

Government of Kerala

Report on
Employment - Unemployment Situation
in Kerala

Based on

NSS 68th Round (July 2011 - June 2012)

Central and State Sample Pooled Data

NSS Division
Department of Economics and Statistics

Preface

The all India Employment and Unemployment surveys of National Sample Survey Office (NSSO) are the primary source of labour market data. Since the sample size of these surveys are not adequate to generate reliable district level estimates Department of Economics and Statistics Kerala (DES), has been participating in these surveys from the very beginning to provide more disaggregated results at district level. Main objective of state participation in the NSS programme is to provide a mechanism by which sample size will be increased and the pooling of the two sets of data would enable better estimates at lower sub state level, particularly at district level.

NSSO and DES conducted NSS 68th round survey on Employment and Unemployment with 2:3 matching ratio sample size basis during July 2011 to June 2012. Based on central and state sample pooled data, statistical indicators of labour force at district level are brought out in this report as per the methodology approved by National Statistical Commission (NSC). Poolability of two sets of data has been examined through statistical tests and the results are presented in chapter 3. The main findings related to the pooled estimates are presented in chapter 4 and Relative Standard Errors of estimates are given in chapter 5.

The financial support extended by 13th finance commission and the technical assistance provided by National Sample Survey Office (NSSO) are acknowledged. This report is prepared by Shri Preeth V.S., Assistant Director in the Directorate under the leadership of Shri C.P. Resmi, Nosologist and Smt. Sheela P. Sanker, Additional Director (State Income). Work done by the supervisors and field staff who worked tirelessly to make the survey a success, the devoted services of all others who may have contributed in diverse ways to the success of the survey and the subsequent production of the report is duly acknowledged. I would thank heartily to all those respondents who actively participated in this survey by giving their valuable time in responding answers to our questions.

I hope that this report will be useful to the planners, policy makers, academicians and researchers. The Department expects suggestions and comments from readers for further improvement in the future operations of this kind.

V. Ramachandran
Director General

Place: Thiruvananthapuram
Date: 19.10.2016

Highlights

This report is based on central and state sample pooled data of Employment Unemployment survey conducted during July 2011 to June 2012.

LFPR - Usual Status

- According to the usual status (ps+ss), 38 per cent of rural and 35 per cent of urban population in Kerala belonged to the labour force
- In rural area, Idukki (500) was estimated to have highest LFPR followed by Kottayam (436), Pathanamthitta (434) and Eranakulam (421)
- The highest urban LFPR were those of Wayanad (425), Eranakulam (395), Alappuzha (390) and Thrissur (364).
- Among the districts of Kerala, Malappuram was estimated to have the lowest proportion of labour force with 290 in rural and 243 in urban.
- LFPR was significantly lower for females than for males in both rural and urban areas of Kerala. It was about 55 per cent for rural male and 54 per cent for urban male. For females, LFPR was 21 per cent in rural areas and 18 per cent in urban areas.
- Malappuram recorded the lowest Female LFPR i.e. 12 per cent in rural areas in comparison to 49 per cent males and only 8 per cent females in comparison to 43 per cent males in urban areas.
- Among the districts of Kerala the gender disparity in labour force was highest in Kozhikode, in rural as well as in urban areas.

WPR - Usual Status

- WPR in usual status (ps+ss) was 35 per cent and 33 per cent in rural and urban areas respectively.
- Except in Wayanad and Palakkad, rural WPR was higher than urban.
- Among the districts, the percentage of usually employed persons in rural areas were highest in Idukki (472) followed by Kottayam (411), Kasaragode (407) and Ernakulam(393).
- The highest urban WPR were those of Wayanad (399), Ernakulam (373), Palakkad (343), and Thrissur (390).

- Malappuram is estimated to have the lowest proportion of work force with nearly 26 per cent population were employed in rural and 23 per cent in urban sector.
- Among the districts, Idukki (35 per cent) reported highest female WPR in rural and Wayanad (23) reported highest female WPR in urban areas.
- In both the sectors, Malappuram (7 per cent in rural & 5 per cent in urban) reported the lowest female WPR and was preceded by Kozhikkode (10 per cent in rural & 9 per cent in urban).

Unemployment Rate

- At the state level, Unemployment rate as per usual status for both sectors was seen around 7%.
- Kasaragod, Kollam, Kottayam and Idukki reported high rural-urban variation in unemployment rate compared to other districts
- Among the districts, Malappuram had highest unemployment rate in rural, 12%, as per usual status approach while in urban Alappuzha district topped with 13%.
- Lowest unemployment rate was seen against Kasaragode district in both sectors

Chapter 1

Introduction

1.1 Background

The National Sample Survey Office (NSSO) has been conducting nationwide multi-subject, integrated large scale sample surveys in the form of successive rounds covering various socio-economic aspects since 1950. Due to the constraint of limited physical and financial resources, sample sizes of these surveys are adequate only to generate reliable estimates at national and state level.

Considering the demands for district level estimates state governments were invited to participate in National Sample Surveys with matching samples so as to enable the preparation of estimates at district level. Accordingly Kerala state has been participating in these surveys from the very beginning by adopting the same sample design based on independently drawn sample as that of NSSO. These two field operations are generally referred as central and state samples of National Sample Survey.

The main objective of state participation is to provide a mechanism by which sample size will be increased and pooling of central and state sample data would enable better estimates at district level. DES Kerala has been enjoying this benefit of pooling of central and state sample data from 66th round onwards, which was one of the milestones to be achieved under 13th finance commission's grant to the state. One can get the idea about the way which DES Kerala achieved this milestone by referring its publication "Report on Household Consumer Expenditure & Employment Unemployment situation in Kerala based on NSS 66th round central and state sample pooled data."

Information on various facets of employment and unemployment in Kerala was collected in NSS 68th round through a schedule of enquiry (Schedule 10) adopting the established concepts, definitions and procedures. Based on the central and state sample pooled data, estimates of various characteristics pertaining to employment and unemployment for each State/UT and all-India have been presented in this report.

1.2. Objective of Employment Unemployment surveys

The main objective of the employment and unemployment surveys at periodic interval is to get estimates of level parameters of various labour force characteristics at the national, State/UT level and district level. These statistical indicators on labour market are required for planning, policy and decision making at various levels, both within the government and outside. The critical issues in the context of labour force enquiries pertain to defining the labour force and measuring participation of the labour force in different economic activities.

1.2 Genesis of Employment and Unemployment Survey of NSSO

- 1.2.1 The quinquennial survey on employment and unemployment is one of the important surveys conducted repeatedly by the NSSO. The first such survey was carried out in the 27th round of NSSO during October 1972 - September 1973. The current employment and unemployment survey of NSS 68th round is like a quinquennial survey as far as subjects of enquiry, design, questionnaires and sample sizes are concerned. Including the present employment and unemployment survey of NSS 68th round (July 2011 - June 2012), nine such comprehensive surveys on the employment and unemployment situation in India have so far been conducted by NSSO.
- 1.2.2 Past Quinquennial Surveys: To assess the volume and structure of employment and unemployment, starting with the 9th round (May - September, 1955), NSSO conducted a number of surveys on employment and unemployment. To give a firm conceptual framework for conducting the employment and unemployment surveys, the Planning Commission, in the year 1970, set up an "Expert Committee on Unemployment Estimates" (popularly known as the Dantwala Committee). The concepts and definitions recommended by this committee formed the basis of the first quinquennial survey on employment and unemployment conducted in NSS 27th round (October 1972 - September 1973). Since then, seven comprehensive quinquennial surveys on employment and unemployment situation in India have been carried out by NSSO prior to the present survey of the 68th round (July 2011 - June 2012). These were carried out during the 32nd round (July 1977 - June 1978), 38th round (January - December 1983), 43rd round (July 1987 - June 1988), 50th round (July 1993 - June 1994), 55th round (July 1999 - June 2000), 61st round (July 2004 - June 2005) and 66th round (July 2009 - June 2010), in which concepts, definitions and procedures were based primarily on the recommendations of the Dantwala Committee.
- 1.2.3 Other surveys on employment-unemployment: Apart from the quinquennial surveys on employment and unemployment, NSSO has also collected information on certain key items on employment and unemployment, as a part of annual series, from a smaller sample of households in each round since its 45th round (July 1989 - June 1990) through the schedule on Household Consumer Expenditure (Schedule 1.0). This procedure of collecting data on employment and unemployment in the annual rounds of NSSO continued till NSS 59th round (January - December 2003). In the annual rounds, only activity status and industry of work according to usual principal status, subsidiary status and current weekly status approach were collected through a few columns of the demographic block of the Consumer Expenditure Schedule (Schedule 1.0). In the annual rounds, particulars of employment and unemployment according to the usual principal status and usual subsidiary status were collected by applying a similar approach as in the quinquennial rounds. In the quinquennial rounds, current daily activities in terms of status and industry are collected for the household members and

current weekly activity is derived from the daily activities of the reference week whereas in the annual rounds, current weekly activity particulars were collected through direct query. In the 60th round (January - June 2004), a separate schedule on employment and unemployment was canvassed for the first time in an annual round and particulars on employment and unemployment were collected in the same manner as that of the quinquennial rounds. A separate schedule on employment and unemployment, similar to the one canvassed in the 60th round, was also canvassed in the 62nd round (July 2005 - June 2006) and 64th round (July 2007- June 2008) of NSSO.

1.3 ?

1.4 Scope of NSS 68th round Survey on Employment and Unemployment

The critical issues in the context of labour force enquiries pertain to defining the labour force and measuring participation of labour force in different economic activities. In the employment and unemployment surveys of the quinquennial rounds of NSSO, persons are classified into various activity categories in three approaches on the basis of activities (economic/non-economic) pursued by them during certain specified reference periods. The three approaches are usual status approach, current weekly status approach and the current daily status approach. Three reference periods used in NSS surveys are (i) one year, (ii) one week and (iii) each day of the reference week. In the usual status approach, the activity status of a person is determined on the basis of the reference period of one year. The activity status of a person in current weekly status approach is determined on the basis of the reference period of one week and that in current daily status approach is determined on the basis of the reference period of one day. Based on the classification of the individuals into various activity categories in the three approaches, labour force indicators like, labour force participation rate (LFPR), worker population ratio (WPR), unemployment rate (UR) are derived in usual status (ps), usual status (ps+ss), current weekly status (CWS) and current daily status (CDS). As in the past, through the employment and unemployment schedule (Schedule 10) of 68th round, NSSO collected data to measure employment and unemployment indicators in terms of usual status (ps), usual status (ps+ss), current weekly status (CWS) and current daily status (CDS).

1.5 Outline of Employment Unemployment Survey in NSS 68th round

- 1.5.1 Geographical coverage: DES Kerala conducted the Employment Unemployment survey through NSS 68th round in whole Kerala.
- 1.5.2 Sub-round: The fieldwork of the 68th round NSS was of one year duration starting on 1st July, 2011 and ending on 30th June, 2012. As usual, the survey period of this round was divided into four sub-rounds, each with duration of three months, the 1st sub-round period ranging from July to September 2011, the 2nd sub-round period from October to December

2011 and so on. In each of these four sub-rounds, an equal number of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period.

- 1.5.3 Sample size: During the survey period NSSO and DES collected data from independent samples. Number of FSUs, households and persons surveyed by the both are presented in table 1.3.3.1.

Table 1.5.3.1. Number of FSU's , Households and Persons surveyed

Sector	First Stage Unit		Household		Persons	
	Central	State	Central	State	Central	State
Rural	326	492	2607	3930	10659	15554
Urban	232	348	1853	2782	7298	10879
Rural + Urban	558	840	4460	6712	17957	26433

1.6 Layout of the Report

This report contains five chapters and three appendices including the present chapter giving the introduction and background of this report. The concepts and definitions of some important terms used in the survey and relevant to this report are explained in chapter two. Results of poolability test are presented in chapter three. Pooled estimates of selected indicators of employment unemployment are given in chapter four and relative standard errors of estimates are presented in chapter five. Detailed tables at district level generated from the pooled data are given in Appendix A. Sample design and estimation procedure for central/state sample is presented in Appendix B. Schedule 10 used for collecting information on Employment Unemployment are given in Appendix C.

Chapter 2

Concepts and Definitions

The concepts and definitions of some important terms used in the survey and relevant to this report are explained in the following paragraphs.

Household and household size:

A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household. The same principle was applicable for the residential staff of such establishments. However, if a group of persons among them pooled their income for spending, they were treated as forming a single household. A family living in a hotel was treated as a single household. The size of a household is the total number of persons in the household.

Age (years)

The age in completed years, as on the date of survey, of the household members were recorded.

Household type

The household type was decided based on the sources of the household's income during the 365 days preceding the date of survey. For this purpose, only the household's income (net income and not gross income) from economic activities was considered; but the incomes of servants and paying guests were not taken into account.

In rural areas, a household belonged to any one of the following six household types:

1. Self-employed in agriculture
2. Self-employed in non-agriculture
3. Regular wage/salary earning
4. Casual labour in agriculture
5. Casual labour in non-agriculture
6. Others

For urban areas, the household types are:

1. Self-employed
2. Regular wage/salary earning
3. Casual labour
4. Others

Economic activity:

The entire spectrum of human activity falls into two categories – economic activities and non-economic activities. Any activity resulting in production of goods and services that add value to national product was considered as an economic activity for the employment and unemployment survey. Such activities included;

- (i) Production of all goods and services for market (i.e. for pay or profit) including those of government services,
- (ii) Production of primary commodities for own consumption and
- (iii) Own account production of fixed assets.

The full spectrum of economic activities as defined in the UN system of National Accounts was not covered in the definition of economic activities adopted for the employment and unemployment survey of NSS 68th round. Although production of any good for own consumption is considered as economic activity by UN System of National Accounts, production of only primary goods for own consumption was considered as economic activity by NSSO for the purpose of the survey. While the former considers activities like own account processing of primary products as economic activities, processing of primary products for own consumption was not considered as economic activity in the NSS surveys.

The term 'economic activity' as defined in the employment and unemployment survey of NSS 68th round, therefore, included:

- (i) All the market activities performed for pay or profit which result in production of goods and services for exchange.
- (ii) Of the non-market activities,
 - (a) All the activities relating to the agriculture, forestry, fishing, mining and quarrying sector (i.e. industry Divisions 01 to 09 of NIC-2008) which result in production of primary goods for own consumption (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) and
 - (b) activities relating to the own-account production of fixed assets, which include production of fixed assets including construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labourer or a supervisor.

Activity status of a person was judged irrespective of the situation whether such activity was carried out illegally in the form of smuggling or not. As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered as economic activities.

Activity status: It is the activity situation in which a person was found during a specified reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during the reference period:

- (i) Working or being engaged in economic activity (work),
- (ii) Being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and
- (iii) Being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

Identification of each individual in terms of a unique activity status could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained for a person during the reference period. In such an eventuality, unique identification under any one of the three broad activity statuses (viz. employed/ unemployed/not in labour force) was done by adopting either the major time criterion or priority criterion. The former was

used for classification of persons according to the usual status approach and the latter for classification of persons according to the current status approach (i.e., current weekly status and current daily status approaches).

Each of the three broad activity statuses was further sub-divided into several detailed activity categories. If a person categorised as engaged in economic activity was found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity in terms of status and industry was considered as that one corresponding to which relatively long time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one noneconomic activity.

The detailed activity statuses under each of the three broad activity statuses (viz. 'employed', 'unemployed' and 'not in labour force') and the corresponding codes used in the survey are given below:

code description working (or employed)

Self-employed

- 11 Worked in household enterprises (self-employed) as own-account worker
- 12 Worked in household enterprises (self-employed) as an employer
- 21 Worked in household enterprises (self-employed) as helper

Regular wage/ salaried employee

- 31 worked as regular wage/salaried employee

Casual labour

- 41 Worked as casual labour in public works other than MGNREG public works
- 42 Worked as casual labour in Mahatma Gandhi NREG public works
- 51 Worked as casual labour in other types of works
- 61 Did not work owing to sickness though there was work in household Enterprise
- 62 Did not work owing to other reasons though there was work in household enterprise
- 71 Did not work owing to sickness but had regular salaried/wage employment
- 72 Did not work owing to other reasons but had regular salaried/wage employment

Not working but seeking/available for work (or unemployed)

- 81 Sought work or did not seek but was available for work (for usual status approach)
- 81 Sought work (for current weekly status approach)
- 82 Did not seek but was available for work (for current weekly status approach)

Neither working nor available for work (or not in labour force)

- 91 Attended educational institutions
- 92 Attended to domestic duties only
- 93 Attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. For household use
- 94 Renters, pensioners, remittance recipients, etc.
- 95 Not able to work owing to disability
- 97 Others (including beggars, prostitutes, etc.)
- 98 Did not work owing to sickness (for casual workers only)
- 99 Children of age 0-4 years

It may be noted that codes 42, 61, 62, 71, 72, 82 and 98 were applicable for current weekly status and current daily status approaches only. It may also be noted that activity status code 41 in the usual status is used for casual labour in all types of public works, whereas in the current activity status, code 41 is for casual labour in public works other than MGNREG public works and code 42 is for casual labour in MGNREG public works.

Workers (or employed):

Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained themselves from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid household members who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. Relevant activity status codes 11 to 72 were assigned for workers. Workers were further categorized as self-employed (relevant activity status codes: 11, 12, 21, 61, 62), regular wage /salaried employee (relevant activity status codes: 31, 71, 72), and casual labour (relevant activity status codes: 41, 42 and 51).

Seeking or available for work (or unemployed):

Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the

prevailing conditions of work and remuneration, were considered as those 'seeking or available for work' (or unemployed). Activity status codes 81 or 82 were assigned for unemployed.

Labour force:

Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 – 82 constituted the labour force.

Not in labour force:

Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working due to sickness. Activity status codes 91-95, 97, 98 and 99 were assigned for persons belonging to category 'not in labour force'.

Self-employed:

Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the selfemployed is that they have autonomy (decide how, where and when to produce) and economic independence (in respect of choice of market, scale of operation and finance) for carrying out their operation. The remuneration of the self-employed consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise.

Categories of self-employed persons:

Self-employed persons were further categorised as follows:

- (i) *Own-account workers:* Self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour was considered as own-account workers. They could, however, have had unpaid helpers to assist them in the activity of the enterprise.
- (ii) *Employers:* Self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour was considered as employers.
- (iii) *Helpers in household enterprise:* Self-employed persons who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed was considered as helpers in household enterprise. They did not run the household enterprise on their own but assisted the concerned person living in the same household in running the household enterprise.

Regular wage/salaried employee:

These were persons who worked in others' farm or nonfarm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

Casual labour:

A person, who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was considered as a casual labour.

Public works:

'Public works' were those activities which were sponsored by Government or Local Bodies, and which cover local area development works like construction of roads, dams, bunds, digging of ponds, etc., as relief measures, or as an outcome of employment generation schemes under the poverty alleviation programmes such as Mahatma Gandhi National Rural Employment Guarantee (MGNREG) works, Sampoorna Grameen Rozgar Yojana (SGRY), National Food for Work Programme (NFFWP), etc. The coverage of schemes under 'public works' is restricted to those schemes under poverty alleviation programmes, or relief measures through which the Government generated wage employment. The types of works that were generally undertaken through these schemes, were watershed development, drought proofing, land levelling, flood control, laying pipes or cables, sanitation, water harvesting, digging of irrigation canal, development of orchard, road construction, building construction / repair, running crèche, etc. There may be some schemes sponsored by the Government and in operation, which were conceived as self-employment generation schemes. Some such schemes of the Government were Swarnjayanti Gram Swarozgar Yojana (schemes under erstwhile IRDP merged with this), Rural Employment Generation Programme (REGP), Prime Minister's Rozgar Yojana (PMRY), Valmiki Ambedkar Awas Yojana (VAMBAY), etc. Employment generated through these schemes was not considered within the purview of 'public works'. Classification of individuals as 'casual labour in public works' required that the work in which they participated was 'public works' as defined above. To distinguish between 'public works' and works not classifiable as 'public works', some broad characteristics of 'public works' were identified, viz. the primary objective was generation of wage employment and poverty alleviation, and creation of community asset as an outcome in achieving those main objectives. It is to be noted that for assigning current weekly and current daily activity status codes for the casual labour working in public works, codes 41 and 42 were used as follows:

- (i) Worked as casual labour in public works other than Mahatma Gandhi National Rural Employment Guarantee (MGNREG) public works – 41
- (ii) Worked as casual labour in Mahatma Gandhi National Rural Employment Guarantee (MGNREG) public works – 42

In the usual activity status, code 41 was used for casual labour in public works, which included all types of public works and code 42 was not applicable in the usual activity status.

Different approaches followed to determine activity status:

The persons surveyed were classified into various activity categories in three approaches on the basis of activities (economic/non-economic) pursued by them during certain specified reference periods. The three approaches are usual status approach, current weekly status approach and the current daily status approach. Three reference periods used in NSS surveys are (i) one year, (ii) one week and (iii) each day of the reference week. In the usual status approach, the activity status of a person is determined on the basis of the reference period of one year. The activity status of a person in current weekly status approach is determined on the basis of the reference period of one week and that in current daily status approach is determined on the basis of the reference period of one day. The procedures adopted to classify the persons into various activity categories according to the usual status approach, current weekly status approach and current daily status approach are elucidated below.

Usual principal activity status:

The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively long time (i.e. major time criterion) during the 365 days preceding the date of survey was considered as the usual principal activity status of the person. To decide the usual principal activity of a person, first a two stage dichotomous classification was followed for determining the broad usual principal activity status (employed or unemployed or not in labour force) of the person. At the first stage, persons were first categorised as those in the labour force (either employed or unemployed) and those not in the labour force depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (not in the labour force). At the second stage, for persons belonging to the labour force, the broad activity status of either 'working' (employed) or 'not working but seeking and/or available for work' (unemployed) was ascertained based on the same criterion viz. relatively long time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively long time spent on such activities. In terms of activity status codes, codes 11-51 were assigned to persons classified as workers and codes 91-97 and 99 to those 'not in the labour force'. In the usual status approach, a single code 81 was assigned to persons seeking or available for work (unemployed persons) while two separate codes 81 (sought work) and 82 (did not seek but was available for work) were assigned to unemployed persons according to current weekly status and current daily status approach.

Usual subsidiary economic activity status:

A person whose usual principal activity status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less

than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11 to 51 only were used for the subsidiary economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the following two situations:

- (i) A person may be engaged in a relatively long period during the last 365 days in some economic (non-economic) activity and for a relatively short period (but not simultaneously), which is not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively short period was considered as his/her subsidiary economic activity.
- (ii) A person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively short time in a subsidiary capacity. The economic activity, which was pursued for a relatively short time, was considered as his/her subsidiary economic activity.

If a person was categorised as worker according to usual principal status, then the subsidiary economic activity of the person was different from the principal activity either in terms of detailed work activity status or in terms of industry of work at the 2-digit level of NIC-2008.

Usual activity status considering principal and subsidiary status taken together:

The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the activity status of the person according to usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

Current weekly activity status:

The current weekly activity status of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided on the basis of a certain priority- cum- major time criterion.

According to the priority criterion, the status 'working' gets priority over the status 'not working but seeking or available for work' that, in turn, gets priority over the status 'neither working nor available for work'. A person was considered 'working' (or employed) if he/she, while pursuing any economic activity, had worked for at least one hour on at least one day during the 7 days preceding the date of survey. A person was considered 'seeking or available for work' (or unemployed) if, during the reference week, the person was not classified as employed but he/she made efforts to get work/was available for work at least for one hour on

any day during the reference week though not actively seeking work in the belief that no work was available. A person who had neither worked nor was available for work any time during the reference week was considered as engaged in non-economic activities (or not in labour force).

After deciding the broad current weekly activity status of a person on the basis of 'priority' criterion, the detailed current activity status was decided on the basis of 'major time' criterion if that person pursued multiple economic activities. The current weekly activity status of a person could be any of the valid codes within 11 to 99. Of these codes, 11 to 72 pertained to workers, 81 to 82 for unemployed and 91 to 99 for persons 'not in the labour force'.

Current daily activity status:

The activity pattern of the population, particularly in the informal sector, is such that during a week, and sometimes, even during a day, a person could pursue more than one activity. Moreover, many people could even undertake both economic and non-economic activities on the same day of a reference week. The current daily activity status of a person was determined for each of the 7 days of the reference week. The activity status of a person on a day was determined on the basis of the activities pursued by him/her using a priority-cum-major time criterion. For each day of the reference week, time disposition was recorded for every member of the sample households. These involved recording of different activities pursued by the members along with the time intensity in quantitative terms for each day of the reference week. The different activities were identified and recorded in terms of 'activity status' and 'industry' codes for persons in urban areas and 'activity status', 'industry' and 'operation' codes for persons in rural areas. The description (and codes used) of current daily activity statuses is the same as those of current weekly activity status. The terms 'industry' and 'operation' are explained later. The following points were considered for assigning the time intensity and determining the current daily status of a person:

- (i) Each day of the reference week was looked upon as comprising either two 'half days' or a 'full day' for assigning the activity status. For recording time disposition for activities pursued by a person in a day, an intensity of 1.0 was given against an activity that was done for 'full day' and an intensity of 0.5 against the activity which was done for 'half day'.
- (ii) A person was considered 'working' (employed) for the full day if he/she had worked for 4 hours or more during the day.
- (iii) If a person was engaged in more than one of the economic activities for 4 hours or more on a day, he/she was assigned two out of the various economic activities on which he/she devoted relatively long time on the reference day. In such cases, an intensity of 0.5 was given for each of these two economic activities.
- (iv) If the person had worked for 1 hour or more but less than 4 hours, he/she was considered 'working' (employed) for half-day and 'seeking or available for work' (unemployed) or 'neither seeking nor available for work' (not in labour

force) for the other half of the day depending on whether he was seeking/available for work or not.

- (v) If a person was not engaged in any 'work' even for 1 hour on a day but was seeking/available for work for 4 hours or more, he was considered 'unemployed' for the entire day. But if he was 'seeking/available for work' for more than 1 hour and less than 4 hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day.
- (vi) A person who neither had any 'work' to do nor was available for 'work' even for half a day was considered 'not in labour force' for the entire day and was assigned one or two of the detailed non-economic activity statuses depending upon the activities pursued during the reference day.

In the employment and unemployment surveys of the quinquennial rounds of NSSO, the current weekly activity status of a person is derived from the intensities assigned for the different activities of a person during 7 days of the reference week.

Conceptual Framework of Key Employment and Unemployment Indicators:

From the employment and unemployment surveys of the quinquennial rounds of NSSO, the Key employment and unemployment Indicators viz. LFPR, WPR, PU and UR are derived for all the three approaches adopted in the survey. The definitions of these indicators are as follows:

1. Labour force participation rate (LFPR): LFPR is defined as the number of persons/person-days in the labour force (which includes both the employed and unemployed) per 1000 persons /person-days
2. Worker Population Ratio (WPR): WPR defined as the number of persons/person-days employed per 1000 persons/person-days.
3. Proportion Unemployed (PU): It is defined as the number of persons/person-days unemployed per 1000 persons/person-days.
4. Unemployment Rate (UR): UR is defined as the number of persons/person-days unemployed per 1000 persons/person-days in the labour force.

Chapter 3

Testing Poolability of Central and State Sample

3.1 Introduction

Theoretically speaking, pooling of central and state sample data will definitely increase the sample size and should result in relatively more dependable estimates at district level. But, looking from application point of view, there are several problems and bottlenecks that must be addressed before generating the district level estimates.

Though the central sample and state sample are drawn independently following identical sampling design with same concepts, definitions and instructions to collect the data, different non-sampling errors may be occurred due to different reasons like lack of adequate training to field staff and data processing staff, agency bias etc. If so, the effort of pooling of central and state data to generate district level estimates will not be fruitful. Therefore before pooling one need to test that the samples are coming from identical distribution. Further one need to examine the magnitude of divergence between central and state estimates as pooling may not result in better estimate where the central and state estimates show wide divergence.

In order to understand whether any gain from pooling, results of Chi-square test, Z-test and magnitude of divergence between central and state estimates are presented in this chapter.

3.2 Parameters considered for pooling

Though the Employment Unemployment survey collected information on various aspects of employment unemployment situation in Kerala and various household characteristics, following broad parameters were considered for pooling due to the small sample size at district level.

- Principal and subsidiary activity status combined
- Weekly activity status
- Daily activity status

3.3 Chi-Square Test of Activity Status

Though the central sample and state sample are drawn independently following identical sampling design with same concepts, definitions and instructions to collect the state sample data, non-sampling errors are likely to be different. Therefore before pooling we need to test that the samples are coming from identical distribution function. That is, if X_1, X_2, \dots, X_m be iid observation from state sample with distribution function F_s and y_1, y_2, \dots, y_n be iid observation from central sample with distribution function F_c then before pooling one should test the Null hypothesis $H_0: F_c = F_s$. Before generating estimates on activity status, the distribution of persons over worker, unemployed and out of labour force in the two samples is tested with the Chi-square test. A brief note on chi-square test is given below.

For discrete data such as status of activity, educational level and categorical variable such as land possessed etc, standard tests of equality of sample proportions of two sets of data based on multinomial distributions, relevant chi-square tests may be used after grouping the attributes/categorical variables in to a suitable number of classes so that each class contains adequate number of sample observations. To test the null hypothesis $H_0: F_c = F_s$, construct $2 \times k$ contingency table for k classes at the domain where two sets of data are to be pooled as below and use chi-square test if State sample and Central sample have identical distribution.

Sample-type	no of sample observation					Total
	Class-1	Class-2	...	Class-k-1	Class-k	
State Sample	N_{11}	N_{12}	...	N_{1k-1}	N_{1k}	$N_{1.}$
Central Sample	N_{21}	N_{22}	...	N_{2k-1}	N_{2k}	$N_{2.}$
Total	$N_{.1}$	$N_{.2}$...	$N_{.k-1}$	$N_{.k}$	$N_{..}$

Observed frequency of each cell $O_{ij} = N_{ij}$ where $i = 1$ to $2, j = 1$ to k .

Expected frequency of each cell $E_{ij} = (N_{i.} * N_{.j}) / N_{..}$ Where $i = 1$ to $2, j = 1$ to k .

$$\chi^2 \text{ Value} = \sum_{i=1}^2 \sum_{j=1}^k (O_{ij} - E_{ij})^2 / O_{ij}$$

with degrees of freedom = $(2-1)*(k-1) = k-1$

Decision rule is accept H_0 if $\chi^2 \leq \chi^2_{\alpha, (k-1)}$ and reject H_0 if $\chi^2 > \chi^2_{\alpha, (k-1)}$ where χ^2 is the calculated value of chi-square and $\chi^2_{\alpha, (k-1)}$ is the table value of chi-square for $(k-1)$ degree of freedom and level of significance α .

As such chi-square test at 1% level of significance has been performed to understand whether the distribution of persons over worker, unemployed and out of labour force in the two samples are same or not and the results are presented in table 3.3.1. Here we reject H_0 if chi-square value greater than 9.21. From the table we can see that the test suggest poolability of two sets of sample data for most of the districts in case of principal and subsidiary activity status combined while in case of weekly activity status and daily activity status the test rejected for most of the districts.

Table 3.3.1.

District wise chi_square value of distribution of persons over worker, unemployed and out of labour force for pooled sample

District	Chi-square value					
	PS+SS		CWS		CDS	
	Rural	Urban	Rural	Urban	Rural	Urban
Kasaragod	8.73	6.62	53.80	21.78	15.95	42.72

Idukki	15.86	1.54	11.88	5.48	20.76	11.84
Kottayam	13.93	12.28	3.59	5.34	13.06	8.55
Alappuzha	30.26	7.93	14.36	2.33	28.70	14.04
Pathanamthitta	4.72	13.33	2.18	6.30	15.20	10.42
Kollam	36.30	14.45	31.71	10.58	66.52	41.06
Thiruvananthapuram	38.06	9.00	28.03	3.70	30.68	11.74

3.4 Parametric test for poolability (Z-test)

One can also use parametric test of equality of means (Z-test) to check the poolability of the two sets of samples with the assumption that the sample observations are independently and identically distributed(iid) from Normal distribution. From concepts and definition of the survey, it is clear that test of significance for difference of Labour Force Participation rate, a ratio estimate, is sufficient to test the poolability of all parameters mentioned in section 3.2.since this ratio estimate is in nonlinear form and was prepared as per sampling weights, the

assumption of iid and normal distribution may not hold. However considering the large sample size we may use Z-statistic to test equality of ratios estimated from central and state sample to see whether they are convergent in conjunction with their variances and to see if estimates are poolable. A brief note on Z- test is given below.

Let r_c and r_s be the estimate of population rates R_c and R_s ie Y/X based on central and state sample respectively with corresponding mean square error $MSE(r_c)$ and $MSE(r_s)$. For large sample, making all assumption of parametric test, one may use Z-Statistic to test the null hypothesis $H_0 E(r_c)=E(r_s)$ where E stands for expectation.

$$\text{The test statistic } Z = \frac{(r_c - r_s)}{\sqrt{(MSE(r_c) + MSE(r_s))}}$$

$MSE(r_c)$ and $MSE(r_s)$ are estimated as follows:

$$mse(r_c) = (\hat{V}(t_{yc}) - 2 * r_c \hat{Cov}(t_{yc}, t_{xc}) + r_c^2 * \hat{V}(t_{xc})) / t_{xc}^2$$

$$mse(r_s) = (\hat{V}(t_{ys}) - 2 * r_s \hat{Cov}(t_{ys}, t_{xs}) + r_s^2 * \hat{V}(t_{xs})) / t_{xs}^2$$

where

$$\hat{V}(t_{yc}) = \sum_l (t_{yd} - t_{yc2})^2 / 4, \quad \hat{V}(t_{ys}) = \sum_l (t_{ysl} - t_{ys2})^2 / 4$$

$$\hat{V}(t_{xc}) = \sum_l (t_{xd} - t_{xc2})^2 / 4, \quad \hat{V}(t_{xs}) = \sum_l (t_{xsl} - t_{xs2})^2 / 4$$

$$\hat{Cov}(t_{yc}, t_{xc}) = \sum_l (t_{yd} - t_{yc2})(t_{xd} - t_{xc2}) / 4 \text{ based on sub-sample 1 \& 2 estimates.}$$

where \sum_l stands for summing over stratum x sub-stratum level variance, covariance at the domain of pooling.

The critical value of test statistic at level of significance α for a two tailed test is given by z_α , where z_α is determined by the equation $P(|Z| > z_\alpha) = \alpha$. Thus the decision rule is: reject the null hypothesis if the computed value of test statistic is greater than critical value.

As described above Z-test has been performed at 1% level of significance and the results are presented in table 3.4.1. It is seen from the table that the test is not significant for most of the districts as calculated value of z of those districts were less than 2.575, tabulated value.

Table 3.4.1
District wise Z value for equality of LFPR

District	Z value					
	PS+SS		CWS		CDS	
	Rural	Urban	Rural	Urban	Rural	Urban
Kasaragod	0.04	3.78	4.02	4.00	3.18	3.66
Kannur	0.47	1.07	0.53	0.84	1.50	0.52
Wayanadu	1.75	1.30	1.38	1.30	1.37	1.23
Kozhikode	0.94	1.70	0.43	1.02	0.04	0.08
Malappuram	1.17	2.60	0.73	2.62	1.13	2.74
Palakkad	1.73	0.84	1.24	0.51	2.11	0.74
Thrissur	1.44	3.00	0.56	2.28	0.26	2.43
Ernakulam	0.48	2.44	1.40	2.10	2.24	1.97
Idukki	2.82	0.36	1.02	0.60	0.10	1.76
Kottayam	2.43	1.73	1.25	0.90	1.10	1.12
Alappuzha	3.84	1.78	3.45	1.20	2.26	1.01
Pathanamthitta	1.07	3.91	0.90	5.08	0.35	3.75
Kollam	5.32	2.98	3.40	2.95	2.65	3.29
Thiruvananthapuram	4.14	2.64	4.24	1.24	3.40	1.69

From table 3.3.1 and 3.4.1 we can examine the acceptance of poolability of two sets of data at district level. Table 3.4.2 provides the distribution of districts for which poolability test was accepted at 1% level of significance. In case of Principal and subsidiary activity status

combined, poolability test was accepted in both methods for about 72% of districts in rural sector and 50% of districts in urban sector. In rural sector, about 36% of districts passed both the tests for current weekly status while the urban counterpart was about 62%. Moving to current daily status, percentages of districts for which both test was accepted were seen as about 29% in rural and about 36% in urban. Further it was noticed in majority of districts the poolability test was accepted at 1% level of significance by at least one method.

Table 3.4.2

Distribution of districts for which poolability test was accepted

Acceptance by the test 	Number of districts accepted at 1% level of significance					
	Rural			Urban		
	PS+SS	CWS	CDS	PS+SS	CWS	CDS
Chisquare test	9	5	4	10	11	5
Z-test	10	10	11	8	10	10
Both the tests	10	5	4	7	9	5
At least one test	10	10	11	11	13	10
Total number of districts	14	14	14	14	14	14

3.5 Divergence between central and state estimates

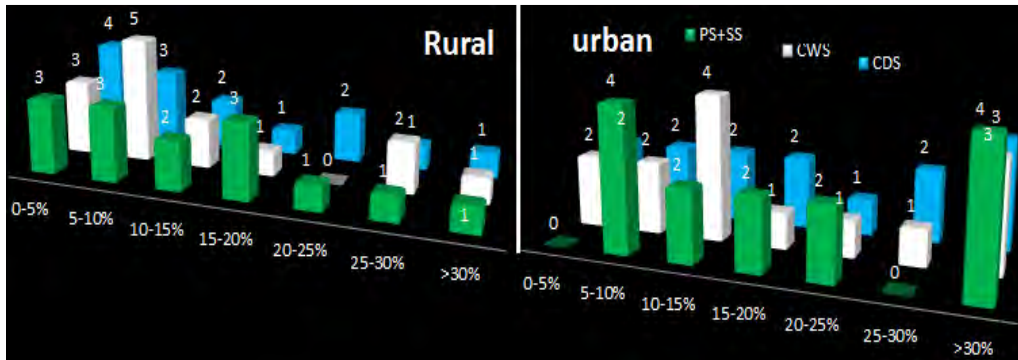

Before going to use pooled estimates one may be interested to know the divergence between central and state estimates as wide divergence between the estimates raising doubts about the unknown magnitude of non-sampling error as well as its agency bias. In such cases pooling may not result in better estimate. On the other hand, even though both the estimates lie on the same side of true value may result in a small loss of information in respect of relative standard error of estimates. Divergence between central and state estimates of LFPR without considering their relative standard errors are presented in this section. Relative standard error of estimates is presented in chapter 5.

Distribution of districts by the percentage divergence between central and state estimates of LFPR are summarised in chart 3.5.1. It is seen that most of the districts occupied in the classes below 20 per cent divergence between central and state estimates. In rural sector, divergence exceeds 30 per cent for one district for PS+SS, one district for CWS and one district for CDS. In urban sector, divergence exceeds 30 per cent for 3 districts for PS+SS, 4 districts

for CWS and 3 districts for CDS. Percentage of absolute divergence between the estimates for each district were presented in table 1(c) of Appendix A.

Chart 3.5.1

Distribution of districts by the % of divergence (in absolute) between central and state estimates of LFPR

Ass poolability conditions were accepted for most of the districts, estimators of parameters mentioned in section 3.2 for each district are presented in chapter 4. The estimates of the districts for which poolability test was rejected should obviously be used with more caution than the estimates of the districts for which poolability test was accepted.

Chapter 4

Employment and Unemployment Situation in Kerala

4.1 Introduction

The summary of findings of major indicators of Employment and Unemployment survey of NSS 68th round are presented in this chapter. The discussion in the summary of findings are mainly centred on the district level estimates of employment and unemployment derived from central and state sample pooled data, measured in terms of the three basic approaches of usual status, current weekly status and current daily status. While using the estimates, results of the poolability test and Relative Standard Error (RSE) of the estimates may also be considered. Results of the poolability tests are presented in chapter 3 and RSE of the estimates are given in chapter 5.

Though information on various facets of employment and unemployment situation in Kerala were collected in this survey, the major indicators like Labour Force Participation Rate, Worker Population Rate, Unemployment Rate and Distribution of workers by employment status based on the pooled data and presented in this report by considering the small sample size at district level.

4.2 Estimates of Activity

The procedure adopted for estimating parameters of activity status is, the weighted average of central and state estimates with weights being matching ratio of central and state sample. For any characteristic, state sample(s) is considered in the form of two independent sub-sample s1 and s2 and the central sample (c) in the form of two independent sub-sample c1 and c2. Based on this the respective estimates for state and central are;

$$t_s = (ts1 + ts2)/2 \text{ and } t_c = (tc1 + tc2)/2$$

As kerala participated with 50% additional samples, the matching ratio of central and state is 1: 1.5. Now, the pooled estimate of t_s and t_c with matching participation rate 1 : 1.5 is ;

$$t_p = \frac{2t_c + 3t_s}{5} \quad \text{and} \quad V(t_p) = \frac{4t_c + 9t_s}{25}$$

Using the above procedure, per thousand distribution of persons into different activity status groups according to three different approaches, viz. usual status (PS+SS) with a reference period of one year, current weekly status (CWS) with a one-week reference period and current daily status (CDS) based on the daily activity pursued during each day of the reference week are estimated with the pooled data.

4.3 Labour Force Participation Rate

Labour force refers to the population which supplies or offers to supply labour for pursuing economic activities for the production of goods and services and, therefore, includes both 'employed' and 'unemployed' persons/person days. Labour Force Participation Rate (LFPR) is defined as the proportion of persons/person days in the labour-force to the total persons/person-days. These ratios are given in per 1000 of persons/person-days. The estimates of LFPR have been discussed here in usual status (PS+SS), CWS and CDS. The labour force indicators measured in PS+SS and CWS are in persons and in CDS in person-days.

4.3.1 Labour Force Participation Rate for All Persons

Labour Force or in other words 'economically active' population of Kerala in 2011-12 was estimated as 37% of the population as per usual status (ps+ss). According to Current Weekly Status and Current Daily Status, LFPR of the state was around 36% and 34% respectively. Chart 4.3.1.1 presents the district level estimates of LFPR in usual status derived from the pooled data. It is seen in all districts that LFPR in Current Daily Status was less than LFPR in Current Weekly Status and LFPR in Current Weekly status was less than LFPR in usual status (ps+ss). Among the districts Idukki had highest LFPR in usual status (ps+ss)(491) followed by Pathanamthitta (426) and Kottayam (422). LFPR in usual status (ps+ss) was seen lowest in Malappuram (285).

Chart 4.3.1.1 Labour force participation rate for all persons

Labour Force Participation Rate

TVM	381	353	322
ALL	370	356	336

Sector wise differences in LFPR was presented in chart 4.3.1.2. According to the usual status (ps+ss), 38 per cent of rural and 35 per cent of urban population in Kerala belonged to the labour force. Chart 4.3.1.2 presents the district level estimates of LFPR in usual status derived

from the pooled data. It's clear from the chart that, except Wayanad, rural LFPR was higher than urban LFPR in Usual status(ps+ss). In rural area, Idukki (500) was estimated to have highest LFPR followed by Kottayam (436), Pathanamthitta (434) and Ernakulam (421). The highest urban LFPR were those of Wayanad (425), Ernakulam (395),Alappuzha (390) and Thrissur (364).

Among the districts of Kerala, Malappuram was estimated to have the lowest proportion of labour force with 290 in rural and 243 in urban.

ALL	378	350	362	341	339	327

In CWS approach, rural LFPR was seen highest for Idukki district (478) and lowest for Malappuram (289) while urban LFPR was highest for Wayanad (425), lowest for Malappuram (239). Like in PS+SS approach and CWS approach, idukki and wayand topped in rural and urban sectors respectively under CDS approach and Malappuram occupied at the bottom level in both rural and urban sectors. Slight difference in ranks was also observed in case of certain districts under the three approaches.

4.3.2 Gender Gap in Labour Force

All over the world, to a great or less extent, patterns of labour participation is different for men and women, Kerala is no exception. Gender gap in estimate of labour force at state and district level is discussed in this section. LFPR was significantly lower for females than for males in both rural and urban areas of Kerala. The estimated proportion of male and female in labour force is shown in chart 4.5.2.1. It was about 55 per cent for rural male and 54 per cent for urban male. For females, LFPR was 21 per cent in rural areas and 18 per cent in urban areas. The same pattern is observed at the district level also.

Chart 4.3.2.1 Gender gap in LFPR under Usual Status

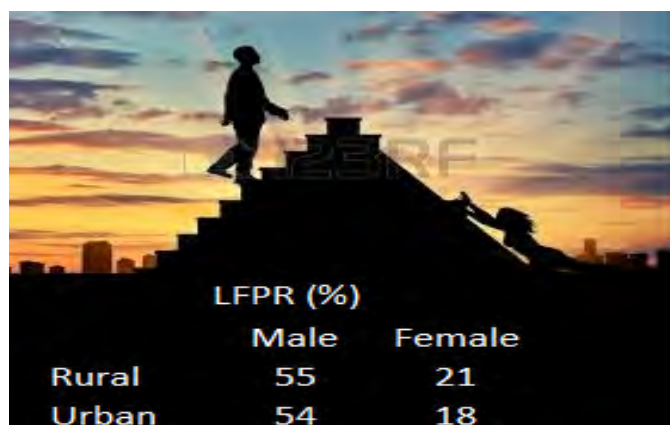

Chart 4.3.2.2 provides a comparative picture of labour force of men and women at district level. The chart reveals that the gender disparity was prominent in LFPR. Malappuram recorded the lowest Female LFPR i.e. 12 per cent in rural areas in comparison to 49 per cent males and only 8 per cent females in comparison to 43 per cent males in urban areas. Kasaragode and Idukki districts showed fewer gaps in LFPR in rural and urban areas. Among the districts of Kerala the gender disparity in labour force was highest in Kozhikode, in rural as well as in urban areas.

Table 4.3.2.2 District wise estimate of LFPR for Male and Female Under usual status

District	Gender Gap in LFPR			
	Rural		Urban	
	male	female	male	female

ALL	556	214	537	177

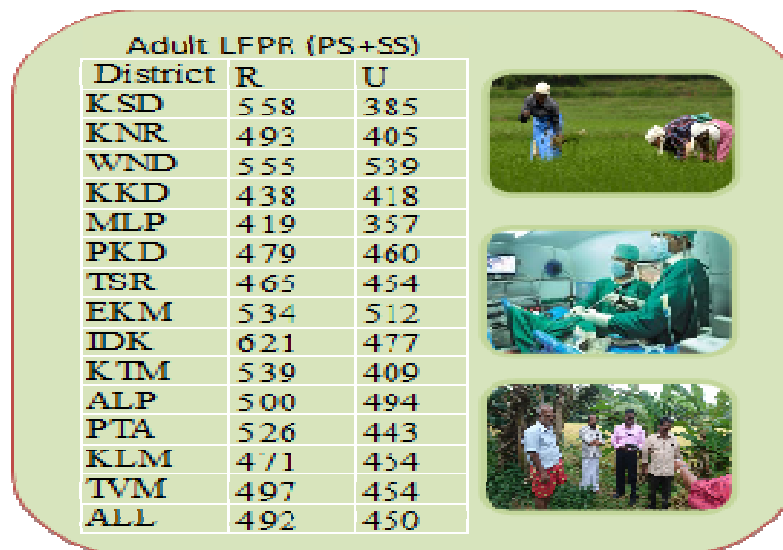

Analyzing at district level results, it has been observed that the female LFPR in rural areas is higher than the female LFPR in urban areas in all districts except Thrissur and wayanad, where reverse trend is visible.

4.3.3 Labour Force Participation Rates of Adult

In NSS surveys, a person (male or female) who has completed 15 years of his or her age on the date of survey is an adult. District level results of LFPRs for adult population according to usual principal status is presented in chart 4.3.3.1. It is seen from the chart that, LFPR is comparably high among adult population than the total population. This pattern is observed in rural and urban sectors of all the districts. In Kerala, about 49 per cent of adult persons in rural areas and about 45 per cent of the adult in the urban areas were found to be in the labour force whereas for the whole population the rates in rural and urban were 38 per cent and 35 per cent, respectively.

The inter-district variation in terms of adult LFPR is demonstrated in chart 4.3.3.1. At the district level, compared to the whole population ratios adult LFPR showed a higher rate of LFPR in both the sectors. For instance, the adult LFPR of Malappuram was 42 per cent in rural and 36 per cent in urban. On the other hand, LFPR for the whole population in Malappuram was 29 per cent and 24 per cent in rural and urban sectors, respectively. Another observation made from the chart is that, there was a great deal of variation across the two sectors. Rural sector showed slightly higher proportion than the urban ones.

Chart 4.3.3.1 Adult LFPR under Usual Status

4.4. Worker Population Ratio (WPR)

Three different estimates of the work force based on the three approaches used in classification of the activity statuses of person are estimated from the pooled data. The estimate of work force, considering both the usual principal status and the subsidiary status, includes the persons who (a) either worked for a relatively longer part of the 365 days preceding the date of survey and (b) also those persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey. The estimate of work force, according to the current weekly status provides the number of persons worked for at least 1 hour on any day during the 7 days preceding the date of survey. The work force measured in terms of current daily status gives the average picture of the person-days worked in a day during the survey period.

The usual status (PS+SS) approach, having the long reference period of last 365 days, adopted for classification of the population is unable to capture changes in the activity pattern caused by seasonal fluctuations. But the estimates obtained by adopting the current weekly and current daily status approaches are expected to reflect the overall effect caused by intermittent changes in the activity pattern during the year. The latter reflects even the changes that take place during a week and enables to account for person-days in work participation.

The number of persons/person-days employed per thousand persons/person-days is referred to as work-force participation rates (WFPR) or worker-population ratio (WPR). This ratio is used in the following discussion on the employed.

4.4.1 WPR for all persons

District level estimates of WPR obtained from the pooled data according to usual status, current weekly status and current daily status are given in chart 4.4.1.1. WPR in usual status (ps+ss) was 35 per cent and 33 per cent in rural and urban areas of Kerala respectively. Except in Wayanad and Palakkad, rural WPR was higher than urban WPR. Among the districts, the percentage of usually employed persons in rural areas were highest in Idukky (472) followed by Kottayam (411), Kasaragode (407) and Ernakulam(393). The highest urban WPR were those of Wayanad (399), Ernakulam (373), Palakkad (343), and Thrissur (390). Malappuram is estimated to have the lowest proportion of work force with nearly 26 per cent population were employed in rural and 23 per cent in urban sector.

In CWS approach, WPR was lower than the WPR obtained in usual status approach. WPR in CWS was 33 per cent in rural areas and 31 per cent in urban areas of Kerala. This difference is observed across the district in both the sectors. The difference between the WPRs according to usual status and current weekly status approach is found to be 2 percentage points in both the sectors. Estimates of WPR in CDS were further lower than those obtained in usual status. In CDS, WPR at the state level decreased to around 30per cent in rural and 29 per cent in urban. This decrease in WPR was observed across all districts in Kerala.

4.4.2 WPR for Adult

WPR in usual status for persons of age 15 years and above in rural areas was 46 per cent and in urban areas it was 42 per cent. At the state and district levels, the work force for adult was considerably higher than the work force for the whole population. For example, WPR of adult in rural areas of Idukky as per the usual status was 59 per cent, whereas for the whole population, this was 47 per cent. District level estimates of WPR obtained from the pooled data are presented in chart 4.4.2.1. Detailed table in the Appendix A provide age specific WPR for the age groups 15 – 24 years and 15 years and above.

4.4.3 Gender Gap in WPR

The gap between the WPR for male and female in Kerala under usual status is shown in chart 4.4.3.1. It displays that percentage of men engaged in works was 3 times that of women in rural sector and almost 4 times in urban sector.

Chart 4.4.3.1 WPR for male and female of Kerala under usual status

As in the case of LFPR, distinct gender difference in WPR is observed both at the state and district level. Chart 4.4.3.2 shows the gender gap in WPR at the district and state levels, as per the usual status. As per the results, in both rural and urban areas, female WPRs were considerably lower than male WPRs. Among the districts, Idukky (35 per cent) reported highest female WPR in rural and Wayanad (23) reported highest female WPR in urban areas. In both the sectors, Malappuram (7 per cent in rural & 5 per cent in urban) reported the lowest female WPR and was preceded by Kozhikkode (10 per cent in rural & 9 per cent in urban).

4.5. Unemployment rate

Unemployment Rate (UR) is the ratio of number of unemployed persons (person-days in the CDS approach) to the number of persons (person-days in the CDS approach) in labour force (i.e., number of employed and unemployed person/person-days). This, in effect, represents the unutilised portion of the labour force. As in the case of employed, for unemployed also, three kinds of estimates are obtained following the three different approaches. These are:

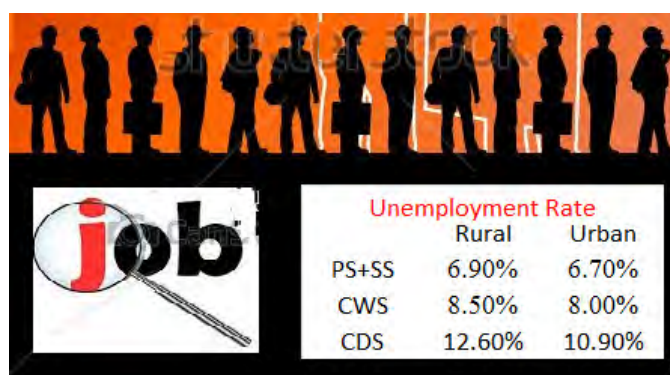

- i) Number of persons usually unemployed based on 'usual status' (PS+SS) approach,
- ii) Number of persons unemployed on an average in a week, based on the 'current weekly status' (CWS) approach, and
- iii) Number of person-days unemployed on an average, on a day during the reference period of seven days preceding the date of survey, based on the 'current daily status' (CDS) approach.

Of these three, the first estimate indicates the usually unemployed excluding those employed in subsidiary status (SS) or usual principal status (PS). The second estimate is based on the current weekly status (CWS) and gives the average weekly picture during the survey year. It includes both chronic unemployment and also seasonal unemployment of those categorised as usually employed caused by seasonal fluctuations in economic activity. The third estimate based on the current daily status (CDS) concept considers person-days and gives average level of unemployment on a day during the survey year.

4.6.1 Unemployment rate for all persons

The unemployment rates, estimated from the pooled data according to usual status (PS+SS), CWS and CDS for the state have been presented in chart 4.6.1.1. Unemployment rate as per usual status for both sectors was seen around 7%. Unemployed person-day (CDS) rates were substantially higher than the rates obtained on the basis of usual status approach or current weekly status approach, thereby indicating a high degree of seasonal and intra-seasonal unemployment. As per CDS approach, the unemployment rates in rural sector was nearly 13% while the rate in urban sector was nearly 11 per cent. The corresponding rates in the CWS approach were around 9 per cent and 8 per cent in rural and urban areas respectively.

Chart 4.6.1.1 sector wise unemployment rate of Kerala

District wise unemployment rates, estimated from the pooled data according to usual status (PS+SS), CWS and CDS for the state have been presented in chart 4.6.1.2. Among the districts, Malappuram had highest unemployment rate in rural, 12%, as per usual status approach while in urban Alappuzha district topped with 13%. Lowest unemployment rate was seen against Kasaragode district in both sectors

4.7. Distribution of Employed by Category of Employment

Persons employed are categorised into three broad groups according to their status of employment. These groups are: (i) self-employed, (ii) regular wage/ salaried employees and (iii) casual labour. The distribution of employed by category of employment according to usual status workers is discussed below.

4.7.1 Distribution of Usually Employed by Category of Employment – for all Persons

The distribution of the usually employed by category of employment at the district and state level are given in chart 4.7.1. and 4.7.2 for rural and urban sectors respectively. The basic distribution of the employed in terms of status of employment shows that, among the three statuses in employment, at the state level in the rural areas, Casual labour had the dominant share (48 per cent) in usual status workforce, while the share of self employment stood at 34 per cent and the rest (18 per cent) of the workforce was regular wage/salaried employees. In the urban areas, the proportion of casual labour was about 1.5 point higher than self employed. The proportion of regular wage/salaried employees in urban areas (35 per cent) was nearly double than that of its rural counterpart.

Chart 4.7.1.1 Distribution of workers according to employment status according to usual status - Rural

Distribution of workers according to employment status									
District	Male			female			all		
	self employed	regular wage/salaried employee	casual labour	self employed	regular wage/salaried employee	casual labour	self employed	regular wage/salaried employee	casual labour

ALL	351	156	493	310	240	450	340	179	481

It can be seen from the chart 4.7.1.1 that, in the rural areas, Kottayam was the only district in Kerala with almost half of the employed were in the 'self-employed' category. In urban areas too Kottayam topped with around 48 per cent of employed persons in self-employment category. The share of regular wage/salaried employees to the total employees in rural sector was seen lowest in Kasaragod district with 5.4 percent. When it comes to urban, Kannur district shows lowest share in regular wages/salaried employees.

ALL	321	299	380	313	498	189	320	346	334

During 2011-12, in rural Kerala, among the workers in usual status (ps+ss), about 35 per cent of the males and 31 per cent of females were self-employed. The corresponding figures in urban Kerala were about 32 per cent for males and 31 per cent for females. The proportion of regular wage/ salaried employees among all workers was much lower for male than female in both rural and urban sectors of all districts except rural and urban sectors of Palakkad and urban sector of Alappuzha

Chapter 5

Relative Standard Error of Estimates

5.1 Introduction

The Estimates of Employment and Unemployment survey presented in the previous chapter are based on information from sample households rather than all households. Hence the estimates produced may differ from those that would have been produced if the entire population had been included in the survey. The sampling error of the estimates were measured and presented in this chapter in terms of Relative Standard Error. The standard error indicates the extent to which a survey estimate is likely to deviate from the true population and is expressed as a number. The Relative Standard Error (RSE) is the standard error expressed as a fraction of the estimate and is usually displayed as a percentage. Estimates with higher RSE (30% or more) are subject to high sampling error and should be used with caution.

5.2. RSE of LFPR

District wise relative standard error (RSE) of LFPR in three approaches viz. usual status (PS+SS), Current Weekly Status (CWS) and Current Daily Status (CDS) based on pooled sample is presented in chart 5.2.1.

5.2.1. District wise RSE of LFPR

District	RSE OF LSPR					
	PS+SS		CWS		CDS	
	R	U	R	U	R	U
Kasaragod	5.26	6.08	5.05	8.12	5.50	8.55
Kannur	4.49	4.41	4.76	4.06	4.59	3.62

Pathanamthitta	3.25	5.65	3.21	4.29	3.21	4.78
Kollam	2.32	5.84	2.49	5.46	3.03	4.99
Thiruvananthapuram	3.56	2.20	3.17	2.32	3.56	2.58
ALL	1.02	1.42	1.07	1.42	1.10	1.46

RSE of estimates of LFPR was found to be within 10 per cent for both rural and urban sectors of all districts under the three approaches. In PS+SS approach, almost all districts fall within 5 per cent level of RSE of rural LFPR. When it comes to urban sector, nine districts exceeded 5%.

Distribution of districts by range of relative standard error (RSE) of LFPR of central, state and pooled sample estimates as per usual status is presented in chart 5.2.2. RSE of estimates of LFPR in rural was found to be within 10 per cent for both central and state sample except for one district in central sample but was within 15%. In urban sector, RSE of LFPR was found to be within 15% for all districts in central and state samples.

Chart 5.2.2 Distribution of districts by range of LFPR according to usual status

	Range	<=5	5-10%	10-15%	15-20%	20-25%	25-30%	>30%

	state	5	5	4	0	0	0	0
	pooled	7	6	1	0	0	0	0

Distribution of districts by range of relative standard error (RSE) of LFPR of central, state and pooled sample estimates as Current Daily Status is presented in chart 5.2.4. RSE of estimates of LFPR in rural was found to be within 10 per cent for both central and state sample. In urban sector, RSE of LFPR was found to be within 15% for all districts in central and state samples except for one district in central sample and one district in state sample but was within 20%.

Chart 5.2.4 Distribution of districts by range of LFPR according to CDS

	Range	<=5	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	central	3	11	0	0	0	0	0
	state	10	4	0	0	0	0	0
	pooled	11	3	0	0	0	0	0
Urban	central	3	9	1	1	0	0	0
	state	4	7	2	1	0	0	0
	pooled	10	4	0	0	0	0	0

From the distribution of districts by RSE level, it can be seen that the pooled estimate of LFPR have relatively lower RSE when compared to central or state sample estimates. For both the sectors, RSE of pooled estimate was found to be within 10 per cent for all districts. It may be seen from the above chart that the estimated RSE of LFPR at district level has marginal improvement by pooling the central and state samples compared to either of them. Thus we can say that the precision of estimate of LFPR increased by pooling.

5.3. RSE of WPR

District wise relative standard error (RSE) of LFPR in three approaches viz. usual status (PS+SS), Current Weekly Status (CWS) and Current Daily Status (CDS) based on pooled sample is presented in chart 5.3.1.

5.3.1. District wise RSE of WPR

District	PS+SS		CWS		CDS	
	R	U	R	U	R	U
KSD	5.45	6.18	7.06	8.41	10.75	10.54
KNR	3.48	3.90	4.09	4.14	3.64	3.17
WND	5.18	5.08	4.67	8.46	8.46	9.47
KKD	3.65	4.64	4.56	2.32	2.20	2.43
MLP	3.02	3.46	3.50	9.15	8.69	8.58
PKD	3.44	3.42	3.26	3.56	3.99	4.43
TSR	3.98	4.69	4.47	4.67	4.46	4.55
EKM	4.24	4.48	4.78	2.90	3.22	3.15
IDK	2.62	2.53	2.66	7.69	12.13	9.75
KTM	4.04	4.23	3.75	7.72	10.30	10.65
ALP	4.98	5.16	5.95	5.91	6.19	6.75
PTA	3.36	3.95	4.33	7.78	5.83	5.89
KLM	2.47	2.25	2.88	7.39	6.93	7.19
TVM	3.55	3.54	3.74	2.49	2.96	2.74
ALL	1.03	1.11	1.13	1.37	1.39	1.39

RSE of estimates of WPR was found to be within 10 per cent for rural sectors of all districts under the three approaches. When it comes to urban sector, two districts under CDS approach and two districts under CWS approach exceeded 10% but within 15%.

Distribution of districts by range of relative standard error (RSE) of WPR according to usual status of central, state and pooled sample estimates is presented in chart 5.3.1. RSE of estimates of WPR in rural was found to be within 10 per cent for both central and state sample except for one district in central sample but was within 15%. In urban sector, RSE of WPR was found to be within 15% for all districts in central and state samples except for one district in central sample which exceeded 15% but within 20%.

chart 5.3.2 Distribution of districts by range of RSE of WPR according to usual status

	Range	<=5	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	central	3	10	1	0	0	0	0
	state	8	6	0	0	0	0	0
	pooled	12	2	0	0	0	0	0
Urban	central	5	4	4	1	0	0	0
	state	4	5	5	0	0	0	0
	pooled	6	8	0	0	0	0	0

Chart 5.3.3 displays distribution of districts by range of relative standard error (RSE) of WPR of central, state and pooled sample estimates as per Current Weekly Status. RSE of estimates of WPR in rural was found to be within 10 per cent for both central and state sample except for three districts in central sample. In urban sector, RSE of WPR was found to be within 15% for all districts in state samples. When it comes to central sample, one district (Idukki) exceeded 25% but below 30%, one district fell between 15-20% while the other districts were within 15%.

Chart 5.3.3 Distribution of districts by range of RSE of WPR according to CWS

	Range	<=5	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	central	3	8	3	0	0	0	0
	state	8	6	0	0	0	0	0
	pooled	11	3	0	0	0	0	0
Urban	central	2	7	2	2	0	1	0
	state	4	5	5	0	0	0	0
	pooled	6	5	3	0	0	0	0

Distribution of districts by range of relative standard error (RSE) of WPR of central, state and pooled sample estimates as Current Daily Status is presented in chart 5.3.4. RSE of estimates of WPR in rural was found to be within 10 per cent for both central and state sample except for three districts in central sample. In urban sector, RSE of WPR was found to be within 15% for almost all districts in central and state samples except for one district in central sample and one district in state sample. The district in the central sample beyond 15% RSE fell in the level 25-30% while the corresponding district in state sample was within 20%.

Chart 5.3.4 Distribution of districts by range of RSE of WPR according to CDS

	Range	<=5	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	central	2	9	3	0	0	0	0
	state	8	6	0	0	0	0	0
	pooled	12	2	0	0	0	0	0
Urban	central	5	5	3	0	0	1	0
	state	4	5	4	1	0	0	0
	pooled	6	6	2	0	0	0	0

From the distribution of districts by RSE level, it can be seen that the pooled estimate of WPR have relatively lower RSE when compared to central or state sample estimates. For majority of districts, RSE of pooled estimate was found to be within 10 per cent. It may be seen from the above table that the estimated RSE of WPR at district level has marginal improvement by pooling the central and state samples compared to either of them. Thus we can say that the precision of estimate of WPR increased by pooling.

Appendix B

Sample Design and Estimation Procedure

Sample Design and Estimation Procedure

1. Introduction

1.1 The 68th round (July 2011-June 2012) of NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. The period of survey was of one year duration starting on 1st July 2011 and ending on 30th June 2012. The survey period of this round was divided into four sub-rounds of three months' duration each - 1st sub-round: July to September 2009; 2nd sub-round: October to December 2009; and so on. In each of these four sub-rounds equal number of sample villages/ blocks (FSUs) was allotted for survey with a view to ensure uniform spread of sample FSUs over the entire survey period.

2 Sample Design

2.1 A stratified multi-stage design was adopted for the 68th round survey. The first stage units (FSU) were the 2001 census villages (Panchayat wards in case of Kerala) in the rural areas and Urban Frame Survey (UFS) blocks in the urban areas. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/ sub-blocks (sbs) from these FSUs.

2.2 *Selection of the first-stage units:* The sampling frame and the sampling technique used for selection of the FSUs are stated in the following paragraphs.

2.2.1 *Sampling Frame for First Stage Units:* For the rural sector, the list of 2001 census villages (Panchayat wards in case of Kerala) constituted the sampling frame. For the urban sector, the list of latest available UFS blocks (2007-12) constituted the sampling frame.

2.2.2 *Stratification of the first stage units:* Within each district of a State/ UT, two basic strata were formed as follows:

- i) rural stratum comprising all rural areas of the district and
- (ii) urban stratum comprising all the urban areas of the district.

However, within the urban areas of a district, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

2.2.3 *Sub-stratification*: Procedure followed for sub-stratification in each of rural and urban sectors are stated below.

2.2.3.1 *Rural sector*: If 'r' was the sample size allocated for a rural stratum, 'r/4' sub-strata were formed in that stratum. The villages within a district as per frame were first arranged in ascending order of population and then sub-strata 1 to 'r/4' were demarcated in such a way that each sub-stratum comprised a group of villages of the arranged frame and had more or less equal population.

2.2.3.2 *Urban sector*: If 'u' was the sample size for an urban stratum, 'u/4' sub-strata were formed in that stratum. In case u/4 was more than 1, implying formation of 2 or more sub-strata, this was done by first arranging the towns in ascending order of total number of households in the town as per UFS phase 2007-12 and then arranging the IV units of each town and blocks within each IV unit in ascending order of their numbers. From this arranged frame of UFS blocks of all the towns/million plus cities of a stratum, 'u/4' number of sub-strata were formed in such a way that each sub-stratum had more or less equal number of households as per UFS 2007-12.

2.2.4 *Allocation of FSU's among Strata*: At the all-India level, a total number of 12784 FSUs (7,508 villages and 5,276 urban blocks) were allocated for survey in the central sample. The total number of sample FSUs was allocated to the States and UTs in proportion to population as per census 2001 subject to the availability of field investigators and ensuring minimum sample allocation to each State/ UT. The State/ UT level sample size was allocated between rural and urban sectors in proportion to population as per *census 2001* with double weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. did not exceed the rural sample size. A minimum of 16 FSUs (minimum 8 for each of rural and urban sector) was allocated to each state/ UT. Within each sector of a State/ UT, the respective sample size was allocated to the different strata/ sub-strata in proportion to the population as per census 2001. Allocations at stratum/ sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal number of samples was allocated among the four sub rounds. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Allocation for each sub-stratum was 4. Equal number of samples was allocated in each of the four sub-rounds.

2.2.5 *Selection of first-stage units*: For the rural sector, from each stratum/ sub-stratum, required number of sample villages was selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. From each stratum of the urban sector, FSUs were selected by using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

2.3 *Selection of Ultimate Stage Units (USU) within a FSU*: The procedures followed for selection of USUs within an FSU are stated in the remaining paragraphs of this sub-section.

2.3.1 *Formation and Selection of hamlet-groups/sub-blocks:* Sample FSUs with approximate population 1200 or more were divided into a suitable number (say, D) of ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector as stated below.

approximate present population of the sample FSU	no. of hgs/sbs to be formed
less than 1200 (no hamlet-groups/sub-blocks)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except four districts Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hgs to be formed
less than 600 (no hamlet-groups)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

Hamlet-groups/ sub-blocks were formed in the sample FSU by more or less equalising populations. Two hamlet-groups (hgs)/ sub-blocks (sbs) were selected from a large FSU, wherever hamlet-groups/ sub-blocks were formed. This was done in the following manner – one hg/ sb with maximum percentage share of population was always selected and was termed as hg/ sb 1; one more hg/sb was selected from the remaining hamlet-groups/ sub-blocks by simple random sampling (SRS) and was termed as hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks. For the FSUs where no hg/sb formation was done, the hg/sb number was assigned as 1.

2.3.2 *Sampling frame of households:* All households listed in a village/UFS block where no hamlet-group/sub-block formation was done, or the households listed in the two selected hamlet-groups/sub-blocks of the village/UFS block where hamlet-group/sub-block formation was done, constituted the sampling frame of households.

2.3.3 *Formation of second stage strata (SSS) and allocation of households in different SSS:* For employment and unemployment survey of NSS 68th round, all households listed in the selected FSU/hamlet groups/sub-blocks were stratified into three second stage strata (SSS). The three second-stage-strata (SSS) formed in each of rural and urban areas and the number of households surveyed from each of the three SSS are specified below:

SSS	composition of SSS	No. of households surveyed	
		FSU without hg/sb formation	for each hg/sb for FSUs with hg/sb formation
Rural			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
Urban			
SSS 1	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2	households having MPCE of middle 60% of urban population ($A \leq MPCE \leq B$)	4	2
SSS 3	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

2.3.4 In the rural areas, identification of affluent households was done by taking into account factors generally associated with affluent households such as: ownership of motor car/ jeep/ tractor/ combine-harvester/ truck/ bus/ etc.; consumer durables like refrigerator/ washing machine etc.; ownership of large business/ highly remunerative profession/ high salaried income etc.; ownership of spacious pucca house in good condition; ownership of 7 hectares or more of cultivable land; ownership of 3.5 hectares or more of irrigated land; ownership of 10 or more cattle, buffaloes and camels. In the urban areas, two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 66th round data for each NSS region in such a way that top 10% of the population had MPCE more than 'B' and bottom 30% of the population had MPCE less than A.

2.3.5 *Selection of households:* For employment-unemployment survey, a total of 8 households were selected from each FSU. In both rural and urban areas, in case no hamlet-group/sub-block formation was done in the village/block, a number of 2, 4 and 2 households were selected from the second stage strata SSS1, SSS2 and SSS3, respectively. In case hamlet-groups/sub-blocks were formed in the village/block, a number of 1, 2 and 1 households were selected respectively from the second stage strata SSS1, SSS2 and SSS3 of each of the hamlet-groups/sub-blocks. The sample households from each of the second stage strata were selected by SRSWOR.

2.4 Number of village/blocks allotted for survey in the NSS 68th round along with the number of villages/blocks actually surveyed and number of persons enumerated in employment and unemployment survey are given for different states and union territories in Table B1 at the end of Appendix-B.

3. Estimation Procedure

Procedures for obtaining estimates of aggregates, ratios and their RSEs are briefly indicated below:

3.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum (only for rural sector)

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (panchayat ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb [j = 1, 2 or 3]

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hgs/ sbs formed in the sample FSU

$D^* = 0$ if $D = 1$; and

$= (D - 1)$ for FSUs with $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes for all the FSUs of a sub-stratum)

z = size of sample village used for selection

n = number of sample FSUs surveyed including 'zero cases' but excluding casualty for a particular sub-sample and sub-stratum

H = total number of households listed in a second-stage stratum of an FSU/ hamlet-group/ sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimates of population total X, Y for the characteristics x, y

Under the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

For ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

3.2 Estimation of aggregates for a particular sub-sample (m) of a stratum (s):

3.2.1 rural areas:

Estimate of population total (Y) of the characteristic y for the j -th SSS of a sub-stratum within a stratum denoted by \hat{Y}_j is obtained as

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

Estimate of aggregates for t -th sub-stratum of s -th stratum denoted by \hat{Y}_{st} is obtained as

$$\hat{Y}_{st} = \sum_j \hat{Y}_j$$

Sub-sample estimate for a stratum (\hat{Y}_{sm}) is obtained by adding sub-sample wise estimates of all the sub-strata (\hat{Y}_{st}) of the stratum.

3.2.2 urban areas:

Estimate of aggregates for j -th second stage stratum of a stratum (\hat{Y}_j) is obtained as

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

Estimate of aggregates for t -th sub-stratum of s -th stratum denoted by \hat{Y}_{st} is obtained as

$$\hat{Y}_{st} = \sum_j \hat{Y}_j$$

Sub-sample estimate for a stratum (\hat{Y}_{sm}) is obtained by adding sub-sample wise estimates of all the sub-strata (\hat{Y}_{st}) of the stratum.

3.3 Overall Estimate for Aggregates: Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

3.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

3.5 *Estimates of Ratios:* \hat{Y} and \hat{X} being the overall estimates of the aggregates Y and X for two characteristics y and x, respectively at the State/ UT/ all-India level, the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

3.6 *Estimates of Error:* The estimated variances of the above estimates are obtained as follows:

3.6.1 *For aggregate \hat{Y} :*

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$ where $V\hat{a}r(\hat{Y}_s)$ is given by

$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$, where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

3.6.2 *For ratio \hat{R} :*

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R} (\hat{Y}_{st1} - \hat{Y}_{st2}) (\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

3.6.3 *Estimates of Relative Standard Error (RSE):*

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$
