## **INTRODUCTION**

The report “Agricultural Statistics” is annually published by the Department of Economics and Statistics which contains the estimates of area of crops, land utilization pattern, crop production and other major aspects of agricultural sector in Kerala. Initially, the data collected through land utilization survey was used for the preparation of Agricultural statistics. But the data collected and estimates prepared were inadequate on account of the small sampling frame and limited coverage. With a view to obtain more comprehensive data on Agricultural Statistics in non-reporting states like Kerala, West Bengal and Orissa, the Government of India sponsored a scheme namely ‘Establishment of an Agency for Reporting Agricultural Statistics (EARAS)’. In Kerala, the scheme is being implemented by the Department of Economics and Statistics from 1975-'76 onwards. Originally, the scheme was intended to collect Agricultural Statistics from 20 % of the selected villages in each year in a phased manner and covering the entire state within 5 years. EARAS scheme was revised in 1987-'88 with a view to prepare district level estimates with breakup for Block/ Municipality/ Corporation. Further, during 1993-'94, the Investigator Zones were re-organized by suiting the villages to Panchayats. From 2000-'01 onwards, the part panchayats were discontinued and each Investigator Zone was formed with full panchayat/ panchayats.

The area under the crops and yield rate of the crops are the most vital components in the estimation of crop production. The area statistics are collected through the Area Enumeration Survey and the yields of crops are collected through the General Crop Estimation Survey conducted under the EARAS scheme.

### **Sampling Design**

Stratified multistage random sampling method is followed in the survey. The C.D.Block / Municipality (Municipalities with an area of less than 10 square km are merged with the adjoining Blocks) / City Corporation is treated as a stratum. The Blocks are divided into a number of Investigator Zones depending on the area of the block and nature of land. City Corporation is divided into three Investigator Zones. Each Municipality having an area of 10 square km or more is treated as a single Investigator Zone. The Investigator Zones within the stratum form the first stage of sampling units. Clusters within each selected Investigator Zone form the second stage units and the survey number of plots within each selected cluster forms the ultimate of sampling units.

## **Sampling Size**

In each Investigator Zone, 100 clusters are allocated among the dry lands and wet land in proportion to the area under these categories in the zone. 100 survey / subdivision numbers are selected from the Basic Tax Register by using circular systematic random sampling method. These are the key plots for cluster formation.

Investigators identify the survey number of the key plots and 4 or more survey numbers / subdivision numbers adjacent to the key survey number (clubbed survey numbers, if the area of survey numbers are small) as per the Instruction Manual of the survey. Wet and dry land clusters are enumerated separately. Wetland clusters are enumerated in all three seasons - autumn, winter and summer and dry land plots are enumerated at least two times for area enumeration during the agriculture year.

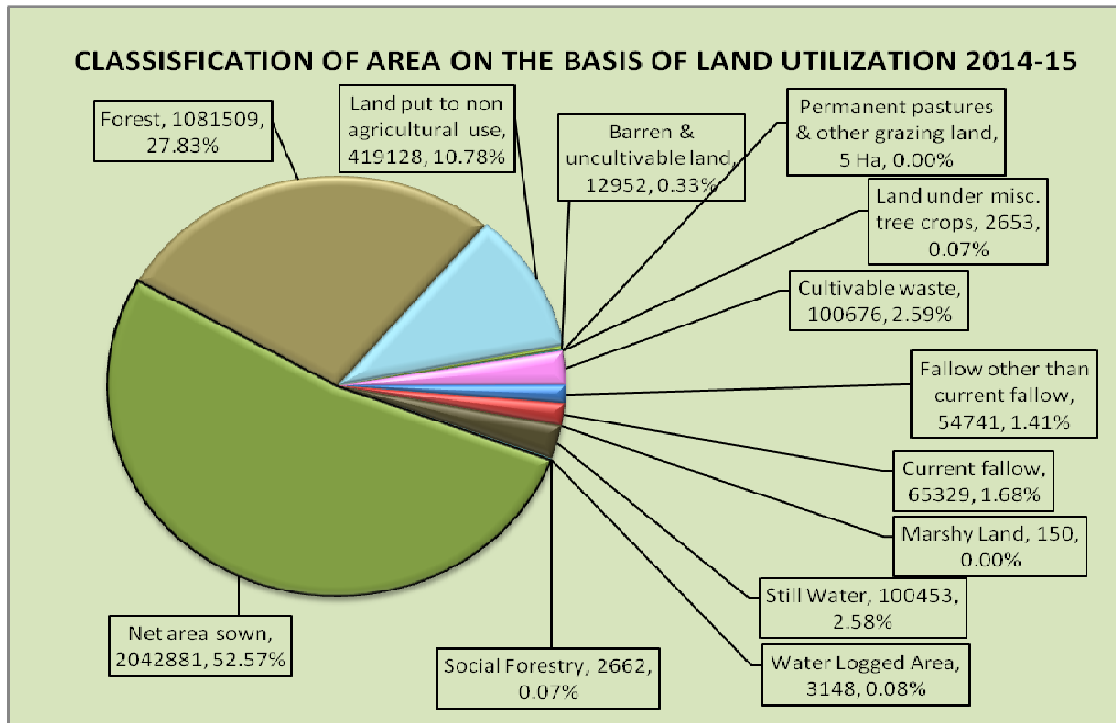

The area under the crops of each season, annual, perennial and horticulture crops etc., land utilization details, irrigation particulars, etc. are collected by the investigators at the time of area enumeration. Simultaneously, Investigators select and conduct crop-cutting experiments of all major crops and the selected minor crops for the estimation of yield rates and production of the respective crops

The data on mean yield of crops thus obtained are provided to the National Agriculture Insurance Company for assessing the crop damages of the selected crops in the respective seasons and to pay compensation to the concerned farmers insured crops under the National Agricultural Insurance Scheme (NAIS).

## LAND USE PATTERN

The total geographical area of the State is 38,86,287 Ha. Geographical area in Kerala has been classified according to thirteen different uses of land during 2014-15 which is presented in Table-2. The net area under cultivation during the year 2014-15 was 20,42,881 Ha, which occupies 52.57% of the total area in the State. The total cropped area is 26,24,624 Ha during the year 2014-15.

**1. Forest:** Forest represents all actually forested area as the lands classed or administered as forest under any legal enactment dealing with forest. The forest area of the State during 2014-15 was 10,81,509 Ha which is 27.83% of the total geographical area of the State. Idukki district with an area of 1,98,413 Ha under forest (18.35%) is the highest among districts in the State.

**2. Land put to Non-Agricultural use:** The land put to use for purposes other than agriculture such as building, pathways, roads, canals, rivers, bus stands, railways, local reservoirs, swamps etc. are brought under this category. Area under this classification is 4,19,128 Ha accounting for 10.78% of the State's geographical area. In Malappuram district about 50,126 Ha (12%) put into non-agricultural uses is the highest followed by Palakkad district with an extent of 46,010 Ha (11%).

3. **Barren and uncultivable land**: Land which cannot be brought under cultivation unless at a high cost, whether such a land is in isolated blocks or within cultivated holdings, such as mountains, deserts, hills etc are classified as barren and uncultivable land.

The total land comes under this category is 12,952 Ha which represents 0.33% of the total geographical area of the State. Kasaragode district alone accounted for 3,592 Ha which is 28% of the states barren and uncultivable land.

4. **Permanent pastures other grazing land**:- All grazing lands, whether they are permanent pastures or meadows are considered as permanent pastures and other grazing lands. An extent of 5 Ha of the State falls under this category.

5. **Land under miscellaneous tree crops** :-All cultivable lands, which is not included under net area sown, but is put to some agricultural use such as land under casuarina trees, thatching grass bamboo bushes and other groves for fuel etc. are come under this category. Out of the total geographical area, land under miscellaneous tree crops and groves not included in the net area sown and it occupies only 2653 Ha (0.07 %)

6. **Cultivable waste** : These includes land available for cultivation but not taken up for cultivation or abandoned after a few years for one reason or the other . Such lands may be either fallow or covered with shrubs or jungles, which are not put to any use. They may be assessed or unassessed and may lie in isolated blocks or within cultivate holdings. Lands once cultivated but remaining uncultivated for five years or more in succession shall also be included in this category. The total area under cultivable waste during 2014-15 is 1,00,676 Ha ie, 2.6 % of the total geographical area of the State. The area under this category is highest in Palakkad district accounting 23,764 Ha.

7. **Fallow other than current fallow** : Land which were taken up for cultivation but have been temporarily put off cultivation for a period of not less than one year but not more than five years due to abject poverty of the cultivators, inadequate supply of water, silting of canals and rivers etc are treated as other fallow land. The total area under other fallow land during 2014-15 accounts 54,741 Ha which is 1.4% of the total geographical area. The land under this category was highest in Palakkad district with 15,486 Ha followed by Thrissur district with 7,699 Ha.

8. **Current fallow** : Land that are kept fallow off out of the net area sown during the previous year are classified as current fallow for the reporting year. The area under this category during 2014-15 is 65,329 Ha., which is 1.68% of total geographical area.

9. **Marshy land** : Land which gets permanently or periodically inundated by water and characterized by vegetation which includes grasses and weeds. Out of the total

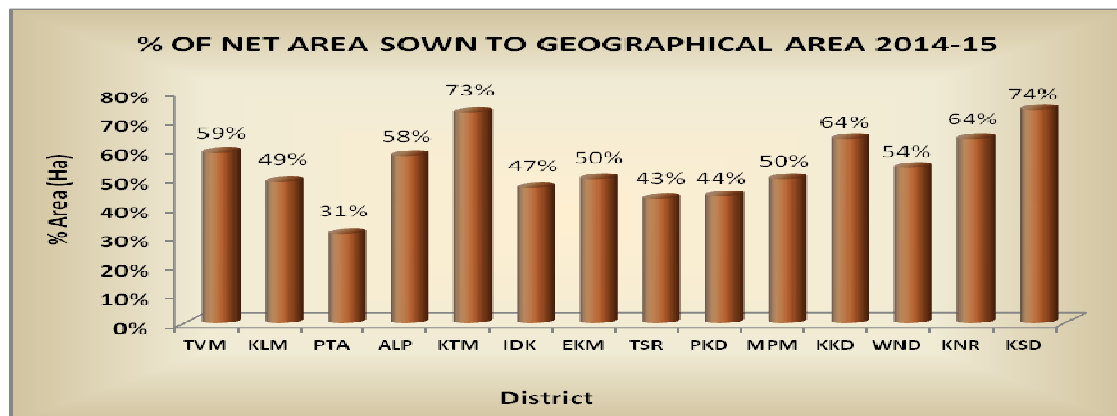

geographical area only 150 Ha come under marshy land during the year 2014-15. Kannur district with 95 Ha ranked first contributing 63% to the total marshy land of the State.

10. **Still water:** The land under still water is broadly the land occupied by water bodies like rivers, lakes, ponds, reservoirs, backwater, canals, tanks including nature made deeps in which water stands still for most part of the period. This is the land on which there is no vegetative growth of any kind. Out of the total geographical area, 1,00,453 Ha of land is under still water constituting 2.6 %. The land under still water is highest in Palakkad district and the area is 15,340 Ha.

11. **Water logged area :** It is the land where water is at / near the surface and stands for most part of the year. It is generally found in low lying areas and it excludes lakes, ponds and tanks. The total water logged area for the year 2014-15 is 3,148 Ha. It is the 0.08% of the total geographical area of the State.

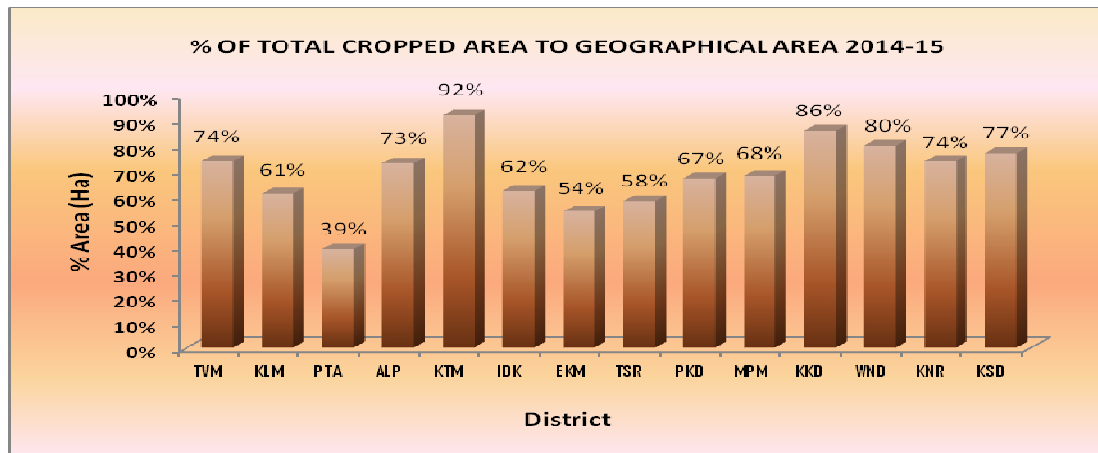

12. **Social Forestry :** The land under social forestry is the land in which the trees are planted by the side of railway lines, road side, river and canal banks with a view to meet the fuel and the fodder needs of the rural population and to serve the broader goals of soil conservation and provision of shed shelter for crops. It also includes village forests/plantation which is being used by common man. An extend of 2,662 Ha of land comes under social forestry. The land under social forestry is highest in Idukki district is 1,140 Ha (42.8%) followed by Palakkad district 379 Ha (14.2%).

13. **Net Area Sown:** In calculating the net area sown, area sown more than once will be counted only once. Area cultivated during any part of the agricultural year should come under net area sown. Out of 38,86,287 Ha of total geographical area, 20,42,881 Ha of land constituting 52.57% is cultivated once with various crops during the year 2014-15. There is a slight decrease of 0.39% in net area sown from the previous year.

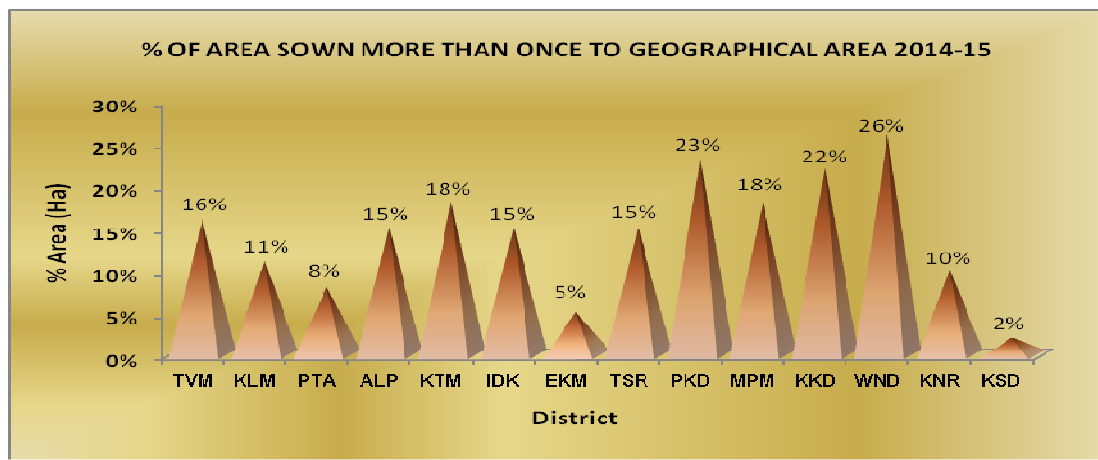

### Total Cropped Area (Gross Area Sown)

The gross area sown represents the total area cultivated under all food and non-food crops including the area sown more than once during the year 2014-15. According to this concept the area under various crops in the same plot can be more than the actual area. The gross area sown during 2014-15 was 26,24,624 Ha as against 26,16,670 Ha in 2013-14. The gross area is increased by 0.3% over the previous year.

### Area Sown more than once

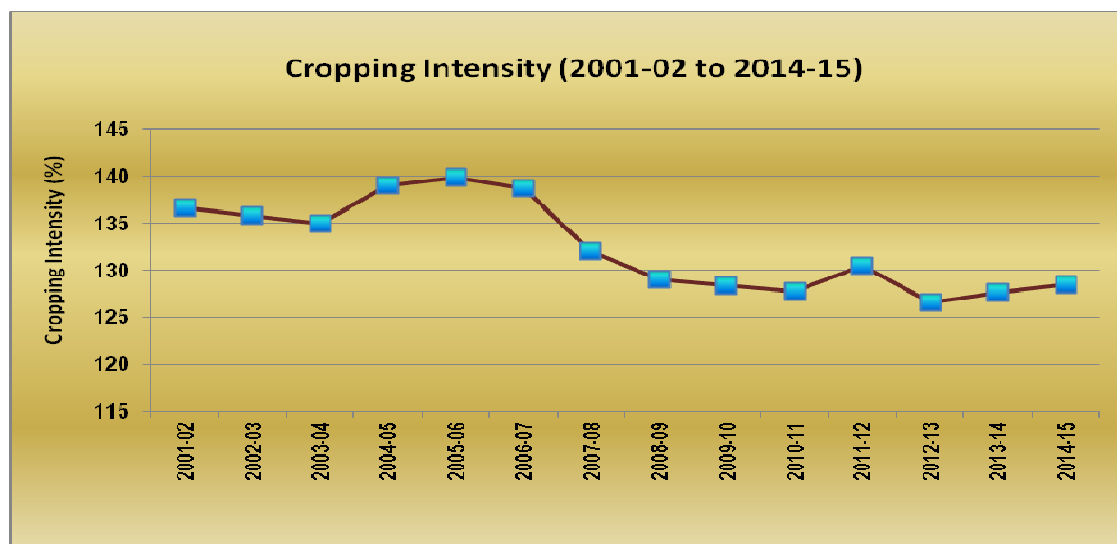

This represents the difference between the gross area sown under all crops and the net area sown during the agricultural year. The area sown more than once during 2014-15 is 5,81,743 Ha as against 5,65,676 Ha in 2013-14.

14	2014-15	2624624	2042881	128.48

Due to mixed cropping pattern, the availability of irrigation facilities and other measures of intensification of agriculture, there is a considerable increase in the double or multiple cropped areas. In order to assess the trends in intensity that is the ratio of total cropped area to the net cropped area, the cropping intensity is calculated. On assessing the years from 2001-02, the cropping intensity is maximum in 2005-'06.

## **A BRIEF ANALYSIS ON THE AREA OF IMPORTANT CROPS FOR 2014-'15**

Agricultural crops in the state are broadly classified as food crops and non-food crops. Food crops are cereals & millets, sugar crops, spices & condiments, fresh fruits, vegetables, etc. The major non-food crops are rubber, betel leaves, lemon grass, etc. Another classification of crops is seasonal crops, annual crops and perennial crops which are based on their life time.

**Seasonal crops:** Paddy, pulses, tapioca, vegetables, sweet potato, tubers, groundnut, ginger, turmeric, cotton, tobacco, onion, tur, etc.

**Annual crops:** Sugarcane, banana, plantain, pineapple, betel leaves, etc.

**Perennial crops:** Coconut, arecanut, cashew, mango, jack, tamarind, pepper, rubber, tea, coffee, cardamom, cloves, nutmeg, cinnamon, cocoa, papaya, etc.

**A BRIEF ANALYSIS ON THE PRODUCTION OF  
IMPORTANT CROPS FOR 2014-15**

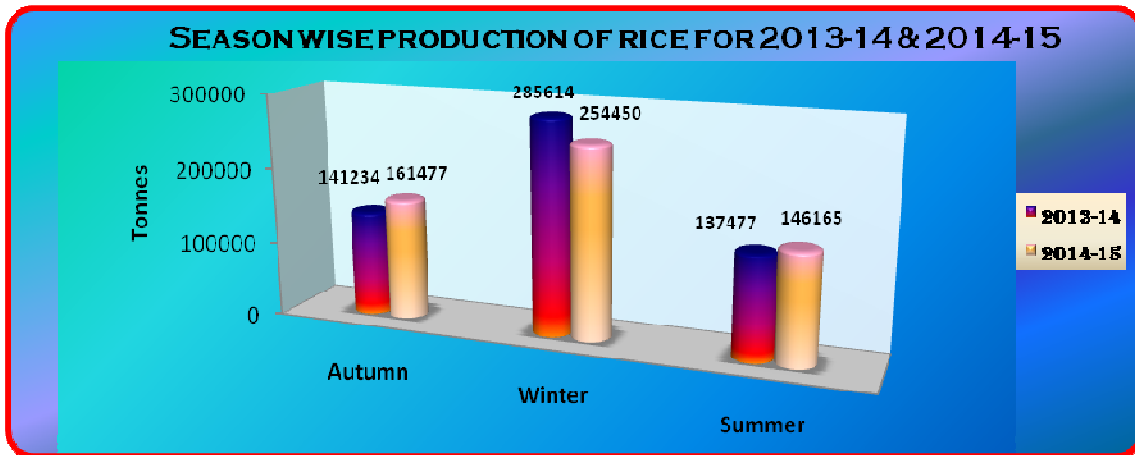

Factors such as fertility of land, monsoon behaviour, rainfall, irrigation, application of fertilizers, climatic conditions, marketing facilities, prices, availability of agricultural labourers etc determine the area and productivity of any crop. The production of food grains during the year under report is 5,62,367 tonnes as against 5,64,600 tonnes in 2013-14 recording a decrease of 2233 tonnes or -0.4%. Rice is the major constituent accounting for almost 100% of food grain production in the state. Crop wise production of food grain is given in the following table.
