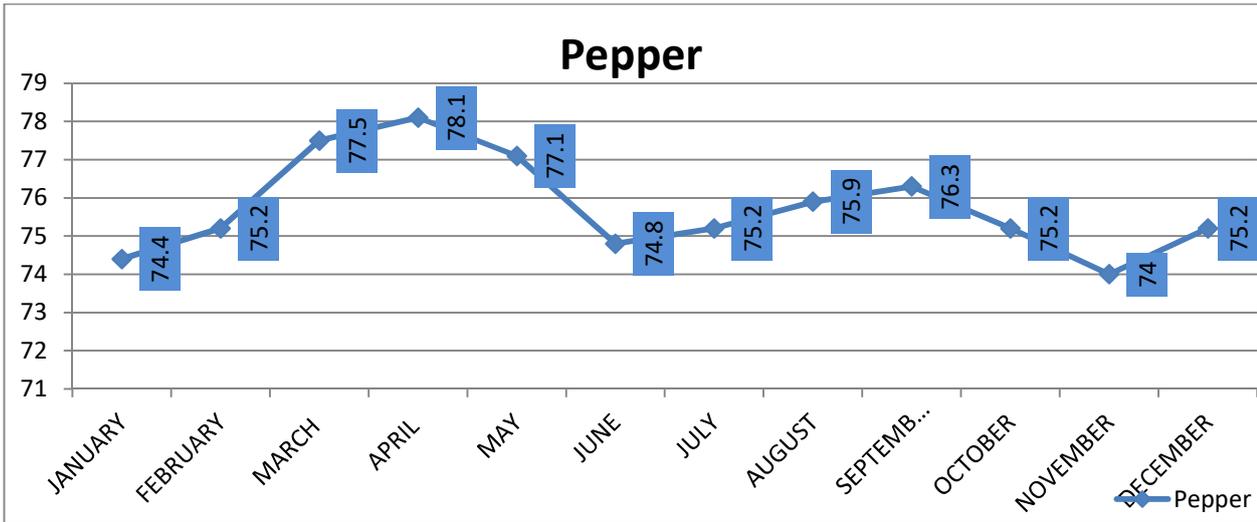

Betel Leaves: Betel Leaves show significant price fluctuations, peaking in March (165.4) and stabilizing toward the end of the year (145.5).

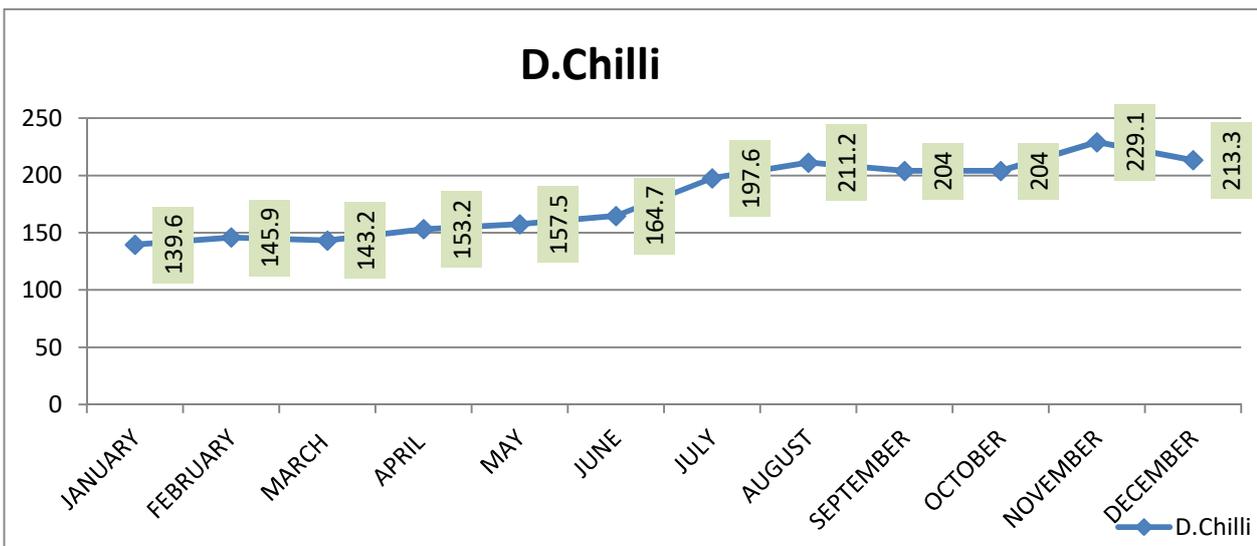

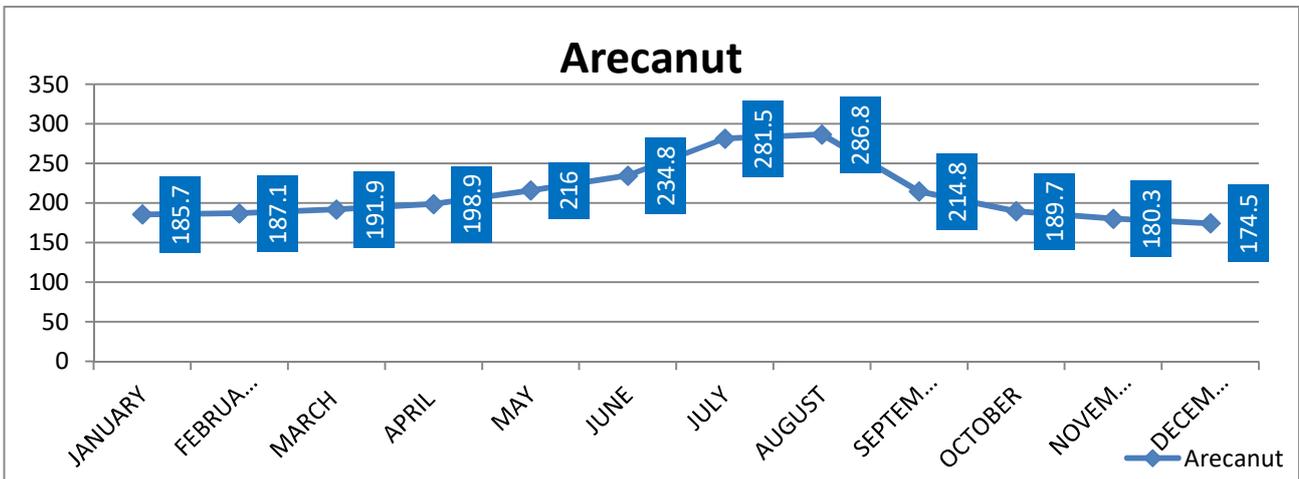

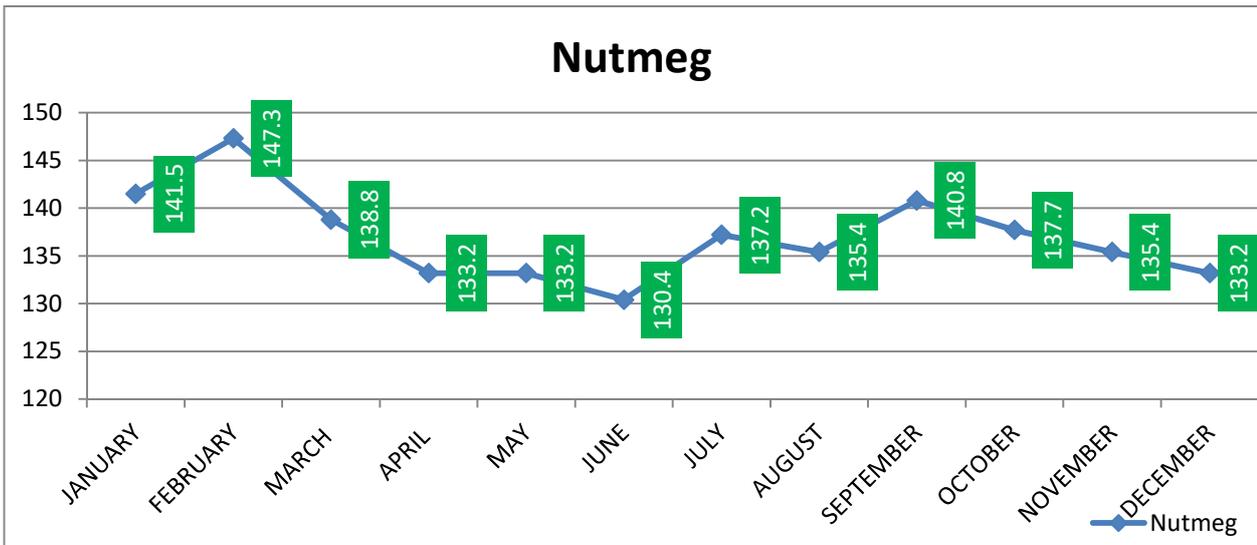

Table 06 illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

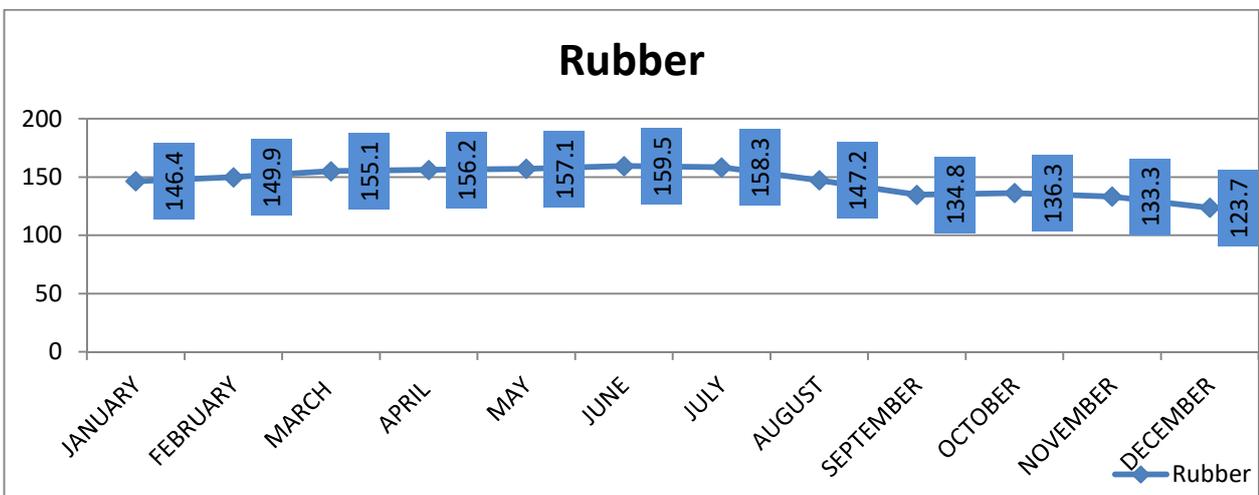

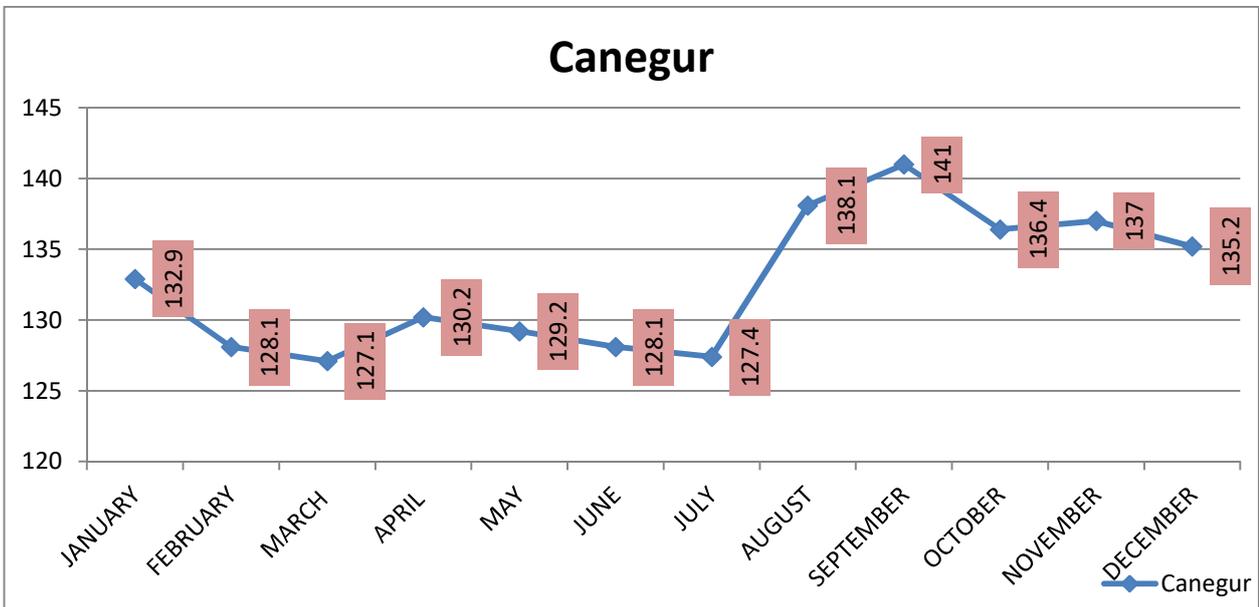

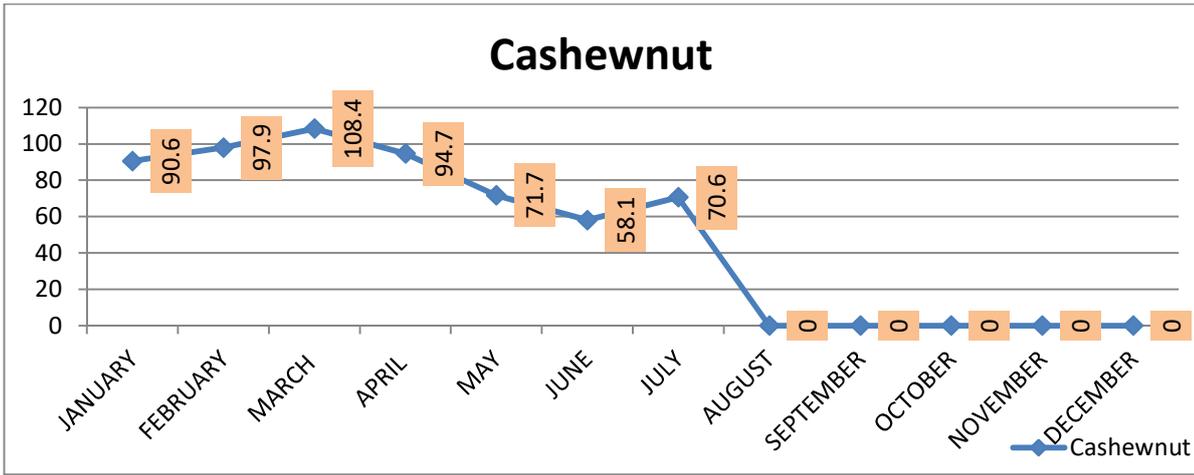

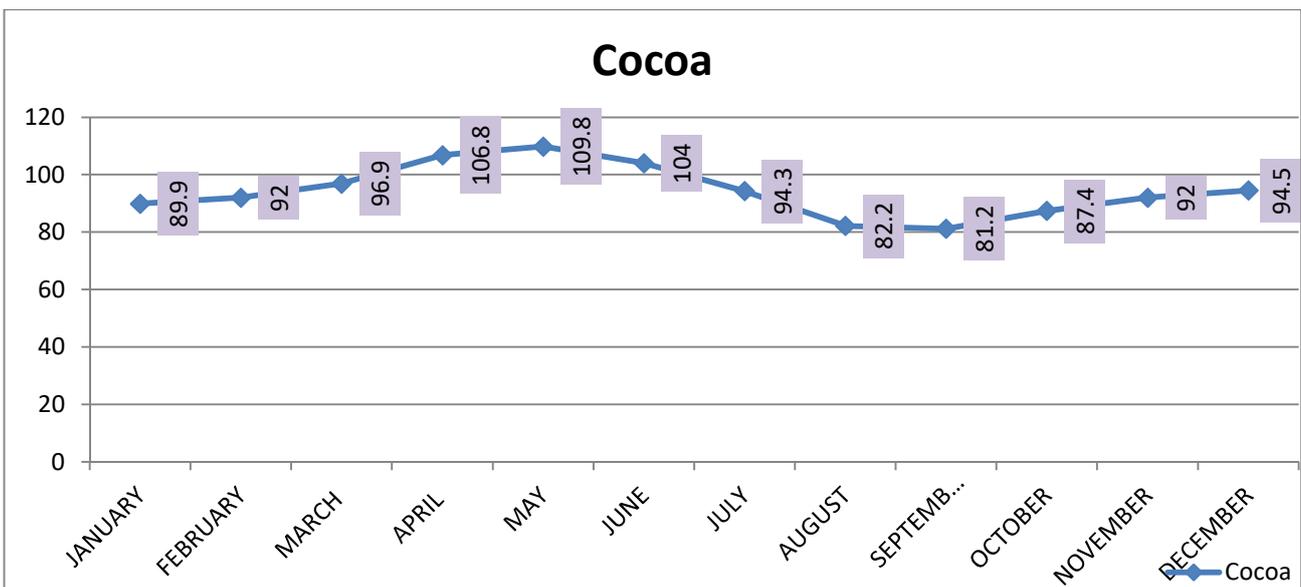

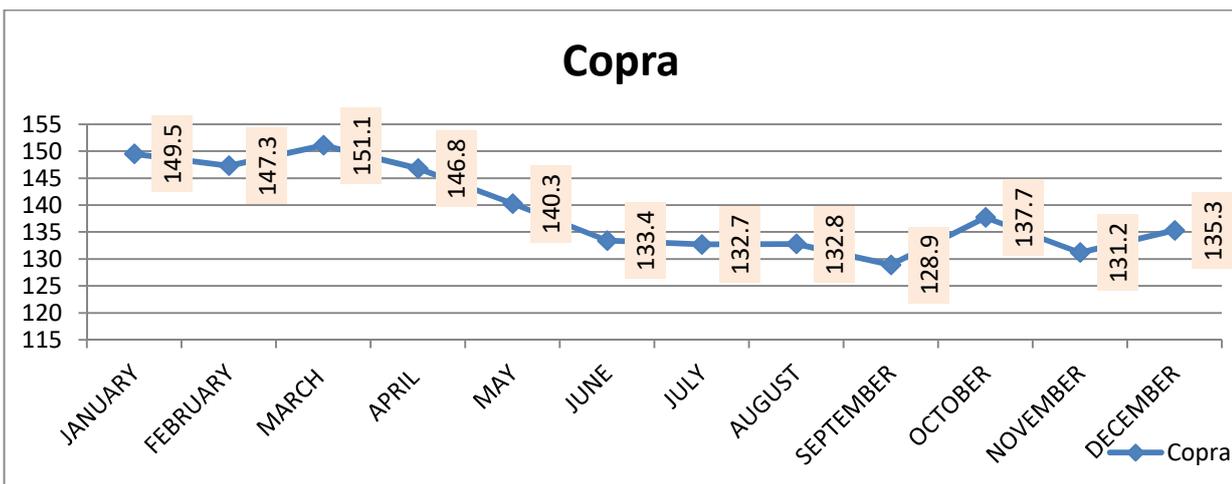

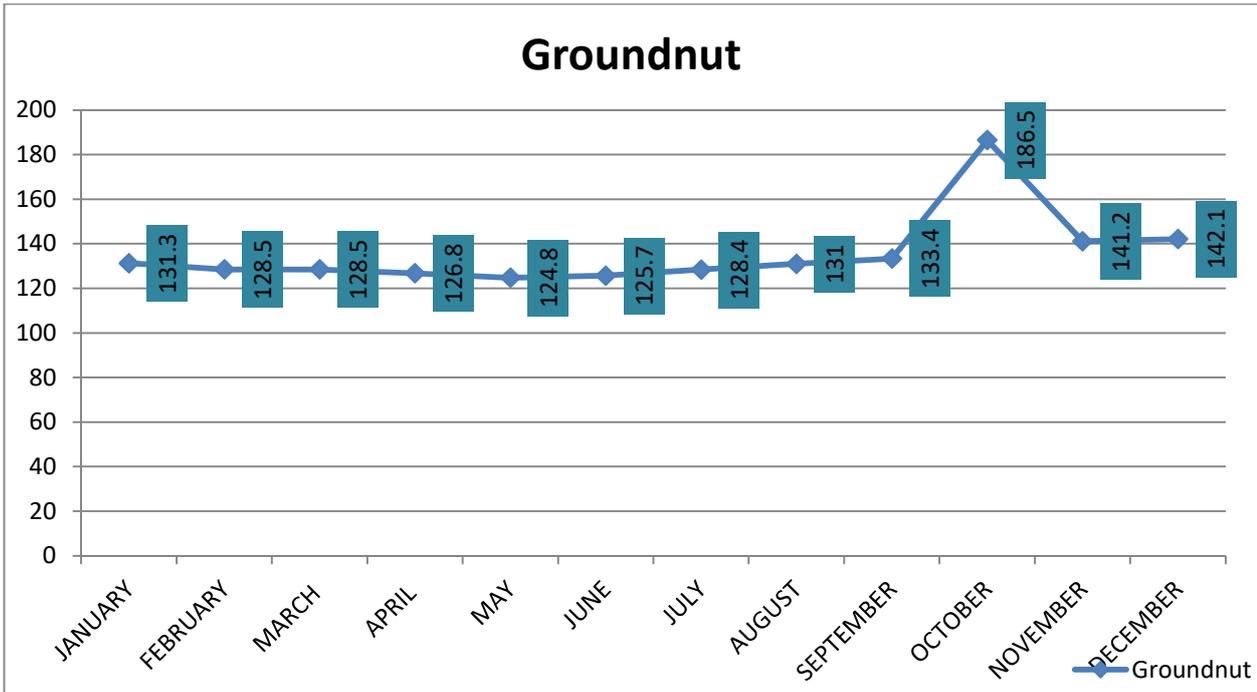

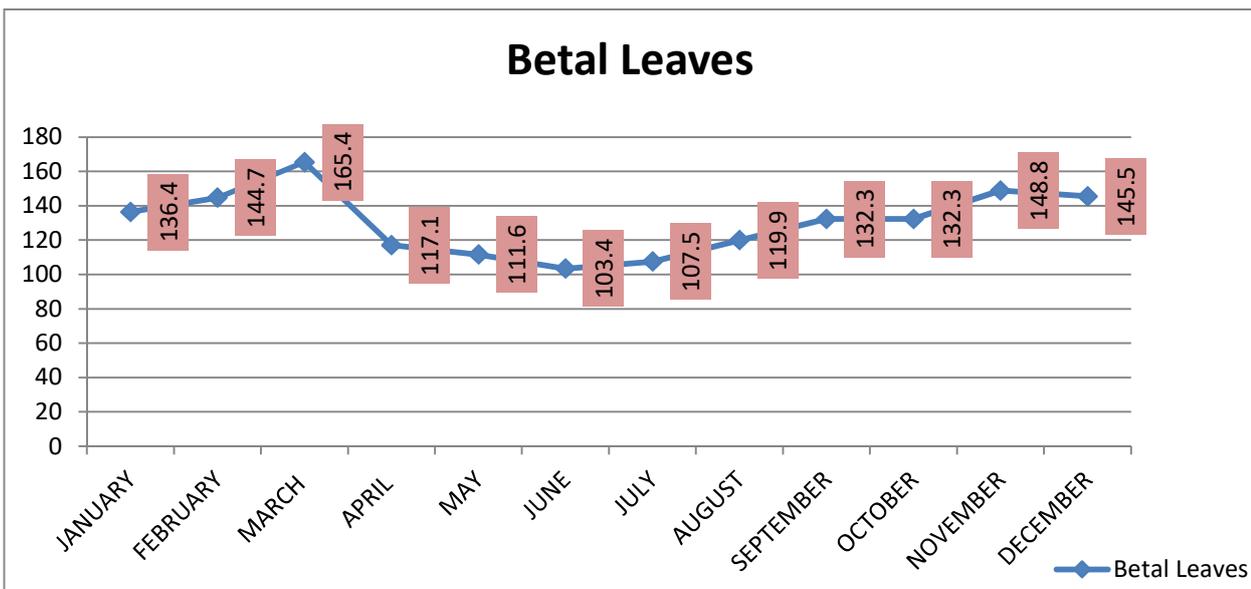

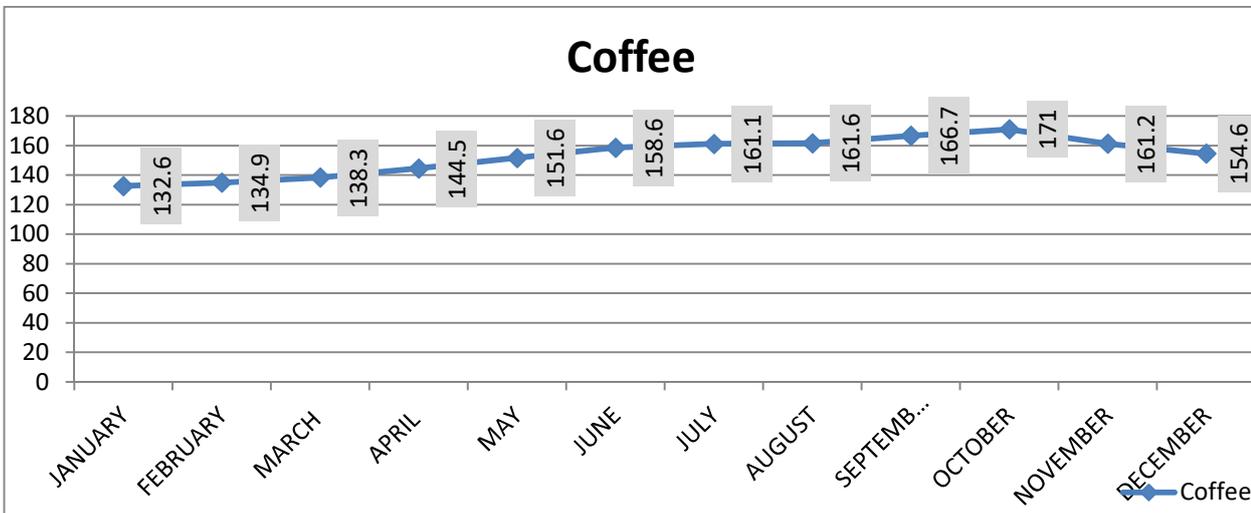

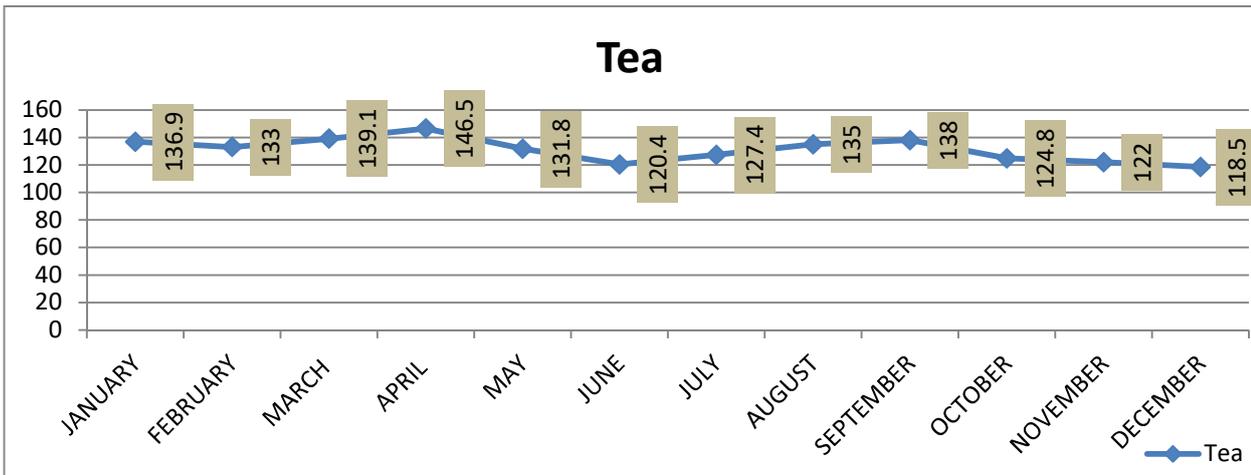

GROUPWISE WHOLESALE PRICE INDEX FOR THE YEAR 2022

The WPI for food crops shows significant variability across the months. It peaks in September at 165.62, reflecting the highest price levels during the year. In contrast, the lowest value is recorded in February at 126.06, indicating price stabilization in early 2022. The Food Crops Index starts in January and declines slightly in March. It rises steadily from May and peaks in September. After September, the index drops gradually, ending in December. This indicates that food crop production or prices strengthen mid-year before slowing down toward the year-end.

The Cereals Index begins in January and shows a consistent rise throughout the year, starting at 123.7 in January and reaching its highest point in November at 155.5, upward trend throughout the year, peaking in November before a slight dip in December. This upward movement reflects stable growth in the production or price of cereals.

The Pulses Index remains relatively stable during the first half of the year, starting in January and hovering until June. A sharp rise occurs in August and peaks in November. The index slightly stabilizes in December. The WPI for pulses remains relatively stable, fluctuating within a narrow range between 68.5 (February and March) and 82.3 (November). The highest value suggests price growth towards the year-end.

The Fruits and Vegetables Index displays significant fluctuations. It starts in January and steady growth until September. The index rises steadily, peaking in September before declining in December. This suggests strong mid-year performance.

The Condiments and Spices Index starts in January but drops sharply in February. It remains stable through April to June and rises again in July and August. A decline follows in the last quarter ending in December. The Commercial Crops Index starts in January and peaks in April to July, then begins a gradual decline, ending in December.

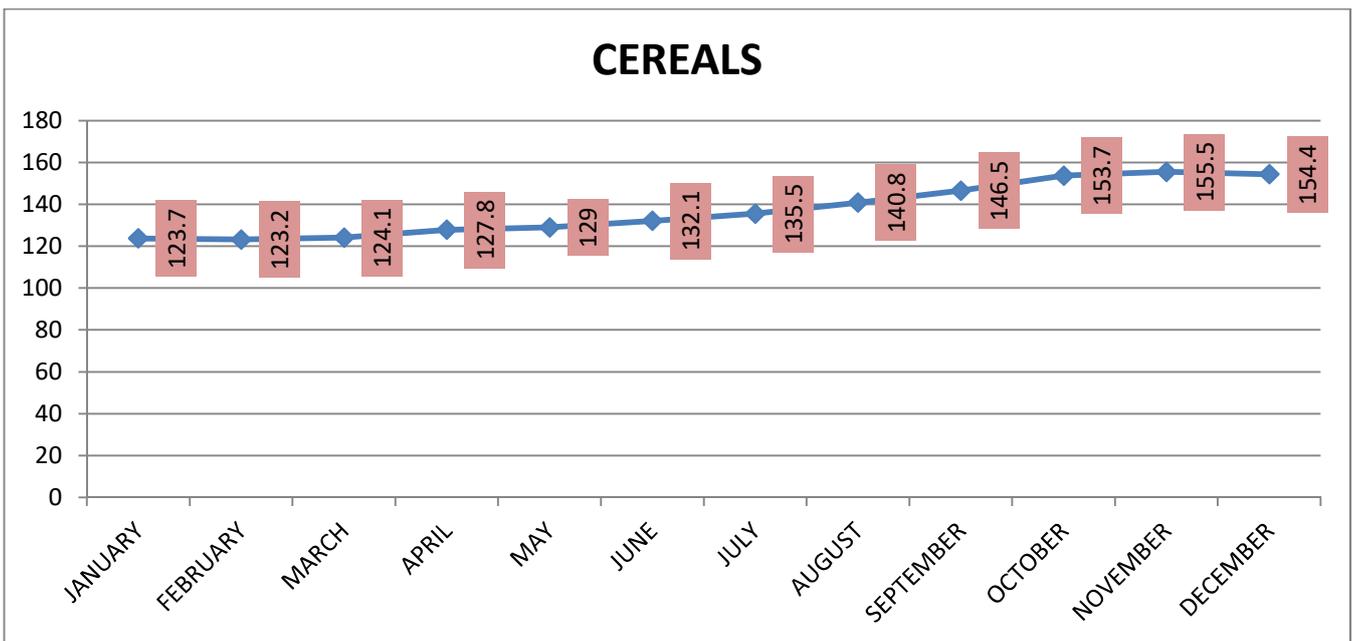

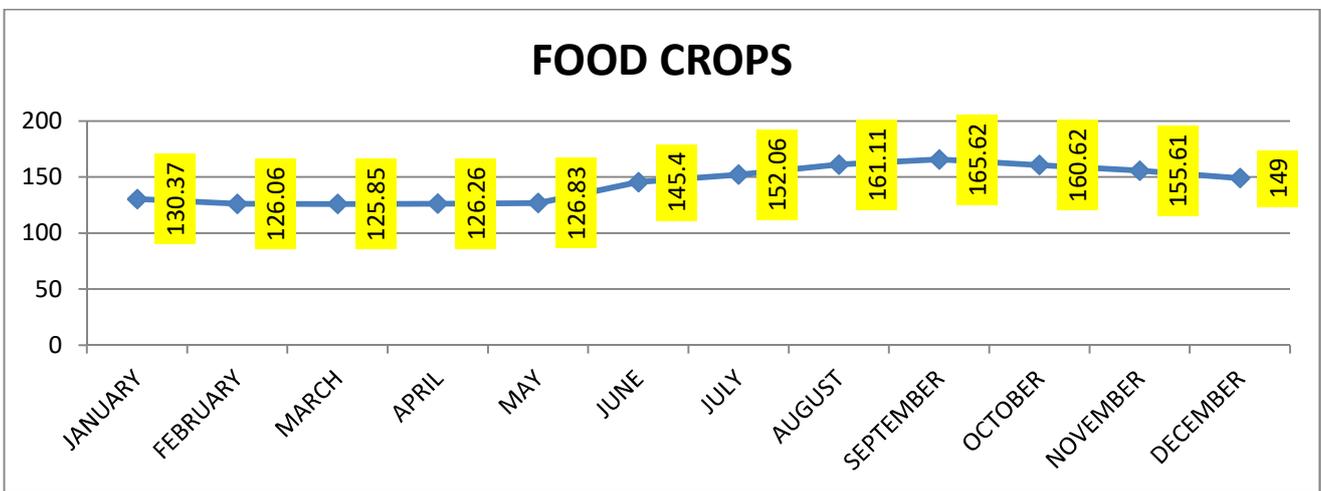

The WPI for oil seeds exhibits a steady decline after peaking at 149.42 in January. By October, it reaches its lowest point at 123.36; it recovers slightly in November and December, possibly influenced by changing market dynamics or production levels. This consistent decline indicates challenges in oilseed production or market demand throughout the year.

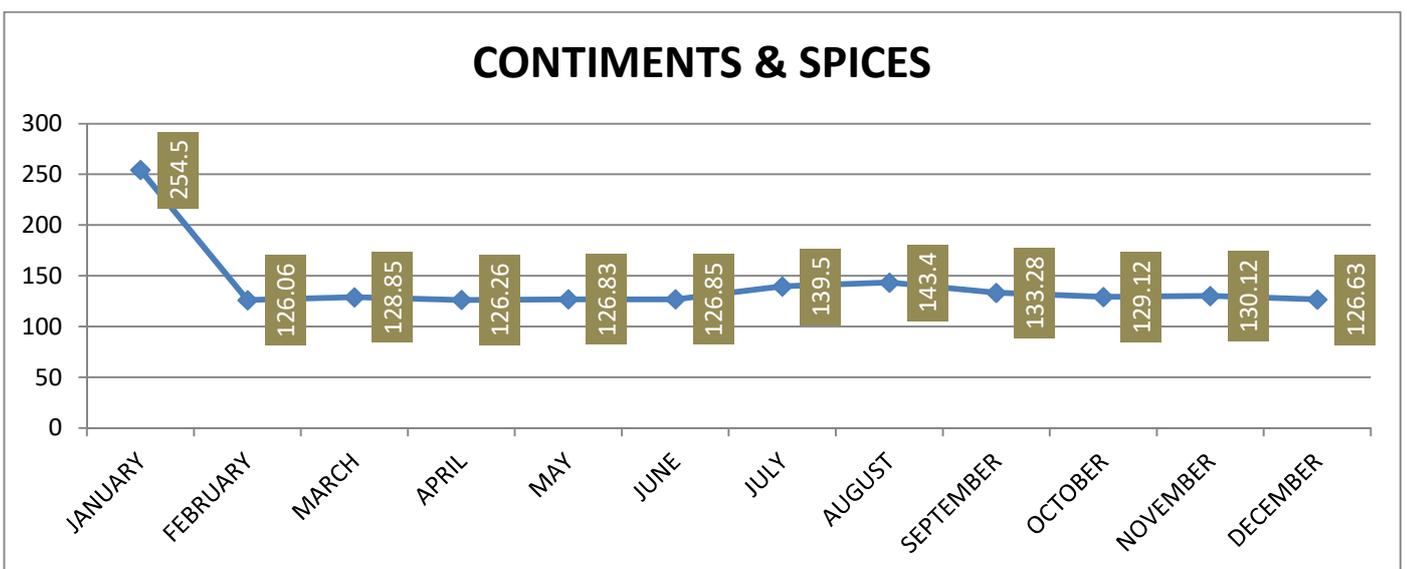

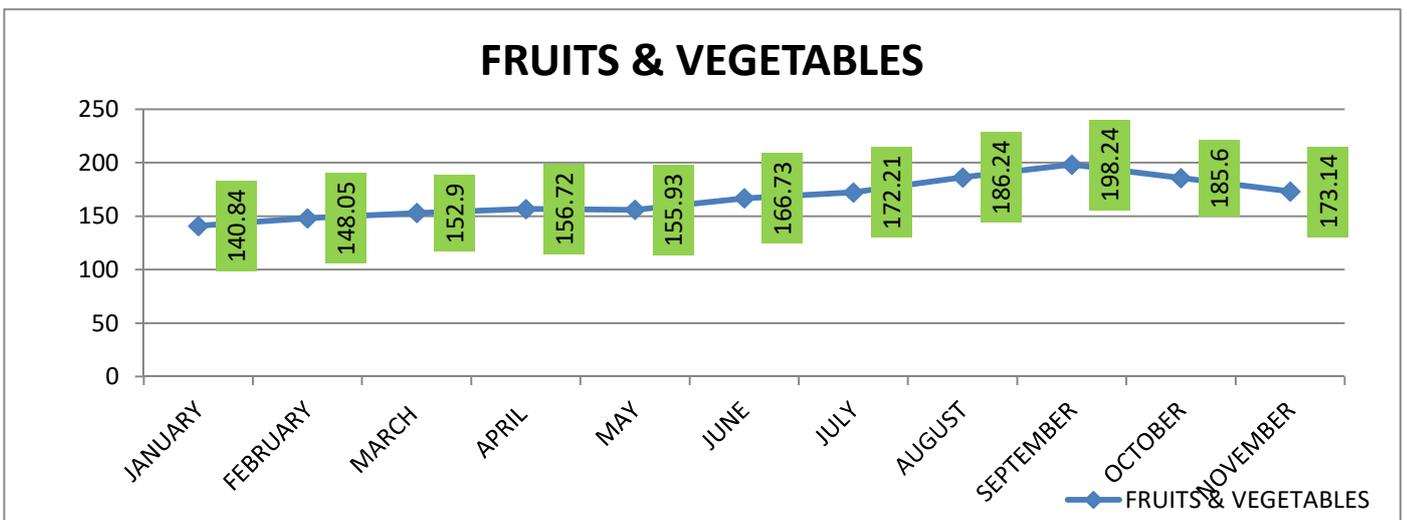

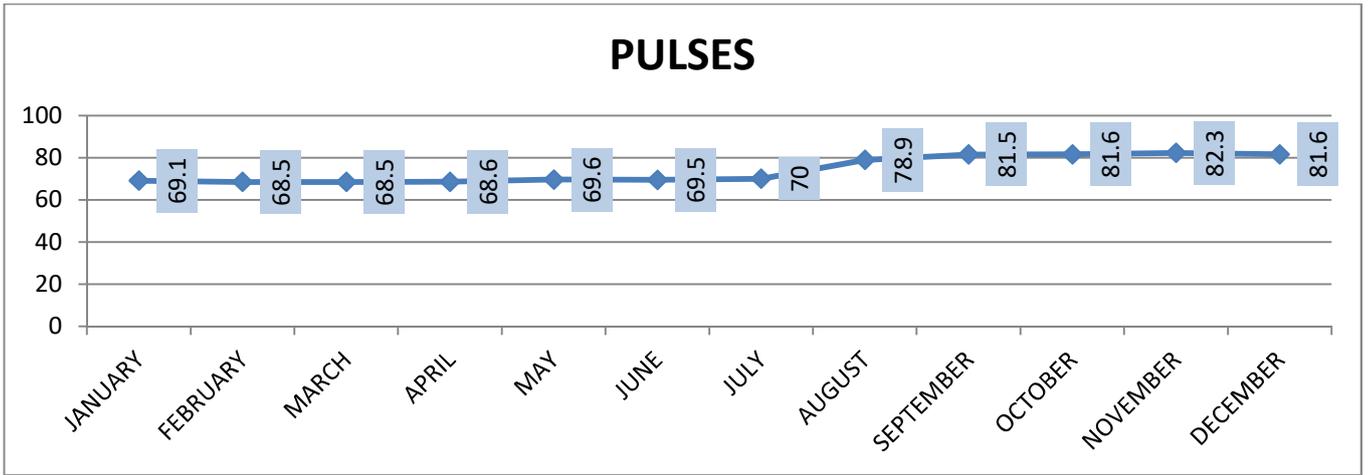

The Beverages Index starts in January and rises in April. It fluctuates through the year, peaking in September before ending in December. The beverages category demonstrates moderate fluctuation, with values ranging from 131.93 in February to a peak of 147.02 in September. The

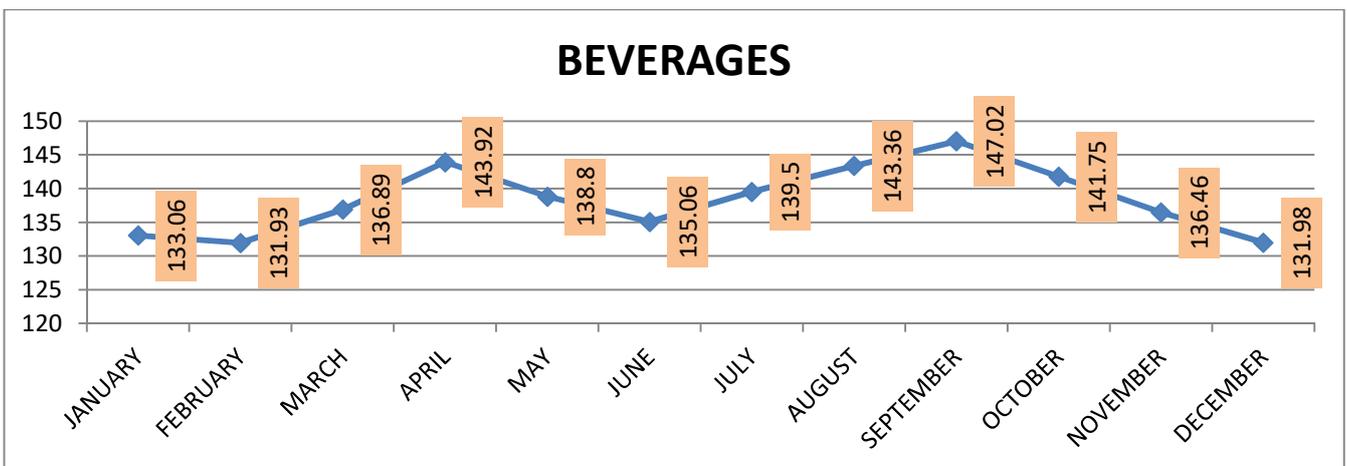

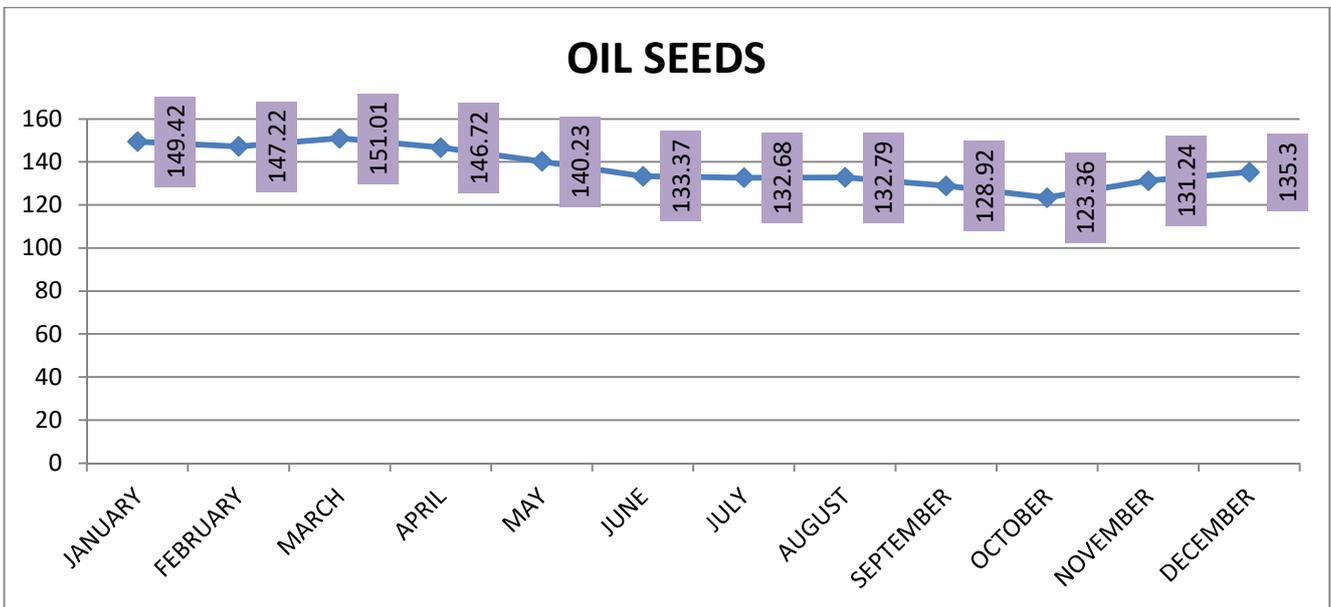

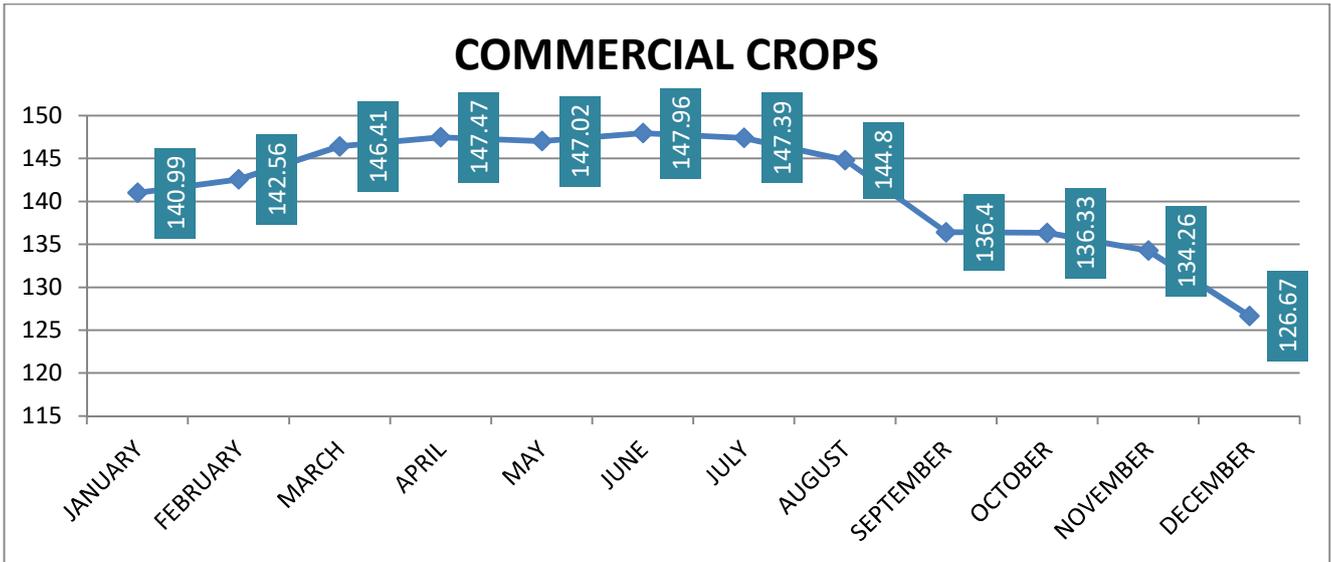

Other Non-Food Items Index fluctuates significantly throughout the year. It starts in January, drops to its lowest point in June and recovers in November. The irregular trend indicates inconsistent production or demand for non-food items.

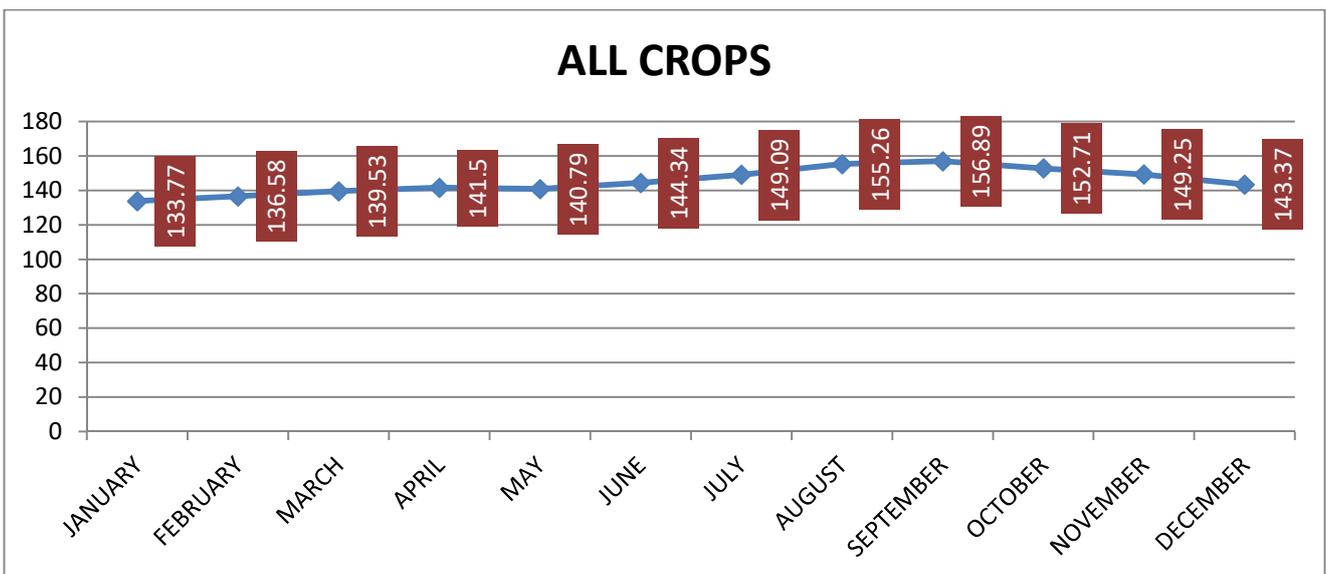

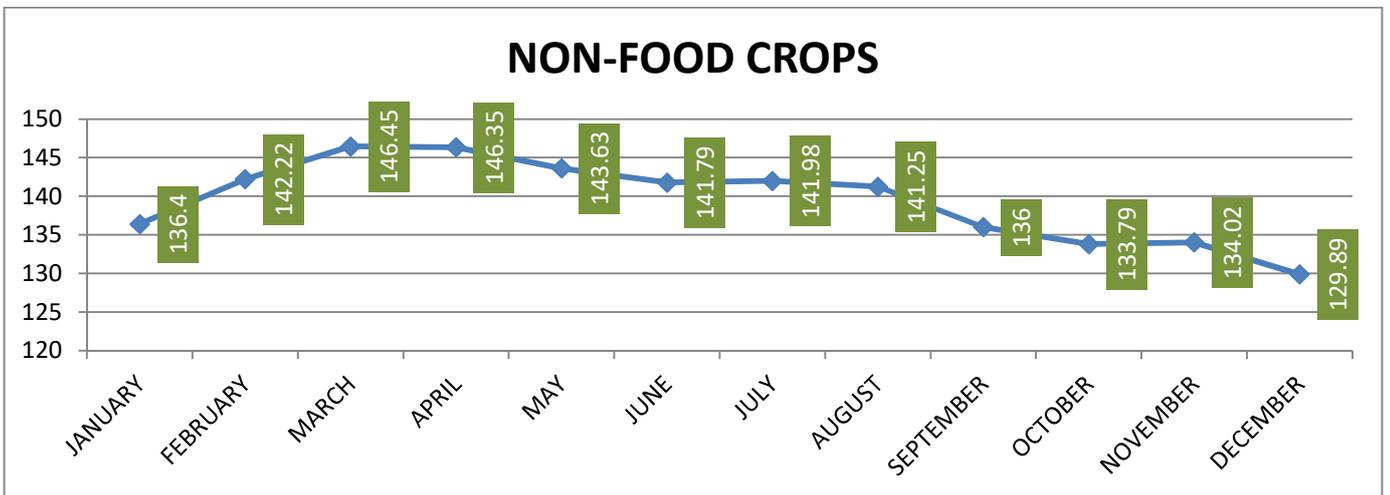

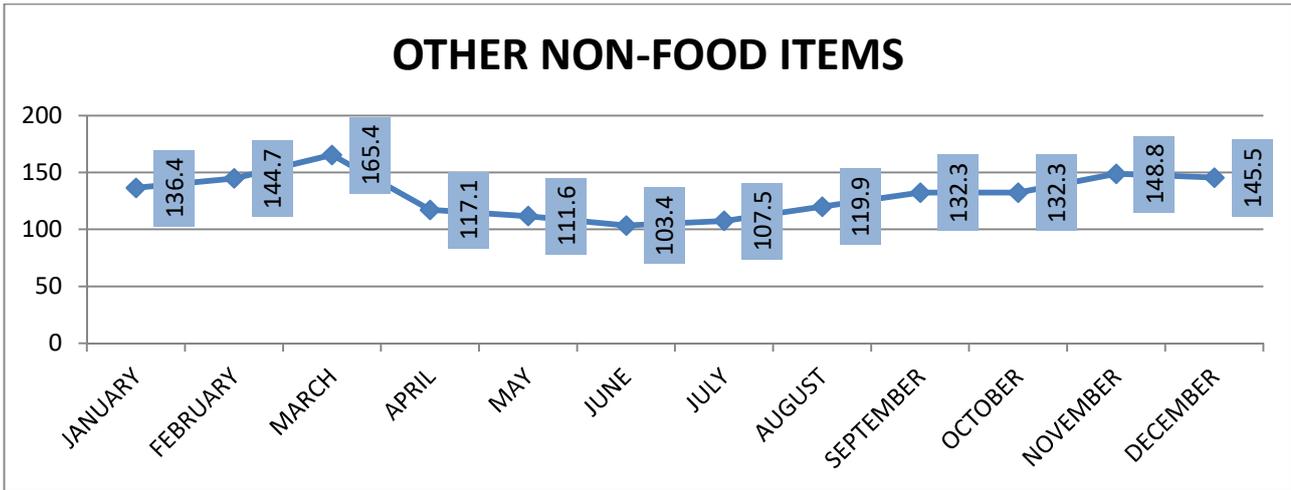

The Non-Food Crops Index begins in January and peaks in March. A slow decline follows, reaching in December. This indicates a steady reduction in non-food crop performance over the year. The All Crops Index starts in January and rises consistently through September peaking it then declines slightly ending in December. This trend shows overall growth in agricultural performance until September, followed by a slight year-end slowdown.

Table 07 illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

INDEX NUMBER OF WAGES FOR SKILLED WORKERS AND AGRICULTURAL WORKERS 2022

Skilled Labour: The carpenter: The wage index for carpenters starts at 107.2 in January and gradually increases, reaching 111.9 by December. This steady increase suggests an overall upward trend in wages, likely reflecting growing demand or inflation adjustments.

The mason: The mason wage index follows a similar pattern, starting at 106.6 in January and rising to 111.1 in December. This steady growth indicates consistent demand for masonry work, with minor fluctuations across the months.

.Paddy Field Labour: Bunding (Men): The index begins at 111.6 in January and increases to 115.4 by December. This gradual rise reflects stable wage growth, possibly due to increasing demand for paddy field activities over time.

Transplanting (Women): The transplanting labour shows starting at 118 in January, the wage index increases to 123.5 by December, indicating a steady rise throughout the year, which may reflect seasonal demand for planting, lower index for women in January and gradually rise to December. The trend shows a steady rise in the demand for women workers in transplanting, indicating that seasonal requirements for women in paddy cultivation might be growing, potentially due to an increase in paddy cultivation area or workforce availability.

Rubber Tapping (Men): This category sees noticeable growth, starting at 117 in January and climbing to 130 by October, where it stabilizes. The increase likely corresponds to heightened demand for rubber tapping during peak seasons. Rubber tapping for men shows a steady increase and consistent starting from January to December. The significant growth in the demand for rubber tapping workers suggests either a higher production of rubber or a growth in the rubber industry, requiring more manpower, remains consistent, and there is likely a constant requirement for labour in this sector, without major fluctuations in demand.

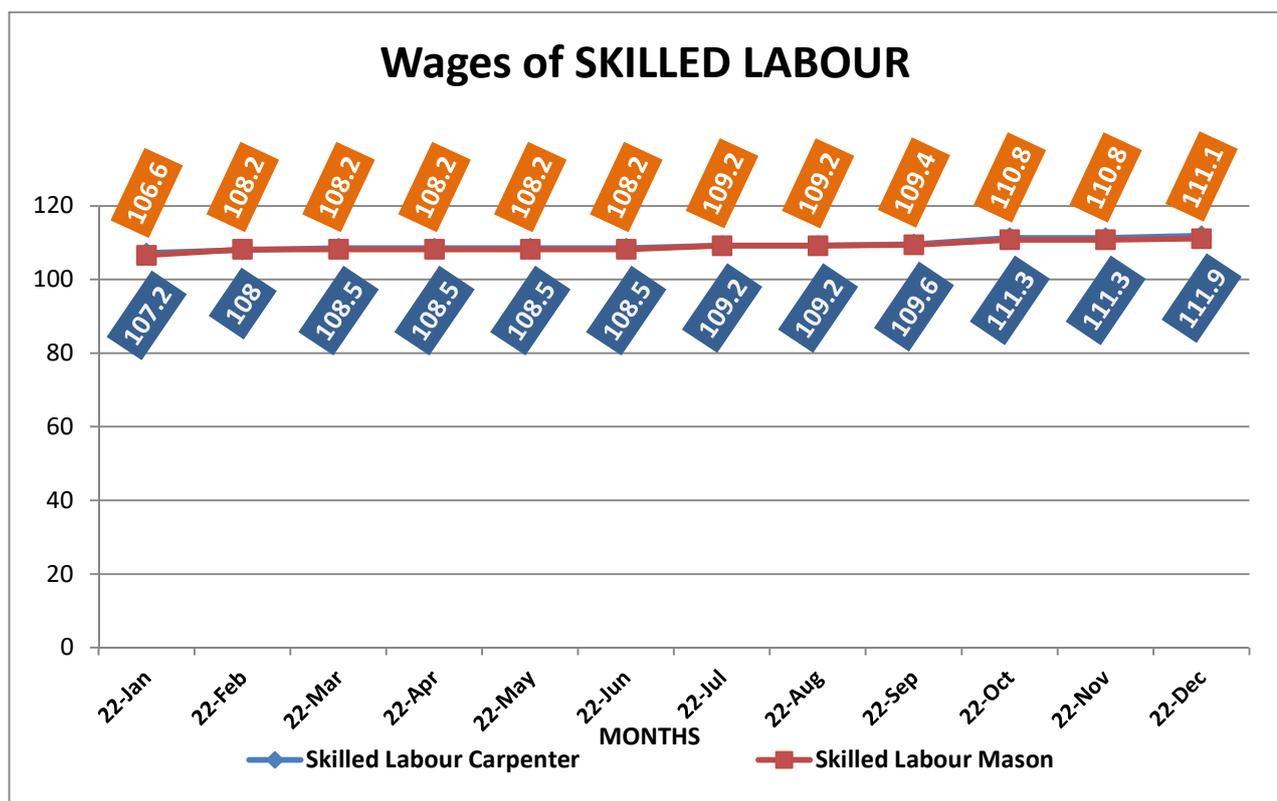

Coconut Plucking (Men): Coconut plucking for men remains relatively stable throughout the year, The index begins at 107.6 and remains relatively stable, showing little variation throughout the year. The index stays close to its starting value, indicating consistent wage levels for coconut plucking.

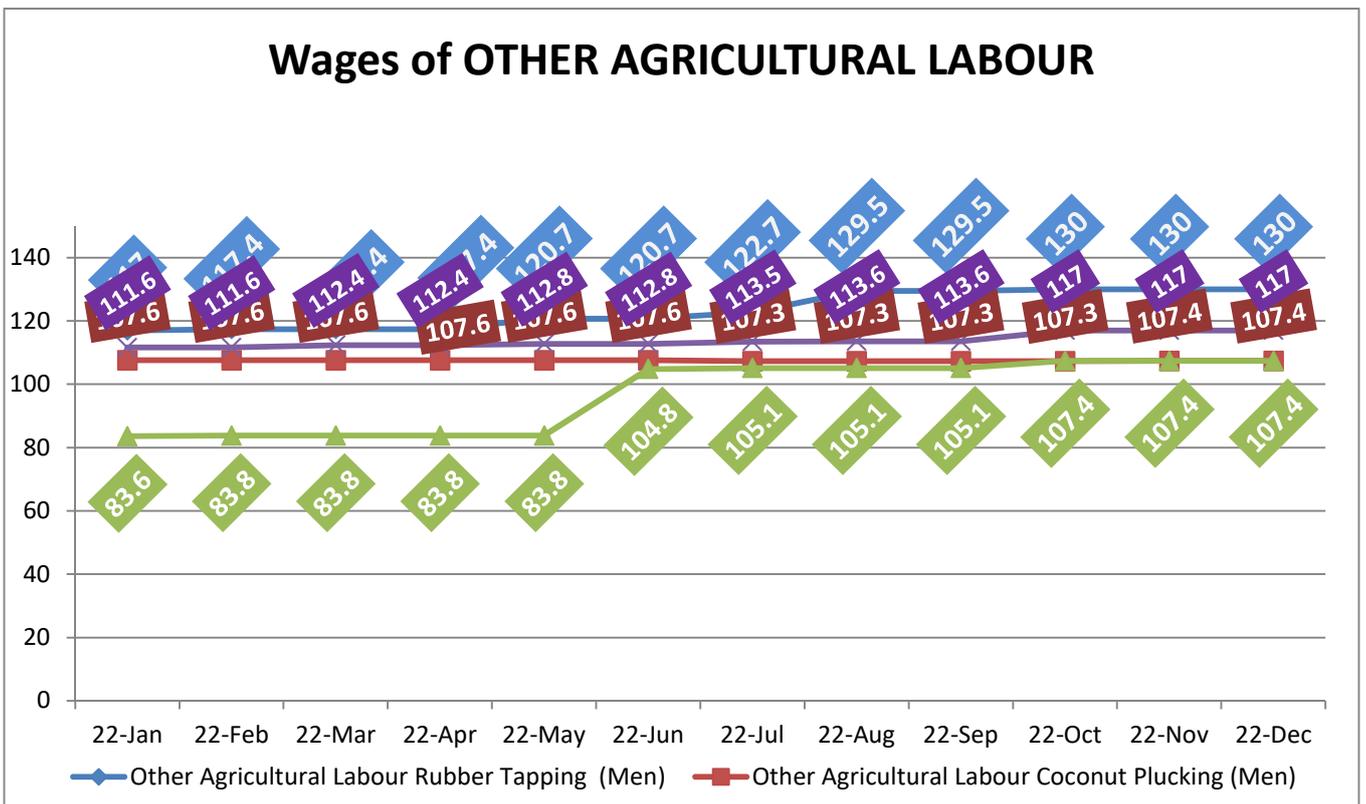

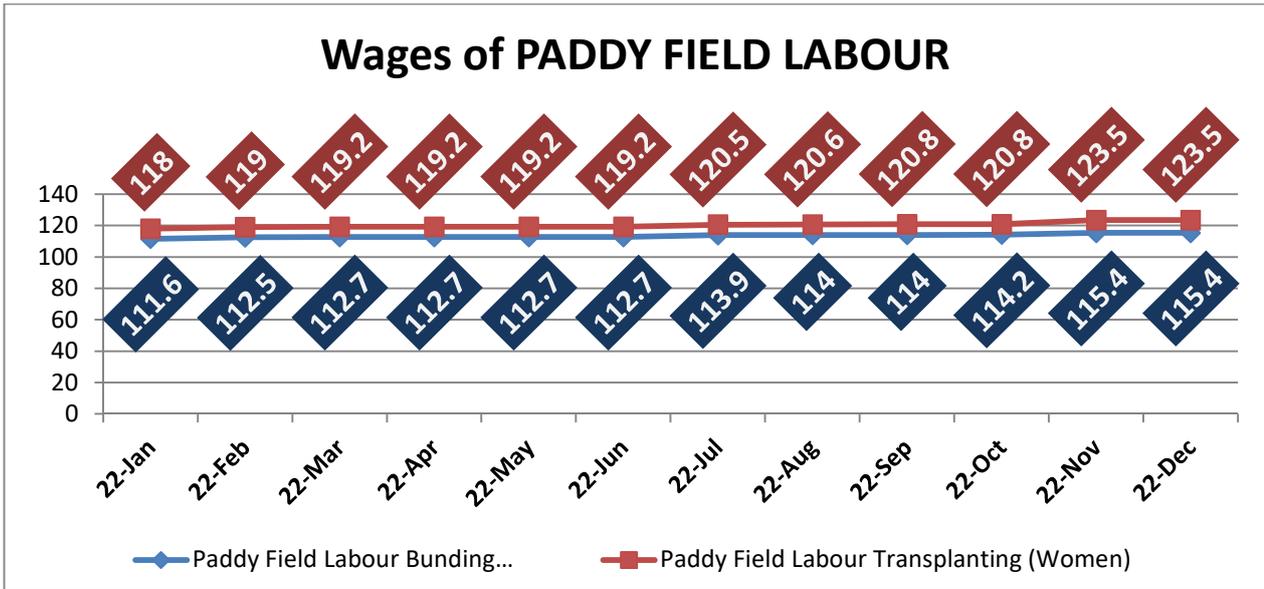

Other Agricultural Labour: Arecanut Plucking (Men): Arecanut plucking sees a small increase, moving from January to December. Starting at 83.6 in January, the wage index rises sharply to 104.8 in June and then increases to 107.4 by December. The rise in demand, especially during the

latter part of the year, might indicate a seasonal peak in arecanut harvesting or a recovery in production.

Head Load (Women): Head load tasks for women show a steady increase from January to December. This category also experiences consistent growth, with the wage index starting at 111.6 in January and rising to 117 by December, The consistent rise in demand for women in head load activities suggests an ongoing demand for women workers in agricultural sectors that require manual labour, such as carrying crops or materials.

Table 08 illustrates the dataset pertaining to the Consumer Price Index(R/U/C) for the Year 2022

Statement Showing the Wages (Paddy Field Labourers) 2022

Paddy Field Labour (Men); Ploughing activity remains consistent throughout the year with minimal variation. The wage for ploughing remains fairly stable throughout the year, starting at 965 in January and remaining constant at 929 from June to December. There is a slight decline in May to 925, but otherwise, the wages stay within a narrow range. The highest recorded value is in February to April and the lowest is in May and June. However, the change in values is fairly marginal across all months. Bunding work shows moderate fluctuation over the year. For bunding, the wages fluctuate from 794 in January to a peak of 905 in November and the lowest is in April. The work is highest in the cooler months (October to December), which might be linked to the seasonal nature of bunding work in the agricultural cycle. Spraying of Pesticides activity remains relatively stable, with slight fluctuations throughout the year. The highest value of pesticide spraying is recorded in July and the lowest is in April. Reaping activity shows variability, with the highest recorded activity in September and the lowest in August. The reaping wage starts at 768 in January and stays fairly constant, with minor fluctuations reaching 850 in September. The wage level reflects the stability of demand for this task. Treading activity remains relatively stable across the months, with a slight increase in June and a steady level in the remaining months. The treading wages follow a steady pattern, starting at 770 in January and peaking at 817 in December. The other works category shows a steady wage of 759 throughout the year, with only slight variations. This suggests consistency in this task's workload and wages. Other works remain steady throughout the year, with the highest recorded activity in later months and the lowest in June. The values show only slight fluctuations, indicating that this category covers activities that may not be tied to a specific season but remain relatively consistent.

Paddy Field Labour (Women) ;

Weeding: Women engaged in weeding earn around 569 in January, which gradually increases to 607 in August. This growth indicates that demand for weeding work increases towards the middle of the year, the general increase from January to November remains consistent.

Transplanting: For transplanting, the wage starts at 599 in January and rises slightly to 607 in August. This reflects steady demand for transplanting work, especially in the initial months of the planting season. Work maintains a relatively stable volume with slight increases over the months. A noticeable spike occurs in while June to December show some variation,

Reaping: The wage for reaping starts at 768 in January then fluctuates slightly before reaching 809 in December. This suggests that women involved in reaping see gradual wage growth as the year progresses. Other Works: Women working in other tasks begin at 565 in January, and wages

rise consistently, peaking at 678 in November. This steady increase mirrors growing demand for labour during the peak harvest period. Paddy Field Labour (Machinery) Activities

Ploughing: Labour for ploughing shows relatively stable values throughout the year, with slight fluctuations. The highest index for ploughing occurs in November and the lowest is in January.

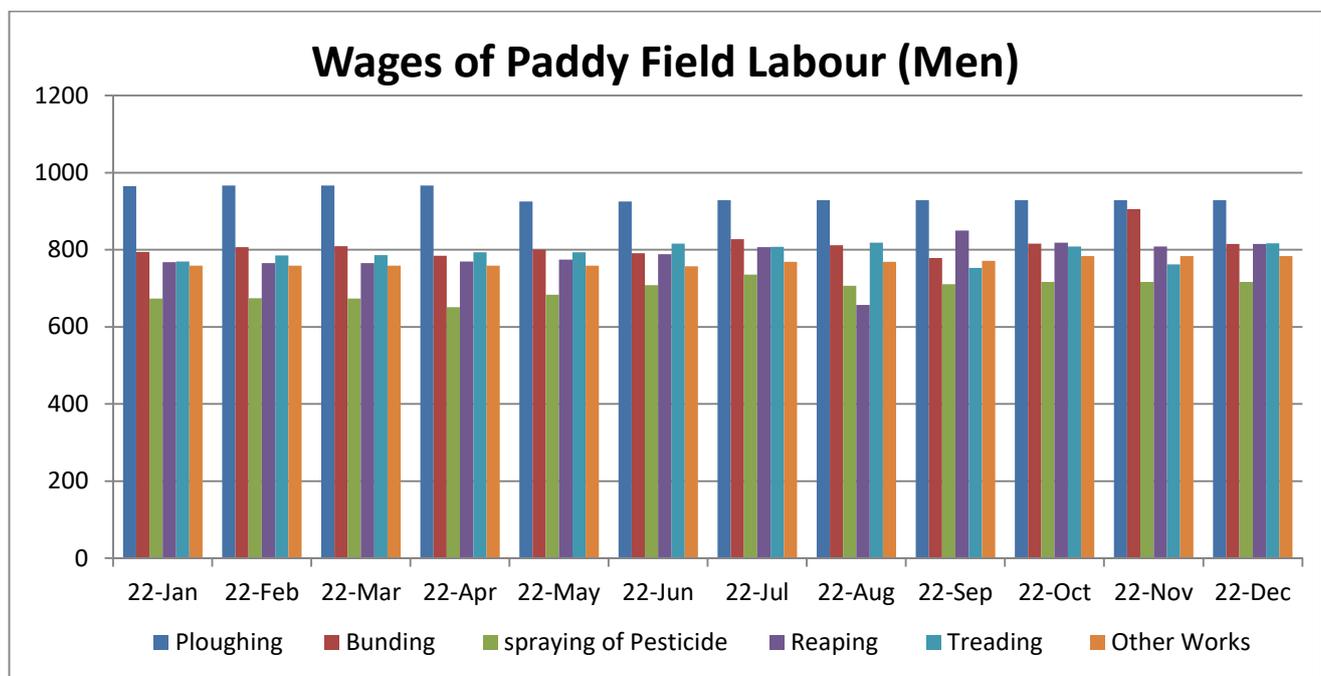

Transplanting: The labour usage for transplanting remains fairly consistent, but with noticeable changes during certain months. The highest transplanting demand is in November which is significantly higher than other months. The lowest labour usage occurs in June reflecting a dip in activity. The months January to April also show relatively high levels of transplanting labour likely due to the peak transplanting season.

Reaping: Labour for reaping fluctuates throughout the year. The highest reaping demand is recorded in September while June has comparatively lower levels .This variation indicates that harvesting activity, while steady, peaks slightly later in the year.

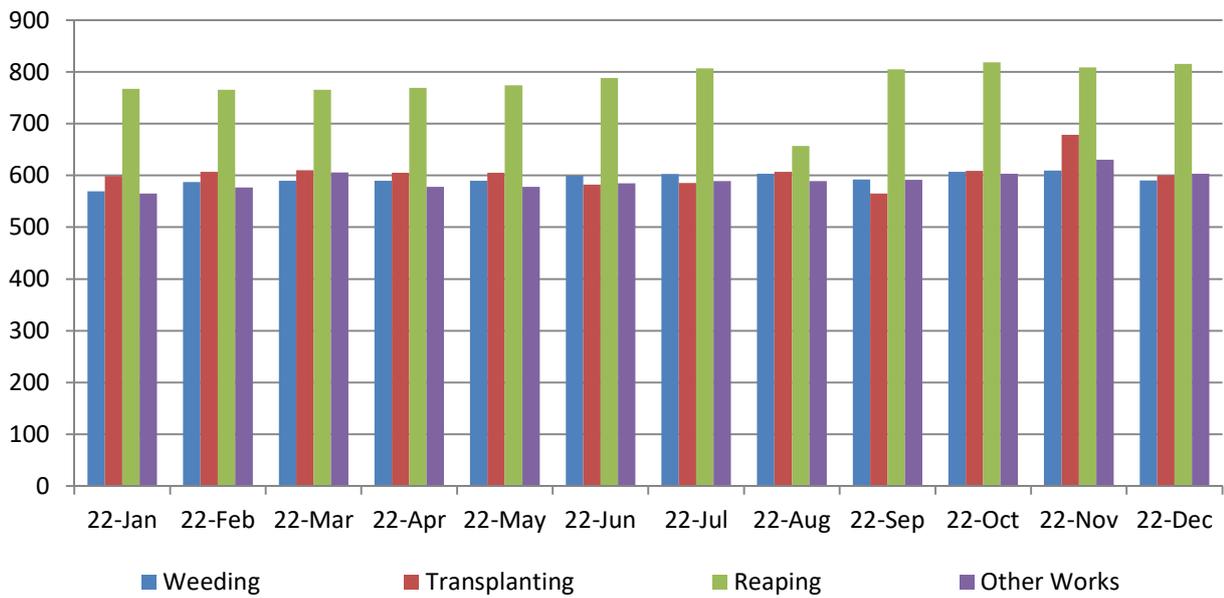

Treading: Treading labour varies across the months, with the highest demand observed in March and April suggesting increased activity during these months. The lowest treading labour occurs in November reflecting a dip in activity as the paddy fields near the end of their cycle.

Driver: Driver labour generally remains steady throughout the year, but there is a minor dip in July to December. The other months, especially January to June, exhibit slightly higher driver demand, reflecting an increased reliance on machinery operations at those times.

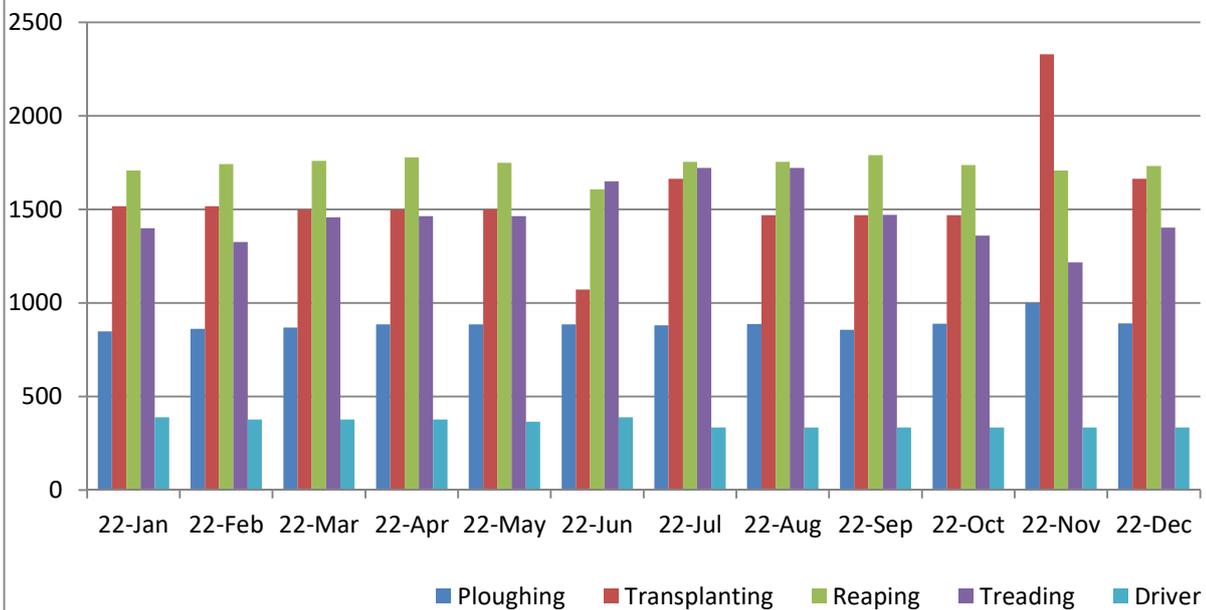

Table 09 illustrates the dataset pertaining to Wages (Paddy Field Labourers)

Wages of Paddy Field Labour (Women)

Wages of Paddy Field Labour (Machinery)

Statement Showing the Wages of Skilled Labourers and Other Agricultural Labours (Men and Women)2022

1.Agriculture Labour (Men) ; Ploughing: The number of men engaged in ploughing remains consistent throughout the year, The wage for ploughing remains constant at 939 for the entire year, indicating a stable demand and consistent compensation for this task across all months. Picking. The labour required for picking also remains relatively stable. Picking wages start at 734 in January and gradually increase to 768 by October, maintaining steady growth through the year. This suggests a modest increase in picking activity during the months of July to December, but otherwise, it maintains a consistent level. Works related to rubber cultivation. The number of men working on tasks related to rubber cultivation stays constant throughout the year. Wages for rubber cultivation remain stable at 742 through the year, reflecting steady demand for this task in the agricultural sector. This indicates that rubber cultivation is managed with a fixed number of workers, irrespective of the season.

Rubber Tapping (400 Trees): The number of labourers involved in rubber tapping fluctuates over the months. The wage for rubber tapping starts at 879 in January and rises slightly to 927 by December. The peak is seen in April and October to December suggesting that there might be a slightly higher demand for labour during certain months, likely due to seasonal factors or higher tree yield.

Coconut Plucking: The labour force for coconut plucking is consistently high workers per month, with no change throughout the year. Coconut plucking wages remain stable at 1253, showing no fluctuations throughout the year. This consistency suggests that demand for coconut plucking remains constant year-round. This indicates that coconut plucking is a major year-round task requiring a constant number of workers.

Arecanut Plucking: The highest wage is seen in July while the lowest is in January and February, The wage for arecanut plucking shows a small increase from 1054 in January to 1104 in November. The rise indicates higher demand for this task during the latter months of the year. This fluctuation could be due to seasonal variations in arecanut harvesting, with peak labour demand during certain months.

Other Works: The other works category sees wages starting at 778 in January and remaining stable at 805 in December. This suggests a constant need for miscellaneous agricultural labour. A

slight increase in labour wage observed from January to December this increase May reflect a growing number of miscellaneous tasks that require manpower throughout the year.

Other Agricultural Labour (Women): Head Load vs. Other Works: The wage for head load labour remains steady at 637 from January through November and slightly increases to 663 in December, suggesting a minor increase in demand for this work by year-end. The Head Load category shows a relatively stable trend, indicating a slight increase towards the middle of the year. Although there is a slight uptick in Head Load numbers during the warmer months, the overall patterns are quite consistent, suggesting a steady demand for agricultural labour across various tasks.

The Other Works: Wages for other works remain at 626 in January, with slight fluctuations, peaking at 643 in May, and then stabilizing at 621 in December. Other Works exhibit minimal monthly variation, with no drastic peaks or troughs observed across the year.

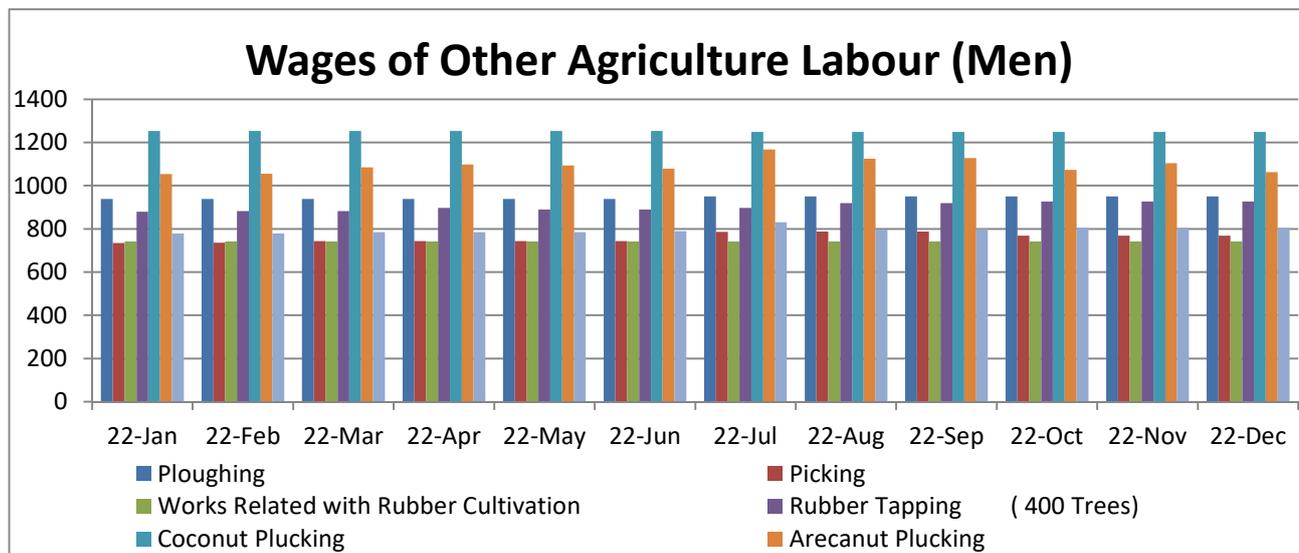

Skilled Labour (Carpenter, Smithy, Mason);

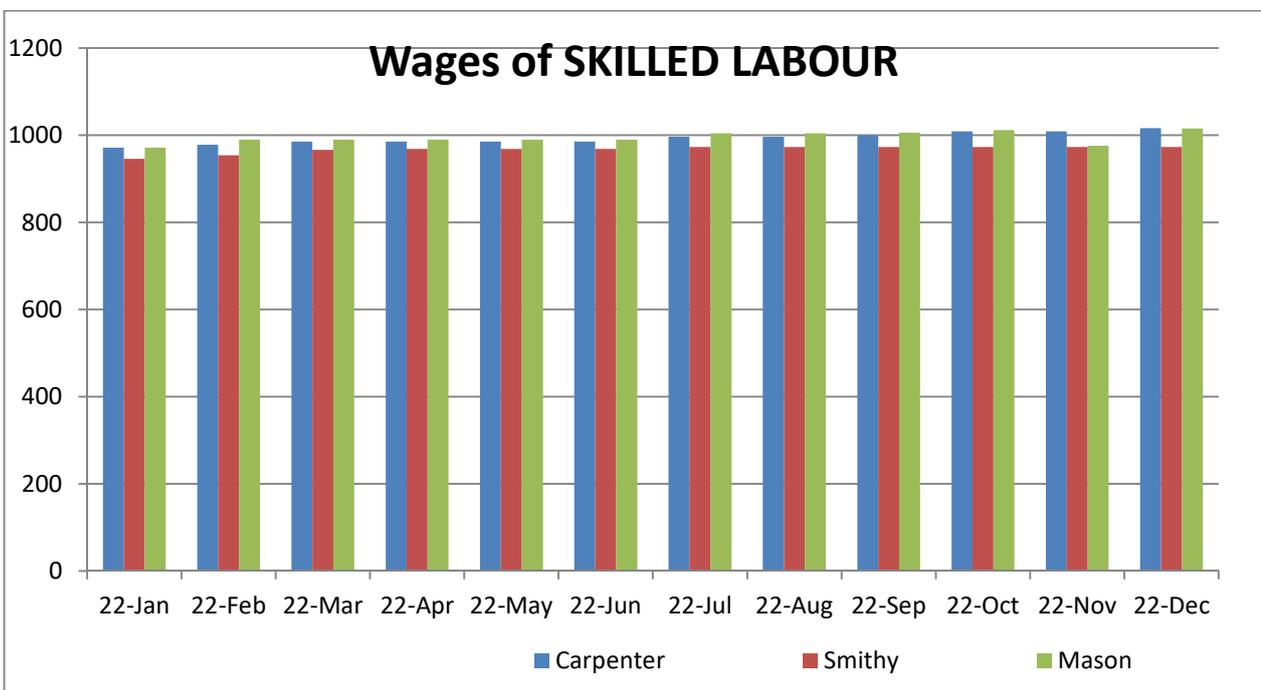

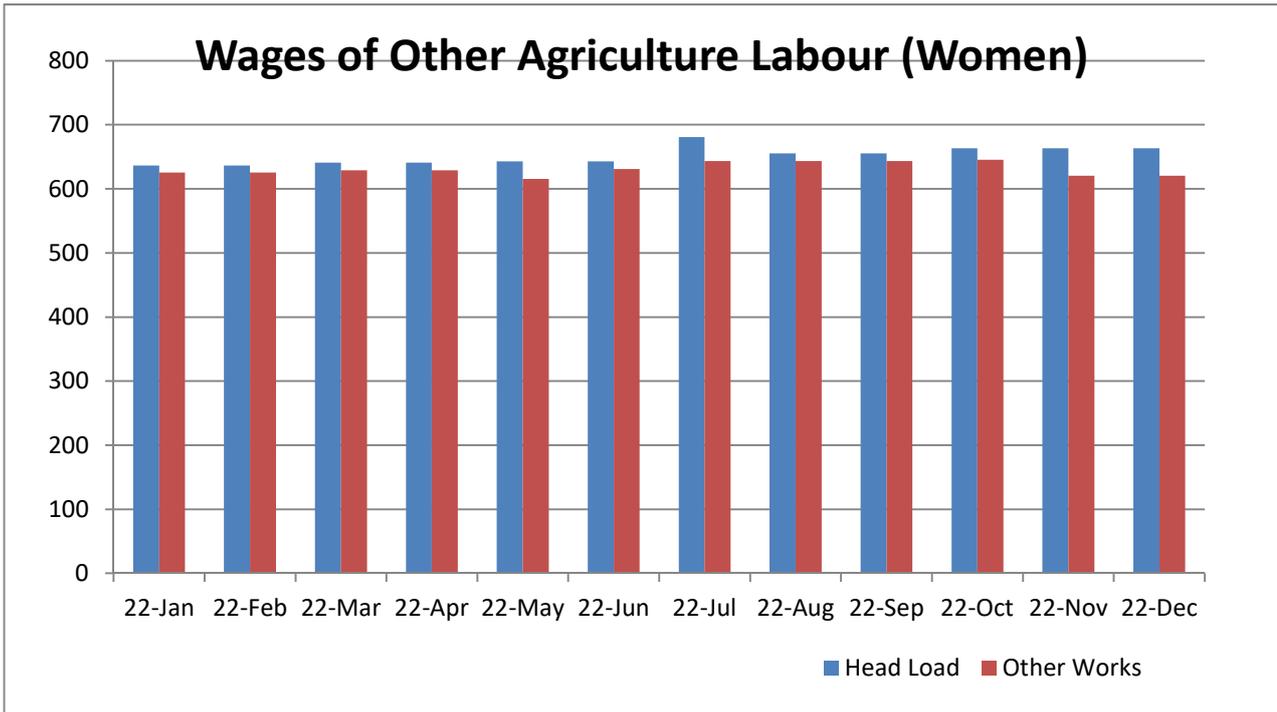

Carpenter: The wage for carpenters starts at 971 in January and shows steady increases, peaking at 1016 in December. The increase in the number of carpenters is steady, with a slight uptick during the later months, particularly in December, reflecting a consistent rise over the year.

Smithy: Smithy wages follow a similar trend, starting at 946 in January and increasing to 973 by December, showing consistent growth throughout the year. A notable jump in December) is observed, but it remains among the lowest values when compared to carpenters and masons.

Mason: The mason category also shows steady growth, and show a gradual increase throughout the year.

Table 10 illustrates the dataset pertaining to Wages of Skilled Labourers and Other Agricultural Labours.

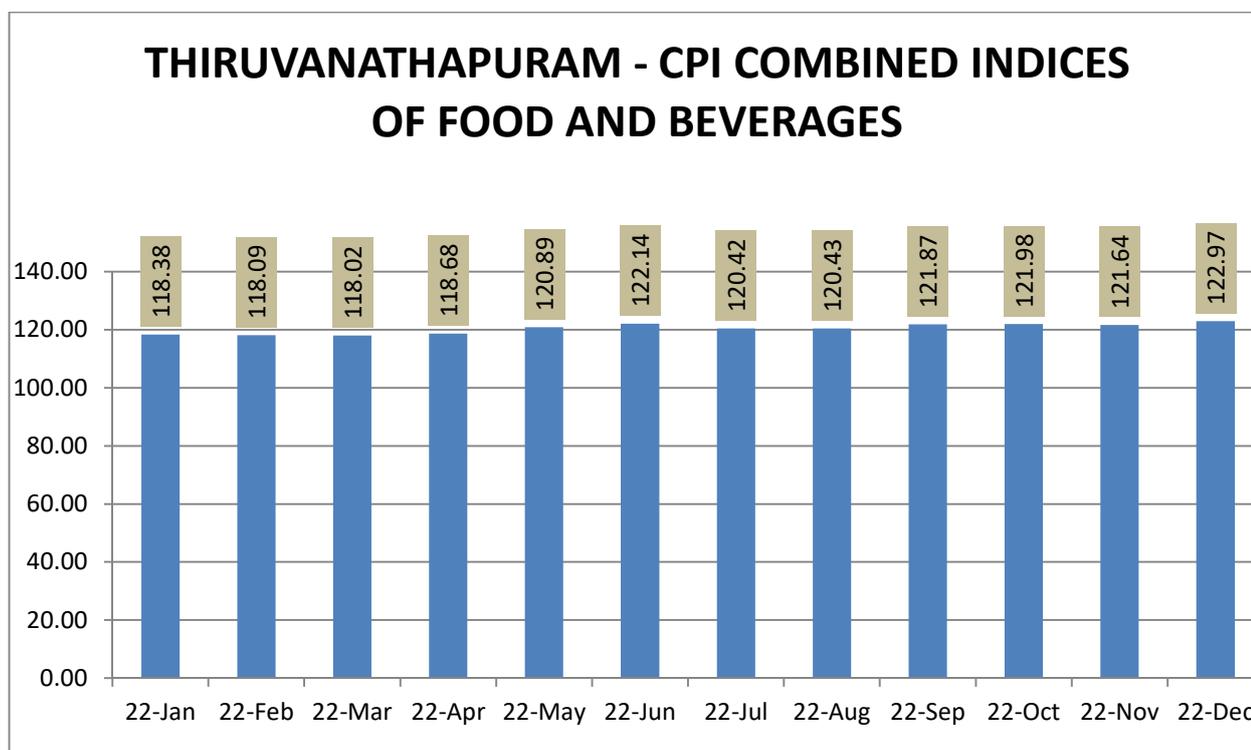

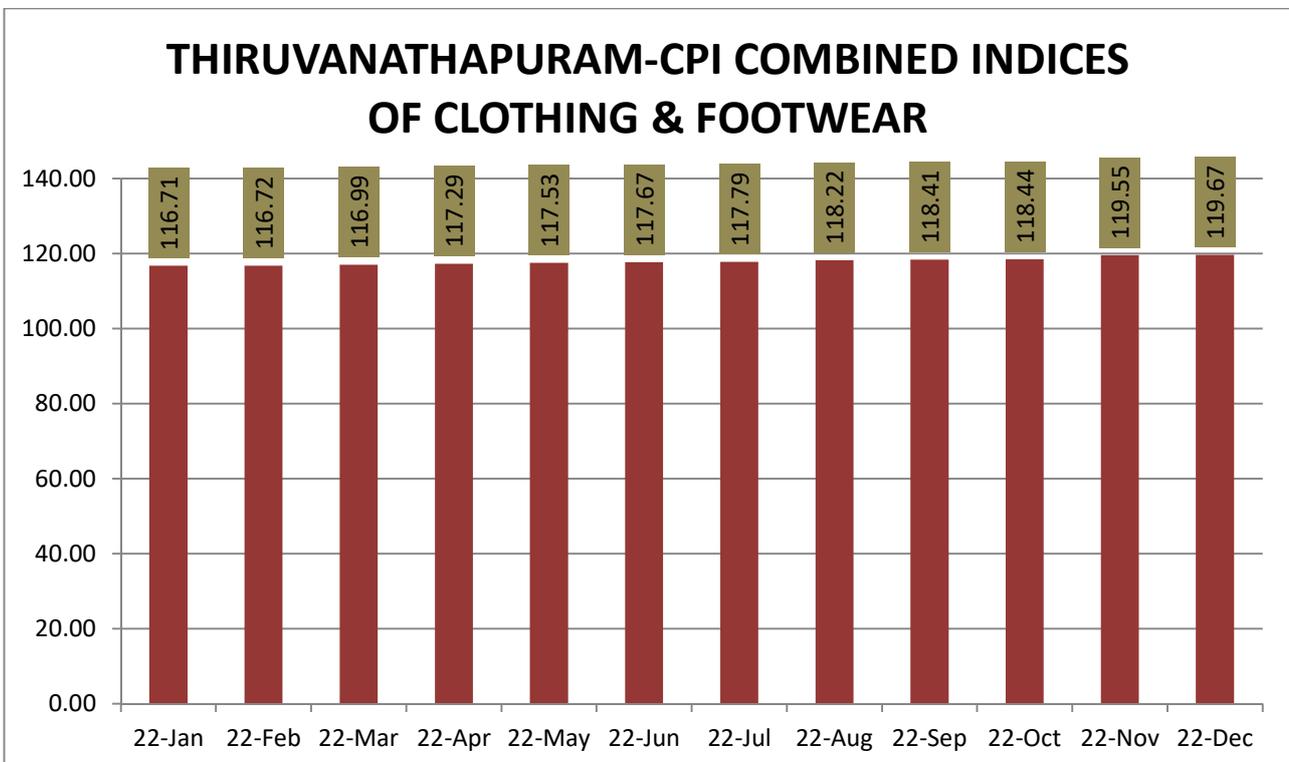

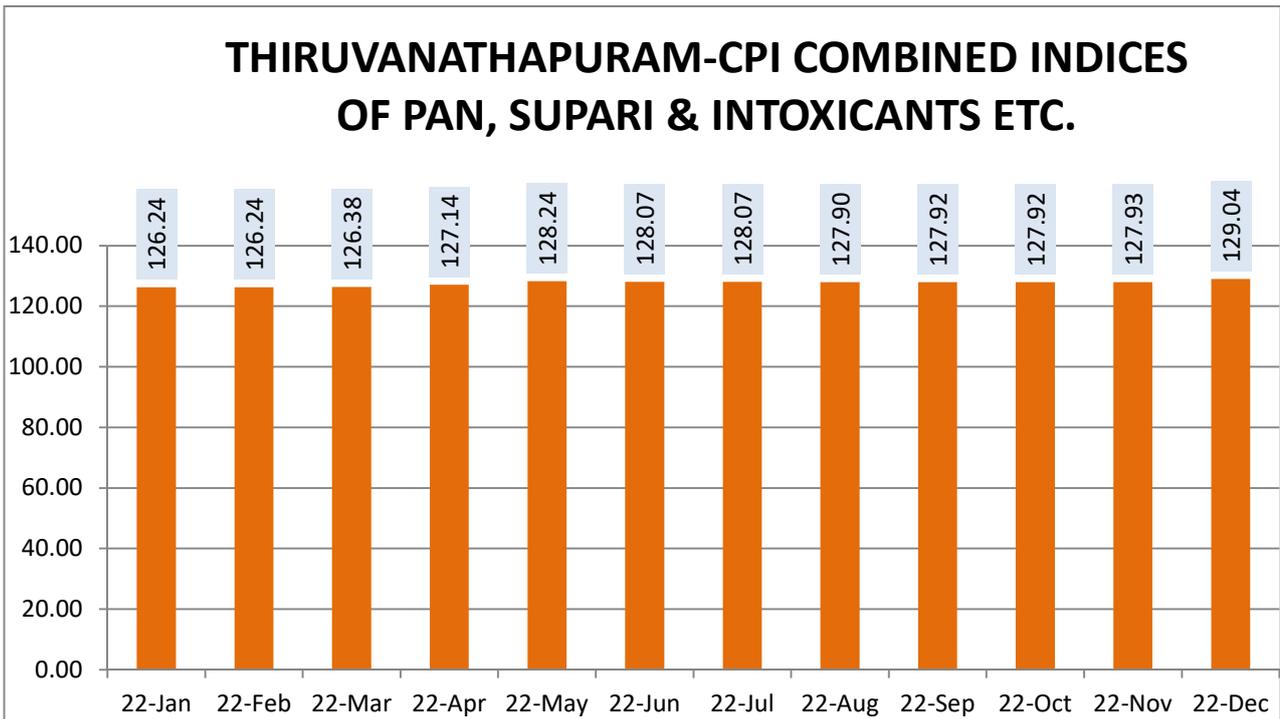

DISTRICT WISE CPI COMBINED INDICES 2022

CPI COMBINED INDICES OF THIRUVANATHAPURAM 2022

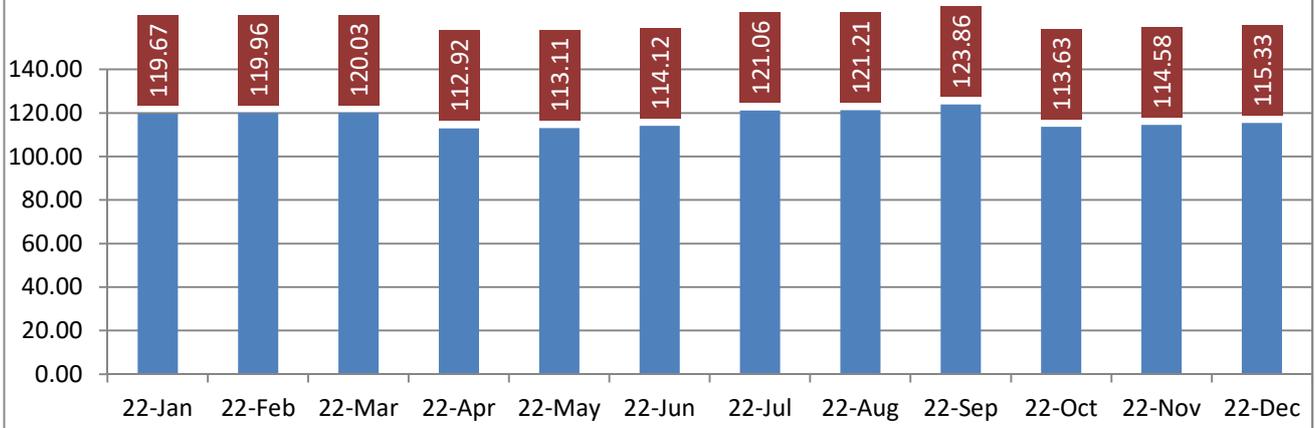

Food and Beverages is showing a steady upward movement. This indicates a consistent increase throughout the year, with minor fluctuations. The highest value occurs in December with the lowest observed in early months. The increase reflects the on-going inflation in food prices. Pan, Supari & Intoxicants is a slight upward trend in this category. Prices increase most notably from May onward, with December witnessing the highest index value. The index for Clothing & Footwear remains relatively stable with slight increases throughout the year. Housing costs show a fluctuating pattern. The index starts in January but drops significantly in April. It rises again in the second half of the year, peaking in. Fuel and Light prices demonstrate a general upward trend, with some notable spikes. It peaks in September before slightly declining in December. The Miscellaneous category exhibits steady growth. The largest increase is observed from June to July. The General index shows a steady, gradual increase, moving from January to December. The General index is relatively stable compared to some other categories, with gradual increases in prices throughout the year.

Table 11-A illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

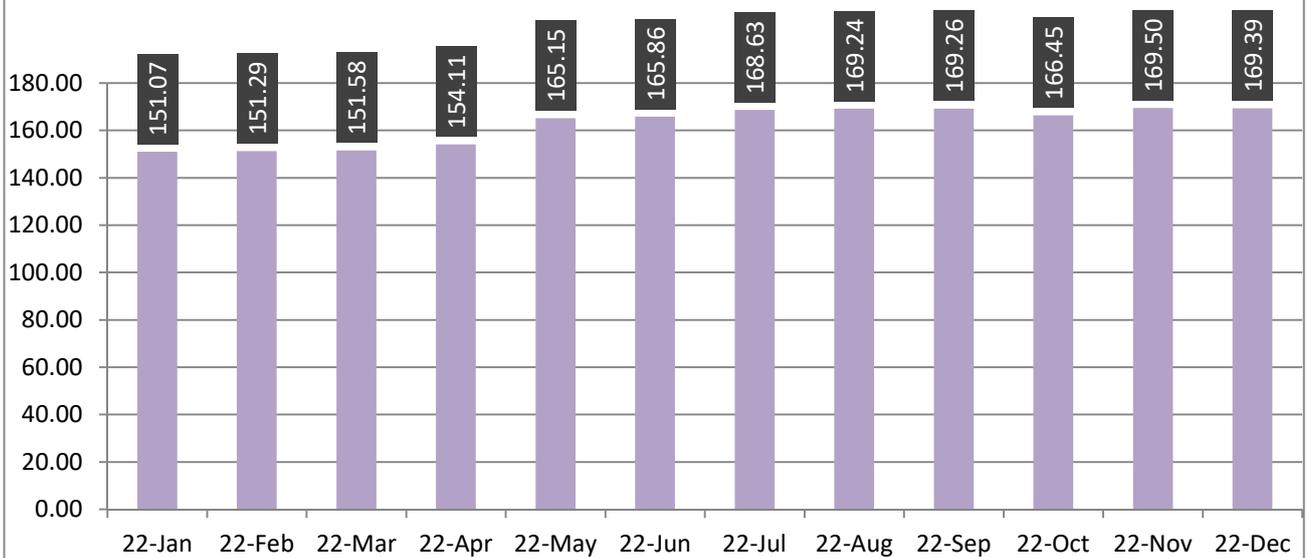

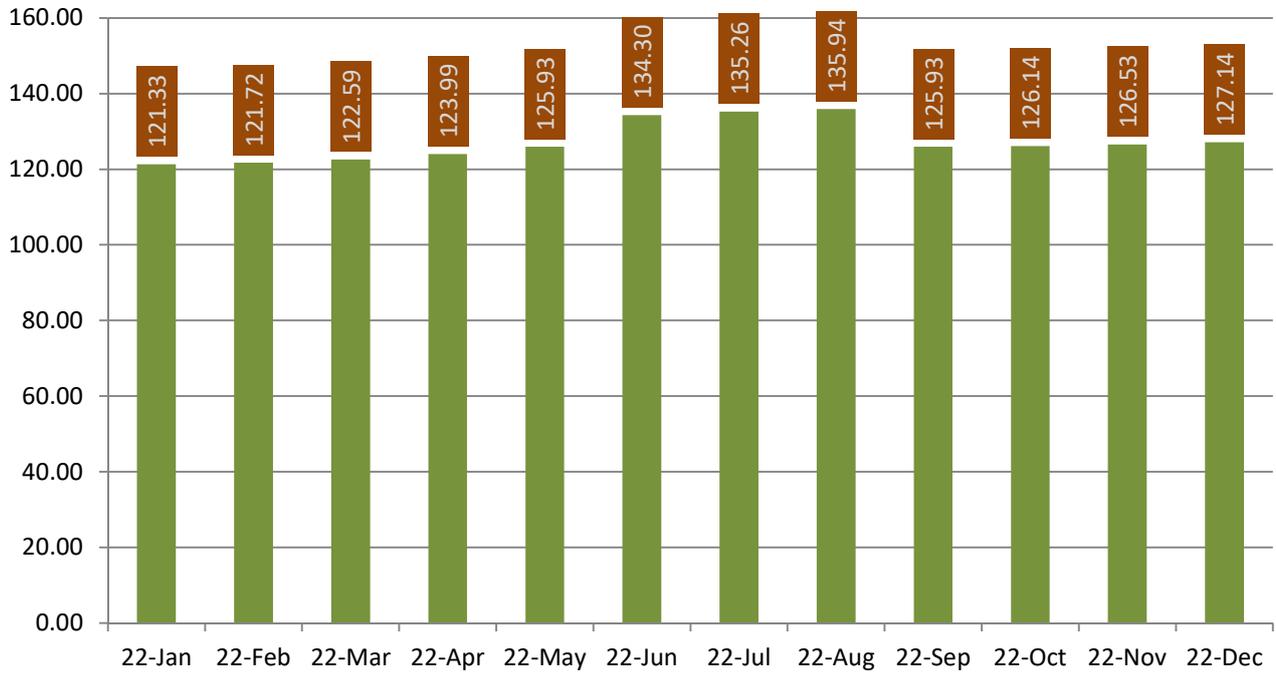

THIRUVANATHAPURAM-CPI COMBINED INDICES OF HOUSING

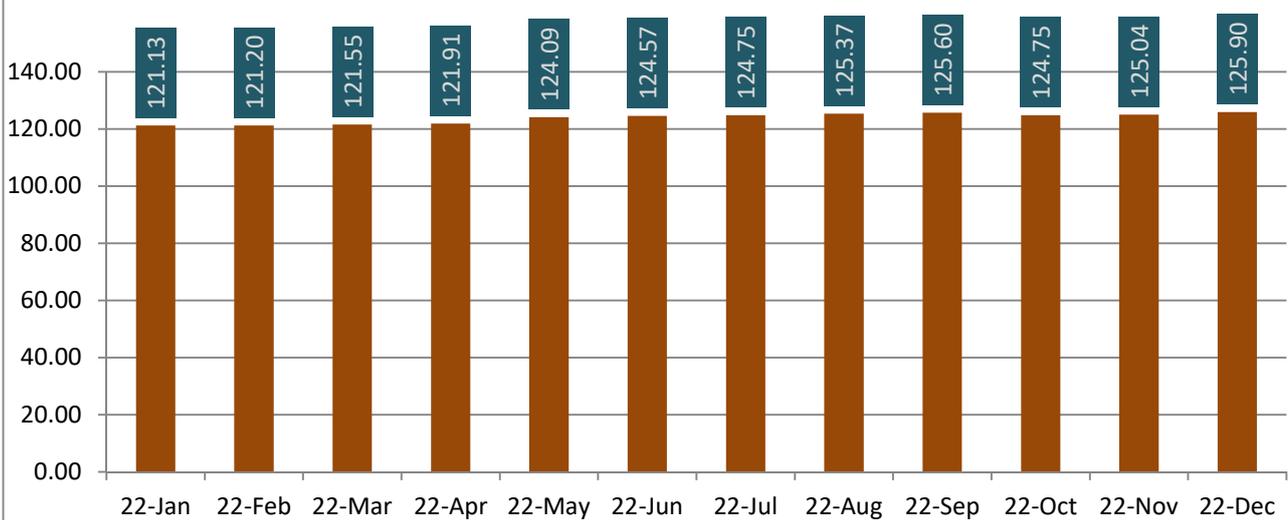

THIRUVANATHAPURAM-CPI COMBINED INDICES OF FUEL AND LIGHT

THIRUVANATHAPURAM-CPI COMBINED INDICES OF MISCELLANEOUS

THIRUVANATHAPURAM- CPI COMBINED INDICES OF GENERAL

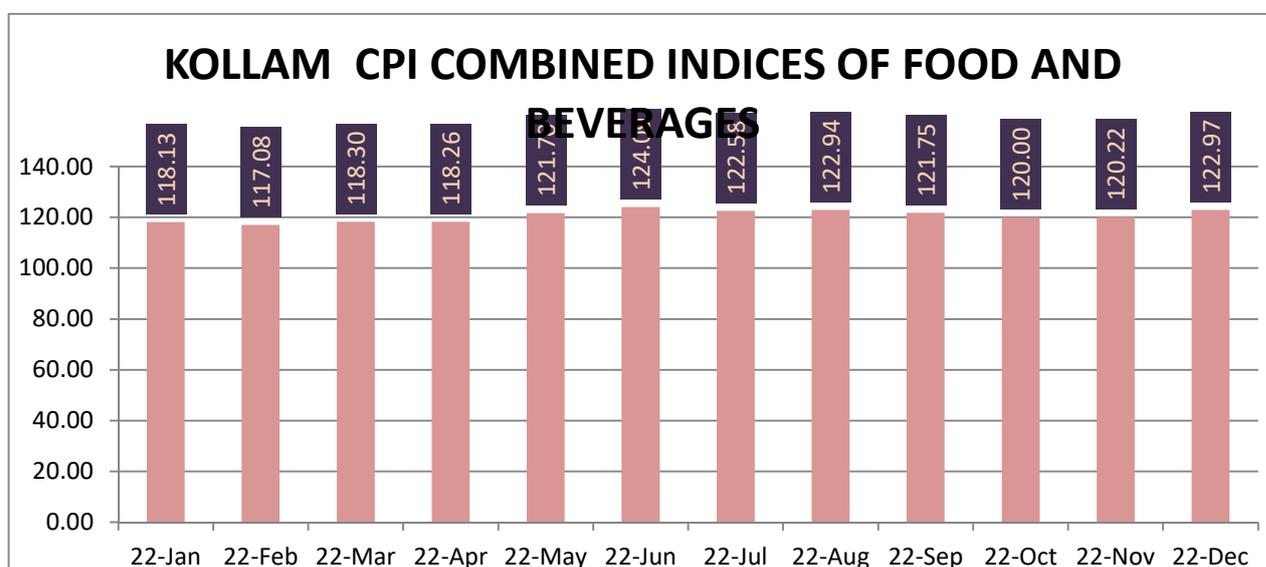

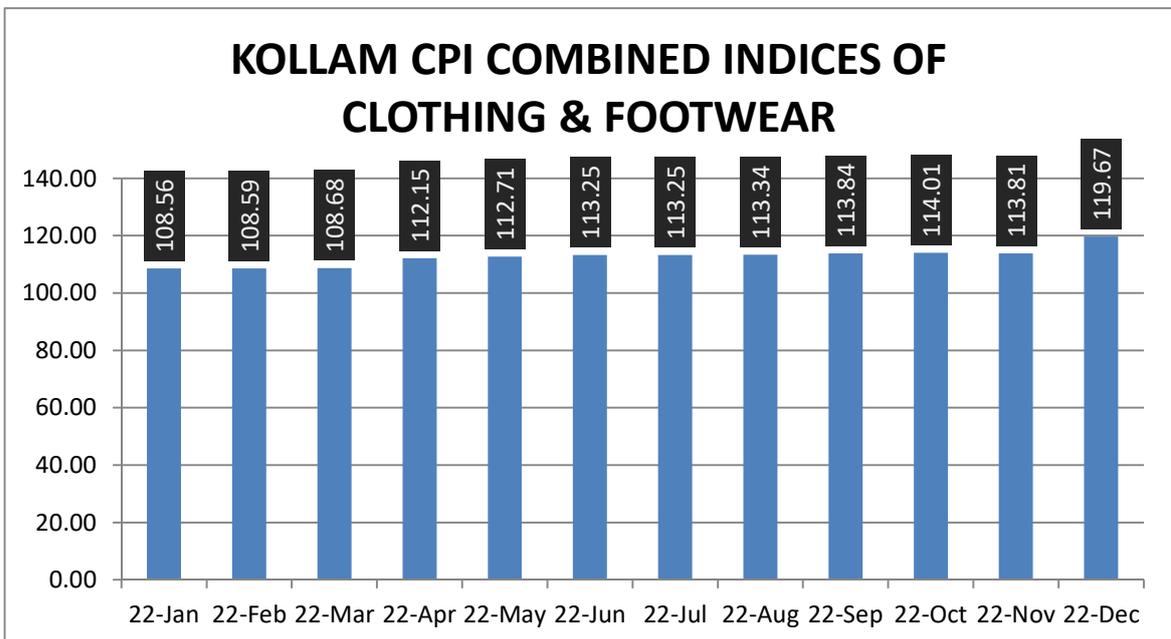

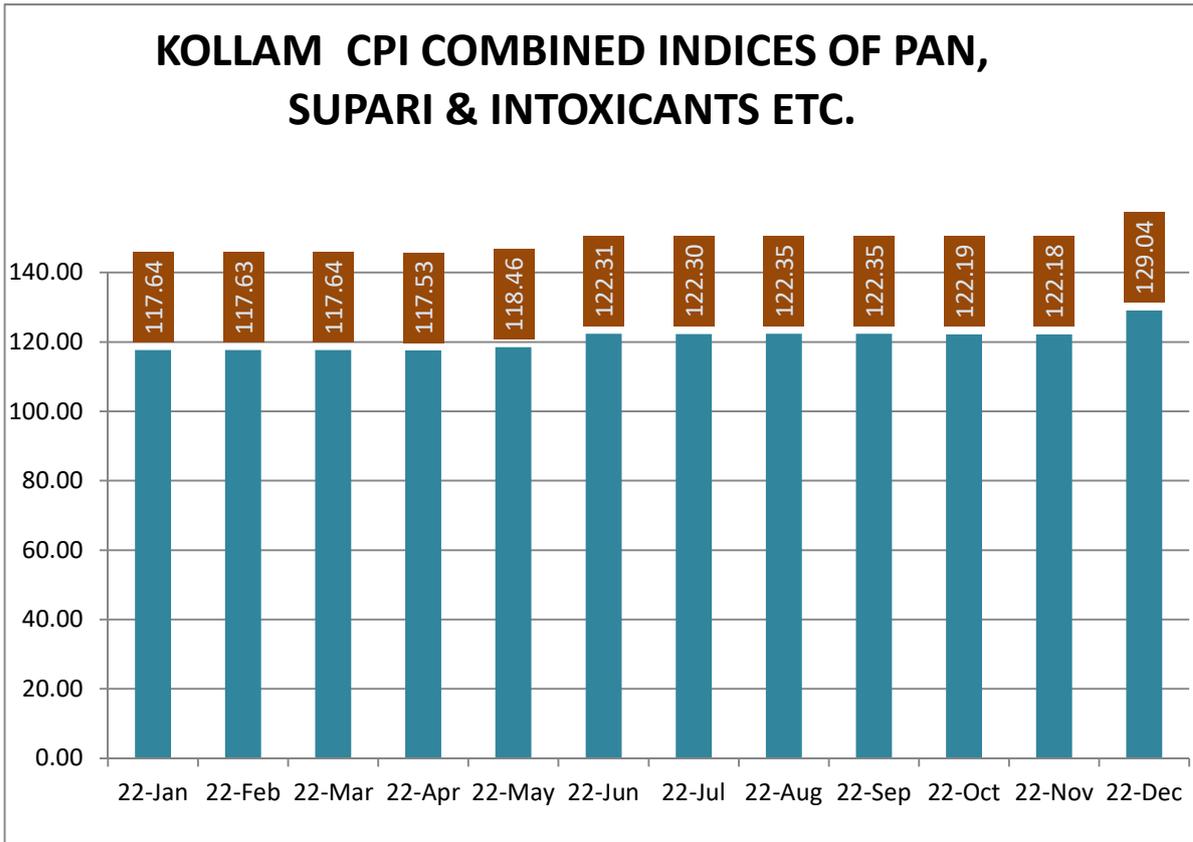

CPI COMBINED INDICES OF KOLLAM 2022

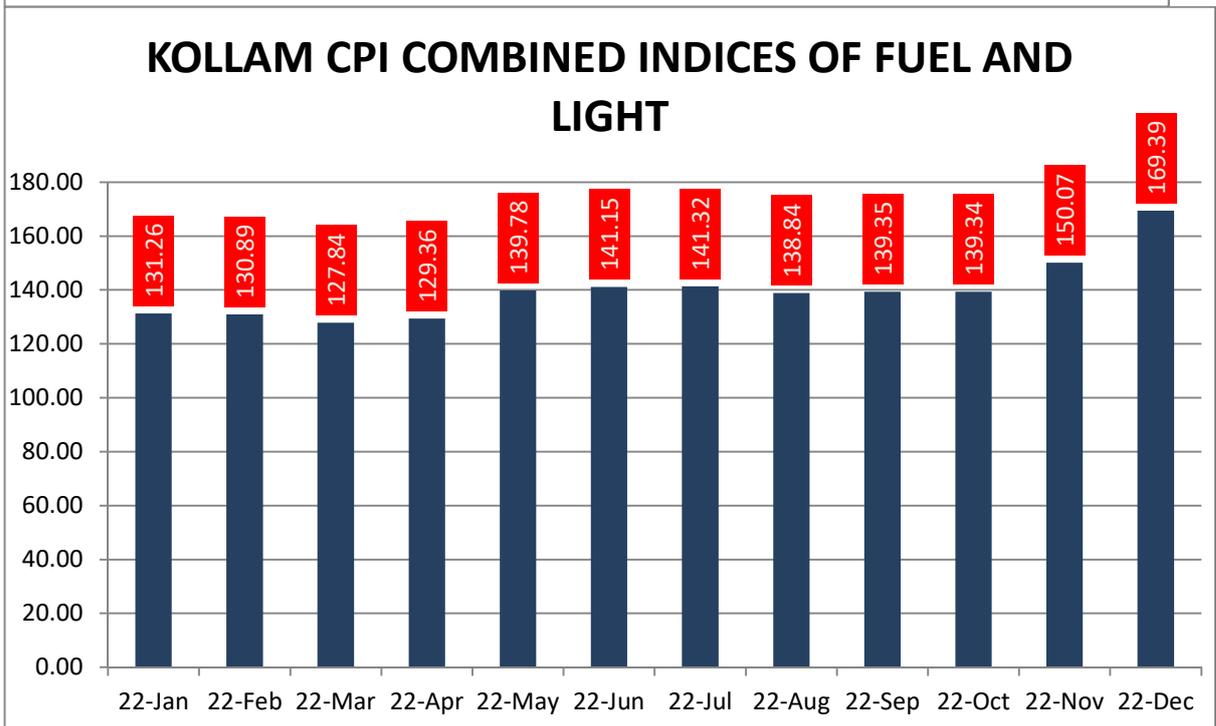

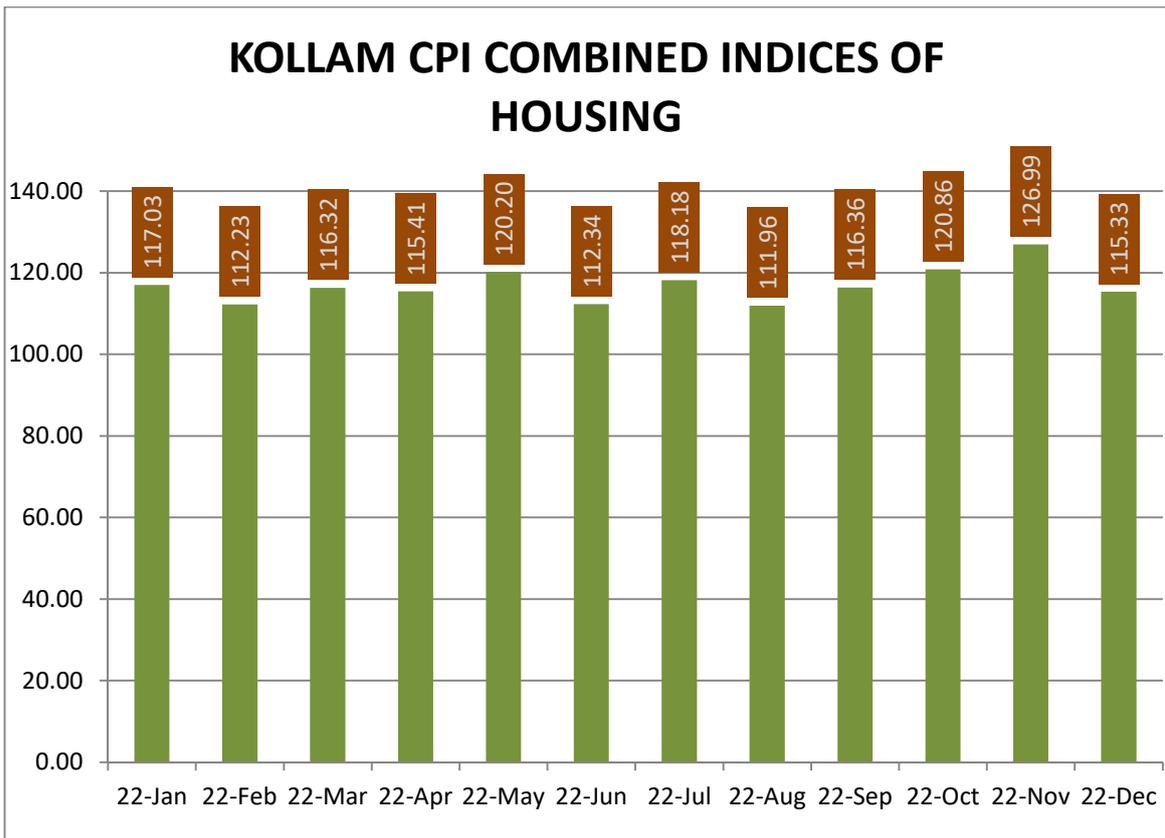

The prices in the Food and Beverages fluctuate slightly throughout the year. The highest recorded value is in December showing modest increase units over the year. The data suggests a stable trend, with minimal fluctuations across the months, except for a slight dip in October May and June show noticeable increases. Pan, Supari & Intoxicants shows the Prices in this category remain relatively stable early in the year but increase more significantly toward the end. The most notable increase occurs in December, reflecting a sharp rise compared to other months.

The Clothing & Footwear category shows a steady increase over the year. There is a notable uptick in April, which continues through the latter part of the year, with values fluctuating slightly but consistently rising. Housing prices show variability, with significant fluctuations observed across the months. The prices decrease from January to February but rise again in May, the highest recorded value in the first half of the year. After June, prices drop again, reaching their lowest in August. They rebound in October but drop again sharply in December. Fuel and Light prices exhibit a steady increase throughout the year, the most significant jump happens in November and December. The Miscellaneous category shows gradual price increases over the months, the prices remain relatively stable through June to October, with small monthly increases. A more notable rise occurs in the last quarter of the year, with December showing a significant jump, indicating a year-end price increase. The General category remains relatively stable, with small fluctuations month-to-month. The trend shows a consistent upward trajectory, although less pronounced than the fluctuations observed in categories like Fuel and Light or Pan, Supari & Intoxicants.

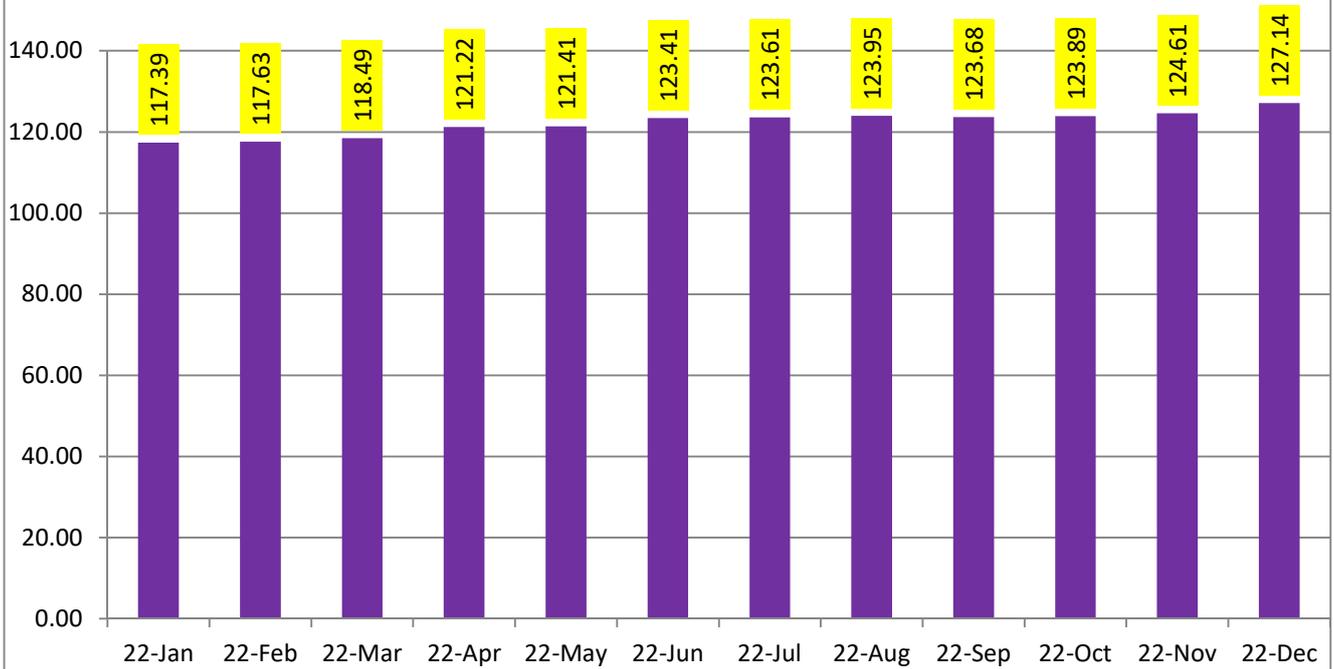

Table 11-B illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

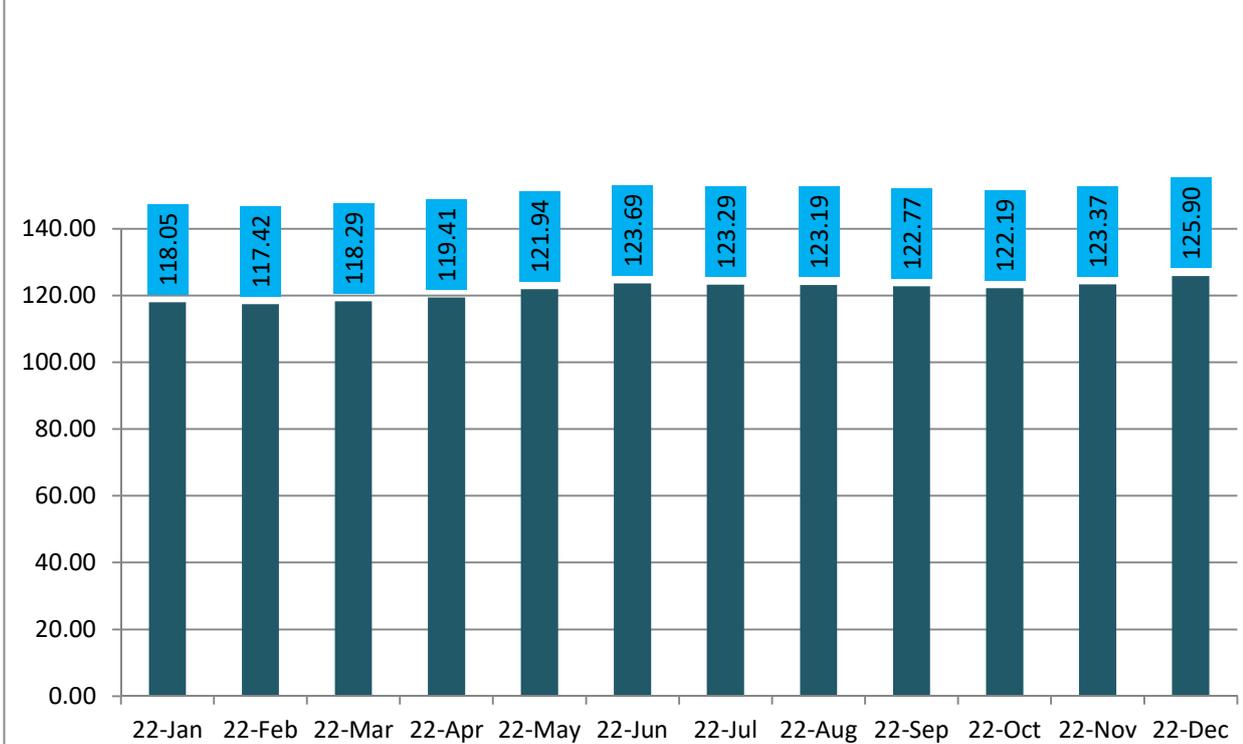

KOLLAM CPI COMBINED INDICES OF MISCELLANEOUS

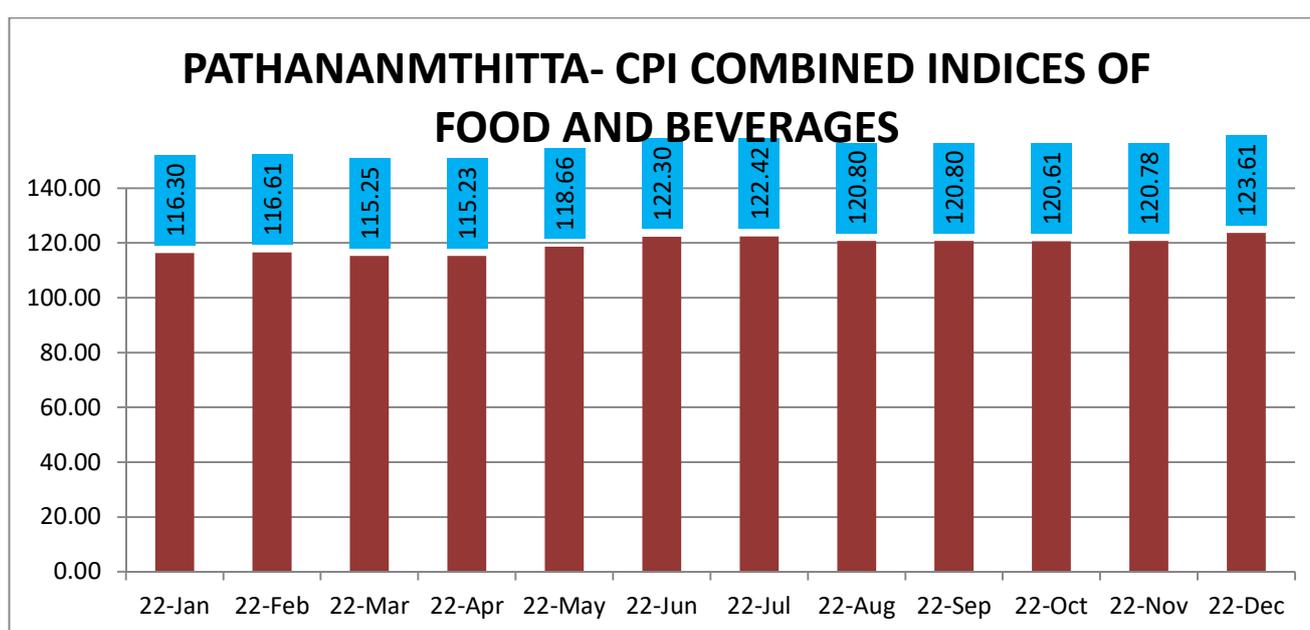

KOLLAM CPI COMBINED INDICES OF GENERAL

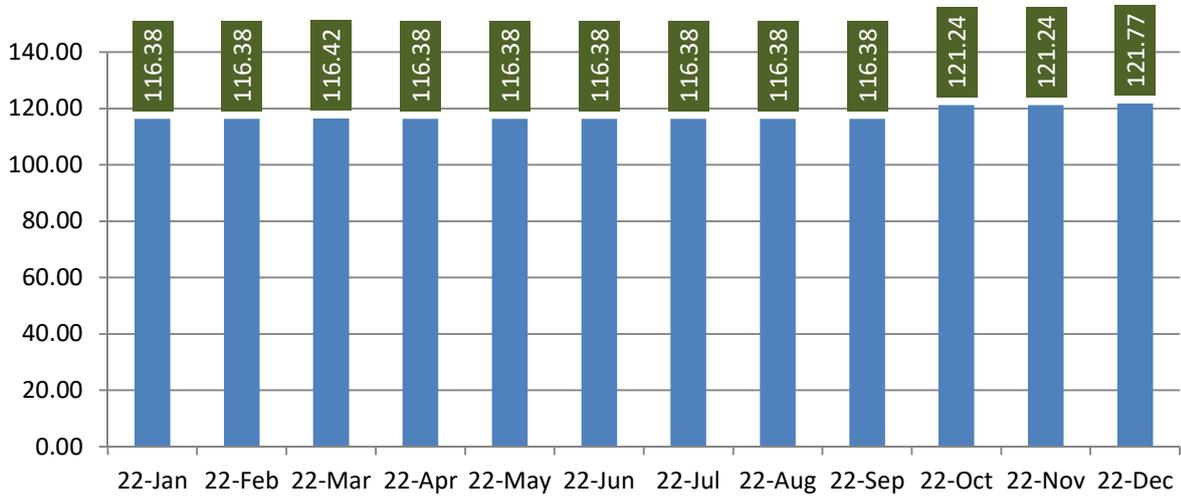

CPI COMBINED INDICES OF PATHANANMTHITTA 2022

The price index for food and beverages shows a steady increase from January to December. The increase over the year is relatively consistent, with a notable rise in June and December. The overall trend demonstrates price stability with slight upward movements, Prices for pan, supari, and intoxicants remain largely stable throughout the year, with slight fluctuations. In October, there is a significant rise followed by another small increase in December. The index experiences a sharp increase only in the last quarter. Clothing and footwear prices show a gradual upward trend from January to December. Similar to the other categories, there is a steady increase particularly from May to August. Housing costs show fluctuations but remain within a narrow range. There is an upward trend throughout the year, although the growth is relatively slow compared to other categories. The highest spike occurs in December. Fuel and light prices exhibit significant fluctuations, with a clear upward trajectory. This category sees some of the sharpest increases, particularly in May. Miscellaneous goods and services follow a general upward trajectory. There is a relatively steady rise throughout the year, with no significant dips, similar to the Food and Beverages category. The steady increase May reflect inflation across a wide range of consumer goods and services, contributing to the overall price rise in the economy. The general goods index follows a similar pattern, with prices rising from January to December. The increase is consistent throughout the year, with some seasonal fluctuations observed in mid-year, but the prices generally rise without major disruptions.

CPI COMBINED INDICES OF ALAPPUZHA 2022

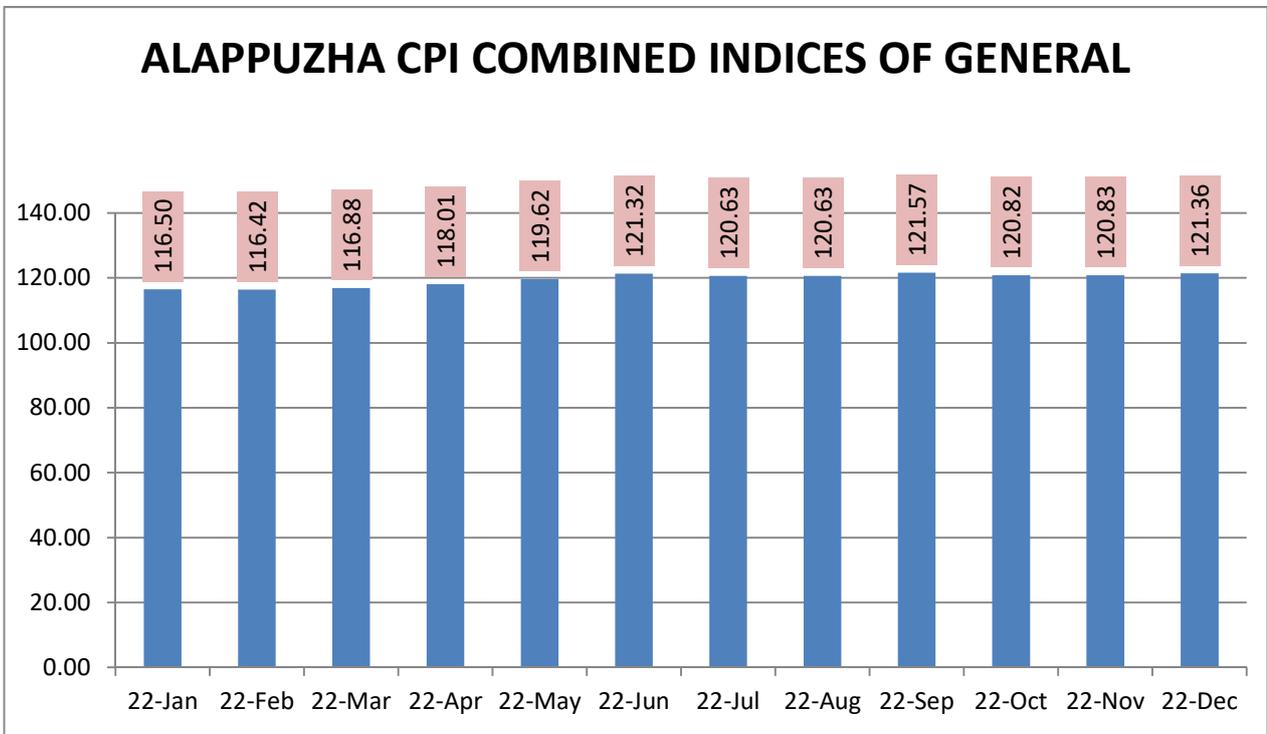

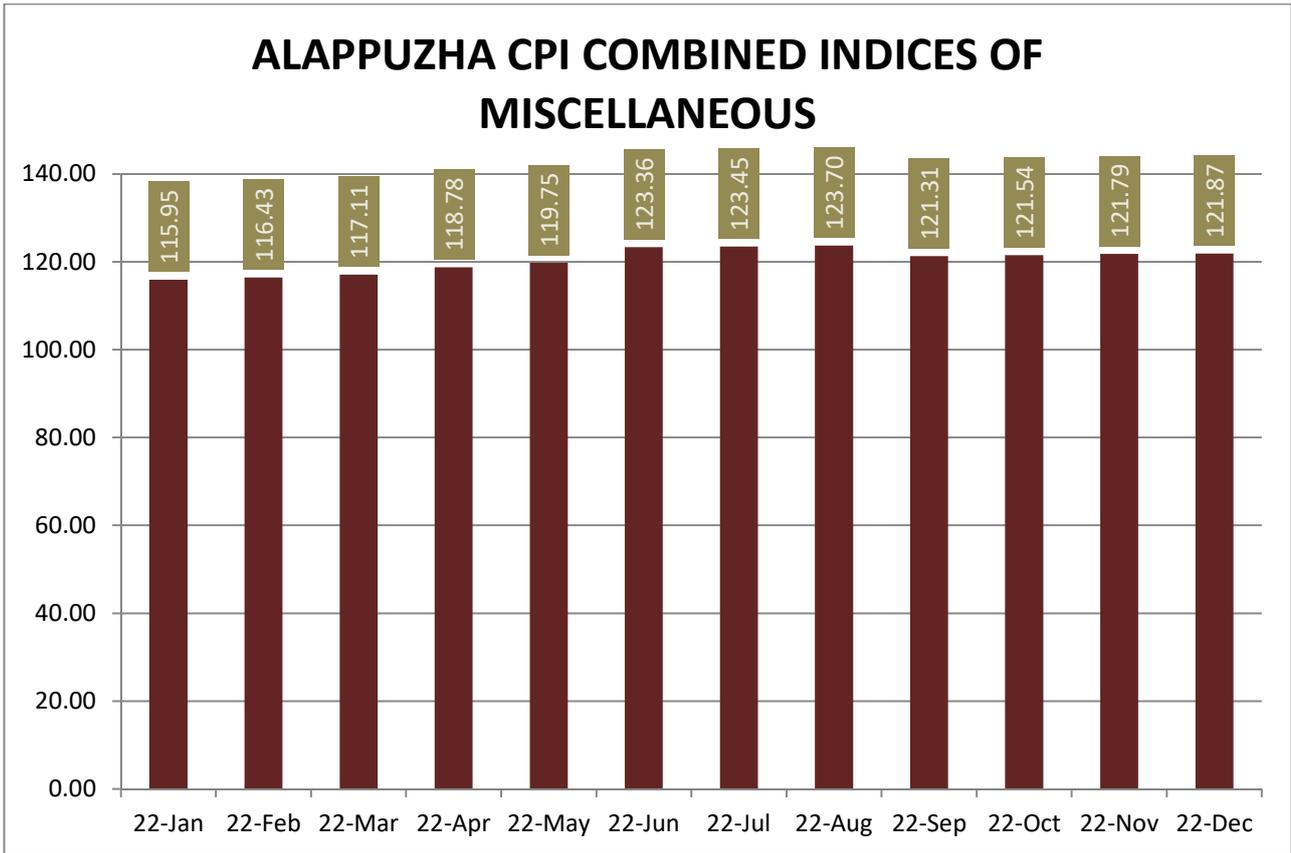

The price index for food and beverages fluctuates slightly but generally increases over the year. There is a gradual upward trend, with some slight dips in February, January to March. The most significant rise occurs in May and June. The prices for pan, supari, and intoxicants remain relatively stable throughout the year. Prices experience minimal fluctuations, with slight dips in February and September, followed by stability for the rest of the year. Prices for clothing and footwear show minor increases and one notable spike. The price increases are gradual, with the largest jump occurring in August. Housing prices exhibit more volatility, Housing prices experience significant fluctuations, including a sharp decline in April, followed by a recovery in May, and another increase in September. Fuel and light prices shows noticeable fluctuations, with a general upward trend over the year. The prices experience significant increases, particularly from March to July. There is a slight drop in August before the prices increase again toward the end of the year. Miscellaneous goods and services show a steady increase, The prices steadily rise throughout the year, with a slight dip in September, followed by a recovery in the last quarter. The general goods index follows a similar upward trajectory. The increase is steady, with small fluctuations observed, particularly in March, April, and June.

Table 11-D illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

CPI COMBINED INDICES OF KOTTAYAM 2022

The Food and Beverages category sees a general decline in prices from January to March followed by a rise in April and June. The prices stabilize for most of the remaining months. The peak price occurs in June and there is a slight decrease towards the end of the year. A slight decline in prices is observed towards the end of the year after a noticeable peak in June.

The prices for pan, supari, and intoxicants category starts in January, increasing slightly in February and March. Prices show moderate stability from May to October. This category remains quite stable with minor fluctuations throughout the year, with only a slight increase in December. Clothing & Footwear show a gradual increase in prices from January to June. A steady increase is seen over the months, with significant rises particularly between January to June and a consistent rise through the latter half of the year.

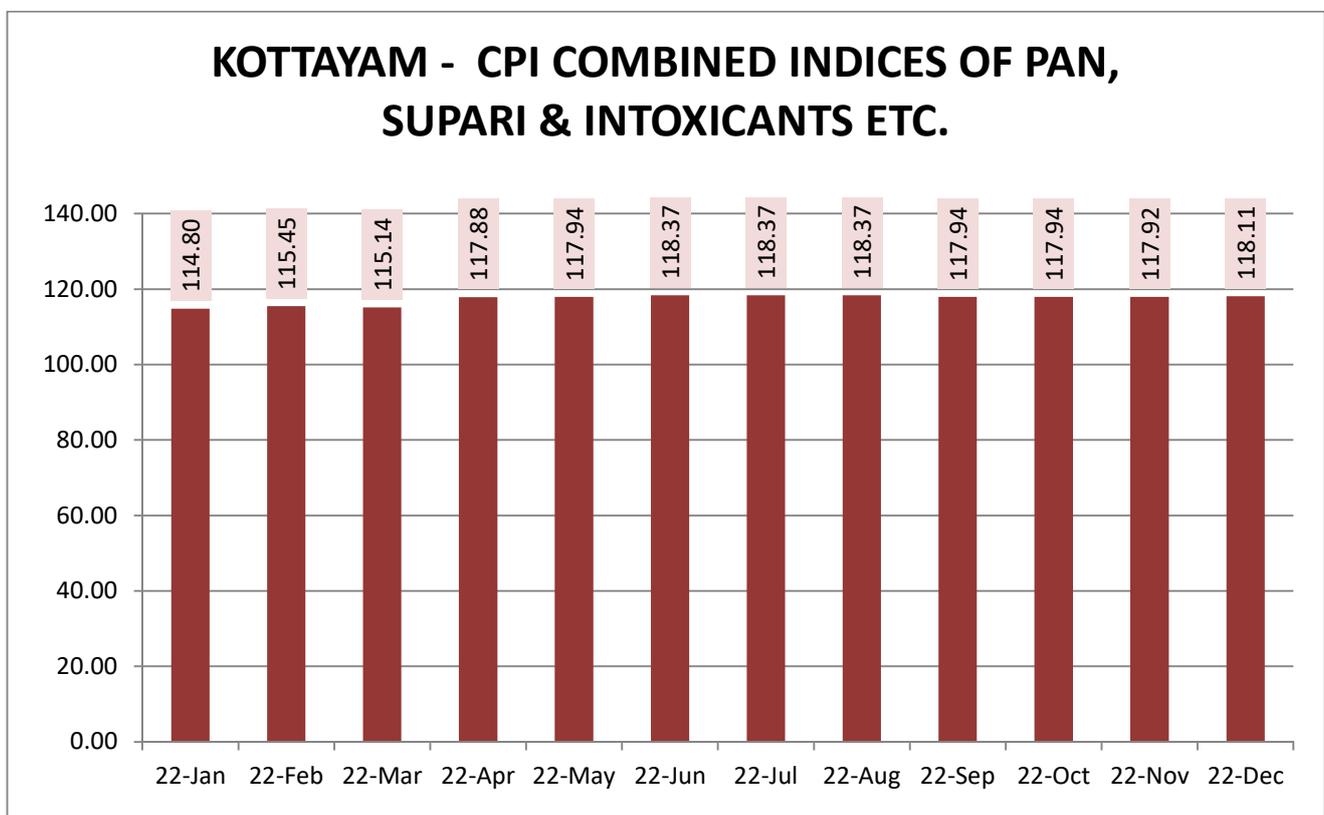

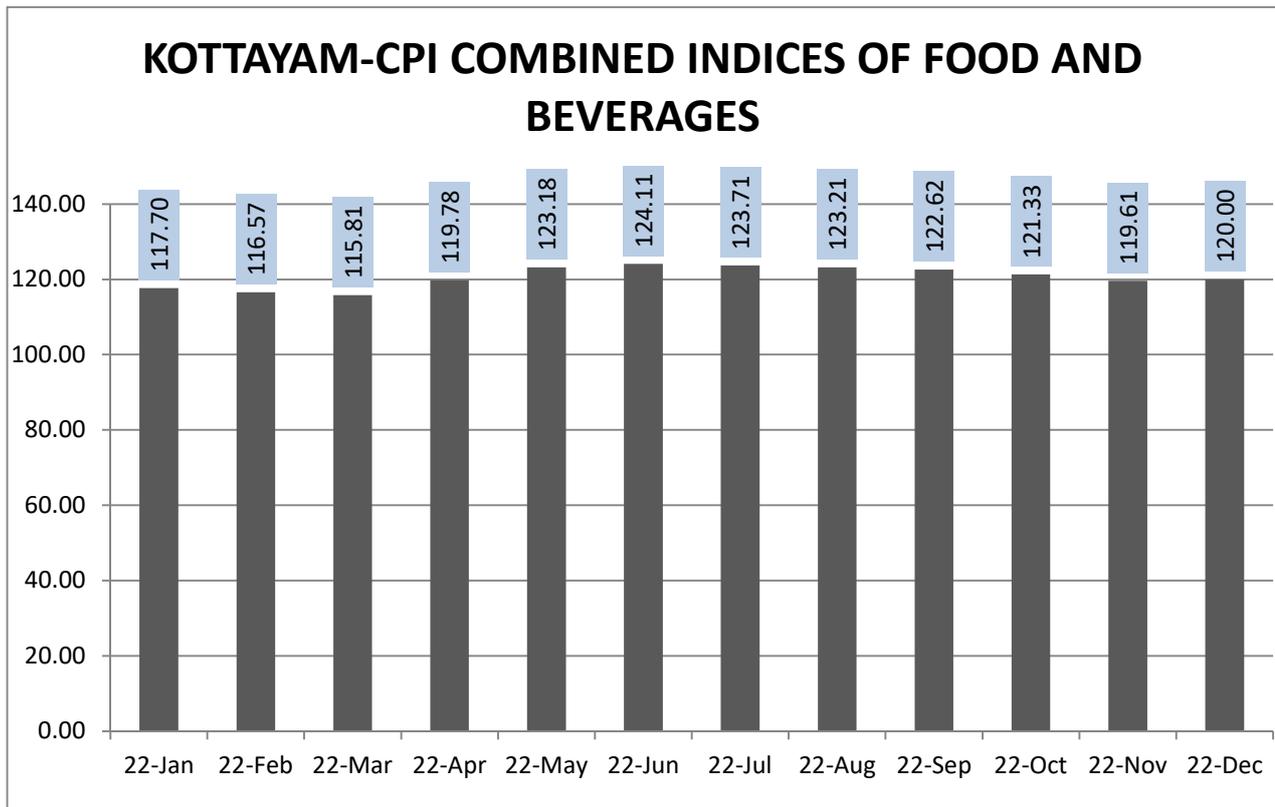

The Housing category shows minor fluctuations, starting in January and slightly decreasing in February, Prices gradually rise through April to June, reaching a peak in June. However, they dip in July and stabilize during the second half of the year. A gradual increase followed by some fluctuations, but generally a rise in housing costs toward the latter half of the year, with a slight dip in July.

Fuel and Light exhibit significant fluctuations throughout the year, starting in January and rising sharply in June. The prices reach their peak in October, then show a slight decrease towards the end of the year. This category experiences substantial increases, particularly between March and October, with some minor fluctuations observed later in the year.

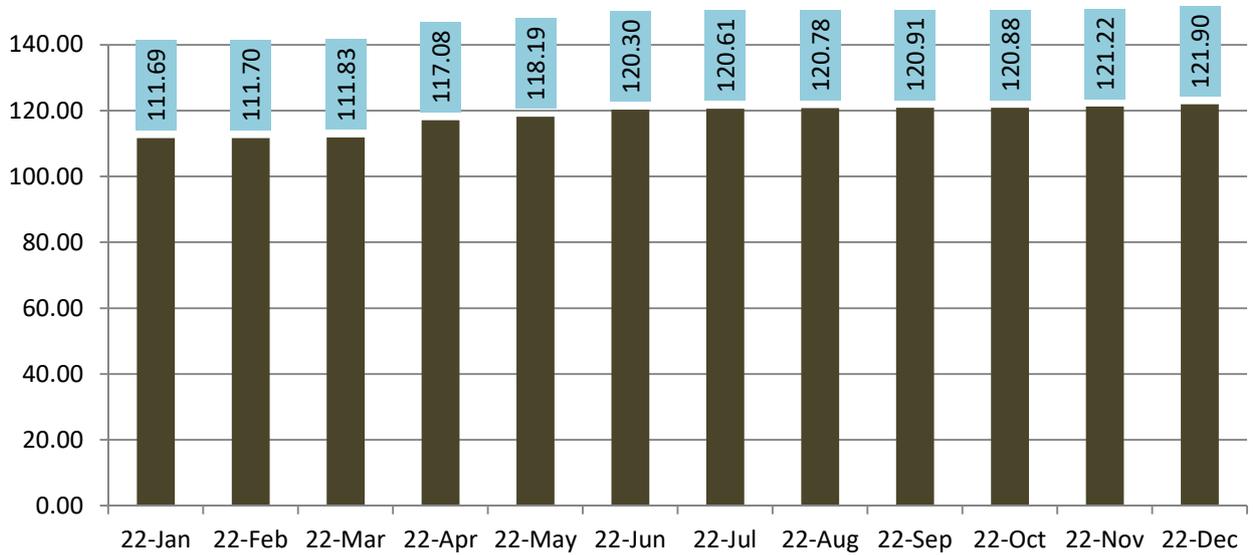

The Miscellaneous category starts in January and follows a general upward trend throughout the year. Prices rise gradually from month to month, reaching in December, which represents the highest growth in any category. A consistent increase across the months, with no significant dips or plateaus, highlighting an upward trajectory in miscellaneous expenses.

The General category, which provides an overall snapshot of the consumer price index, begins in January and experiences moderate fluctuations. A noticeable increase occurs between April and June with prices stabilizing in the latter half of the year. The year closes with a slight drop in December.

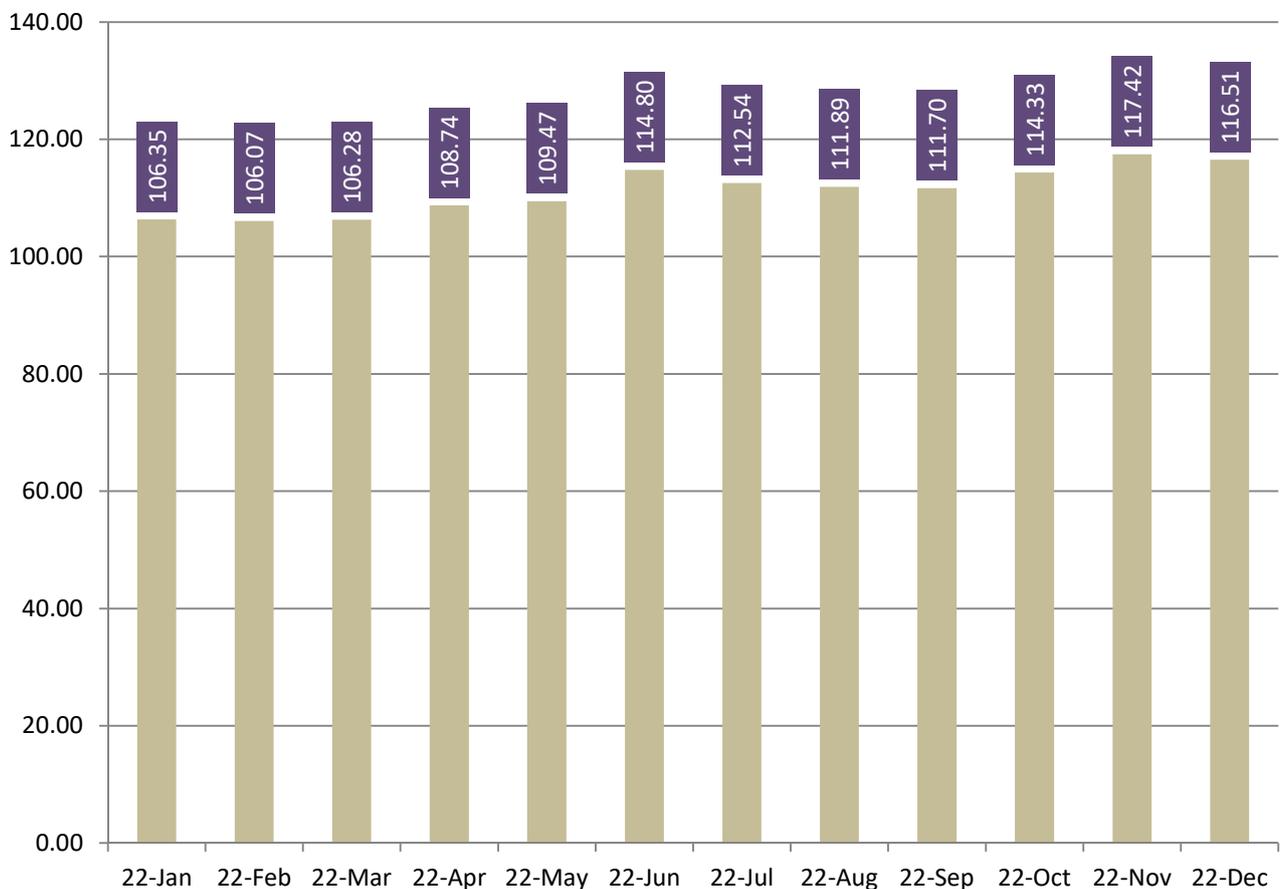

Table 11-E illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

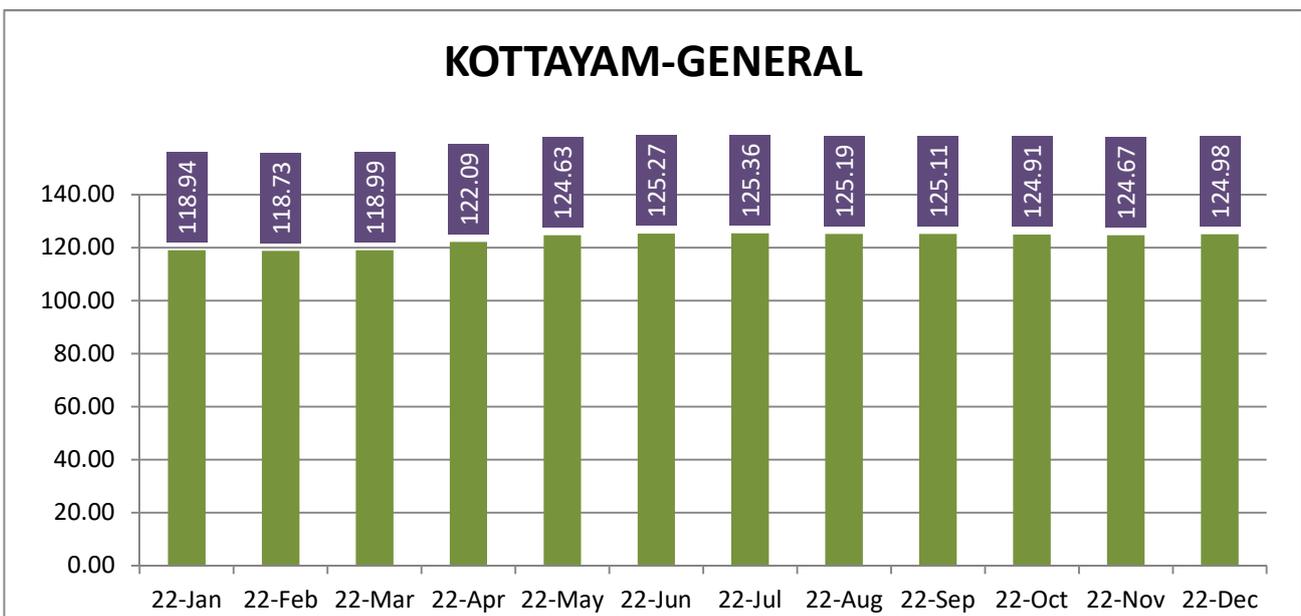

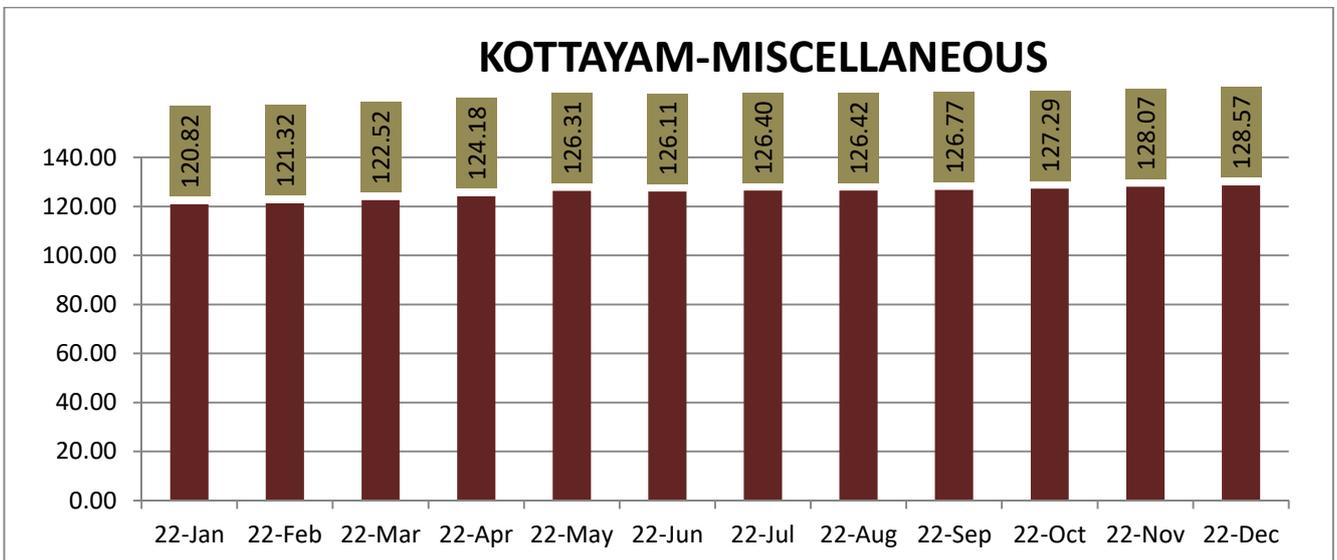

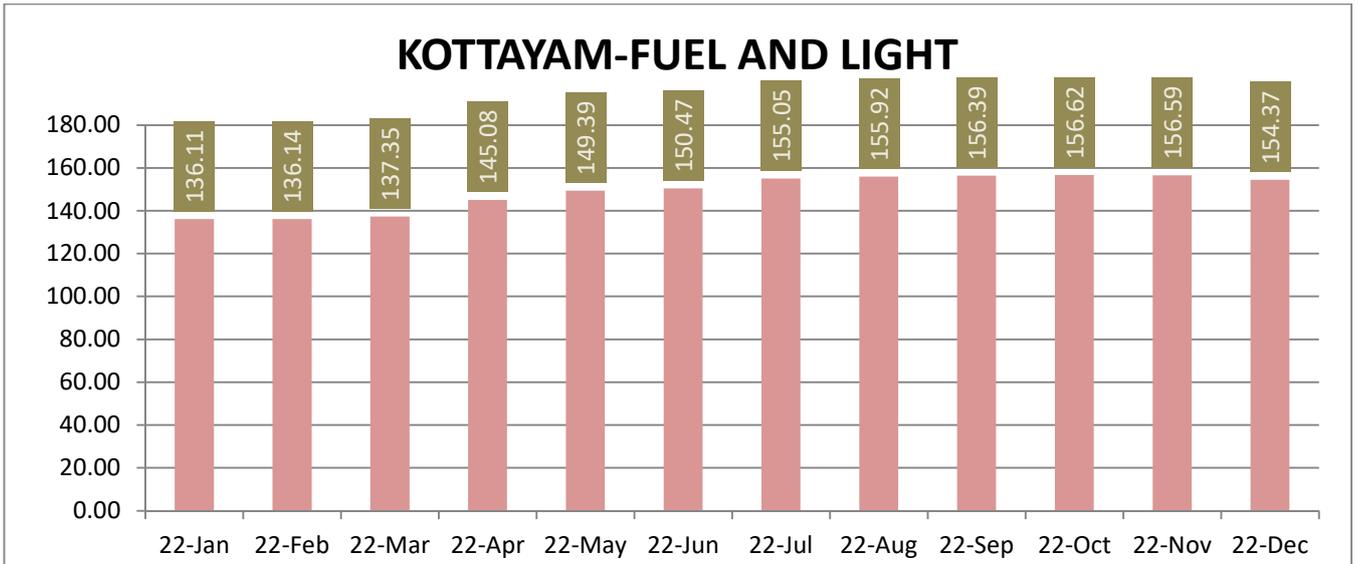

KOTTAYAM-CPI COMBINED INDICES OF CLOTHING & FOOTWEAR

KOTTAYAM - CPI COMBINED INDICES OF HOUSING

CPI COMBINED INDICES OF IDUKKI 2022

The food and beverages shows slight fluctuations but remains relatively stable with a slight upward trend. The highest value is recorded in latter months and the lowest value occurs in February, There is a steady and slight increase in food and beverage expenses towards the end of the year.

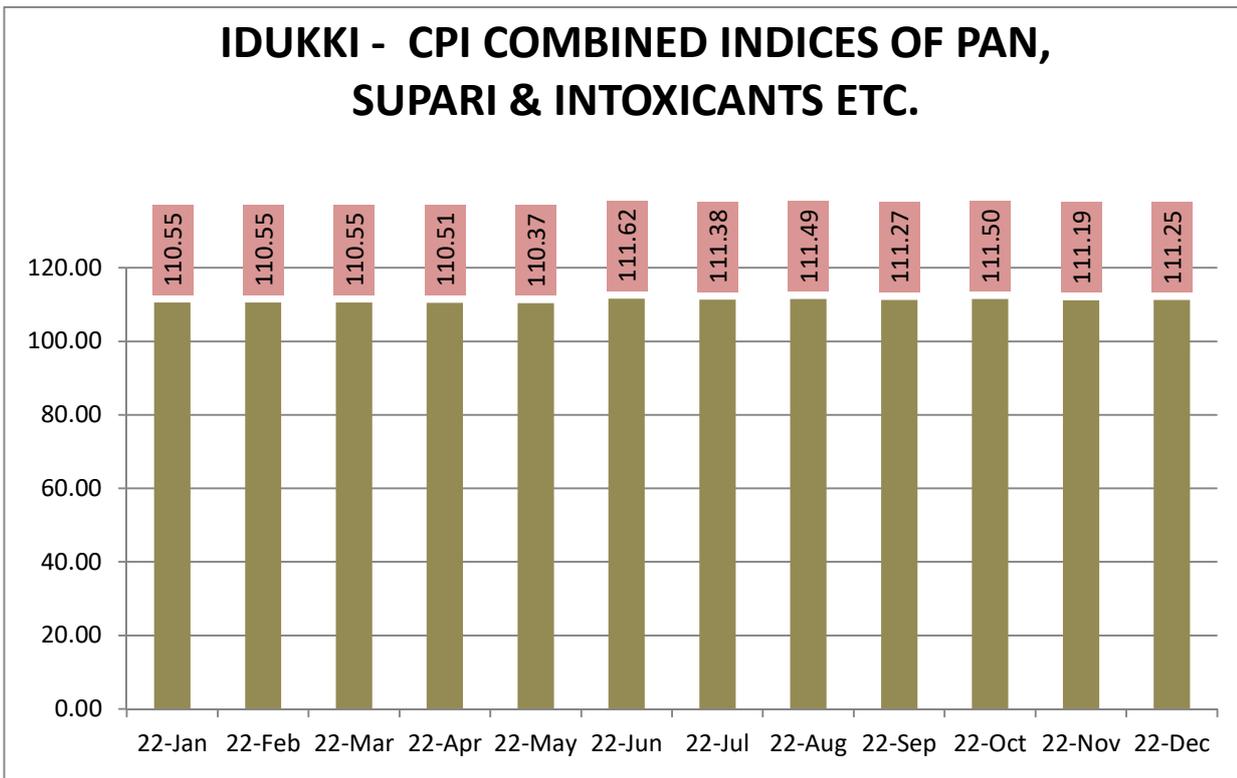

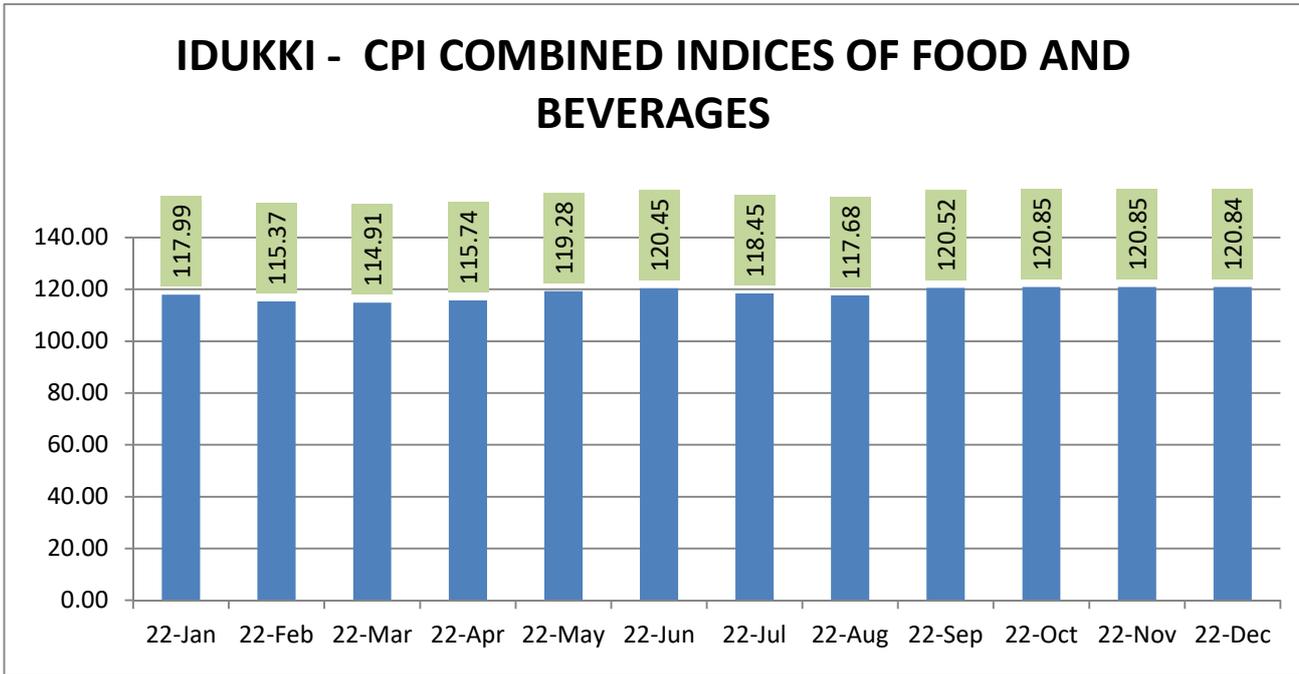

Pan, Supari & Intoxicants category remains mostly stable, with minimal fluctuations throughout the year. The lowest value in May and the highest value in June. There is a slight drop in December but the overall range of values remains narrow, indicating consistent spending. Clothing and footwear expenses see a gradual increase, especially towards the latter half of the year. The monthly values increase from January to a high in November. The highest increase occurs from October to November, with a slight decline in December.

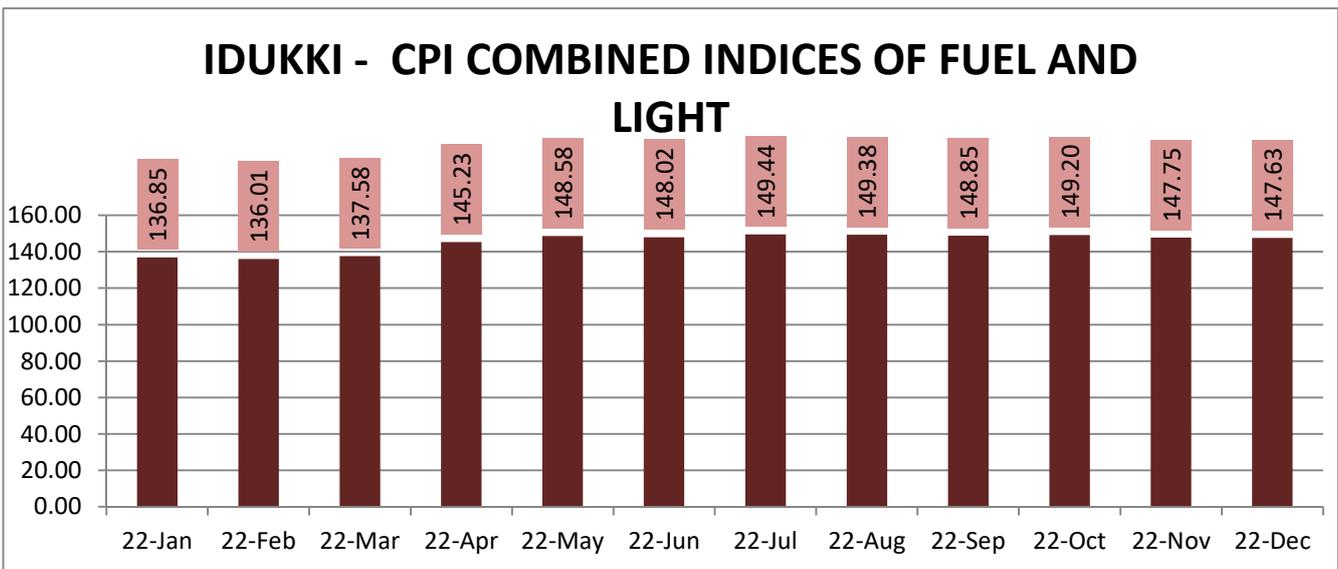

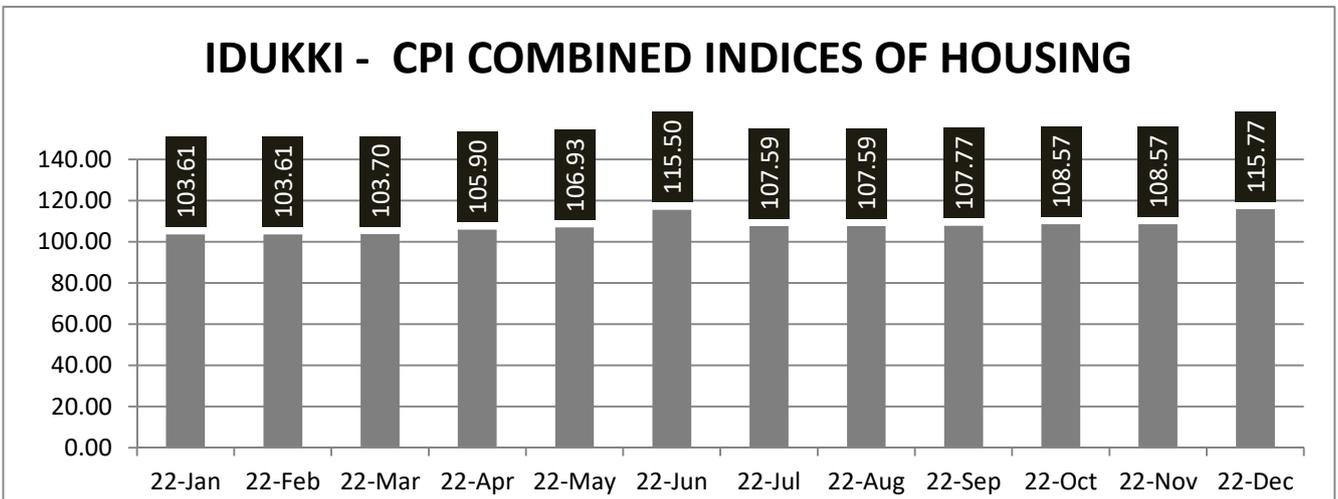

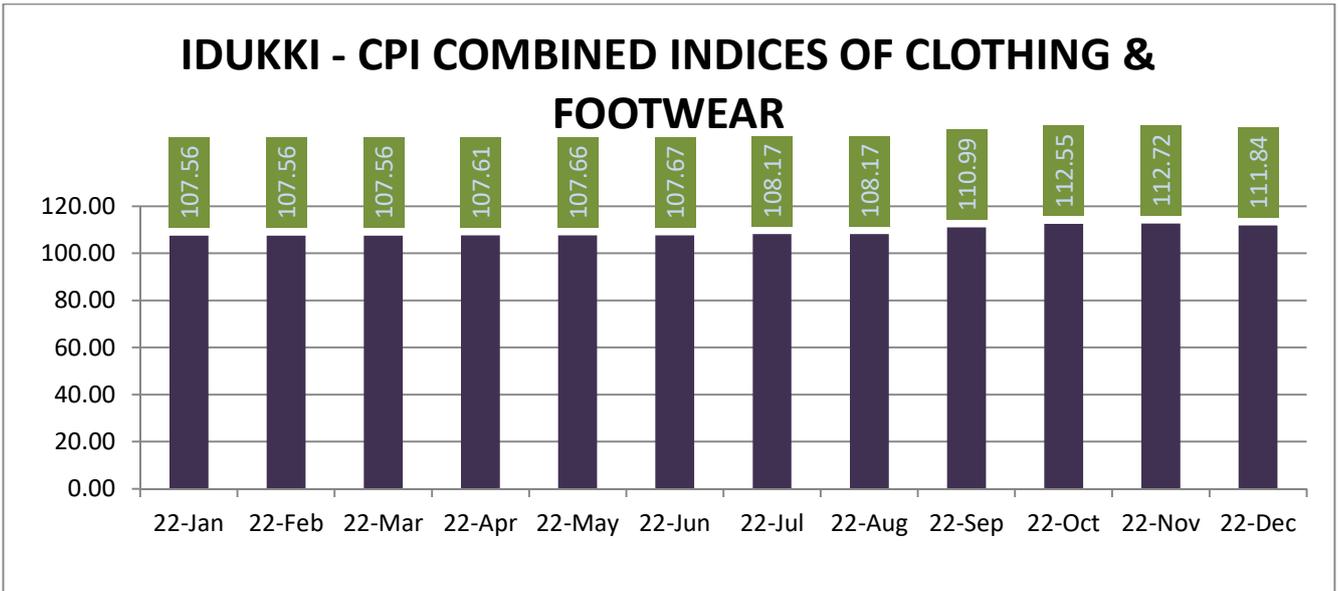

Housing expenses exhibit a steady upward trend throughout the year, with occasional fluctuations. The lowest value in January to March, while the highest value in December. There is a noticeable spike in June, followed by a drop in July and September. However, expenses rise sharply again in December. The consistent rise from May through December is notable, especially in July and December.

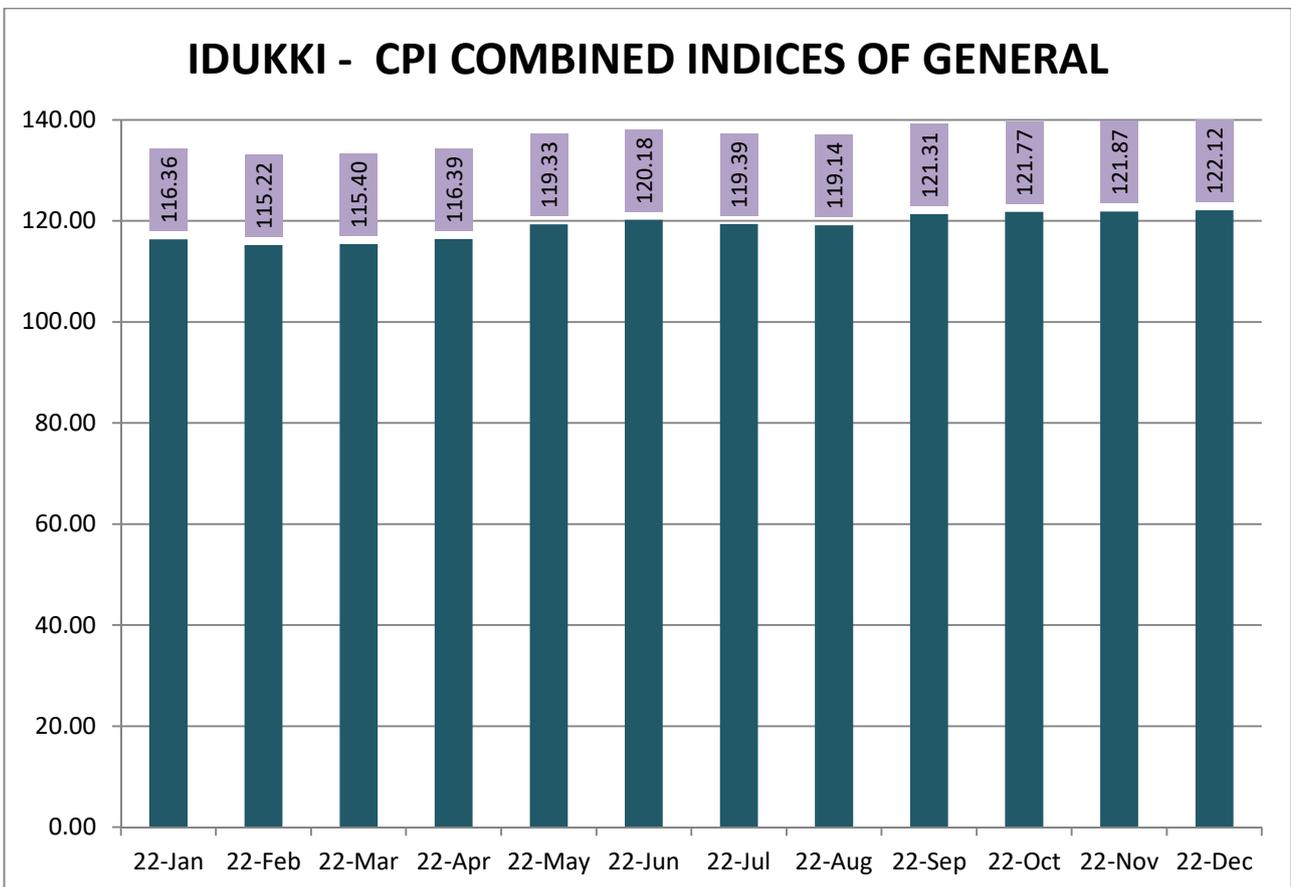

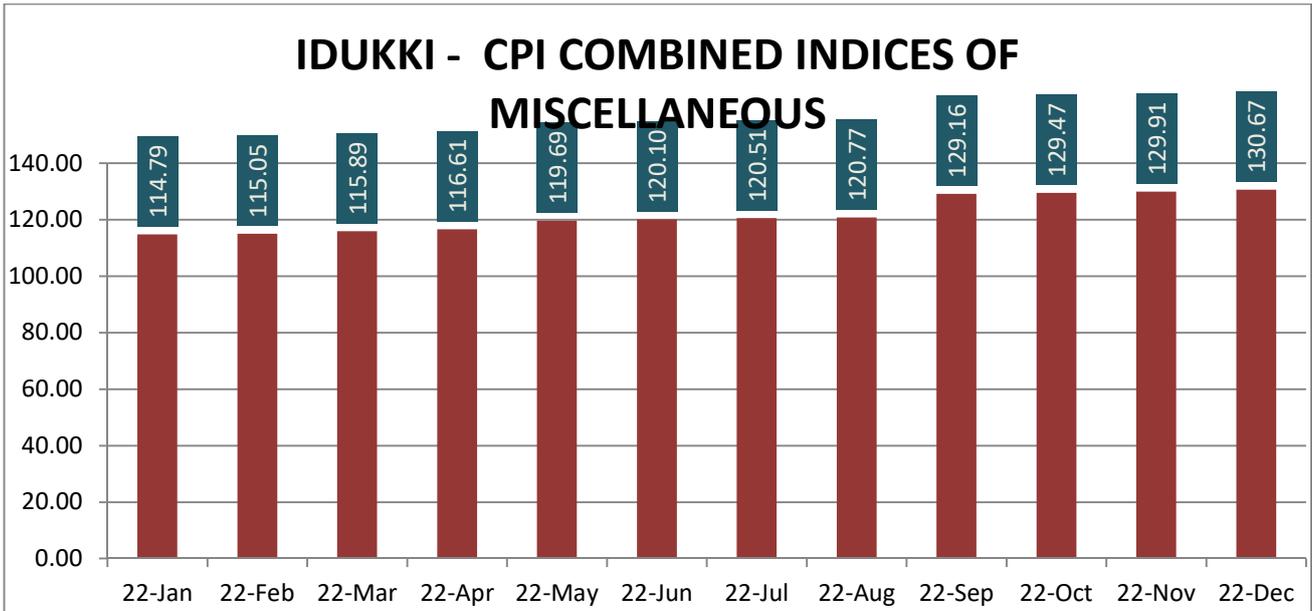

Fuel and light expenses show an upward trend overall, with some fluctuations. The value increases from January to July, peaking around this time. The lowest value occurs in February while the highest value in July. After July, fuel expenses decrease slightly but remain above for the rest of the year. Fuel and light expenses fluctuate in response to market dynamics, with peaks in summer months (especially July), possibly due to higher energy usage or fuel price increases. Miscellaneous expenses steadily increase throughout the year. The value starts in January and reaches in December. The most notable increase is between September and December signaling higher spending towards the end of the year. There is a steady growth in this category from May onward. Miscellaneous expenses are rising continuously, indicating either an increase in discretionary spending or rising prices for items in this category.

The general expenditure category shows a steady rise throughout the year, with consistent growth. The value starts in January and ends in December, with a steady increase. The highest value in December, indicating an end-of-year increase. General expenses show consistent growth, especially towards the end of the year.

Table 11-F illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

CPI COMBINED INDICES OF ERNAKULAM 2022

Food and Beverages category exhibit moderate fluctuations throughout the year, with a slight upward trend in mid and late months. The highest expenditure is observed in September. The lowest expenditure occurs in March. There is a gradual increase from the middle of the year suggesting increased consumption or price hikes toward the end of the year.

Pan, Supari, & Intoxicants category shows a relatively stable expenditure pattern with very slight fluctuations. The highest value is observed in June followed closely by December, The lowest recorded value is in May. There are no significant spikes or dips, indicating that consumer spending in this category remains quite steady throughout the year, with only minor monthly adjustments.

Expenditures in Clothing and Footwear show a gradual increase toward the end of the year. The highest value is recorded in October and November, January represents the lowest point for the year. The expenditure increases consistently from September onward, with a peak in November. Housing expenditures see noticeable variations, particularly from June to December. The highest expenditure occurs in December, the lowest expenditure happens in January.

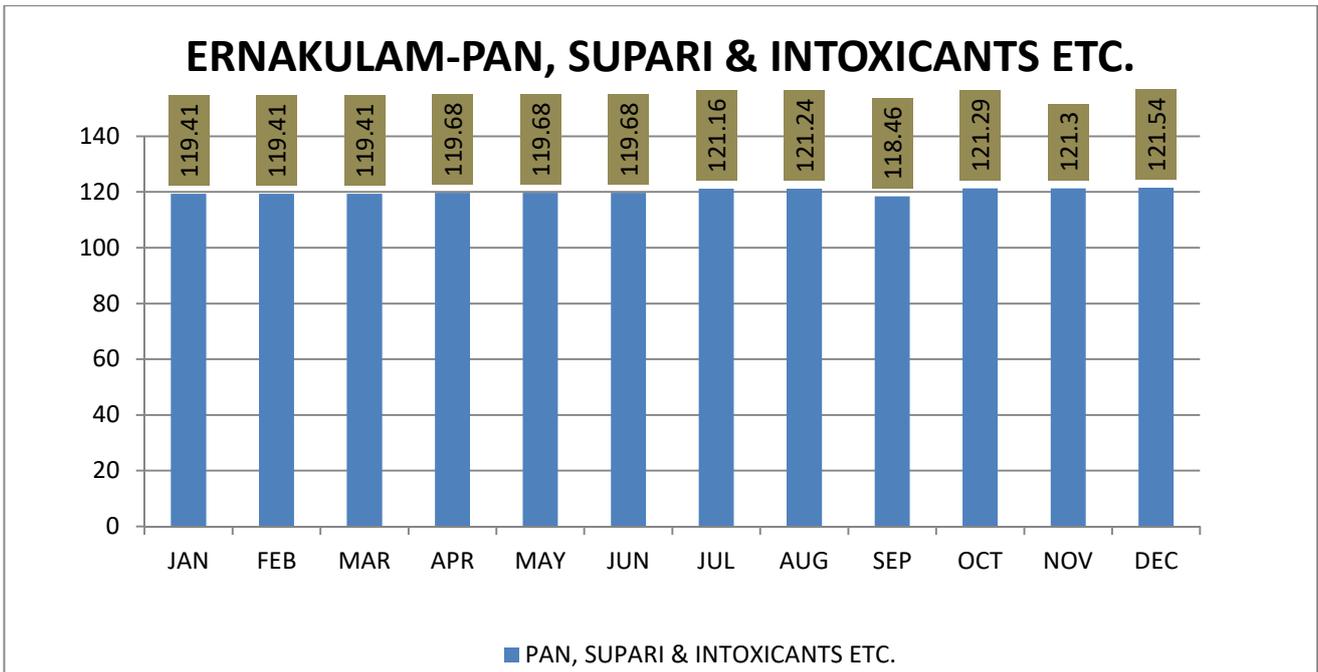

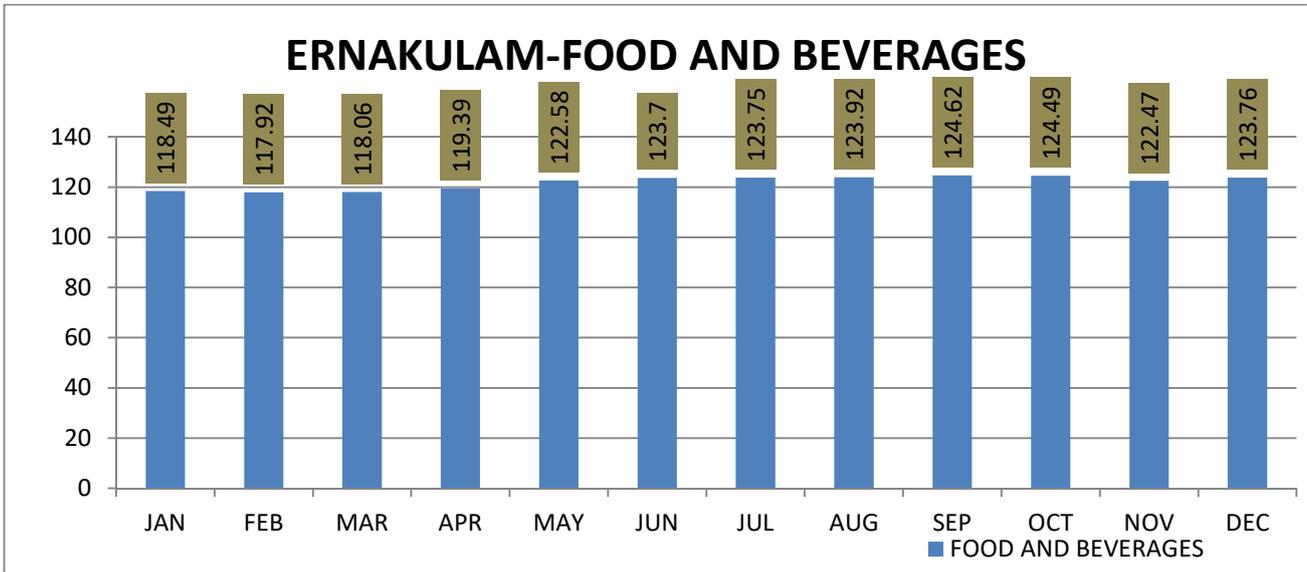

Housing costs remain relatively stable in the first few months of the year, but there is a noticeable spike from June onward. This could indicate increased rent, maintenance, or utility costs as the year progresses.

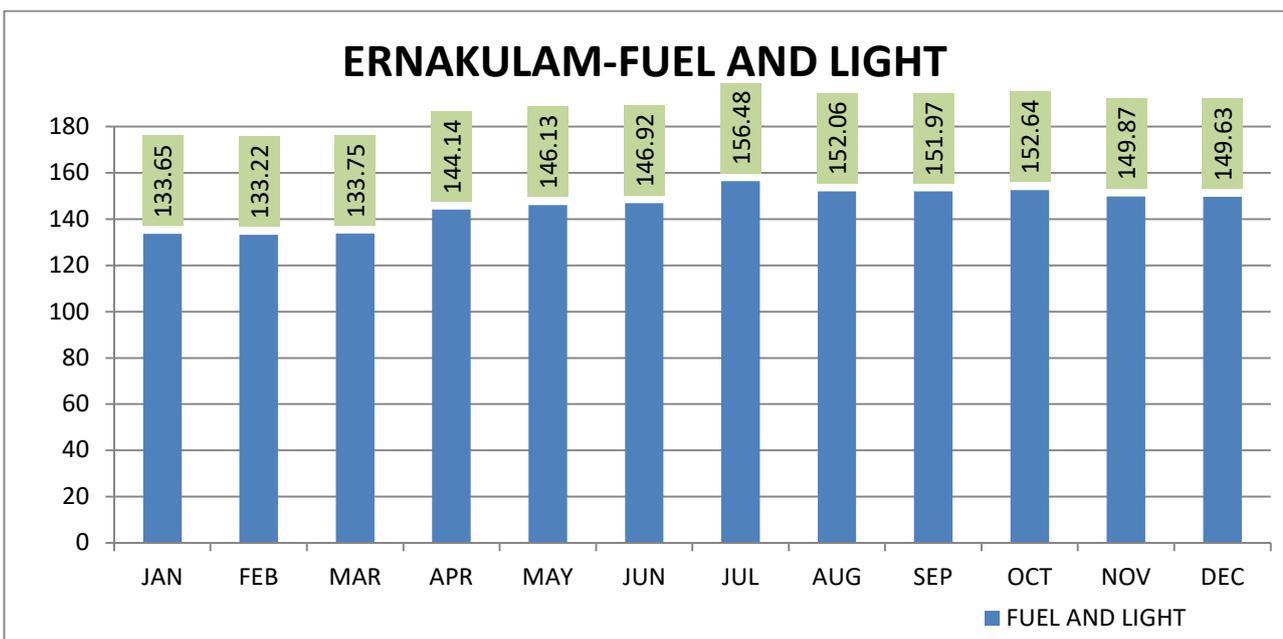

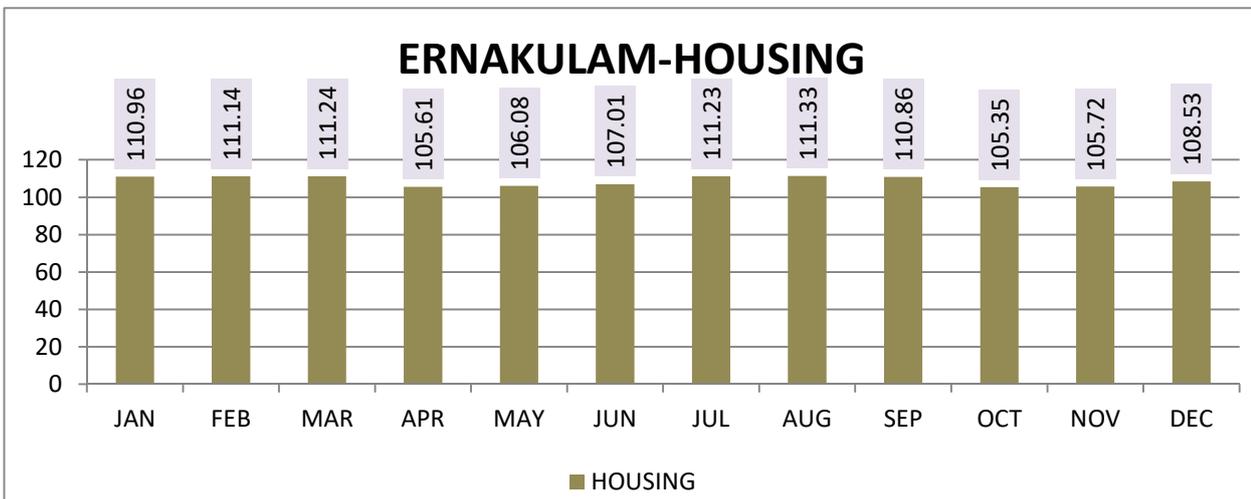

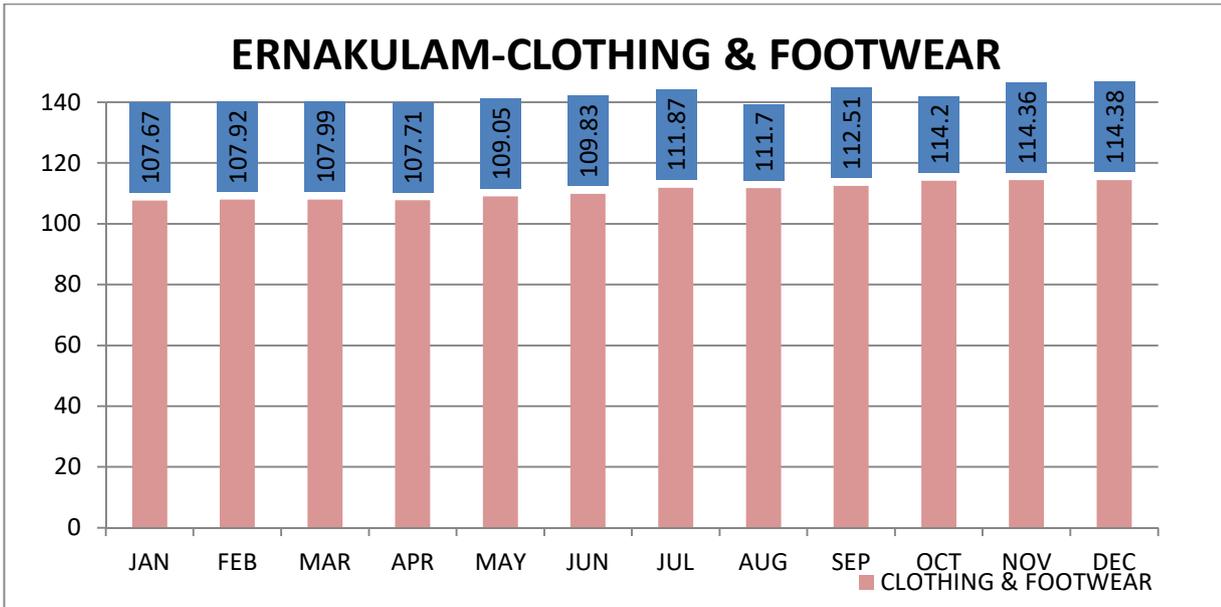

Fuel and light expenditures fluctuate significantly throughout the year, with a marked increase in the middle months. The highest recorded value is in July the lowest expenditure occurs in early months. Fuel and light costs show a substantial rise from April onward, peaking in July and August.

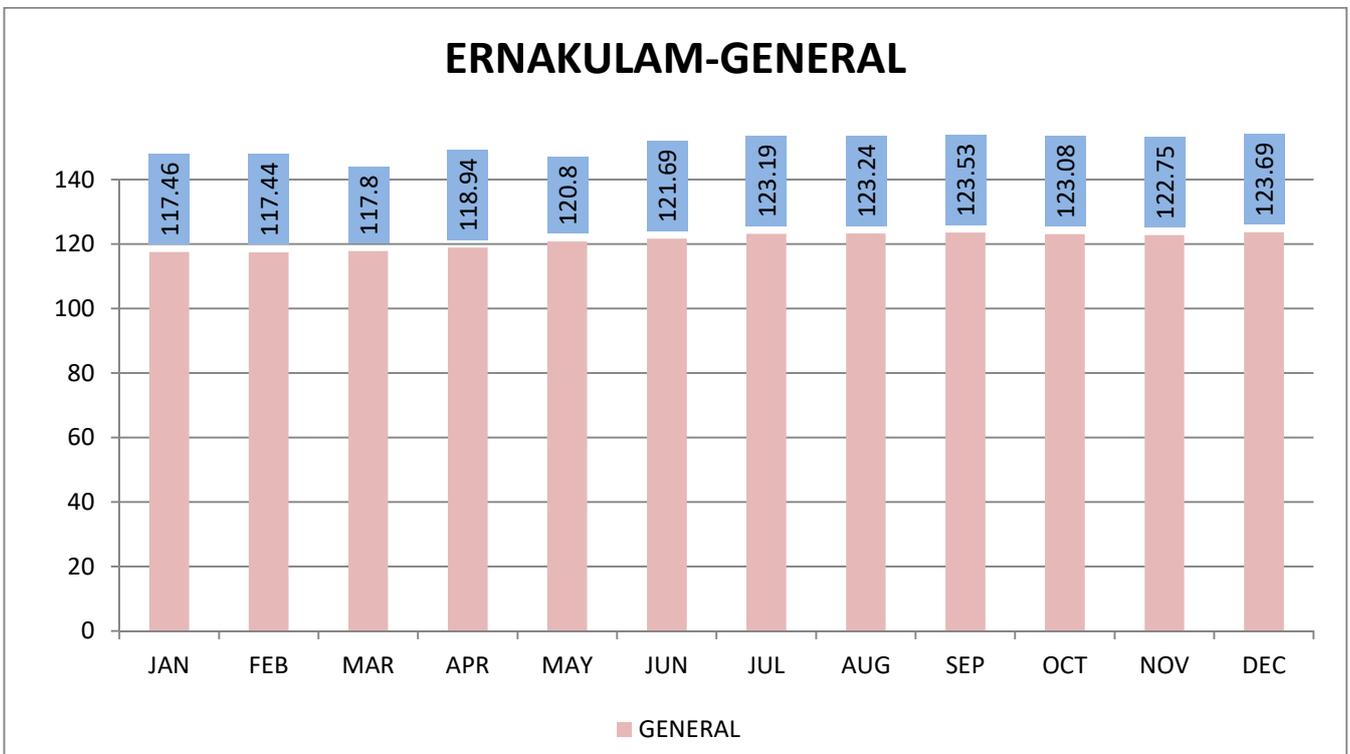

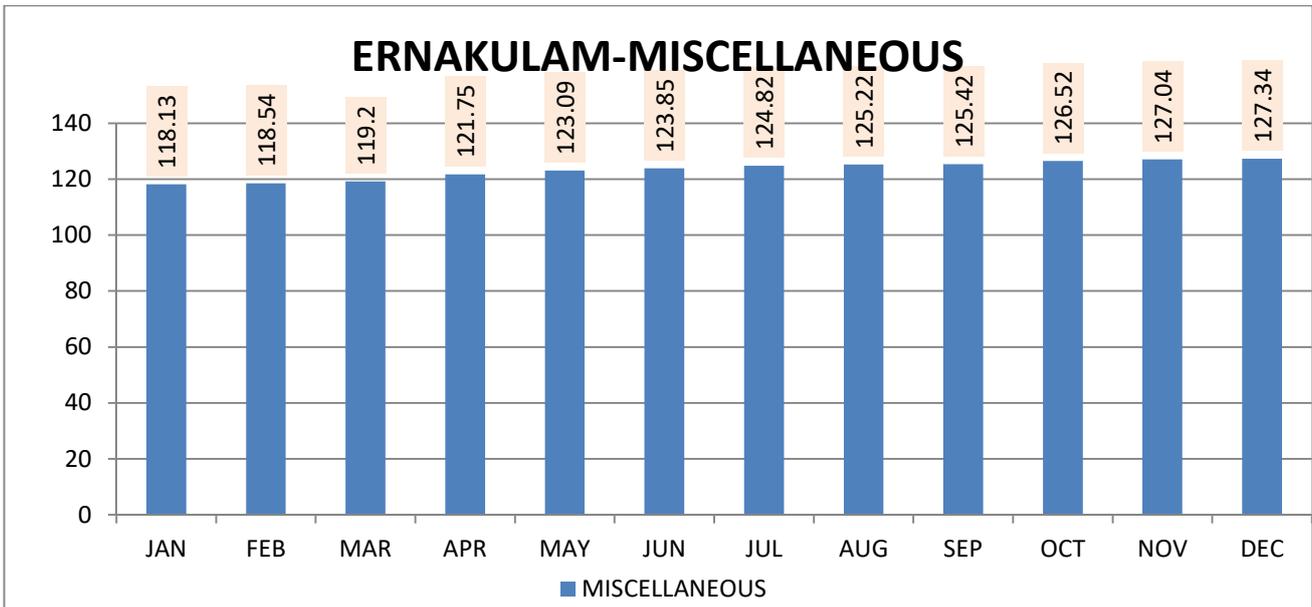

The Miscellaneous category demonstrates a consistent upward trajectory, with a clear rise towards the year's end. The highest value is recorded in December. The lowest expenditure occurs in January. A steady increase is seen from January to December, especially notable from September onward, which suggests that consumers are spending more on various miscellaneous goods and services as the year closes.

Expenditures in the General category also follow a steady upward trend, with peaks in the later months of the year. The highest expenditure is seen in December, The lowest expenditure is recorded in February. A continuous increase in spending is observed throughout the year, particularly from June onward.

Table 11-G illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

CPI COMBINED INDICES OF THRISSUR 2022

The prices of food and beverages show a steady increase over the year. Starting in January, prices rise gradually, peaking in June. The trend fluctuates slightly after that, with minor variations in August and in September. By the end of the year, the price settles in December, indicating a general upward movement with slight seasonal fluctuations.

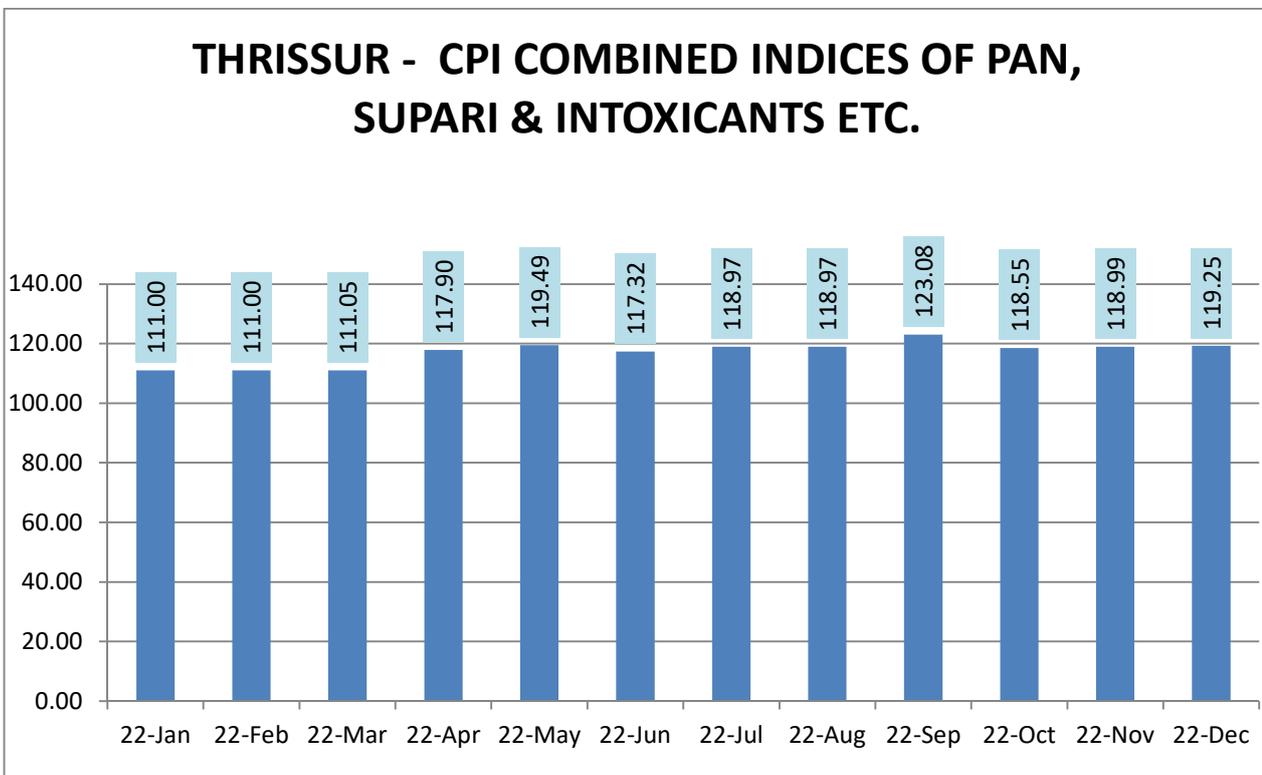

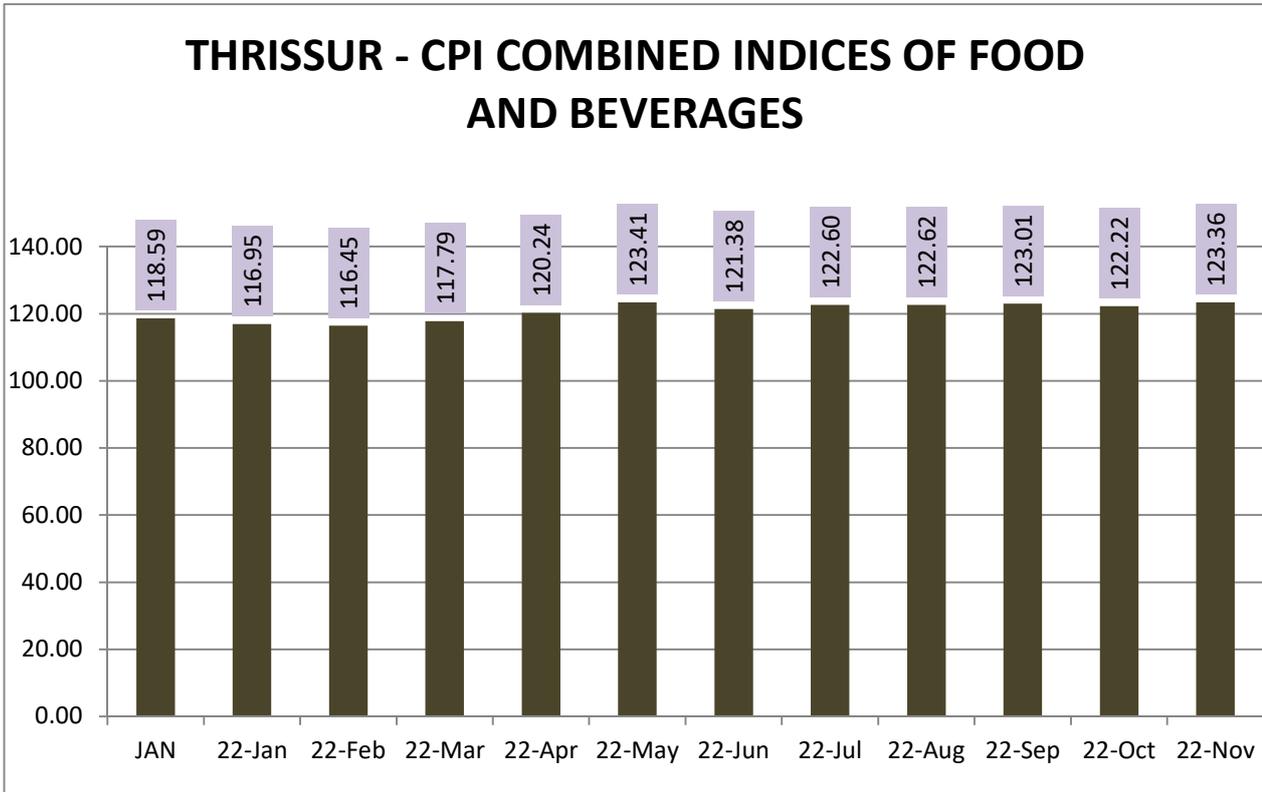

PAN, SUPARI & INTOXICANTS ETC sector shows a consistent rise in prices, peaking mid-year and slightly tapering off in the latter months. Prices in this category are relatively stable compared to other sectors. Starting in January, the prices remain steady through January, February and March. A slight increase is observed in April, after whom prices hover for most of the year, with a peak in September. The clothing and footwear sector sees a notable upward trend from January to July. The prices peak in both July and August before experiencing a decline in September then stabilizing in December.

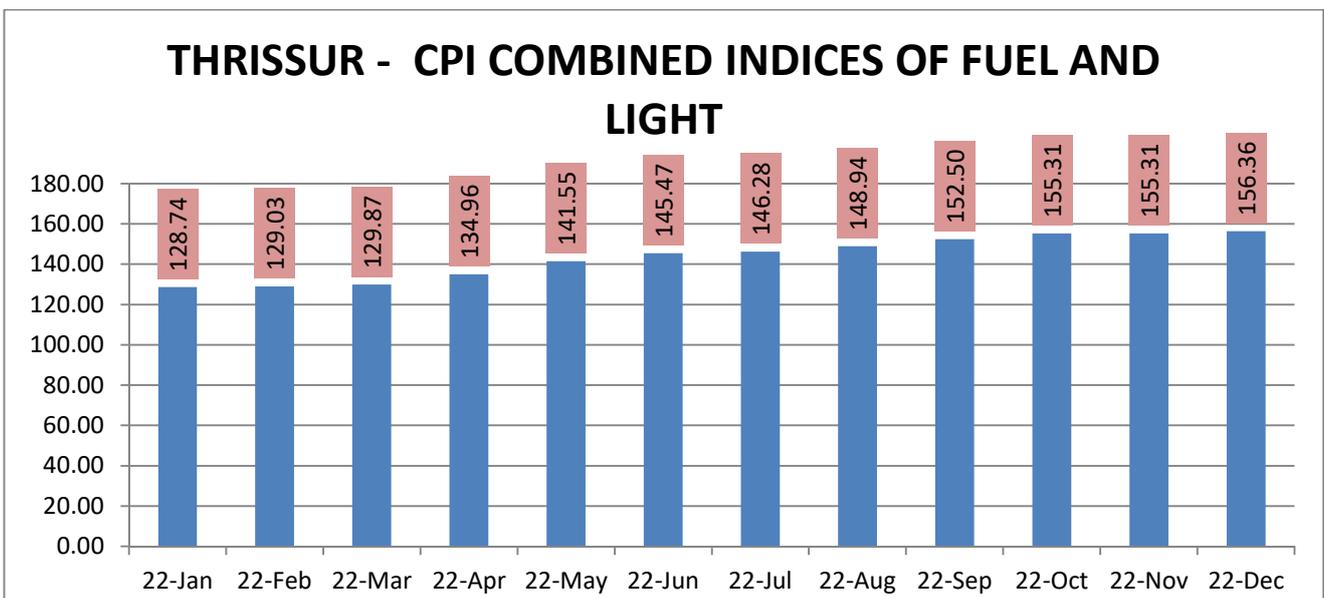

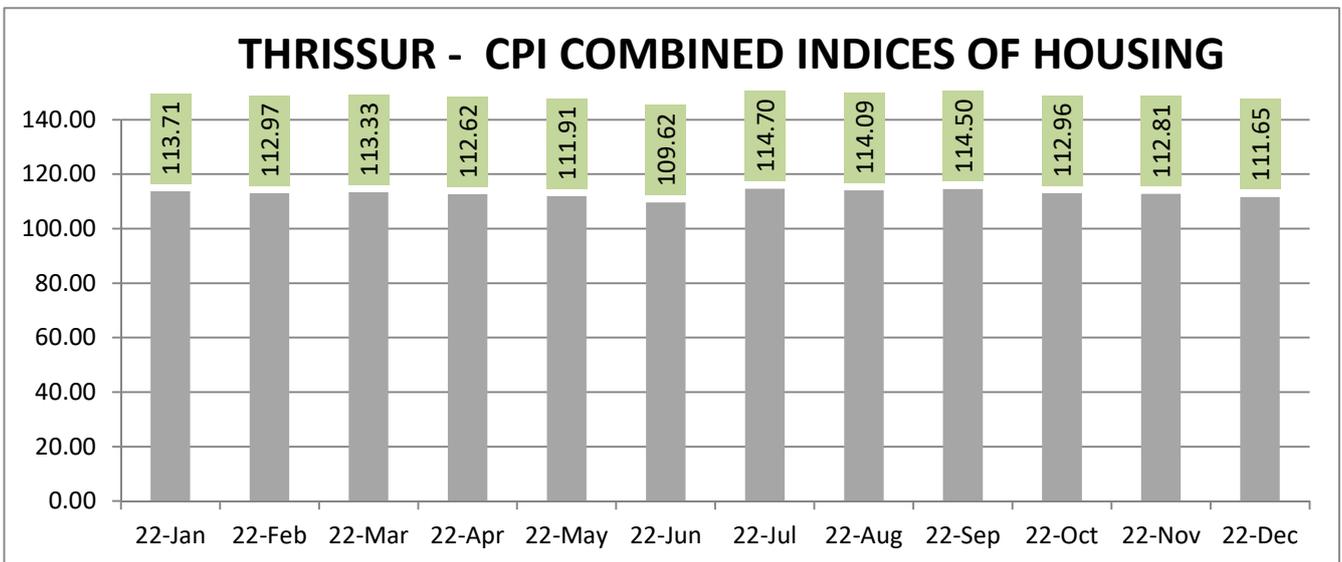

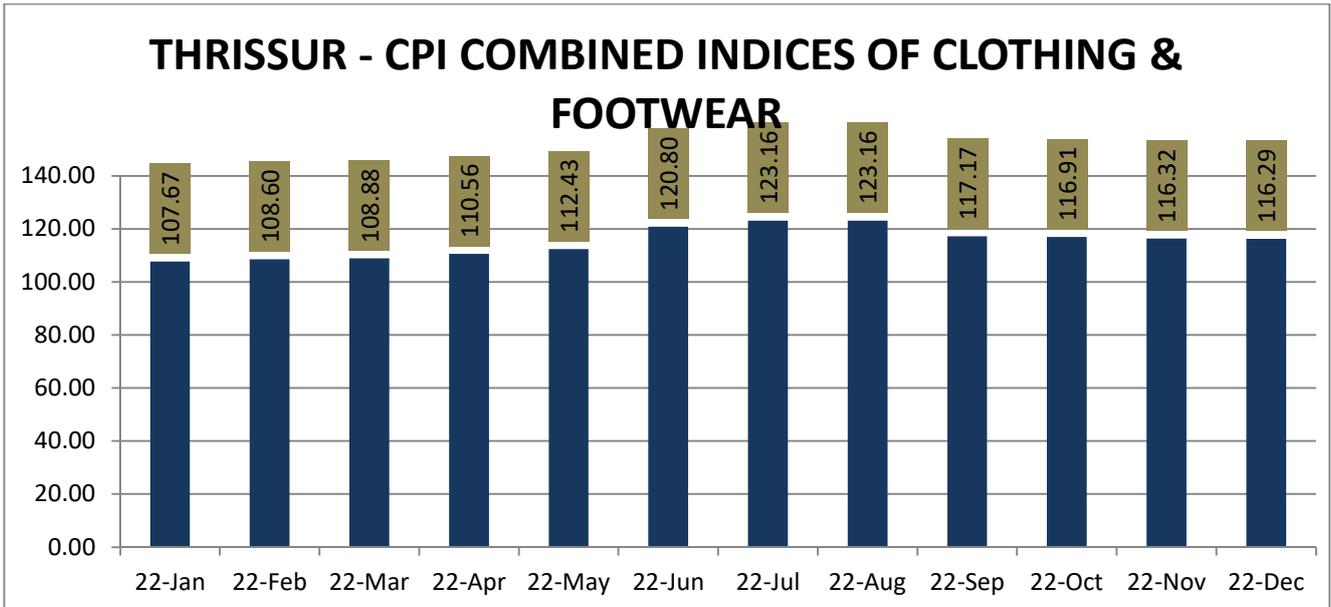

Housing costs fluctuate throughout the year, starting in January. The trend is mostly downward, reaching a low in June before increasing again in July. The prices remain stable towards the end of the year. Housing prices show a seasonal dip in the mid-year and some recovery in the latter months.

Fuel and light prices show a sharp increase throughout the year, starting in January and escalating by December. The most significant increase happens from April to May, with a steady rise in the following months. There are no significant drops, indicating a strong upward trend. This sector experiences continuous price hikes, especially in the second half of the year, possibly reflecting global energy price trends and inflationary pressures.

The miscellaneous category follows a generally upward trajectory, starting in January and peaking in June to August. The prices stabilize in the latter months of the year. The general index tracks a stable upward trend, moving from January in December. The sector sees a steady increase in prices, with only minor fluctuations throughout the year, suggesting a general rise in the cost of living.

THRISSUR - CPI COMBINED INDICES OF GENERAL

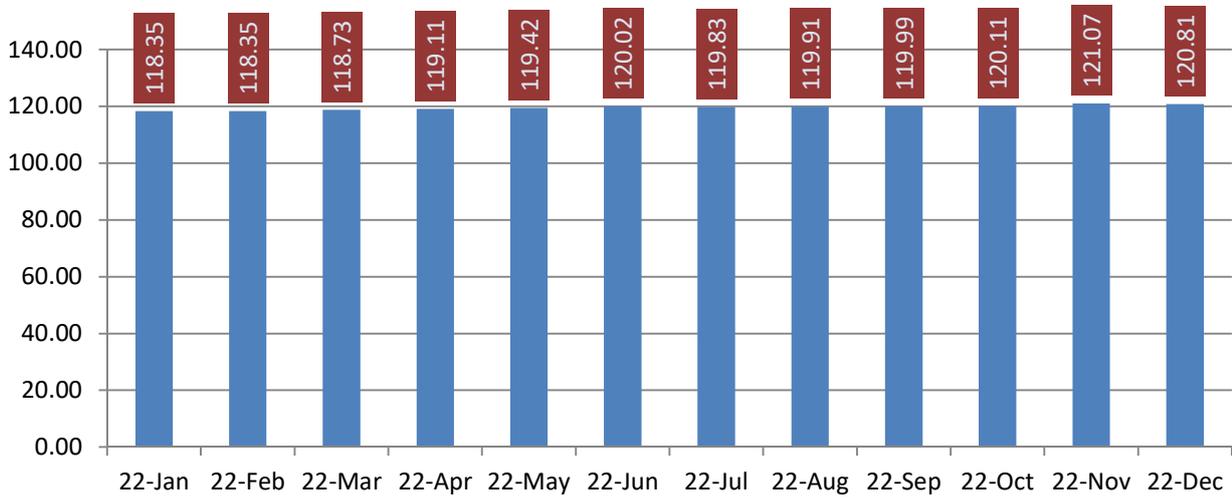

CPI COMBINED INDICES OF PALAKKAD - 2022

Food and Beverages category remains relatively stable with slight monthly fluctuations. The highest recorded value is in December and the lowest is in February. There is a slight upward trend starting from February through to December, indicating a consistent increase in food-related expenses, peaking during the last quarter of the year. Pan, Supari & Intoxicants sees a steady increase in expenditure, with December showing the highest expenditure. The lowest value is recorded in January, February and March. The overall trend shows gradual increases from January to November, after which the growth rate slightly stabilizes but remains relatively high through the year. Clothing & Footwear expenses experience a slow but consistent increase. There is a notable dip in September, which is the lowest point of the year, followed by a slight recovery in October and December. Housing expenditures show significant fluctuations throughout the year. The values are relatively higher in the earlier months and decrease sharply in April. The lowest value is recorded in September, October, and November; there is a sharp rise in December. The Fuel and Light category experiences the most volatility with significant increases across the months. The highest expenditure is observed in December, Miscellaneous expenses see a gradual rise from January to December. The growth rate is particularly sharp in May and remains high through the summer months. The lowest expenditure occurs in January, but there is an upward trend throughout the year, with the highest recorded in May and June. The General category also follows an upward trend, with expenditure rising from January to December. The highest expenditures in this category occur in May and June, while the lowest occurs in January, February and March.

CPI COMBINED INDICES OF MALAPPURAM 2022

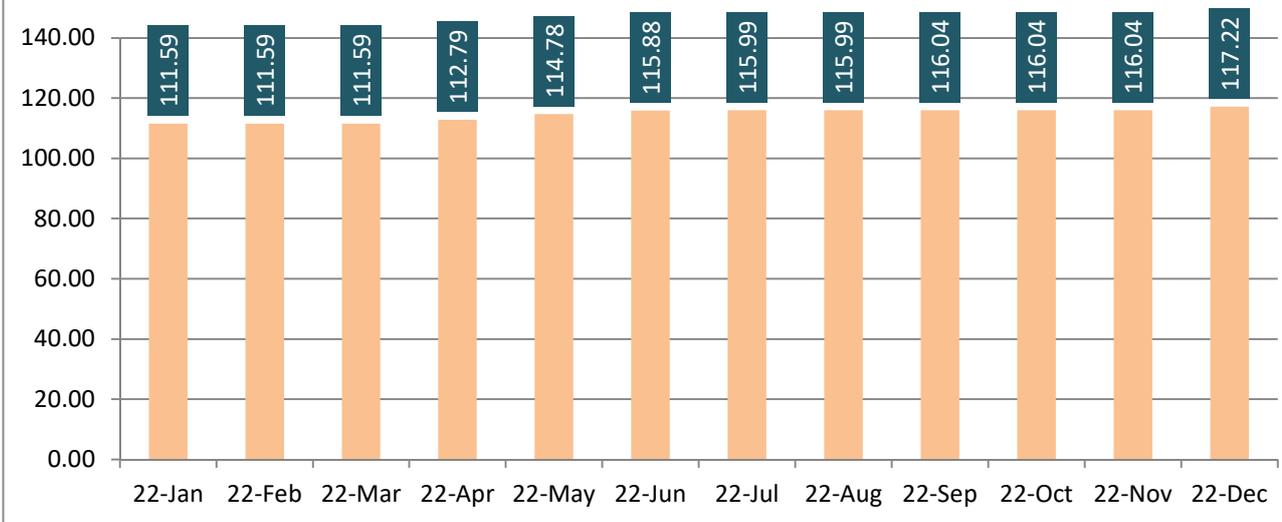

Food and Beverages remain relatively stable with slight fluctuations in the monthly indices. The CPI value starts in January and peaks in May, showing a gradual increase in food prices. A slight decline is observed from May to June followed by a minor drop until November, December marks a minor increase, but the year ends lower than the May peak. While food prices experience slight increases, the changes are not drastic, with a peak in May followed by a small correction in the latter months of the year. Pan, Supari & Intoxicants category shows a steady increase throughout the year. The CPI begins at in January and remains constant until March. A slight increase is noted starting in April and the values continue to rise by December. The growth is consistent throughout the year, with no significant fluctuations. Prices for Pan, Supari, and Intoxicants see gradual but consistent growth, with a notable increase at the year's end. The CPI for Clothing & Footwear shows small but steady growth over the months. The index starts in January and shows very little fluctuation month-to-month. From January to December, the CPI increases slightly, indicating a consistent rise. The rate of change is very gradual, with only minor increases each month. The Clothing & Footwear sector experiences stable, incremental increases in price over the year, with no sharp deviations. Housing shows more noticeable fluctuations, particularly mid-year. The index starts in January, and then rises slightly in March. The most significant increase occurs in July followed by a drop in November. The overall trend shows a peak in mid-year, followed by a sharp decline in the latter months, reaching in December. Housing costs are subject to seasonal fluctuations, with a significant peak in mid-year, followed by a considerable drop in the last quarter of the year. Fuel and Light prices are volatile, with considerable monthly changes. Starting in January, the index shows a sharp rise in April and continues to climb through May. The most significant price spikes are noted in April and May, with a minor correction towards the end of the year. The Fuel and Light sector shows high volatility, with substantial price increases in the middle of the year, followed by some stabilization toward the end. Miscellaneous items exhibit a consistent upward trend in prices. The index starts in January and rises steadily throughout the year, reaching by December. While the rate of increase is not dramatic, the steady growth throughout the months indicates a consistent rise in miscellaneous goods and services. Miscellaneous goods continue to become more expensive at a steady pace, December marks the highest price.

The General index follows a somewhat stable upward trend similar to other categories, though with slight fluctuations. The General CPI starts in January and remains relatively stable, reaching a peak in May. After May, there is a slight decline in July, followed by a final increase in December. The General index experiences moderate growth, with prices slightly increasing month-to-month, particularly in the latter half of the year.

CPI COMBINED INDICES OF KOZHIKKODE 2022

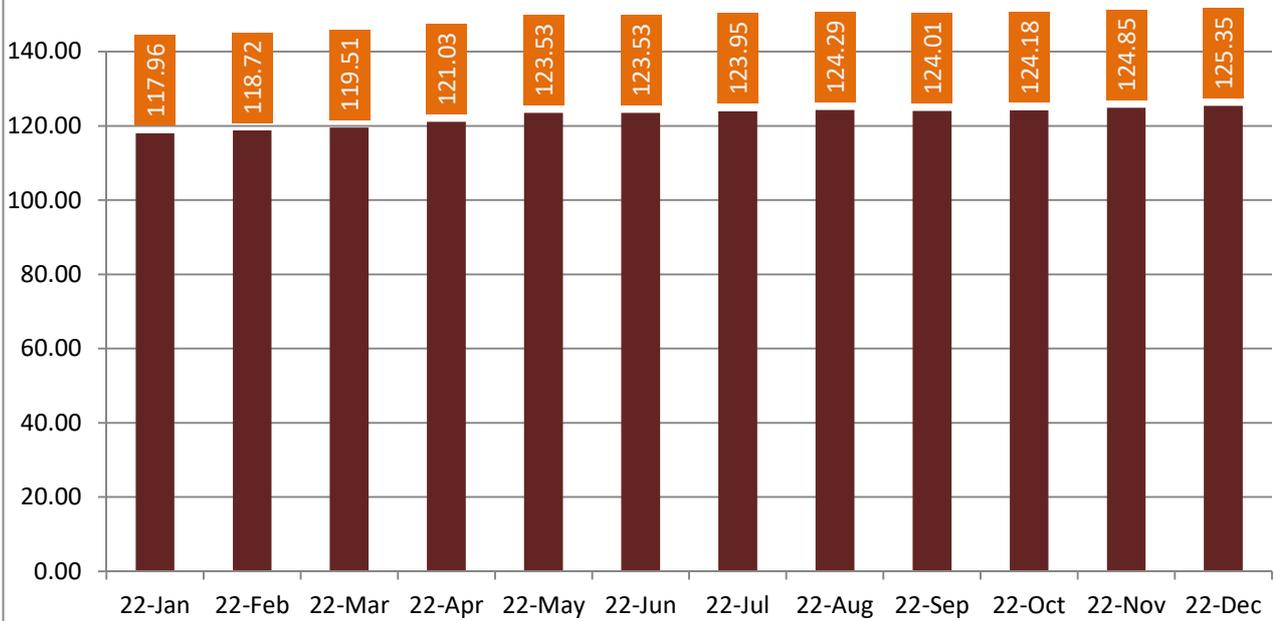

Food and Beverages shows a steady upward trend throughout the year. Starting from in January, it increases gradually by December. The highest increase occurs between April and May. This category experiences a moderate but consistent inflationary trend, showing a increase from January to December. Pan, Supari & Intoxicants category remains relatively stable throughout the year, fluctuating only slightly between in January and in December. This category shows an increase from January to December, with minimal variation, suggesting relatively stable pricing or low inflationary pressures. Clothing & Footwear rises gradually over the year, from in January to December. The largest increase is noted between November and December. The category experiences a consistent upward trend, with an increase from January to December, suggesting that clothing and footwear prices May be influenced by seasonal demand and new fashion cycles. Housing prices exhibit some volatility, with significant fluctuations throughout the year. Starting in January, it drops in April, followed by a steady increase in December. Housing costs show a negative trend latter month, but ultimately close with an increase from January to December. Fuel and Light follows a consistent upward trajectory, from January to December. The most notable increase occurs between September and October indicating an almost constant rise during the year, potentially due to higher energy costs or inflationary pressures on energy prices; It shows the largest overall increase, with a rise from January to December, reflecting the ongoing volatility and rising global energy prices. Miscellaneous items rises steadily from January to December, This category shows a steady increase throughout the year, with the largest jump between May onwards marking a stable increase in the first half of the year. The General category, representing an aggregate of all sectors, fluctuates moderately throughout the year. Starting in January, it ends in December. The most significant rise occurs between May and June. The General category reflects a moderate overall increase, from January to December, which mirrors the inflationary pressures seen in specific sectors like housing and fuel.

KOZHICKODE -CPI COMBINED INDICES OF GENERAL

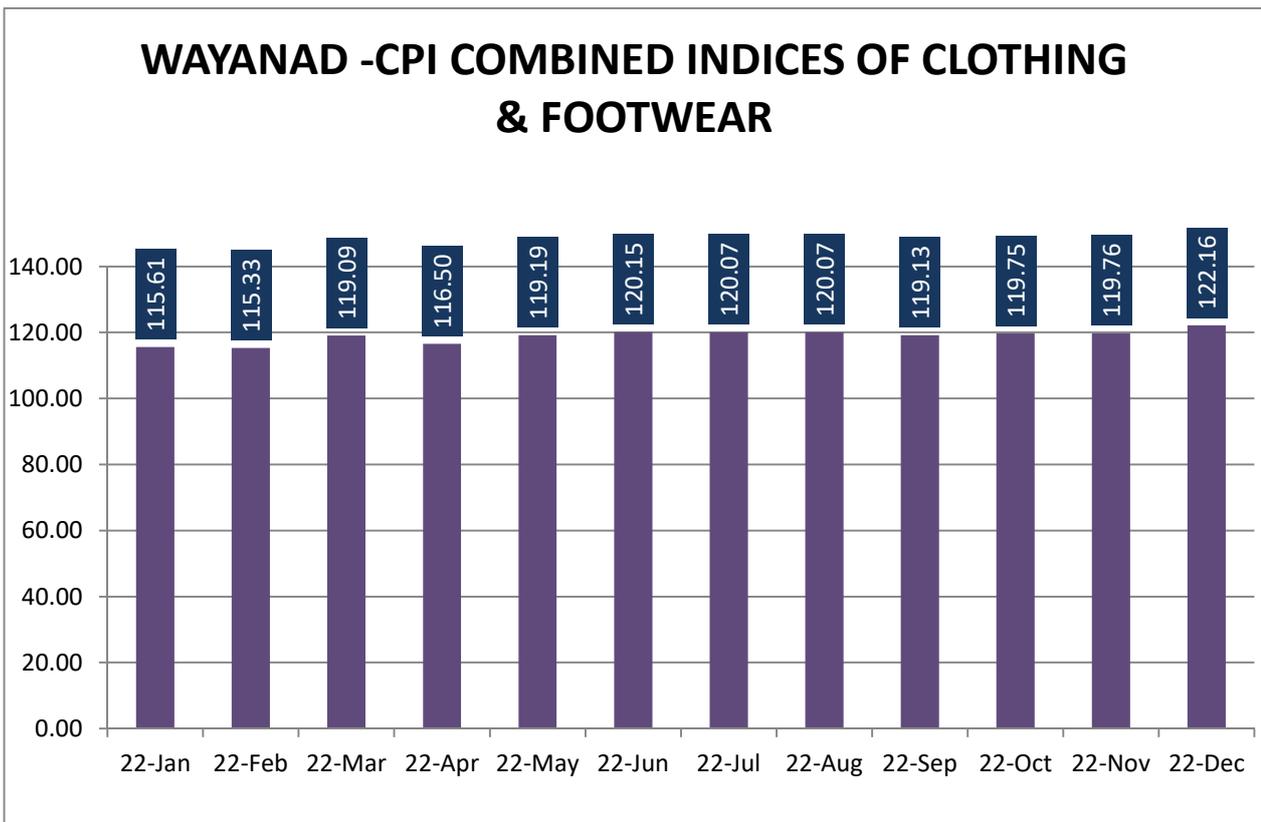

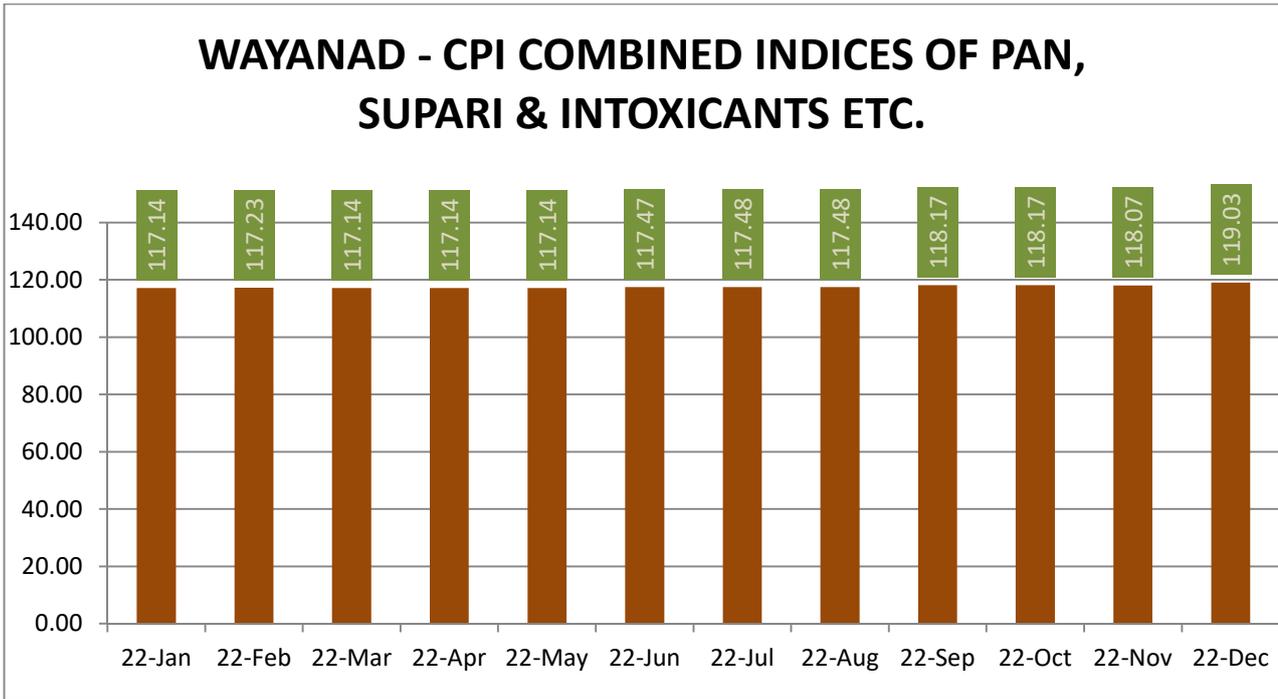

CPI COMBINED INDICES OF WAYANAD 2022

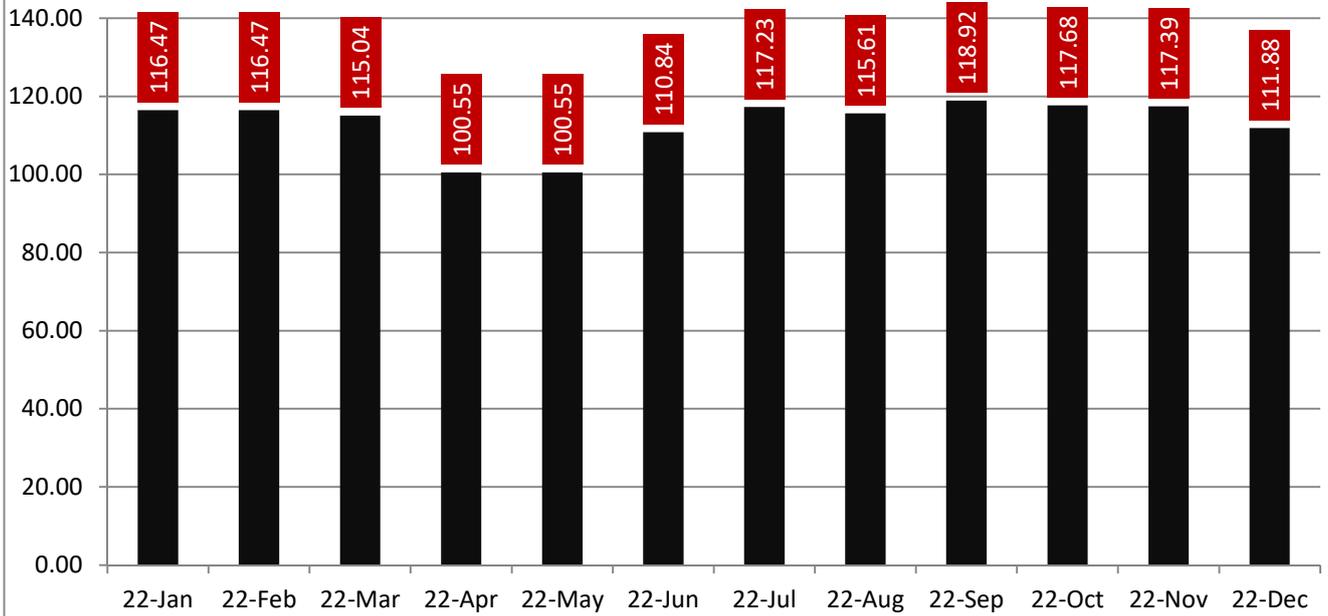

Food and Beverages fluctuates but generally increases from January to December. The largest increase occurs between May and June, signaling a notable rise in food prices mid-year. The most significant decline occurs in July. Pan, Supari & Intoxicants category shows a stable increase in CPI from January to December. It remains fairly stable through most of the year with small increases, peaking in December. Pan, Supari & Intoxicants prices rise moderately, with increase from January to December, reflecting relatively stable but gradual inflation in this sector. Clothing & Footwear experiences significant fluctuations. The most notable increase happens in December marking a point jump from November. Its prices rise sharply, with an overall increase from January to December. Housing prices exhibit considerable volatility throughout the year, starting in January, dropping sharply in April and then recovering by December. Fuel and Light shows a steady increase from January to December. It experiences continuous growth, peaking in June and then slightly declining toward the end of the year. Fuel and Light costs rise over the year, Miscellaneous items increases from January to December. The most notable increase occurs in July and August after which the miscellaneous items adjusts downward in the latter part of the year. The General category, reflecting an aggregate of all sectors, shows a steady increase from January to December. A steady rise occurs through the year, with a slight dip in September but overall the trend is positive. The General category experiences an overall increase reflecting the combined inflationary pressures across all sectors.

Table 11-L illustrates the dataset pertaining to the CPI COMBINED INDICES 2022

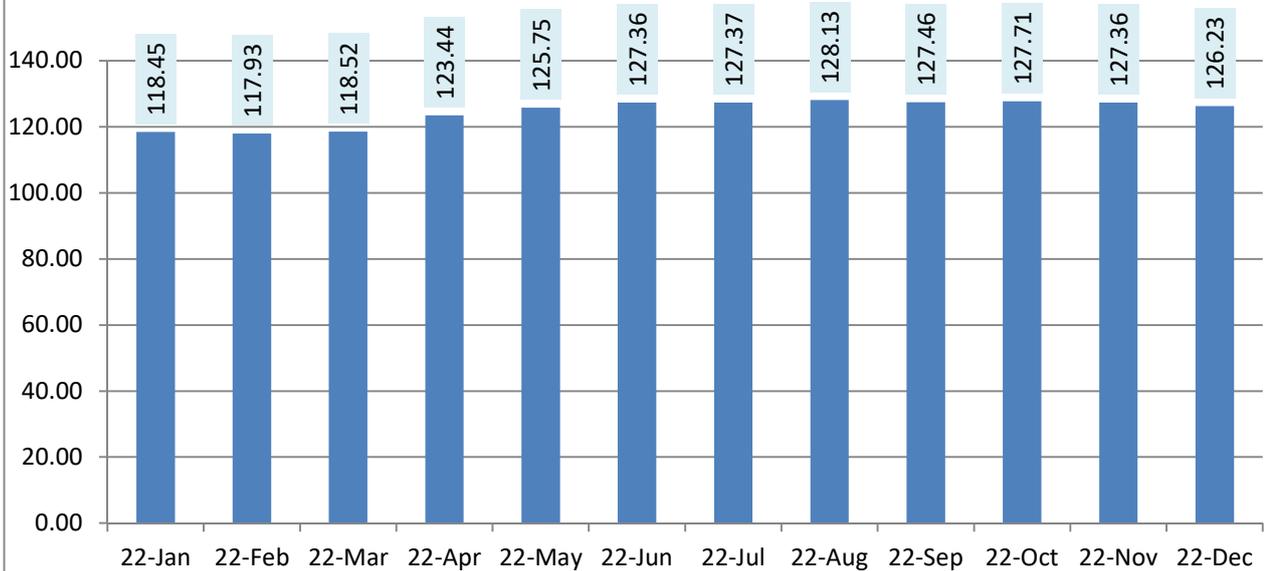

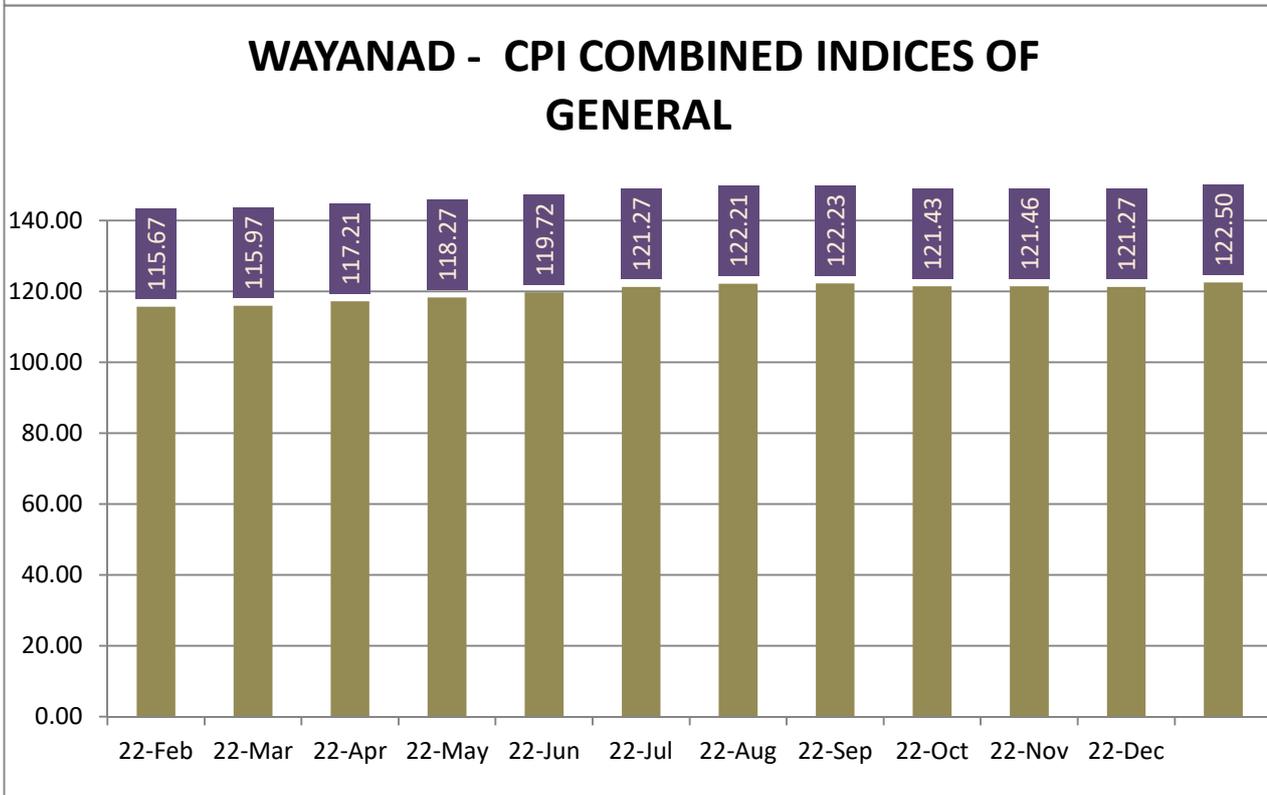

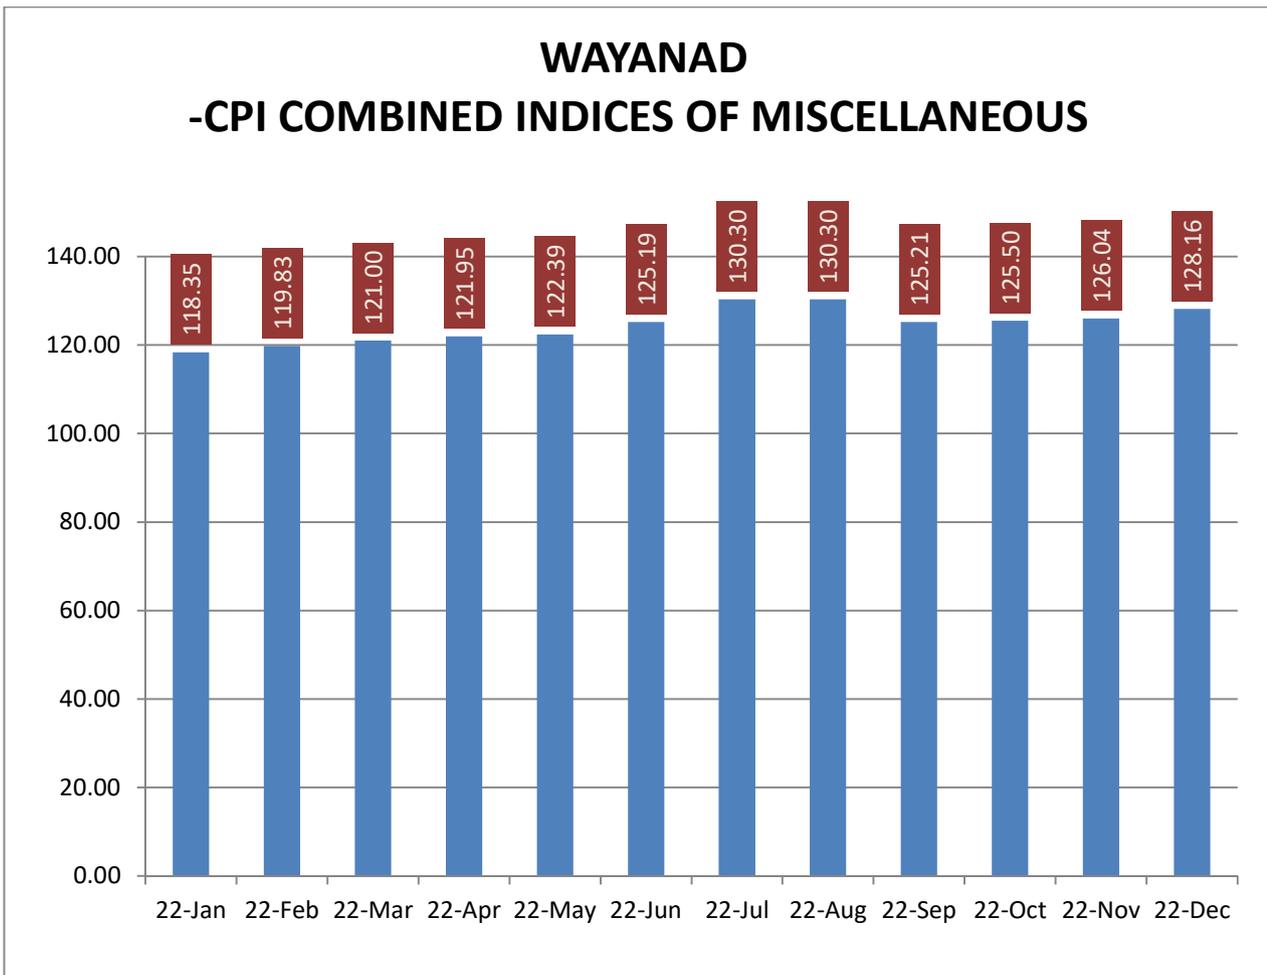

WAYANAD - CPI COMBINED INDICES OF HOUSING

WAYANAD - CPI COMBINED INDICES OF FUEL AND LIGHT

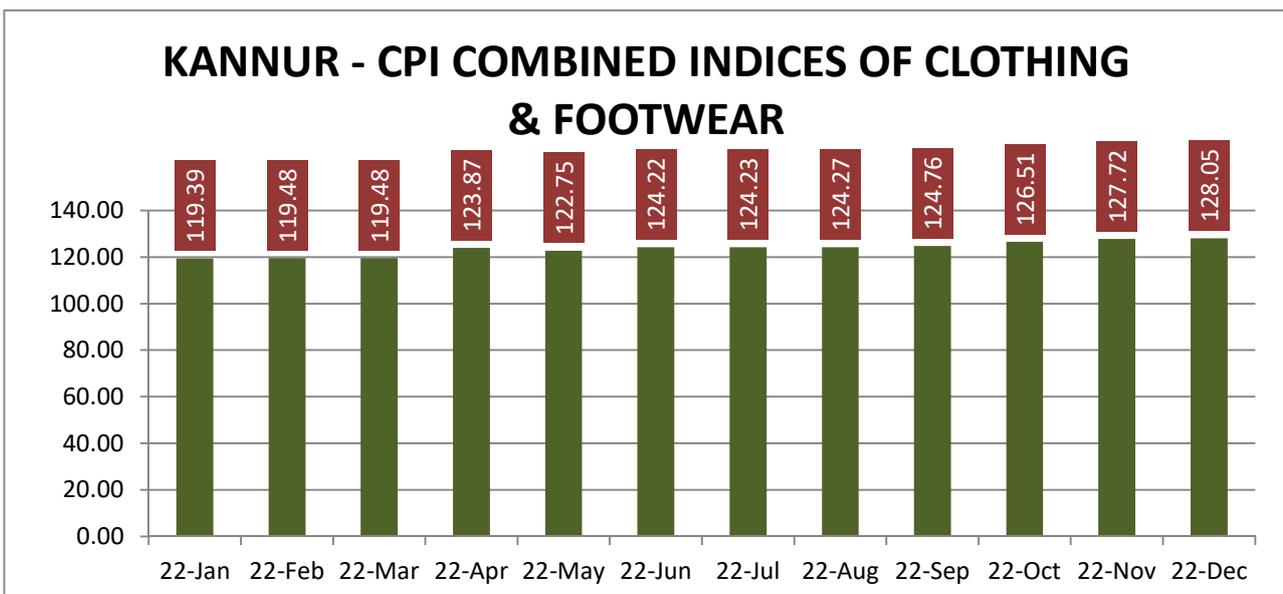

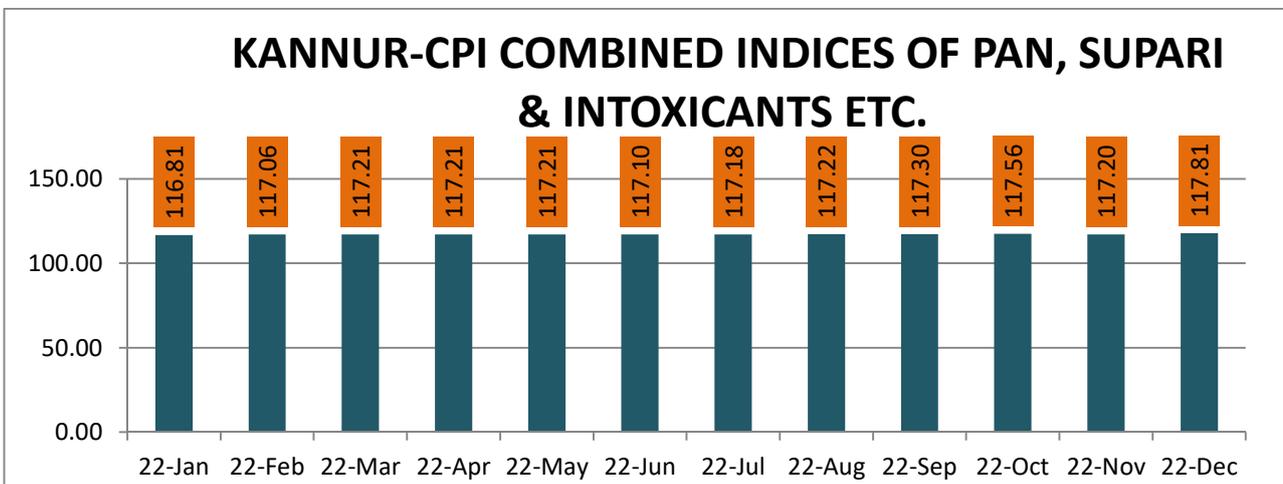

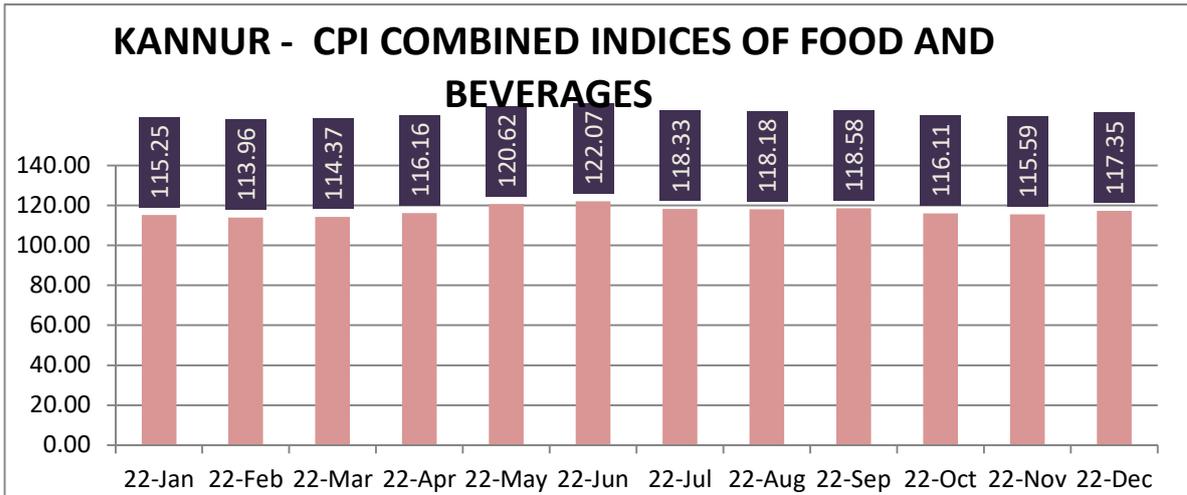

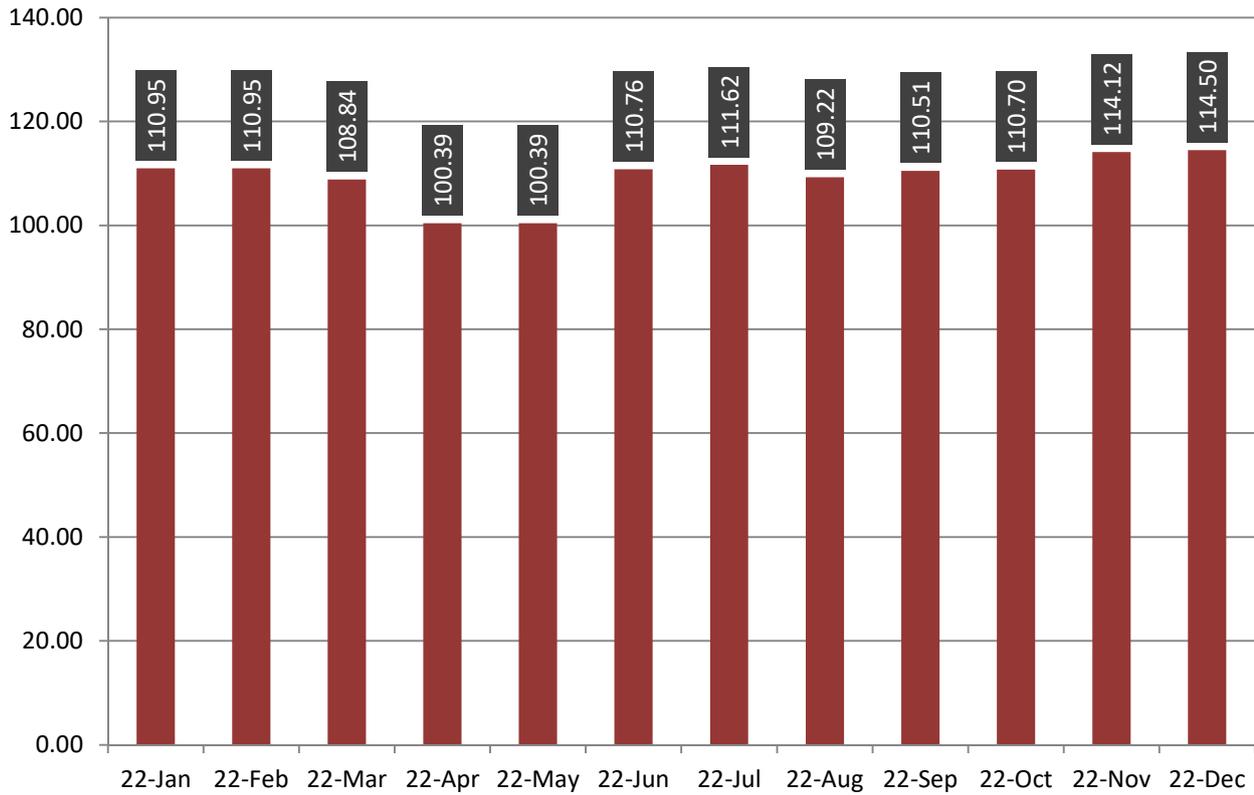

CPI COMBINED INDICES OF KANNUR 2022

Food and Beverages starts in January and increases steadily, reaching by June. The largest increase occurs between May and June showing a significant price hike mid-year. The prices fluctuate throughout the year but remain slightly higher towards the end. Pan,Supari& Intoxicants remains relatively stable throughout the year, ranging from January to December. The CPI experiences minor fluctuations, with the most significant increase occurring in December. The prices in this category increase slightly over the year, indicating stable inflation with minimal volatility. Clothing & Footwear shows a steady rise throughout the year, increasing from January to December. This category experiences increase over the year, which is the most significant rise among the categories. Housing prices fluctuate significantly, starting in January and ending in December. There is a sharp decline in April followed by a gradual recovery. The lowest point occurs in April and prices start recovering from June reaching by December. Housing prices show an overall increase from January to December, with the sharp decline in April possibly due to seasonal adjustments or temporary market corrections. However, the recovery in the latter half of the year signals a rebound in housing costs. Fuel and Light experiences notable fluctuations, beginning in January and ending in December. A sharp increase occurs between January and April followed by a gradual rise throughout the rest of the year, peaking in May. Fuel and Light prices increase from January to December, reflecting rising energy prices. This category is highly volatile, with significant price jumps observed in the first half of the year, followed by slight adjustments in the latter months. Miscellaneous items increases steadily, from January to December. The largest increase is observed between September and October with a slight rise continuing through December. Miscellaneous goods see increase in CPI, indicating inflationary pressures in goods outside essential categories, possibly driven by higher demand for discretionary or luxury items. The General category, which aggregates all sectors, shows a steady rise throughout the year, starting in January and reaching by December. It sees a slight drop in February, followed by steady increases, especially in May and June. The General CPI increases from January to December, reflecting broad-based inflation across all sectors, with the largest rises occurring in housing, clothing, and fuel.

KANNUR - CPI COMBINED INDICES OF FUEL AND LIGHT

KANNUR - CPI COMBINED INDICES OF MISCELLANEOUS

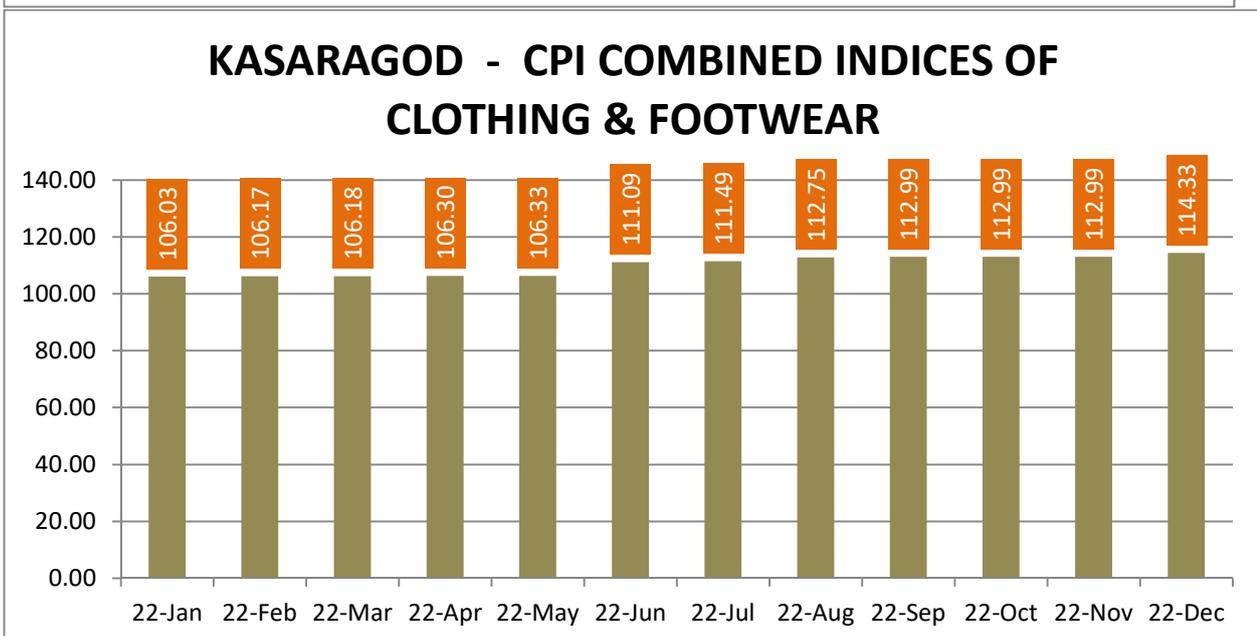

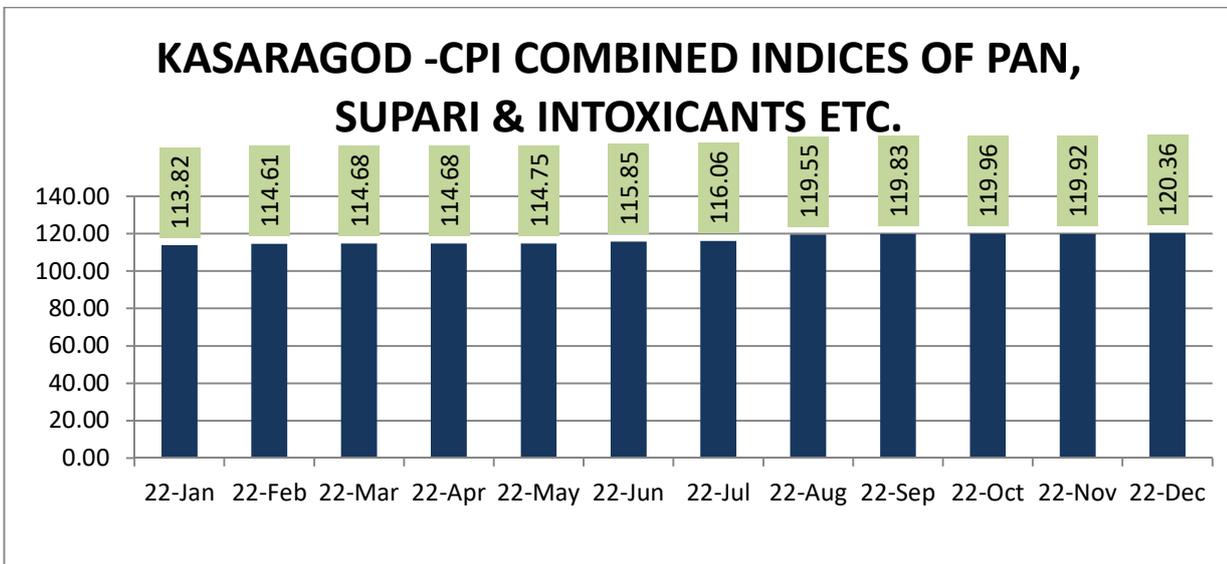

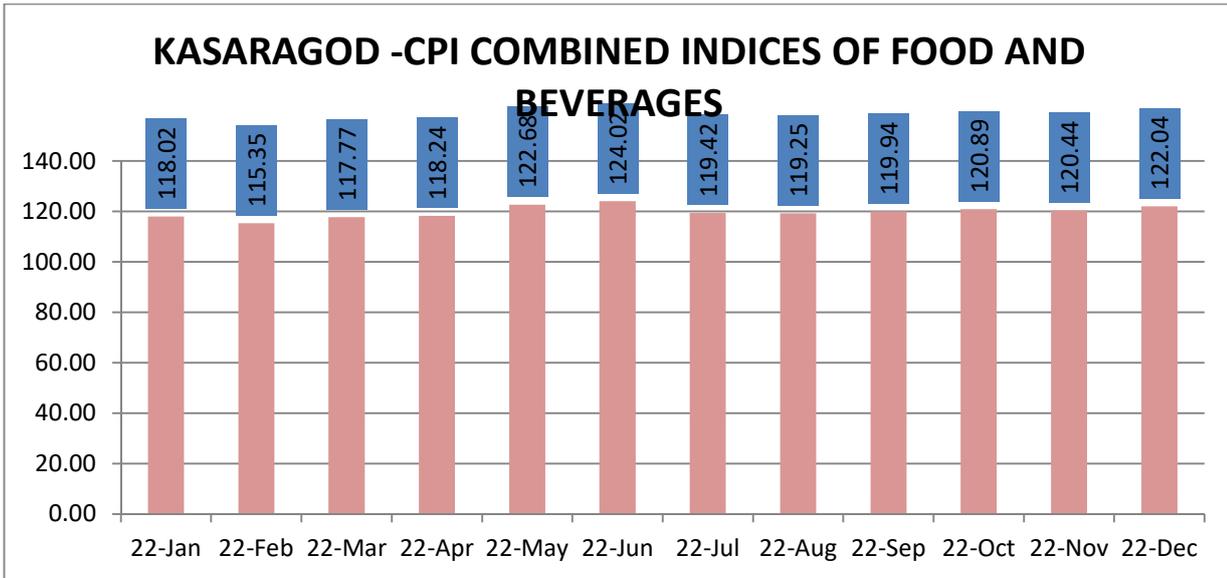

KANNUR - CPI COMBINED INDICES OF GENERAL

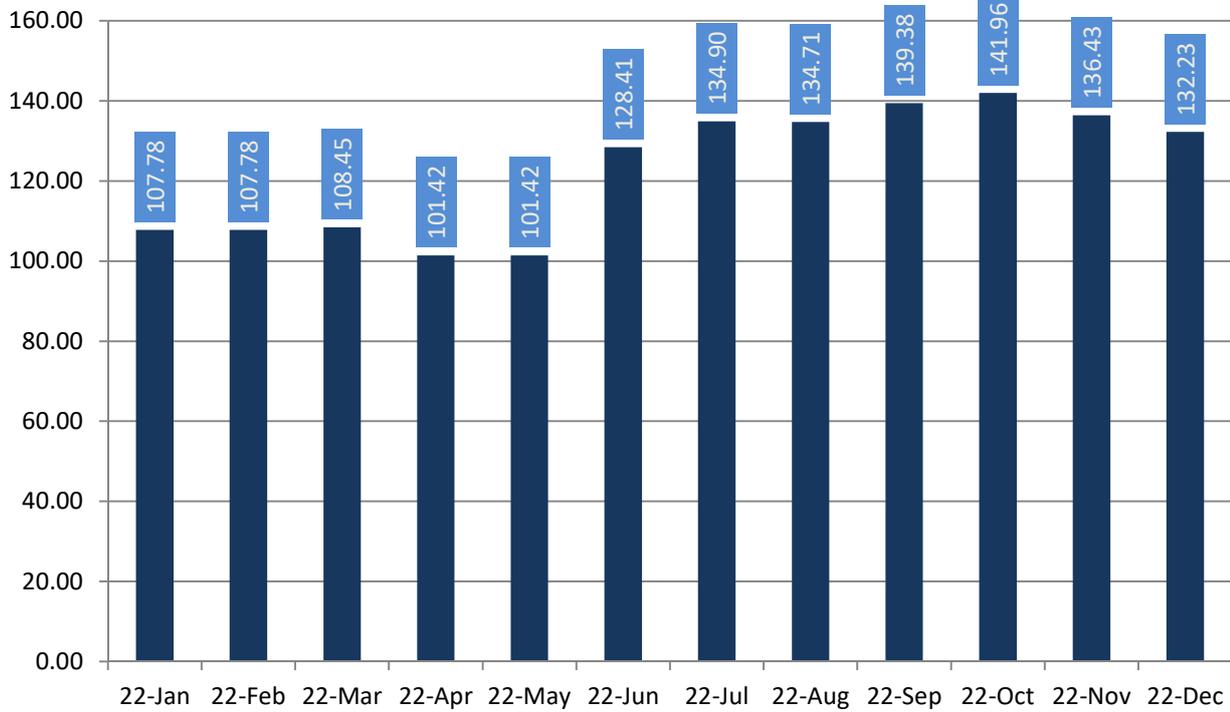

CPI COMBINED INDICES OF KASARAGOD 2022

Food and Beverages starts in January and increases steadily, reaching by December. The largest increase occurs between May and June showing a significant price hike mid-year. The prices fluctuate throughout the year but remain higher towards the end. The category shows an overall increase from January to December, Pan, Supari & Intoxicants starts in January and increases by December. This category sees a steady upward trend, with the most significant rise occurring from August to December. This category increases over the year, reflecting consistent inflation in this sector. The steady increase indicates gradual price adjustments, which could be due to increased demand or regulatory changes affecting production. Clothing & Footwear begins in January and rises by December. The largest increase occurs from June to July marking a jump as the year progresses. A steady increase is observed, with a slight peak in December. Housing fluctuates significantly, from January to December. The most dramatic shift occurs between April and June reflecting a sudden surge in housing costs. This could be due to seasonal factors or changes in housing demand. Housing prices remain high through the second half of the year but slightly decrease by December. Housing prices increase from January to December, reflecting significant volatility, which may be attributed to seasonal market fluctuations or a surge in demand due to economic factors. The CPI for Fuel and Light starts January and ends in December, showing relatively stable prices. The CPI fluctuates throughout the year, peaking in May, before declining toward the end of the year. The fluctuations are relatively small, with prices remaining within a narrow band throughout most of the year. Fuel and Light costs show a slight overall decrease from January to December, reflecting relatively stable energy prices. Miscellaneous items starts in January and increases steadily by December. The most notable increase happens between October and December with a noticeable jump toward the year's end. The General category, reflecting an aggregate of all sectors, starts in January and ends in December. The CPI rises steadily throughout the year, with notable increases in May and June before reaching its peak in December.
