2022

Preface

Index Numbers are the device to measure the relative movements in variables. It is a technique of estimating general trends in price, production and other economic and social variables. Index Numbers play a vital role in business planning and drafting of executive policies.

Department of Economic & Statistics compute different types of indices, including Consumer Price Index (IW&AL). These Indices are not adequate to analyse the consumption pattern of the general population over a period of time. Therefore it is recommended by Expert committee on Price and Price Indices to derive a new Consumer Price Index (Rural, Urban and Combined) with a wide range.

The preliminary work related to Consumer Price Index was started in 2018 with the assistance of ISSSP Scheme of Government of India and the computation delayed due to flood and Covid pandemic. Department finalised the index from January 2020 and already published the report for the year 2020.

This report is prepared by the joint efforts of the officers working in the Price Section of the Department. I appreciate all the officers for their sincere efforts and involvement in the preparation of this report.

Suggestion for improvement of this report is appreciated.

Thiruvananthapuram
....07.2022

1 INTRODUCTION

1.11 Index number is a device to quantify the change in a group of related variables over two different situations. It is a technique of estimating general trends in prices, production and other economic and social variables ie Group of variables may be the prices of a specified set of commodities, the volumes of production in different sectors of an industry, the marks obtained by a student in different subjects and so on. Two different situations may be two different times, two different places etc.

1.12 Index number is an important tool usually used to measure the pulses of the economy. Index numbers play a vital role in Business planning and drafting of executive policies. Most of the current indices are indicators of changes over time in respect of economic characteristics like prices, outputs, wages etc. These are termed as Price indices, production indices, wage indices etc.

1.13 One of the main indices computed by the Department of Economics and Statistics is the Consumer Price Index. Consumer Price Index Numbers are constructed to study the effect of changes in the prices of a basket of goods and services on the purchasing power (household purchase for the purpose of consumption) of a particular class of people during the current period as compared with some base period. Such changes affect the real purchasing power of consumers' income and their welfare. CPI numbers were originally introduced to provide a measure of changes in the living costs of workers, so that their wages could be compensated to the changing level of prices. CPI numbers are widely used as a macro economic indicator of inflation, and also as a tool by Governments and central banks for targeting inflation and monitoring price stability. CPI is also used as deflators in the National Accounts. So the CPI is considered as one of the most important economic indicators.

1.14 Given the many uses of CPIs, it is unlikely that one index can perform equally satisfactory in all applications. Therefore, there is a practice of compiling several CPI variants for specific purpose. Each index should be properly defined and named to avoid confusion. The purpose of CPI should influence all aspects of its construction.

1.15 In Kerala, CPI IW &AL¹is being computed by the Department of Economics and Statistics.

1.16 Consumer Price Index for Industrial Workers and Agricultural Labourers- CPI (IW & AL)

¹Cpi for Industrial Workers and Agricultural Labourers

1.161 The target population is working class family, defined as a family: (i) located within the center for industrial workers, (ii) has at least one member working as a worker (as in the Factories act 1948). A worker is a person who draws a major portion of his earnings out of employment for hire or reward to do any work skilled or unskilled, manual or clerical in any industry trade or agricultural operations.

1.162 The present series of CPI (IW &AL) is on base 2011-12=100. The weighting diagrams for the purpose of the compilation of index numbers had been derived on the basis of average monthly family expenditure of the working class obtained from the Family Budget Survey conducted during 2011-12.

1.163 The CPI (IW) is released every month for each of the selected 17 centers. It is mainly used for the determination of Dearness Allowance (DA) being paid to the workers in the industrial sectors, besides fixation and revision of minimum wages in scheduled employments. At the Government level, Index numbers fixation is an economic barometer which helps to determine general economic policies particularly with respect to wages, prices etc. These index numbers are being used for wage fixation, wage agreements and they are in demand by Industrial Tribunals, Wage Boards, etc. in charge of the task of fixation or revision of wages. It is used to measure the consumption - expenditure pattern which throws light into the purchasing power of money and real income of the population concerned. It is also used to work out the estimated expenditure of a working class family for investigating the vigilance cases against public servants.

1.17 The National Statistical Commission under Dr. C. Rangarajan observed in its Report (2001) that CPI numbers catering to specific segments of the population can be considered as partial indices only. These indices are not oriented to reflect a true picture of the price behavior and effects of price fluctuations of various goods and services consumed by the general population in the country, over a period of time. The Commission, therefore, recommended for compilation of CPI for rural and urban areas.

1.18 The Index number presently compiled and released at state level reflects the fluctuations in the retail prices of consumption goods pertaining to specific segments of population in the state only viz. industrial workers and agricultural labourers. These indices do not encompass all the segments of the population in the state and as such do not reflect the true picture of the price behavior in the state. To overcome this difficulty, the Department of Economics and Statistics has decided to compile new series of CPI for the entire urban population, viz. CPI (Urban), and CPI for the entire rural population, viz. CPI (Rural) and CPI (Combined) for entire population, which would reflect the changes in the price levels of various goods and services consumed by the

urban and rural population. Further it is significant to note that these new indices are compiled at district level.

1.19 Support for Statistical StrenghteningProject (earlier ISSP)

1.191 Computation of Consumer Price Index is one of the 20 key activities suggested in ISSP. It is envisaged in the SSSP to take steps to compute CPI separately for rural and urban areas by using weights computed from latest Consumer Expenditure Survey Conducted by NSSOand prices collected from representative markets and outlets selling specific consumer products. Accordingly, a new series of Consumer Price Index Numbers for Rural and Urban Population is included as one of the objectives in the KLSSSP. The following points are proposed in the project:-

- (i) Computation of Weighting Diagram -Weighting diagram can be derived from the latest Consumer Expenditure Survey.
- (ii) Identification of centres and markets -Identify at least 3 urban centres and 3 rural centres as well as the markets in each district
- (iii) Conduct of market surveys- Identify the most popular consumption items, their specifications and identification of specified shops.
- (iv) Start regular price collection on a monthly basis and the compilation of the indicesaccordingly.

1.192 Accordingly, a specific subject Expert Committee was constituted to examine the issues related to prices and price index numbers and to suggest suitable measures to the Technical Advisory Committee. For construction of CPI numbers, three components are required- weighting diagrams (consumption patterns), price data collected at base period and price data collected at regular intervals.

1.193 As per the recommendations of the Committee, it was proposed to conduct a market survey for collecting base price data for the new series of Consumer Price Index, for rural and urban population. The methodology for weighting diagram, selection of centers and item basket are as follows.

1.194 Expert Committee on Price and Price Indices on its 2nd meeting, proposed to prepare the weighting Diagram using the methodology provided by CSO². As requested from this office the detailed methodological note regarding the preparation of weighting diagram based on NSS³ 61st round Consumer Expenditure Survey data was provided by MOSPI ⁴ The same is available in the official website of MOSPI ie mospi.nic.in/Central Statistics Office/Statistical Manuals/Manual on Consumer Price Index. The Expert Committee on Price and Price Indices also suggested to use the average household

²Central Statistical Office

³National Sample Survey

⁴ Ministry Of Statistics And Programme Implementation
Department of Economics & Statistics, Kerala

monthly consumer expenditure (urban/rural/combined) derived from pooled data of NSS 66th round Consumer Expenditure Survey (2009-10). The weighting Diagram for each district was prepared using that data. But unfortunately CSO informed that the results of which were not considered suitable for taking any major decision because 2009 was not a normal year. For that reason another CES⁵ was conducted in the NSS 68th Round in 2011-12 (July 2011 to June 2012).

1.195 The Expert Committee on Price and Price Indices suggested to use the average household monthly consumer expenditure (urban/rural/combined) derived from pooled data of NSS 68th round Consumer Expenditure Survey (2010-11). Therefore, it was directed to switch over to NSS 68th round CES data. The pooled estimate of data available on August 2016.

1.21 The complete methodology and selection procedure were verified by the committee with new Chairman. They found some discrepancies in the number of centers and center selection procedure suggested in the project and asked DES to attend the national workshop conducted by CSO. The CSO shared the new methodological note for center selection, weighting diagram preparation and item selection. After attending the meeting rework had been done on the center selection methodology and the same has been submitted before the committee on 16/06/2017.

1.22 Approved methodology for center selection and weighting diagram had been submitted before TAC on SPCL⁶(held on 17/10/2017)and the TAC suggested slight variations in the center selection incorporating the suggestions the redesigned methodology has been submitted and the same had been approved by TAC on SPCL. It is proposed to start Market survey and base price collection in 2018.

2 BASE REFERENCE YEAR AND WEIGHT REFERENCE YEAR

2.11 The well known criteria for the selection of base year are :- (i) a normal year i.e. a year in which there are no abnormalities in the level of production, trade and in the price level and price variations, (ii) a year for which reliable price data are available and (iii) a year as recent as possible, and comparable with other price index series released at national and state levels.

3.43 The TAC on SPCL constituted by Government of India in its 59 th meeting suggested, “2018” as the base year of new CPI series in Kerala. The National Statistical Commission set up by the Government of India (in 2001) recommended that base year of CPI series should be revised once in every five years and not later than ten years. As per International Labour Organisation’s (ILO) recommendation, the family living survey or household consumer expenditure survey needs to be conducted at intervals, generally of not more than 10 years with a view to update the series of price index numbers.

2.11 The NSS 68th Round.

2.111 The NSS 68th round of CES had collected the data on consumer expenditure pertaining to three different reference periods – Uniform Reference Period ⁷(URP), Mixed Reference Period⁸ (MRP) and Modified Mixed Reference Period ⁹(MMRP).

2.112 The 68th Round NSS survey covered all segments of people in all districts in the state. Besides NSSO samples, additional 50% samples have also been surveyed in the state by DES. The sample design followed was a stratified multistage design. First stage units were Panchayath Wards in the rural areas and urban Frame Survey blocks in the

⁷ URP- Data on expenditure incurred are collected from the household for each item during last 30 days

⁸ MRP- From 1999-2000 onwards, the NSSO switched to a method known as the Mixed Reference Period (MRP). The MRP measures consumption of five low-frequency items (clothing, footwear, durables, education and institutional health expenditure) over the previous year, and all other items over the previous 30 days.

⁹ MMRP- Data on expenditure incurred are collected for the items falling under edible oil, egg, fish and meat, vegetables, fruits, spices, beverages and processed foods, pan, tobacco and intoxicants during last seven days; clothing, bedding, footwear, education, medical (institutional), durable goods during last 365 days; all other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes during last 30 days. Data for URP and MRP were collected in schedule I whereas those of MMRP were collected in Schedule II. Sample of households were different for these two types of schedules. MRP and MMRP have been introduced since 66th round of CES.

urban areas. To be precise 840 samples (panchayaths+urban blocks) was surveyed by DES and 560 (panchayaths+urban blocks) samples were surveyed by NSSO. Households formed the second stage unit in both the urban and rural areas. 6537 households were surveyed in rural areas and 4616 households were surveyed in the urban areas. Districtwise survey details are given below.

Table 1

2.12 Pooling of Central and state level data

2.121 The National Statistical Commission in its report has observed the importance of pooling of state and central samples to obtain dependable estimates within the state. To fulfill this purpose the NSC constituted a committee on pooling of central and state samples of NSS under the chairmanship of Prof. R.Radhakrishnan. As per the directions given by NSC and based on the recommendations of the committee, DES Kerala generated estimates based on pooled data. Pooled estimates of MMRP data of NSS 68th Round Consumer Expenditure Survey (2011-12) is used to prepare item baskets and weighing diagrams. Before pooling the data the sample is undergone Wald-Wolfowitz run test to ensure that the data are coming from the identical distribution function. The method here adopted for pooling the data is pooling by inverse weight of variances of the estimates.

2.13 After making available the pooled data ,it is decided to compile weighting diagram for Consumer Price Index Numbers (Rural/Urban/Combined) for all the fourteen districts in Kerala.

2.14 Availability of data, particularly from Consumer Expenditure Survey (CES) is a crucial factor in determining the base of CPI. The Price Reference Year ¹⁰and the Weight Reference Year should be identical, so that prices are collected of those items which belong to the basket of consumers in true sense. It is not always possible to have both the reference years identical, but it is desirable to minimize the gaps between these two.

2.15 The TAC on SPCL suggested the base year for the new CPI series would be the calendar year 2018 as the Price Reference Year, whereas Weight Reference Year be 2011-12. To overcome the wide gap between these two reference years, TAC on SPCL suggested to do the revision procedures as and when the pooled estimate of next round CES data which will be carried out on the same subject become available.

¹⁰The year in which the average prices, of goods and services consumed, are taken as base price and equated to 100 and accordingly, CPI for Base Year is 100.

Here price reference year is 2018 ie CPI (R/U/C) with base 2018=100

3 CLASSIFICATION OF ITEMS AND CODING

3.11 Classification of Items

3.111 The PGPCPI¹¹ acknowledges that choosing a classification system is the first step in compiling the sub aggregates, because sub-aggregates must be defined in such a way that expenditure weights and prices will relate precisely to the coverage of the sub-aggregates. It establishes a hierarchical framework from whose boundaries the representative items for inclusion in the index, most countries have moved to the international standard classification COICOP¹². The classification explains the purpose and product type and both. At the top level, the Divisions and groups reflect purposes; at the third level, Classes, present the aggregations as product types, the level there below has elements of both.

3.112 In order to ensure better comparability with CPIs of other countries, it is desirable to have the classification of items synchronized with COICOP. At the same time, it is also important to make it relevant to the Indian context by making it comparable to groups and sub-groups being followed in the CPI series compiled in the country. Therefore, CSO suggested to follow COICOP, with following few deviations:

- a) ‘Egg’ is kept as a separate sub-group, in COICOP ‘egg’ is clubbed with ‘milk and milk products’
- b) Keeping garlic and ginger under ‘Vegetables’ sub-group, ginger is to be put under vegetables, instead of spices (food products n.e.c) as suggested in COICOP.
- c) ‘Restaurants and Hotels’ is included in ‘Food and Beverages’ and ‘Accommodation’ in ‘Recreation and Amusement’.
- d) ‘Books and Stationery’ are included in ‘Education’.

¹¹Practical Guide to Producing Consumer Price Indices - This is a publication of the United Nations. The handbook is the result of a collaborative effort involving experts from a number of countries, organisations of the United Nations and the input from CPI compilers in developing countries. It is targeted at developing countries focusing on practical solutions to the problems being faced by the compilers of the consumer price index (CPI) in the developing world. Although targeted at CPI compilers in developing countries it will also be of interest to compilers more generally. The Handbook provides internationally agreed guidance and suggests good practices with the objective to help national statistical offices to further improve their CPI statistics

¹²Classification of Individual Consumption according to Purpose- COICOP is a classification used to classify both individual consumption expenditure and actual individual consumption (individual consumption expenditure by households and NPISH(non-profit institutions serving households) + individual consumption expenditure by Government). It is one of the classifications designed to classify certain transaction of producers and three institutional sectors namely household, general government and non-profit institutions serving households. They are described as “functional” classifications because they identify the “functions” - in the sense of “purposes” or “objectives” - for which these groups of transactors engage in certain transactions.

3.113.In COICOP 'Restaurants and Hotels' is a separate Division has two classes: Catering Services; and Accommodation Services. In Indian context, generally, a major portion of the price, charged for food served in restaurants or in hotels, is for food ingredients. Therefore, it is justified to keep 'Restaurants and Hotels' under 'Food and Beverages' and Accommodation are categorized as 'Recreation and Amusement'. Further, 'Books and Stationery' are placed under 'Recreation and Culture' in COICOP as a major expenditure of an individual on books is done for light reading, whereas in India, such expenditure is incurred for educational purpose, which justifies the deviation of placing 'Books and Stationery' under 'Education', instead of 'Recreation and Amusement'.

3.114 .Items have been classified into following Groups and Sub-groups, as mentioned in the Report of the Group of TAC on SPCL and practiced by the CSO.

Groups and Sub groups for CPI(Rural/Urban)			
Group	Sub Group	COICOP code	Description
1		01	Food and beverages
	1	01.1.1	Cereals and products
	2	01.1.2	Meat and fish
	3	01.1.3	Egg
	4	01.1.4	Milk and products
	5	01.1.5	Oils and fats
	6	01.1.6	Fruits
	7	01.1.7.1	Vegetables
	8	01.1.7.2	Pulses and products
	9	01.1.8	Sugar and confectionery
	10	01.1.9	Spices

	2	06	Health
	3	07 and 08	Transport and communication
	4	09	Recreation and amusement
	5	10	Education
	6	12.1 and 12.3	Personal care and effects

*Prepared meals, snacks, sweets etc.

3.12 Coding Structure of an item

3.121 After classifying or grouping the items in the NSS 68th Round of CES, the items should be scientifically coded. Sometimes, it happens that one single specification of an

item is not popular; instead two or three types/varieties are equally popular. In this case, these different types of specifications should be taken as different priced items against the selected weighted items of the CES schedules.

3.122 As for example, Rice is an item in CES schedule. It has got acceptable weight, so as to be included in the CPI basket. Now, three types of Rice(boiled red ,white ,unboiled white etc) are equally prevalent for consumption and they have many popular varieties. Therefore, Rice1 Rice2etcupto Rice 7 may be taken as seven priced items against the weighted item Rice.

3.123 The TAC in its directions has given the freedom to the states to include more priced items according to the popularity of the various brands available in the market. The states may fix three-four most popular specifications as SPDs, following the principles of representativity, in such a way that they are able to give average prices of each item, in respect of those specifications which are common in different districts and regions. Further States may collect weekly prices of vegetables and fruits from each selected market because prices of these items fluctuate on a daily basis.

3.124 Code

- From left, 1st digit denotes Group
- 2nd digit denotes Category
- 3rd - 4th digits denote Sub-group
- 5th digit denotes Section
- 6th digit denotes Goods/Services (1 for Goods and 2 for Services),
- 7th-8th digits denote Weighted Item
- 9th digit denotes Priced Item.

9th (last) digit represents identification of items: single Weighted Item or Priced Item¹³. If a Weighted Item has more than one Priced Items. If 9th digit is '0', it means there is

¹³Items, listed in the schedule of Consumer Expenditure Survey (CES) included in the basket of CPI, are either Weighted or Composited items (explained in para 4.3). In order to collect more

representative prices of some Weighted Items, these are further divided into more than one items. Such items are called as Priced Items. As for example, 'medicine' listed in the CES, is a Weighted Item. Price of one type of 'medicine' cannot give its proper representation. Therefore, it has been divided into eight items: Pain Killer, Cough Syrup(Adult), Cough Syrup(child), Medicine for BP, Medicine for Sugar, Medicine for Cholestrol, Dasamoolarishtam, Dhanvantharitailam. These eight items are Priced Items against the Weighted Item 'medicine'.

single priced item against the Weighted Item, else the digit 'i' indicates that it is ith Priced Item against the respective weighted item.

Group	Sub Group	Description
I		Food and beverages
	1	Cereals and products
	2	Meat and fish
	3	Egg
	4	Milk and products
	5	Oils and fats
	6	Fruits
	7	Vegetables
	8	Pulses and products
	9	Sugar and confectionery
	10	Spices
	11	Non-alcoholic beverages
	12	Prepared meals, snacks, sweets etc.
II		Pan, tobacco and intoxicants
III		Clothing and footwear
	1	Clothing
	2	Footwear
IV	1	Housing
V		Fuel and light
VI		Miscellaneous
	1	Household goods and services
	2	Health
	3	Transport and communication
	4	Recreation and amusement
	5	Education
	6	Personal care and effects

3.125 In the case of composite items the code will be changed according to weighting diagram ie whether it is included as priced item.

4 WEIGHTING DIAGRAM AND ITEM BASKET

4.11 The Laspeyres formula to compile CPI, measures current prices weighted by base quantities divided by base prices weighted by base quantities; which can be written as

$$\begin{aligned} P_L &= \sum_{i=1}^n p_i^t q_i^0 / \sum_{i=1}^n p_i^0 q_i^0 \\ &= \sum_{i=1}^n (p_i^t / p_i^0) s_i^0 \end{aligned}$$

Where $s_i^0 = p_i^0 q_i^0 / \sum_{i=1}^n p_i^0 q_i^0$ is the share of the actual expenditure on commodity i in period 0. PGPCPI mentions that CPIs are not really Laspeyres indices; they are Lowe or Young indices, i.e. the reference weights refer to a possibly distant year while the reference month or quarter is more recent. These means s_i are computed for the year b , which is different from zero. Therefore, in the formula, s_i^0 would be replaced by s_i^b . The common practice amongst index compilers is to price update the weights, this still leaves an inconsistency between the price reference period and the weight reference period. But, one thing is obvious that the weight s_i^b is used to aggregate elementary indices to arrive at higher level indices, namely section, sub-group, group and all commodities/items indices.

4.12 The weight s_i^b is the share of the actual expenditure on commodity i in period b , i.e. during weight reference year. The Weighing diagram gives the share of each item in the total consumption expenditure in a CES. The weighing diagrams for the CPI series have been derived on the basis of average monthly consumer expenditure of an urban/rural household. As mentioned in the second chapter, the results of NSS 68th Round of CES survey(2011-12)is used to compile weights. Estimates based on MMRP survey data are considered to be more robust because of shorter reference periods for most of the food items, to take care of memory lapse on expenditure incurred daily or at very high frequency on these items, and larger reference periods for items of infrequent consumption. It is, therefore, internationally practiced to compile weights of CPI using MMRP data. Planning Commission had also expressed its view to use MMRP data in future for estimating poverty lines at national and sub-national levels.

4.13 A complete set of items of a CPI basket is not sold at a single outlet. Thus, it is not feasible to collect a full set of prices from every outlet, including market stalls, and from every provider of a service. It is not logical also to keep all the items of the Consumption in the basket of CPI because: very heavy basket attracts non-response from the shopkeeper; and items having negligible weight do not contribute to the overall index. Therefore, it is necessary to set a benchmark to make the basket size optimum. There is no standard rule for this. This requires a subjective judgment keeping in view

the objective that no important item, which describes the consumption behaviour, should not be left out. Once the benchmarks are set, some of items, for which data were collected for expenditure, would be excluded. It is necessary to include their weights suitably in the basket. PGPCPI has suggested two methods of doing this:

- (a) Including the weight in a related elementary aggregate (this may involve the creation of a 'miscellaneous' category). But note that it is desirable to make the elementary aggregates as homogeneous as possible. The price movement of the other products within the elementary aggregate become the source for the imputation of prices for the non-priced product. For example, assume an elementary aggregate called 'milk and cheese' and it has been decided that because of the small share of cheese consumption in the country no prices will be collected for this product. Then the movement for the elementary aggregate will be determined solely by any observed price changes for the products from which prices are actually collected, in this case milk.
- (b) Having the weight of the product, for which no representative prices exist, equal to zero. Using the previous example, the weight of the 'milk and cheese' index will be reduced by the value of the weight of cheese. Consequently, its weight will be implicitly reallocated to the weights of the other elementary aggregates in the CPI. In effect cheese prices are being imputed by the movement in the price of milk and of the prices in the remaining elementary indices.

4.14 In general, the prices for the product for which prices are not collected will be expected to exhibit a similar movement to the other products in the elementary aggregate and the first of the above two methods should be used. The second method may be used where the elementary aggregate is heterogeneous or the associated price index is not considered very reliable. Because of the negligible size of the weight value involved, the consequence on the overall index will also be negligible whichever method is used.

4.15 Similarly, the item basket and weighing diagrams have been prepared as per guidelines given in PGPCPI Report (being followed by the CSO), which are as follows:

4.16 Criteria of selection of items

The following four-fold criteria may be adopted:

- i) include all PDS items
- ii) include all items accounting for 1% or more of total expenditure at sub-group level.
- iii) include all items accounting for more than specified percentage of total expenditure of all consumption items as given below:

Group (1)	Group Description (2)	Specified percentage out of total expenditure (3)
Group 1, Group 2, Group 4, Group 6	Food and Beverages, Pan, Tobacco and Intoxicants, Housing and Miscellaneous excluding 'Bedding'	> 0.04%
Group 5	Fuel and light	>0.03%
Group 3	Clothing and footwear, Section 'Bedding' under subgroup 'Household Goods and Services'	>0.02%

iv) include all items for which more than 75% households have reported consumption.

4.17 Only consumption expenditure has been considered for the purpose of preparation of weighing diagrams. Non-consumption expenditures, like legal expenses etc. have been excluded. All consumption items (excluding legal service) satisfying any of the above four conditions may be retained. These are termed as weighted items. Expenditure on certain item was imputed considering its insignificant share and/or difficulties involved in pricing to the item(s) retained on the basis of mainly same or similar price movements.

4.18 *Composite item*:- With a view to ensure adequate no. of items for pricing, it was decided to include certain important items for pricing even though the same are not being retained in the weighting diagram as such. For this purpose expenditure against those items may be clubbed together and put along with the weight of "other" item of the same subgroup provided their combined weight is more than 0.5% at sub group level. The average price relatives of these items would be used with combined weight of these items for compilation of the index. A list of such composite items along with the items included in the same is given.

Table -List of Composite and Composed Items

Sl.	Composite items	Items included
1	Other rice products (106) ¹⁴	Chira (103), khoi/lawa (104), muri (105)
2	Other wheat products (114)	Maida (110), Suji/rawa (111), Sewai/noodles(112), Bread (bakery) (113), Biscuits, chocolates , etc.(291)
3	Other tobacco products (317)	Snuff (313), Zarda/kimam/surti (316)
4	Other consumer services excluding conveyance (497)	Domestic servant/cook (480), Sweeper (482)
5	Other furniture & fixtures (557)	Bedstead (550), Almirah/dressing table (551), Chair/stool/bench/table (552)
6	Other cooking & household appliances (592)	Stove/gas burner (586)
7	Other crockery & utensils (573)	Stainless steel utensils (570), Other metal utensils (571),Casseroles/thermos/thermoware (572), Pressure cooker/pressure pan (587)

4.19 Imputation of weights:- For items not retained in the weighting diagram, the expenditure recorded on such items in the CES, may be imputed to other items (being retained) of the same sub-group whose price movements are expected to follow the same or similar trend as those of the items being excluded. However, there are certain items, whose expenditure weight cannot be imputed to any single item of the same sub-group on the basis of above criterion. In such cases the only practical alternative, was to impute expenditure of such items to all the remaining items (being retained) in the concerned section / sub-group / group in proportion to the expenditure recorded on those items. In practice, imputation is done at three levels viz.

Item level,

- Section level and
- Sub-group/Group level

4.20 Item level imputation:- Item level imputation consisted of straight addition of weights of one or more items (being excluded) to an item being retained within the same section/subgroup having similar price trend. Detailed item level imputation plan covering important items of all the sub-groups/groups and their treatment for imputation is indicated below:

¹⁴Codes in bracket indicate NSS item codes of Consumer Expenditure Survey (2011-12)
Department of Economics & Statistics, Kerala

Table Imputation at item level

Sl.No	Items to be imputed	Imputed to
(1)	(2)	(3)
1	Chira (103), Khoi/lawa (104), Muri (105), other rice products (106)	Rice-other sources (102)
2	Maida (110), Suji/rawa (111), Sewai/noodles (112), Bread (bakery) (113), Other wheat products (114), Biscuits, Chocolates, etc. (291)	Wheat/atta-other sources (108)
3	Grinding charges (486)	Major of other rice products (106) & Wheat/atta-other sources (108)
4	Arhar (140) and Khesari (147)	To one another
5	Gram split (141) and Gram whole (142)	To one another
6	Ghee (164) and Butter (165)	To one another
7	Curd (163)	Other milk products (167)
8	Pan leaf (300)	Pan finished (301)
9	Toddy (321) and Country liquor (322)	To one another
10	Beer (323) and Foreign liquor (324)	To one another
11	Coke (330), Coal (337), Charcoal (340)	To one another
12	Firewood & chips (331) and Dung cake (333)	To one another
13	Lungi (367)	Dhoti (350)
14	Telephone charges (488 and 487) and Postage & telegram (490)	Major of 3
15	Petrol other than conveyance (343) and diesel other than conveyance (344)	To one another
16	Petrol (508) for vehicle and diesel for vehicle (510)	To one another
17	Lubricating oil (511)	Major of 508 and 510
18	Electric fan (580) and Air cooler (581)	To one another
19	Motor cycle / scooter (601) and Motor car/jeep (602)	To one another
20	Tyre/tube (603)	Major of 601 and 602
21	House rent/garage rent (520), Residential land rent (522)	House rent/garage rent (imputed) (539)

4.21 Section level imputation:- Section level imputation consisted of proportionate distribution of expenditure of one or more un-priced items over several priced items, which forms a distinct section within the same subgroup. In these cases, one or more un-priced items follow or are assumed to follow the combined price trend of several

priced items within the same section. Details of sections formed under different sub groups are enclosed.

Table Details of sections formed for section level imputation

Sub Group	Sections	Items Included
Cereals and products	Major Cereals and Products	rice- P.D.S., rice - other sources, chira, khoi, lawa, muri, other rice products, wheat/atta-P.D.S., wheat/atta-other sources, maida, suji, rawa, sewai, noodles, bread (bakery), other wheat products, other cereals, cereal substitutes: tapioca, etc., biscuits, chocolates, etc.
	Course Cereals and Products	jowar& its products, bajra& its products, maize & products, barley & its products, small millets & their products, ragi& its products
	Grinding Charges	Grinding Charges
Meat and fish	Meat	goat meat/mutton, beef/ buffalo meat, pork, chicken, others: birds, crab, oyster, tortoise, etc.
	Fish	fish, prawn
	Egg	egg
Milk and products	Liquid milk	milk : liquid
	Milk products	baby food, Milk: condensed/powder, curd, other milk products
Oils and fats	Oils	mustard oil, groundnut oil, coconut oil, refined oil (sunflower, soyabean, saffola etc.), edible oil : others
	Fats	ghee, butter, vanaspati/margarine
Fruits	Fresh fruits	banana, jackfruit, watermelon, pineapple, coconut, guava, singara, orange/mausami, papaya, mango, kharboozza, pears/naspatti, berries, leechi, apple, grapes, other fresh fruits, green coconut
	Dry fruits	coconut : copra, groundnut, dates, cashew nut, walnut, other nuts, raisin/kishmish/monacca etc., other dry fruits
Vegetables	Root vegetables	potato, onion, radish, carrot, garlic, ginger
	Leafy vegetables	palak/other leafy vegetables
	Other Fresh vegetables	tomato, brinjal, green chillies, lady's finger, parwal/patal, kundru, cauliflower, cabbage, gourd, pumpkin, peas, beans &barbati, lemon, other vegetables
	Vegetable Products	chips, pickles
Pulses and products	Pulses	arhar, tur, gram (split), gram (whole), moong(green gram), masur (red lentils), urd (black gram), peas, khesari, other pulses
	Pulses products	gram products, besan, other pulse products
Sugar and confectionery	Sugar	sugar - p.d.s.,sugar - other sources, gur
	Confectionery	candy, misri, honey, jam, jelly (includes sauce)
	Ice-cream	ice-cream
Non-alcoholic beverages	Tea and Coffee Beverages	tea: leaf, coffee: powder
	Mineral Water and	mineral water, cold beverages: bottled/canned, fruit juice

Sub Group	Sections	Items Included
	other beverages	and shake, other beverages: cocoa, chocolate, etc.
Prepared meals etc. (Restaurants)	Prepared Tea and Coffee	tea: cups, coffee: cups
	Prepared Meals	cooked meals purchased, cooked meals received free in work place, cooked meals received as assistance
	Sweets and snacks	cooked snacks purchased, other served processed food, prepared sweets, cake, pastry, papad, bhujia, namkeen, mixture, chanachur, other packaged processed food
Pan, supari& intoxicants etc.	Pan and ingredients	pan leaf, pan finished, ingredients for pan
	Tobacco products	bidi, cigarettes, leaf tobacco, snuff, hookah tobacco, cheroot, zarda, kimam, surti, other tobacco products
	Intoxicants	ganja, toddy, country liquor, beer, foreign/refined liquor, other intoxicants
Clothing & footwear	Ready made garments	dhoti, sari, chaddar/shawl, lungi, kurta-pajama suits: males, shirts, t-shirts, shorts, trousers, bermudas, baniyan, socks, other hosiery and undergarments, etc., kurta-pajama suits: females, frocks, skirts, etc., blouse, dupatta, scarf, muffler, other casual wear (includes night dresses), school/college uniform: boys, school/college uniform: girls
	Knitted garments	coat, jacket, sweater, windcheater etc , knitting wool
	Other clothing	kurta/kameez, pajamas/salwar, cloth for shirt, pajamas, kurta, salwar, cloth for coat, trousers, suit, etc., infant clothing, gamchha, towel, handkerchief, clothing (first hand): others , clothing: second hand headwear, belts, ties
	Tailoring and laundry Services	washerman, laundry, ironing charges, tailoring charges
Housing	House rent	house rent/garage rent (actual), residential land rent, house rent/garage rent (imputed-urban only)
	Housing charges	res building & land (cost of repairs only), water charges, other consumer taxes &cesses(municipal rates, watchman charges, refuse collection charges etc)(s)
Fuel and light	Electricity	electricity
	Gas fuel	L.P.G., gobar gas
	Liquid fuel	kerosene - p.d.s., kerosene - other sources, petrol (excluding conveyance), diesel (excluding conveyance) , other fuel
	Solid fuel	coke, firewood and chips, dung cake, coal, charcoal
Household goods and services	Furniture & furnishings	bedstead, almirah, dressing table, chair, stool, bench, table, foam, rubber cushion, carpet, daree and other floor mattings, paintings, drawings, engravings, etc., other furniture & fixtures (couch, sofa, etc.), lantern, lamp, electric lampshade, bathroom & sanitary equipment
	Bedding	bed sheet, bed cover, rug, blanket, pillow, quilt, mattress, cloth for upholstery, curtain, tablecloth, etc., mosquito net, bedding: others
	Household appliances	electric fan, air conditioner, air cooler, inverter, sewing machine, washing machine, stove, gas burner, refrigerator, water purifier, electric iron , heater, toaster,

Sub Group	Sections	Items Included
		oven & other electric heating appliances, other cooking/household appliances, other machines for household work, Other durables (specify), repair charge for non-durables
	Household utensils and crockery	earthenware, glassware, stainless steel utensils, other metal utensils, casseroles, thermos, thermoware, other crockery & utensils, pressure cooker/pressure pan
	Tools and equipment for house	torch, lock, electric bulb, tubelight, electric batteries, other non-durable electric goods, plugs, switches & other electrical fittings
	Other household items	matches (box), candle, bucket, water bottle/ feeding bottle & other plastic goods, coir, rope, etc., washing soap/soda/powder, other washing requisites, incense (agarbatti,), room freshener, flower (fresh): all purposes, mosquito repellent, insecticide, acid, etc., other petty articles
	Household services	domestic servant/cook, attendant, sweeper, miscellaneous expenses, priest, other consumer services excluding conveyance, other consumer rent (hiring charges for furniture etc)(s)
Health	Institutional health	medicine, X-ray, ECG, pathological test etc.(s), doctor's/surgeon's fee(s), other medical expenses, hospital/nursing home charge(s)
	Non-institutional health	medicine, other medical equipment, family planning devices, spectacles, contact lenses, hearing aids and orthopedic equipment, other medical expenses (CGHS contribution etc), doctor's/surgeon's fee(s), X-ray, ECG, pathological test etc.(s)
Transport and communication	Transport vehicles	bicycle, motor cycle, scooter, motor car, jeep, tyres& tubes, other transport equipment
	Fuel for transport	petrol for vehicle, diesel for vehicle, lubricants and other fuels for vehicles, other conveyance expenses
	Transport services	air fare, railway fare, bus/tram fare, taxi/auto-rickshaw fare, steamer/boat fare, rickshaw (hand drawn & cycle) fare, horse cart fare, porter charges, school bus/van, etc.,
	Communication devices	mobile handset, telephone instrument (landline)
	Communication services	telephone charges: landline, telephone charges:.. Mobile, postage & telegram, internet expenses
Recreation and amusement	Recreation items	newspapers, periodicals, , sports goods, toys, etc., goods for recreation and hobbies, photography, pets animals (incl. birds, fish), radio, tape recorder, 2-in-1, television, VCR/VCD/DVD player, camera & photographic equipment, CD, DVD, audio/video cassette, etc., VCD/DVD hire (incl. instrument), musical instruments, other goods for recreation, PC/laptop/other peripherals incl software
	Recreational services	library charges, cinema, theatre, club fees, cable TV, other entertainment, hotel lodging charges, mela, fair, picnic

Sub Group	Sections	Items Included
Education	Educational items	books, journals: first hand, books, journals, etc: second hand, stationery, photocopying charges, educational CD
	Educational services	tuition and other fees (school, college, etc.), private tutor/coaching centre, other educational expenses (incl. fees for enrollment in web-based training)
Personal care and effects	Personal care items other than ornaments	umbrella, raincoat, lighter (bidi, cigarette/gas stove), other minor durable-type goods, toilet soap, toothpaste, toothbrush, comb, etc., powder, snow, cream, lotion and perfume, hair oil, shampoo, hair cream, shaving blades, shaving stick, razor, shaving cream, aftershave lotion, sanitary napkins, other toilet articles, suitcase, trunk, box, handbag and other travel goods, clock, watch, any other personal goods
	Ornaments	gold ornaments, silver ornaments, jewels, pearls, other ornaments
	Personal care services	barber, beautician, etc.

4.22 Sub group/group level imputation:- Sub-group/Group level imputation involved proportionate distribution of expenditure of one or more un-priced items over all the items included in the sub-group/group. It was ensured that expenditure reported in one sub-group is not transferred to another sub-group or group.

4.23 Thus, final expenditure allocated to an item to be priced, includes its own weight, weights of un-priced items imputed to it wholly and also proportionate share of weights of other un-priced items imputed to it partially. The resultant expenditure on each item, which is finally retained for pricing, is expressed as a percentage of the total expenditure accounted for by all the items included in the sub-group/group to yield the final weight of the items within the respective sub-group/group.

4.24 Weights of Sub-groups/Groups:- The weight of each sub-group was obtained by expressing the total expenditure on the sub-group as a percentage of the total expenditure on all sub-groups. Similarly, weight of each group was obtained by expressing the total expenditure on the group as a percentage of the total expenditure on all groups. These weights are shown in Table 1 and 2 appended with Annexure.7

4.24A. Weights of Sub-groups/ Groups for district CPI (combined): - After compilation of the CPI (Rural) and CPI (Urban) at different levels, these are aggregated to arrive at their respective CPI (Combined) using the share of rural and urban areas expenditure in combined expenditure. These weights are shown in Table 3 appended with Annexure 7.

4.25 District share in state CPI:- District's share at each of sub-group/group/all groups level is worked out by considering district's total expenditure [average household expenditure

at the respective level x total number of households (estimated) as available from NSS 68th round data] to Kerala total expenditure. Using above methodology, subgroup level and group level weights for each sector-wise may be prepared. District share in state is shown in Table 4 5 appended with Annexure.7

4.26 District share in state CPI(combined):- After compilation of CPI (Rural) and CPI (Urban) at different levels, these are aggregated to arrive at their respective CPI (Combined) using share of rural and urban areas expenditure in combined expenditure. Share of rural and urban areas at All Kerala level for different sub-groups, groups and all items are given in Table 6 appended with Annexure.7

4.27 Item Basket :- After finalizing the weighting diagram using the data of NSS, 68th Round of CES, the items were selected separately for each district sector-wise. Therefore, items included in the schedule are different for each district (rural /urban). Some weights are redistributed after completion of the market survey, according to the availability of price data. Selected items in each district are shown in Table 7 appended with Annexure.7

4.28 Weights of different category of beneficiary in PDS items

These weights have been computed using the expenditure estimates of different types of ration card holders.

5 SELECTION OF CENTERS

5.11 The Expert Committee on Price and Price indices, after detailed deliberations decided to take rearranged 2011 census population data according to the reconstitution of LSGS based on 2015.ie -The Urban centres are selected based on the population of ULBs (Municipalities and Corporations) coming under Ministry of Urban Affairs.(As on 2015 there are 87 Municipalities and 6 corporations (ULBs)in the State).The Rural centres are selected based on the Population of Blocks(BPs) which is the sum total of population of constituent GramaPanchayats(GPs) coming under Ministry of Panchayati Raj(MoPRI) (As on 2015 there are 941 GPs in 152 Blocks).

5.12 The above two distinct groups constitute the total area as well as population of the state with out duplication or omission. The population figures are as per 2011 census.This method is followed taking into consideration the fact that,in the state for all administrative and development purpose Municipalities and Corporations are treated as Urban and GramaPanchayats are treated as Rural. Municipalities and Corporation are considered as urban and all GramaPanchayats are treated as Rural disregarding the fact that the GPs may be having some portion treated as urban as per the census concept (It is also practically difficult to demarcate GPs as Partially Rural and Partially urban). That is there is no concept as Urban GP or Urban Block in the state.

5.13 Selection of centers –Rural:- The Rural centres are selected based on the Population of Blocks(BPs) which is the total of population of constituent GramaPanchayats(GPs) coming under Ministry of Panchayati Raj(MoPRI).As on 2015 there are 941 GPs in 152 Blocks.Total rural population is 25814233.Districtwisenumber of CD Blocks and number of selected GPs are shown in**APPENDIX 1**. Number of CD Blocks and Number of GramaPanchayaths selected are also included in the table.In the case of rural markets, the C.D blocks are selected as follows;

Stratum	CD Block Population
I	Below 1.5 lakh
II	1.5lakh –2 lakh
III	2lakh – 2.5 lakh
IV	Above 2.5 lakh

Each stratum is subdivided into substratum by clubbing the near by CD blocks.

Stratum	No of CD Blocks Per Stratum
I	4
II	3
III	2
IV	1

5.14 If the number of CD blocks is less than the required number to form a sub-stratum, then such CD Blocks are transferred to the next higher order of stratum. For instance, there is only one CD Block in Stratum I, and four CD Blocks are required to form a sub-stratum. In this case, that CD Block of Stratum I would be transferred to Stratum II, and included there in one of the sub-strata.

One GramaPanchayath is allocated to or selected from each sub-stratum. The GramaPanchayath having highest population within the sub-stratum has been selected for collection of prices for CPI (Rural).

5.15 TAC on SPCL suggests that a minimum of 4 markets should be selected from each district. If the number of selected GPs is less than four then we select GP with the second highest population and so on. Selected centers are given in **APPENDIX 2**

5.16 *Selection of centers – Urban:* -In the case of urban markets also, minimum 4 markets in a center are a necessity. The headquarters of the district must compulsory be a centre. The urban centres are selected based on the methodology of CSO, using rearranged 2011 population census. Detailed methodology is described below.

5.17 All towns having population more than one lakh and district headquarters irrespective of the population size may be purposefully selected. For a selection of remaining towns, each district may be divided into two Strata.

Stratum	Class Interval (Population)	
I	Less than 40,000	
II	40,000 -100000	From each stratum,

5.18 From each stratum, the number of towns to be selected was decided by using the following formula.

- Selection of towns in urban areas

Let the number of towns to be selected is X ; and the total population of i^{th} Stratum is P_i , then,

$$X = P_i / 1,00,000$$

X is rounded to the nearest integer, with a condition that minimum one town to be selected from each stratum.

- Number of markets allocated to the selected towns are as follows:

Towns having Population	Markets per Town
Less than 2 lakh	1
2 lakh – 6 lakh	2
More than 6 lakh	4

- Total number of markets are divided into three segments :Affluent; Middle; Poor using population criteria.

5.19 There are 93 urban centers(As on 2015 there are 87 Municipalities and 6 corporations (ULBs)in the State) in Kerala, distributed over 14 districts. All the district headquarters and Municipalities with population more than 1 lakh have been purposefully selected. Thus, 14 centers [14 district HQ out of which 9 centers are having population more than one lakh are selected. The details are given below.Number of selected centers are given in APPENDIX 4

Stratum	Total No. of Towns	Total Population	No. of towns to be selected
below 40000	30	915140	13
40000 to 100000	49	2861760	30
Total	79	3776900	43
State total	93	7577566	69

5.20 Total Number of centers selected in Rural and Urban

5.21 Quotations allocated to a particular town have been distributed by ensuring both the geographical coverage of the selected town and the different segments of the population living in the town (poor, middle and affluent). Further, quotations allotted for the town have been distributed over the four weeks of a month to take into account week to week variation in the prices. If more than 4 centers are selected then price collection centers are evenly distributed over 4 weeks. For eg -Suppose there are 7 centers are selected then price collection, will be done from 2 centers for the first 3 weeks and the remaining one from last week.

5.22 Item specifications must be fixed on the basis of popularity of variety and quality of an item and the frequent buying behaviour. A particular variety popular in the market catering to the poor may not be popular in the market of rich or affluent people. If we select all the market catering to a particular segment of population, in terms of level of income or expenditure, the fixed specifications will not be representative of the entire population. Therefore, it is important to allocate the number of markets proportionately to Affluent; Middle; and Poor segment of population, within each town. The urban markets are allocated to Affluent; Middle; and Poor segment in the proportion of 1:2:1 ratio considering all centers in a district. However in some Districts sufficient number of markets are not available to maintain this proportion so it is decided to maintain the proportion in the state. The centers have been distributed among the four weeks to capture weekly variation in the district. In case of some districts lesser number of centers, additional center/markets have been selected.

Market survey & Price Collection

6.11 To study the regular changes occurring price data it has to be collected in regular intervals from time to time. A large element of sampling errors enters through various stages of price collection. Therefore, it should be related to same variety, quantity, area and boundary of sale, etc. to reduce the sampling errors in price data to get meaningful time series data of price. For each commodity there may be a large number of varieties. Each variety is sold from a large number of shops or outlets and the variety commands different prices in different outlets. Not only the price variation depend on shop or market but also on the buying behaviour of the customer. Further, the purchases are made on different days of a month and at different times of a day. Obviously, it is impracticable to cover the entire transactions of various varieties of goods. Therefore, the sampling procedure is adopted at various stages, say by selecting a representative variety of a particular commodity to be priced. For each variety, prices are collected under given circumstances of sale from a sample of shops or outlets selected in a representative manner. The prices will be collected on chosen dates and time to evaluate price fluctuation as experienced over a period of time.

6.12 However, practical obstacles, considerations of cost and operational difficulties usually restrict the scope of applying rigorous sampling techniques. And under conditions existing in practice, judgement plays a predominant role in sample selection. Markets and shops are selected in a way that prices are representative of that region.

6.13 *Selection of markets, identification of shops, fixing specification of items with unit & quantity, and collection of prices for the Base period put together is known as Market Survey.* It is the most important activity of the index compilation. The quality of index, in terms of being representative of the consumers' price, depends only on this activity. Therefore, suitable sampling technique must be adopted to select markets and shops. Fixing of specifications must be based on popularity of variety and quality of an item and the frequent buying behaviour. There are 71 rural centers and 78 urban markets are selected according to the methodology narrated in the previous chapter. The selected markets are to be distributed over Affluent, middle, Poor markets in proportion of 1:2:1. Market survey are conducted in the above said center.

6.14 *Shop Selection:-* PGPCPI suggests two methods for outlet selection: Judgemental Sampling; and PPS Sampling with turnover as size is a measure available. PPS Sampling can be done by making use of Business Register, Telephone directories of business and Records of local administration.

It would not be easy to implement the above suggested method, especially in India since data, on turn over or Gross Domestic Product (GDP) at such disaggregated level of space, are not available. In the absence of these, Judgmental sampling mixed with interview of few people and shopkeepers is used for shop selection.

- The most popular shop is selected as original shop.
- Next two most popular shops are kept as reserve 1 and reserve 2 shops.
- Shop list is prepared item-wise, since a shop 'A' may be more popular for item 'X' but not for item 'Y'.

6.15 Structured Product description (SPD):- SPD consists of all those characteristics of product, which affect the price. For instance, variety, brand, size, quality, type of packaging, unit, quantity etc. SPD of each item should be fixed market-wise on the basis of popularity. If branded item is popular, then specification must include brand. Quality of item should also be included in the specification on the basis of popular buying. Determination of unit and quantity is also important.

6.16 Base Price Collection: - Base price collection work will be started after completing the listing of shops, and selection of shops, fixing of SPDs, their scrutiny etc. 2018 is proposed as Base Year. Market-wise days of price collection must be fixed so that every month the price is collected at the interval of 30 days. Prices must be collected from the original shops. Actual price paid by the customer is to be reported. G.M of 12 months prices is taken as Base Price.

6.17 House Rent Data Collection: - For a compilation of house rent index, which is a component in the Housing group of CPI (Urban) rent data are also collected from a sample rented dwellings in each of the selected towns. For each quotation, twelve rented dwelling units have been selected. These are selected in such a way that they represent various categories of dwellings with different number of living rooms. Dwellings are visited once in six months for canvassing house rent schedule.

6.18 PDS Price Data Collection: - Public Distribution System (PDS) prices, also known as Fair Price Shop prices, are also collected in respect of four items viz. Rice – PDS, Wheat/ wheat- atta – PDS, Sugar-PDS and Kerosene- PDS. These are collected in respect of three groups of beneficiaries viz. Above Poverty Line (APL), Below Poverty Line (BPL) households and Antyodaya Anna Yojana (AY). Weighted Average of the price relatives of each category of a particular PDS item is taken as Index of that item.

7. House Rent Index

7.1 For compilation of house rent index which is a component in the Housing group of CPI (Urban) rent data are also collected from a sample rented dwellings in each of the selected town. For each quotation, twelve rented dwelling units have been selected. These are selected in such a way that they represent various categories of dwellings with different number of living rooms. Dwellings are visited once in six months for canvassing house rent schedule.

7.2 Two categories of dwellings viz. rented dwellings and self-owned dwellings are considered in the compilation of the house rent index. The previous six months data are used to compile rent relatives for the current month. Rent relative is calculated as current month rent/rent six months ago and then simple average of rent relatives is worked out by classifying the dwellings by number of living rooms (1 room, 2 rooms, 3 rooms and 4 or more rooms). These rent relatives are weighted to get a combined rent relative using the estimated proportions of dwellings under each group, obtained from the NSS 69th round survey (2012) on Housing Conditions. The weighing diagrams of different types of houses, to be used in the revised series of CPI, are given below. House rent index is obtained by multiplying the combined rent relative with the corresponding rent index six months ago. The chain base method facilitates the substitution of dwellings without requiring base year rent. Collection of base year rent is difficult in most of the cases due to change of tenants, availability of rented dwellings after the base year.

7.3 The rent data is collected district wise and index are aggregated to the state level. The rent data are collected from rented residential accommodations only. As said above the residential accommodations are Categorised using the criteria of number of living rooms. The ratio of the current rent to previous six months ago rent gives the rent relatives. The geometric mean of the rent relatives of each category is weighted with the weights of the respective categories of the dwellings. The rent relative of rented accommodation is applied in the respective category of owner occupied dwellings, to compute a weighted average of category wise rent relatives for owner occupied accommodation.

Number of Dwellings to be selected in each group

8. Index Calculation

In order to arrive at sub group index, the item indices would be aggregated (using respective weights), which would further be aggregated to arrive at sub group and general indices for the respective sector of the District. After compilation of CPI (Rural) and CPI (Urban) at different levels, these are aggregated to arrive at their respective CPI (Combined) using share of rural and urban areas expenditure in combined expenditure.

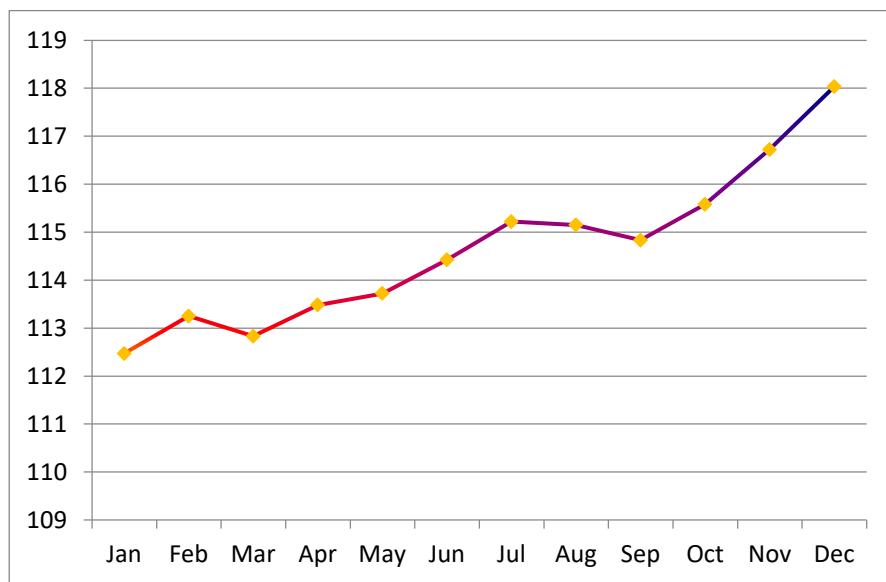

These Sub-group, Group and General indices are aggregated as a weighted average, to compile state sub-group, group and General indices respectively using the suitable share of the respective District. These shares of a particular sub-group of a District of a sector viz. rural/urban, may be computed as estimated total expenditure of that sub-group of that District of a sector divided by the estimated total expenditure of all Districts of that particular sector.

9. Consumer Price Index (RUC) 2021

The field work of price collection related to Consumer Price Index (RUC) was started in 2018 January, and that year was taken as base year for the index calculation. Due to the flood in 2019 affected the economy of the state and the abnormalities and fluctuations made it difficult to derive the CPI in that year. The lockdown due to Covid pandemic made some obstacles in 2020 and also in 2021 and it was overcame by using statistical tools to derive the state indices. Department finalised the index from January 2020 and already published the report for the year 2020. This report is based on the CPI(RUC) computed for January to December 2021.

Index tables for 2021 show that in the general index of the state, an increase of 12.47 points was observed in January 2021 over the base year 2018, generally showed an increasing trend. An increase of 5.56 points occurred in the year and ended up with increase of 18.03 points in December 2021.

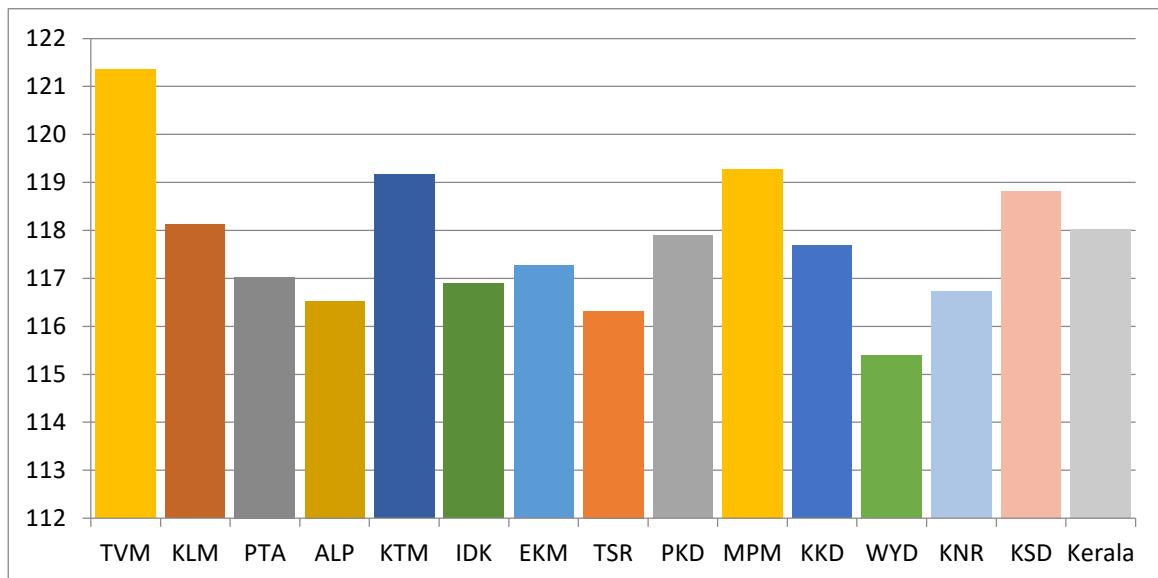

Consumer Price Index, Kerala 2021

The rural index increased by 5.64 points and urban increased by 5.42 points. Figures show that, at the end of the year in food articles, indices of vegetables and

pulses had the highest increase with 44 points and 7 points respectively. The indeces of these items showed highest increase in 2020 also. Considering all subgroups vegetables has the highest increase. At the same time personal care group index decreased in 2021, which has the highest increase with 44.55 points in 2020, with base year.

General Index Districtwise and State –December 2021

Comparing the indices between Districts in 2021, Thiruvananthapuram shows the highest increase of 9.31 points followed by Kannur with 6.55 points. At the end of the year Thiruvananthapuram had the highest index of 121.35 followed by Malappuram with 119.28 points with respect to base year. In 2020 Wayanadu District has the least increase in general index with 109.77 in December and the same trend continued in 2021. In December 2021 the index of Wayanadu increased by 2.53 points and ends up with 115.40 in December 2021.

Analysing the report, the velocity of rural indices are more than that of urban. This trend is happened in 2020 also. Which shows the cost of living in Rural area is more than that of Urban.
