*Agro Climatic Zone wise Report on  
Important Crops in Kerala 2001-02*

---

---

**Department of Economics & Statistics  
Government of Kerala  
Thiruvananthapuram  
May 2003**

## *Preface*

There is a great demand from various corners of data users for Agro Climatic Zone wise data on area, production and productivity of field crops in Kerala. This department has already published the Agricultural Statistics 2001-02 in which the district wise data on various parameters are included. Despite the technical limitation, we have attempted this exercise to prepare the estimates on area, production and productivity of the prominent crops at Agro Climatic Zones of Kerala. It is worth mentioning that 12 Agro Climatic Zones identified in the "Report of the Committee on Agro Climatic Zones and cropping pattern" Kerala 1974, is considered while preparing this report. However the Plantation crops like Tea, Rubber, Coffee, Cardamom, etc. governed by the commodity Boards are not covered due to limitation in identification of area under each Agro Climatic Zones. This is the 1<sup>st</sup> Report on the subject viz. **Agro Climatic Zone wise Report on Important crops in Kerala 2001-02.** It is hoped that as an indicator this would be useful to mitigate the problems of data users on data gap to a certain extent. Shri. S. Janardhanan Potti and Smt. C.S. Lathakumari, Assistant Directors of Agricultural Statistics Division of this Directorate have rendered very good service in completing this task. Shri. B. Mohanakumaran Nair, Joint Director initiated this project, guided the work and rendered excellent service to make this report a reality within stipulated time frame. Improvement on this report can be made in the next editions. Suggestions for improvement are welcome.

*A. Meera Sahib*

14. Zone wise status according to area, production and productivity – Pineapple	34
15. List of Blocks/Municipalities/Corporations according to zones.	35-39

## **Introduction**

At present the Department of Economics and Statistics is publishing Agricultural Statistics every year as per the results obtained through area enumeration survey and General Crop Estimation Survey under the 50 percent Centrally Sponsored Schemes (CSS) –EARAS in the state. The concept and methodology followed in the survey is governed by the Ministry of Statistics Planning and Programme Implementation, Ministry of Agriculture Government of India and the guidance issued by the Indian Agricultural Statistics Research Institute, Government of India. The Agricultural Statistics especially estimates on area under each crop, production, and productivity of each crop deserves more attention in the present context of WTO and global market. The change of policy that is from subsistence farming to commercial farming, increase in production and productivity, reduce the cost of production etc necessitate the realistic data base for valid assessments. As such by an area approach and Agro climatic zonation wise status of yield of field crop attains more importance. In Kerala with the introduction decentralized planning process and Local Level Development Plan Formulation importance for data at Panchayat/Block level is increased.

Despite the technical limitation that, inadequate sample size for valid estimates at Panchayat/Block level, the department considered the growing demand for Agro Climatic Zone wise data on of field crops, Department took up this exercise to prepare a zonation wise area, production and productivity of prominent crops by making use of the data of Agricultural Statistics 2001-2002 which is published at district level. The data of Agricultural Statistics 2001-2002 are suited to the Agro Climatic Zonation wise, identified 12-zone area. The agro climatic zones are identified by the Committee on Agro Climatic Zone and cropping patterns, of the Department of Agriculture, Government of Kerala. The data on 14 districts are accommodated in the 12 Agro Climatic Zones in the state.

A brief explanation on the concepts and parameters of distinguishing the Agro Climatic Zones are given in the following paragraphs.

## **Location**

In the Indian union, Kerala is one of the smallest states which is spread over in the area of 38.864 Km<sup>2</sup>. The western side of state is blessed with a long coastal strip of Arabian

sea and East with westernghat. With regard to the location of the state it lies between  $8^{\circ} 18'$  and  $12^{\circ} 48'$  North latitude and  $74^{\circ} 52'$  and  $77^{\circ} 22''$  East longitude. The length of seacoast of the state is about 590 KM. The state is broader in the central area that not exceeding 120 Kms and narrows down to 30 Km at extremes of north and South.

### ***Administration Division***

Development Division of the administration units of the state are 14 districts 152 community development Blocks 991 Panchayats 53 Municipalities and 5 Corporations. The administrative division consists of 63 taluks 1452 revenue villages in 14 districts.

### ***Physiographic divisions***

The landmass of Kerala has been distinguished into three divisions such as Highlands Midlands and Lowlands. The following Table represents the phisiographic divisions of Kerala.

Table A

No	Division/Zones	Description	Area	
			KM	Percentage
1	Highlands	Revenue villages lying 250' (76.2M) and more above MSL	18653.50	48.00
2	Midlands	Revenue villages lying between 25' (7.62m) and 250' (76.2m) above MSL	16231.20	41.76
3	Lowland	Revenue villages lying below 25' (7.62m) above MSL	3979.30	10.24
Total			38864	100.00

The altitude of above MSL is the only criteria for natural physiographic divisions of Kerala. As such each of these three divisions that Highlands, Midlands and Low lands would comprise heterogeneous agro ecological entities and resultant land use patterns. Climate, soil, Rainfall etc are also to be taken into account for homogeneous Agro Climatic Regions.

### ***Seasons***

In the broad sense, Autumn Winter and Summer are the three seasons in an agricultural year in Kerala. Strictly speaking there are no well-defined seasons in most parts

of the state. The summer and winter seasons are benefited with southwest and northeast monsoons. Autumn is hardly distinguishable in view of climatic conditions.

## **Rainfall**

According to the National Commission on Agriculture (NCA) there are three rain fall seasons in a year in the nation. Each season consist of four months. The Rainfall season and the periods are given below.

No	Season	Period
1	Pro-Monsoon	February to May
2	Monsoon	June to September
3	Post Monsoon	October to January

Normal Rainfall in Kerala are given Table 1 and 2

## **Agro Climatic Zones**

Combination of parameters such as altitude, rainfall pattern, soil type and topography influences the configuration of typical agronomic environments where in a distinct cropping pattern flourishes.

In the State only two areas fall under high altitudes namely high ranges Idukki and Wayanad district besides westernghat areas. The low altitude region endowed with humid tropical climate is spread over the entire length of the state.

Rainfall characteristic is another important parameter. The state was divided into two i.e. the areas south and North of 11° N latitude (South and North of Trisur) with rainfall patterns 1 and 2 respectively. The southern region is having comparatively well rainfall and June maxima whereas Northern Region has relatively ill rainfall and July maxima.

Soil type is another distinguishing factor of a zone. The soil types are laterite, Red loam, Alluvial peat soil (Kari) and sandy.

The parameters for identifying Agro Climatic Zones are given in the Table

### **A. Altitude**

- |              |                         |
|--------------|-------------------------|
| 1. Type - I  | Sea level to 500 meters |
| 2. Type - II | Above 1000 meters       |

### **B. Rainfall**

Pattern – I Both the South West and North East Monsoons are active and moderately distributed. South West Monsoon with June maximum

Pattern – II III – distributed rainfall South West Monsoon with July maximum and concentrated in 3-4 months. North East Monsoon relatively weak.

### **C. Soil types**

1. Alluvial soil
2. Sandy soil
3. Laterite with well defined B-horizon
4. Laterite soil (without B-horizon)
5. Red soil
6. Black soil
7. Peat (Kari) soil

### **D. Topography**

1. Model-I. Extensive valleys with level but raised garden lands
2. Model-II a. Valleys less extensive. Hills with moderate gradients and slopes having mild gradients.
3. Model-II b. Valleys less extensive, hills with ,moderate gradients and with egg shaped hump. Slopes are steep
4. Model-II c. Valleys less extensive. Hills with table tops. Slopes are steep.
5. Model-III Narrow valleys and hills with steep gradients.

### **Cropping Pattern**

According to the above mentioned parameters the entire state is classified in to 12. Agro Climatic Zones. The principal Crops according to the Agro Climatic Zones of Kerala along with soil type represents in the given below.

No.	Zones	Altitude	Rainfall	Topography	Soil type	Principal crops
		Type	pattern	Model		
I	Malappuram	I	II	II C	Laterite	Rice, Coconut, Cashewnut, Arecanut
II	Northern Midlands	I	II	II b	Laterite	Rice, Coconut, Arecanut
III	High Ranges	II	I&II	III	Red loam	Tea, Coffee, Cardamom, Rice
IV	Malayoram	I	I	III	Laterite without B	Rubber, Coconut, Pepper, Rice
V	Central Midlands	I	I&II	II a	Laterite	Rice, Coconut, Tapioca, Arecanut, Banana
VI	Palakkad	I	II	II	Red loam	Rice, Cotton, Groundnut, Millets
VII	Chittoor Black soil	I	II	II a	Black soil	Rice, Sugarcane, Cotton, Groundnut, Millets
VIII	Coastal sandy	I	I	I	Sandy Loam	Rice, Coconut
IX	Kuttanad	I	I	I	Peat (Kari)	Rice, Coconut
X	Onattukara	I	I	I	Sandy loam	Rice, Coconut, Tapioca, Arecanut
XI	Southern Midlands	I	I	III	Laterite without B	Coconut, Rice, Tapioca, Arecanut
XII	Red loam	I	I	III	Red loam	Coconut, Tapioca, Rice

Source: Report on the Committee on Agro climatic zones and cropping patterns - April 1974

### Land use pattern

At present the land utilization are classified in to nine folds. The National Statistical Commission proposed to enhance the nine folds of classification by way of including under marshy land, under still water, social forestry etc. The land utilization pattern in this state of Kerala as per the Agricultural Statistics 2001-2002 reveals that 56% of the total geographical area (38.85 lakhs hectares) is under net sown area. The Forest land cultivation are not included. The forest area is accounted to 28% of the total geographical area. The total cultivable land in the state is accounted to 84% of the total geographical area, excluding the forest area. The current fallow is estimated to 2% during 2001-2002. The land put under nonagricultural use is worked to 10%. The gross cropped area is 2992252 hectares where as the Area sown, morethan once is worked to 21% of the total geographical area. Land use pattern in Kerala during 2001-02 and percentage of classification of land utilization are given in the table 3 & 4.

Zonation wise area under predominant crops, Production and productivity of each crops are given in table 5. Geographical Area of each Block- Municipality/Block/Corporation in the state under each zone in the state are based to allocate the data for respective Agro Climatic Zones. The data on area production and productivity of crop-as per Agricultural Statistics 01-02 at state level is spread over in the identified 12 Agro Climatic Zones.

## **The seasonal crops**

Paddy (Autumn, Winter and Summer), Tapioca

## **Annual crops**

Banana, Plantain and Pineapple

## **Perennial crops**

Coconut, Aeronaut, Cashew and Pepper

## **Analysis**

The analysis of Crop statistics in the state reveals the fluctuations in the productivity of each crop is varying in the different zones which indicates the influence of Agro Climatic parameters.

### **I Rice**

#### **Rice (Autumn)**

##### **a. Area**

During Autumn 2001-2002 of the total, 116540 hect. paddy cultivation area in zone 7 (Chittoor Black Soil) is having 24651 Hectare (21.15%) with rice production of 62271 MT and productivity, 2526 Kg/Hect. This is followed by Palakkad zone 21273 MT (18.25%) with production 46449 MT and productivity of 2183 Kg/Hect. The High ranges shows the lowest area of 33 Hect (0.03%) with production and productivity 94 MT and 2843 Kg/Hect. respectively.

##### **b. Production**

In production also Chittoor Black Soil zone comes with 62271MT (26.4%) followed by Paiakkad and Malayoram 46449MT (19.7%) and 38645 MT (16.4%) respectively. The least production is in High ranges zone 94 MT (0.04%).

##### **c. Productivity**

High range zone and Chittoor Black soil zone comes first and second zones in productivity with 2848 Kg/Hect and 2526 Kg/Hect respectively. The least productivity zone is Kuttanad with 209 Kg/Hect during autumn 2001-02. It is not a normal rate but decrease is due to crop loss.

### **Rice (Winter)**

(a) **Area:-** The central Midlands comes first with an area of 35446 Hect (21.9%) production 73056 (20.1%) and productivity 2061 Kg/Hect. This followed by Malayoram zone having an area of 24890 (15.37%), production and productivity recorded are 53559 (14.8%) and 2152 Kg/Hect respectively. Red loam soil least area of 367 Hect (0.23%) with 579 MT production and 1578 Kg/Hect as productivity.

(b) **Production:-** As in area in the case of production also central Midland comes first with 73056 MT (20.1%). Similarly Malayoram stands second with production 53559 MT (14.8%). The lowest production is seen in Red loam having a production of 579 MT(0.16%).

### **(c) Productivity**

Against the lowest production and productivity in Kuttanad during autumn 2001-2002, the production and productivity during winter stands first in the state. The paddy area during winter is worked out to 13364 hect (8.25%) the production of rice is 38851 MT (10.7%), where as the productivity worked out to 2907 Kg/hect.

### **(ii) Rice (Summer)**

(a) **Area:-** During the season also central Midland comes first in area 10719 Hect (24.44%) with production and productivity 22548 MT and 2104 Kg/Hect respectively. Southern Midland zone stand second behind with an Area 7128 Hect (16.26%) having production 15863 MT and productivity of 2225 Kg/Hect. In this season also Red loam stands at last with an area, of production and productivity of 4 Hect, 4MT and 1000 Kg/Hect respectively.

### **(b) Production**

Central Midland comes first with production of 22548 MT (21.46%) and productivity 2104 Kg/Hect. Kuttanad zone stands next in production with 20178 (19.2%) having a productivity of 2911 Kg/Hect. The Red loam is lowest in area production as compared to other zones.

### **(c) Productivity**

Chittoor Black Soil comes first in productivity 2956 Kg/Hect followed by Kuttanad zone having a productivity of 2911 Kg/Hect.

## **II Coconut**

### **(a) Area**

Northern Midlands and Malappuram zones ranks first and second with an area of 178548 (19.7%) and 174050 (19.2%) respectively. 38.93% of the area of the state included in the

above mentioned zones. Kuttanad zone comes the lowest in area of the coconut with 6262 Hect. It is to be mentioned that the Kuttanad zone includes the maximum wetland area where is under paddy cultivation is prominent.

**(b) Production**

Malappuram zone stands first in coconut production 1238 million nuts (22.6%) followed by Northern midlands 1098 Million nuts (20.0%). 42.6% of the total production is from these two zones. As in area, the coconut production in Kuttanad zone also ranks the lowest with 39 million nuts.

**(c) Productivity**

Regarding productivity of coconut, Red loam soil zone stands first with productivity of 7146 Nos /Hect. Where as Malappuram comes second with productivity of 7114 Nos of nuts/hect. The lowest productivity is in High ranges (3935 Nos/Hect).

### **III Arecanut**

**(a) Area** In respect of area of arecanut Malappuram zone occupies the first in position i.e. 30333 (32.5%) followed by Northern Midland with an area of 19718 (21.2%). Majority of the arecanut area in the state is spread over in these two zones. Red loam zones constitutes only 125 Hect (0.13%).

**(b) Production**

Just like in area, Malappuram and Northern Midlands stands as first and second respectively in production contributing 61.8% of total production. The least produced zone is Red loam with a production of 9.318 Million nuts.

**(c) Productivity**

Malappuram and central midlands stand as first and second with a productivity of 227.337 and 199.853 (Millions/Hect) respectively. The least productivity noted is in the Chittoor Black soil.

### **IV Cashew**

**(a) Area**

Estimated area under the crop cashew is high in the Northern midland zone, which is 29788 hectares (33.20%) and lowest in Kuttanad zone i.e., 51 hectares (0.06%). 63% of area under the crop is in Malappuram and Northern Midlands zones.

(b) Production:- Major production of cashew in the state is from northern midlands zone, which accounts to 25637.02 Tones (38.92%). Northern midlands and Malappuram contributes the major production of the crop (77%). The lowest production of cashew is in Kuttanad zone i.e., only 12.927 Tones (0.02%).

(c) Productivity:- The largest productivity is also in Malappuram zones (923 Kg/Hect). But the lowest productivity is marked in Red loam zone (231 kg/hect) which is comparatively very low with the state productivity.

## **V Pepper**

(a) Area:- As compared to other zones in the state area under pepper is highest in high ranges, 97731 hect (47.92%). About half of the area under pepper is in high range zones. Whereas 187 hect (0.09%) area is in Kuttanad zone.

(b) Production:- The highest quantity ,about 61% of pepper is produced in High ranges (35811.24 Tones). The same is lowest in Kuttanad zone, which is only 19.041 Tones.

(c) Productivity:- Productivity is also comparatively high in High range zone (366.427 kg/hect) and lower in Costal Sandy soil zone (88.548kg/hect)

## **VI Tapioca**

(a) Area:- The highest area under Tapioca is in Southern midlands 36424 hect (32.76%) followed by Malayoram zone, 36405 hect (32.74%) together contributes about 65% of the total area under the crop. Whereas the same is lowest in Kuttanad zone.

(b) Production: - The status of production of Tapioca is considered the highest in Malayoram, in 936422 Tones (38.13%) followed by Southern midland zones 691308 Tones (28.15%). Just as area, production, of tapioca from Malayoram and southern midland zones also accounts above 50%. Negligible quantity of Tapioca is produced in Kuttanad zone i.e. 3912 Tones.

(c) Productivity:- Higher productivity is another factor for increased production in Malayoram zone. Highest productivity is marked in High ranges as 30147 kg/hect followed by Malayoram 25722 kg/hect and lower in Onattukara as 12846 kgs/hect.

## VII Banana

- (a) Area:- Malayoram zone stands first with an area of 18745 (3632%) followed by High ranges 13485 (26.50%). The two zones together contribute the major portion of the area. In Onattukara Banana cultivation is least as compared to other zones.
- (b) Production:- As in the area, Malayoram and High ranges stands as first and second in the production having a production of 124019 (22.99%) and 116203 (30.91%) respectively. Onattukara zone holds back position in the production.
- (c) Productivity:- In respect of productivity High Ranges stands first with 8617 kg/hect followed by Kuttanad with 8073 kg/hect. Lower rate of productivity noted is 5419 kg/hect in Onattukara zone.

## VIII Plantain

- (a) Area:- Area under plantain is 12434 hect (22.5%) Hectare in Malayoram zone. Southern midland stands just behind Maiayoram with an area of 8194 Hect (14.8%). Plantain area in Palakkad zone accounted to (623 hect) holds lowest position.
- (b) Production:- The highest Production is Malayoram (93904MT). High ranges followed with a production of 69868 hect. The least produced zone is Palakkad.
- (c) Productivity:- High ranges and Onattukara zones stands as first and second with productivity of 10741 kg/hect and 8850 kg/hect respectively. The rate of productivity is poor in the northern midlands (4810 kg/hect) as compared to other zones.

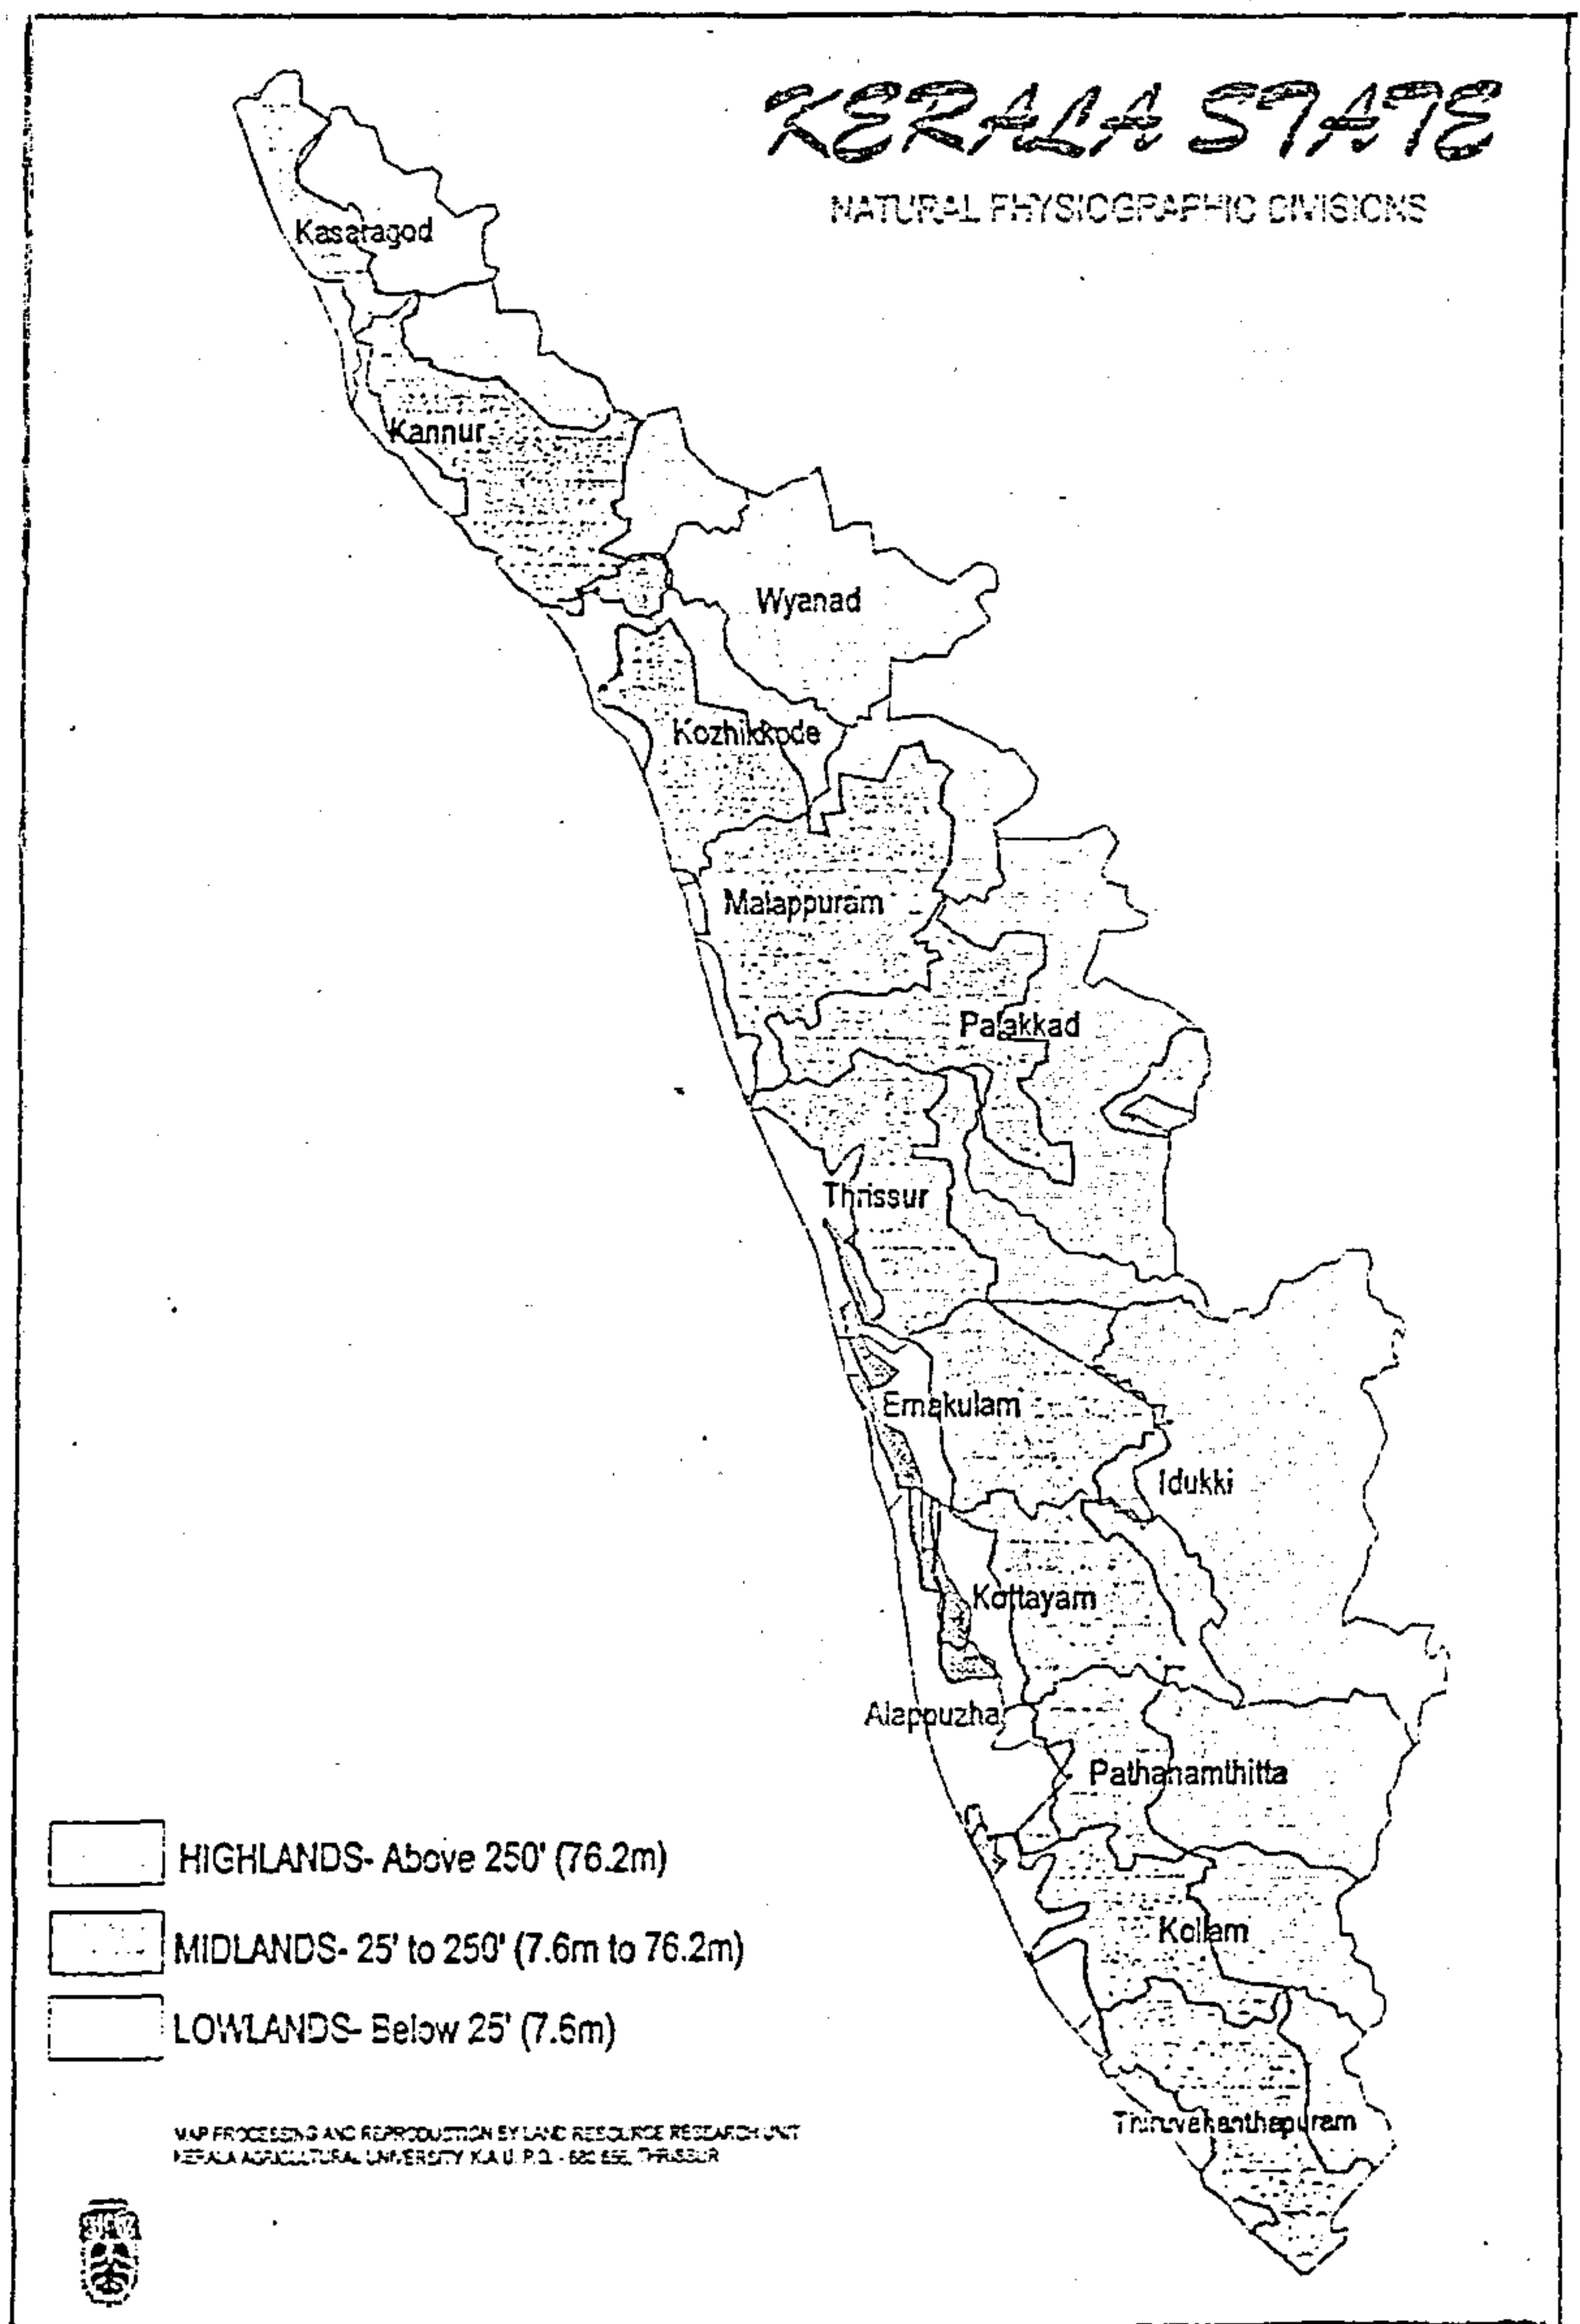

## IX Pineapple

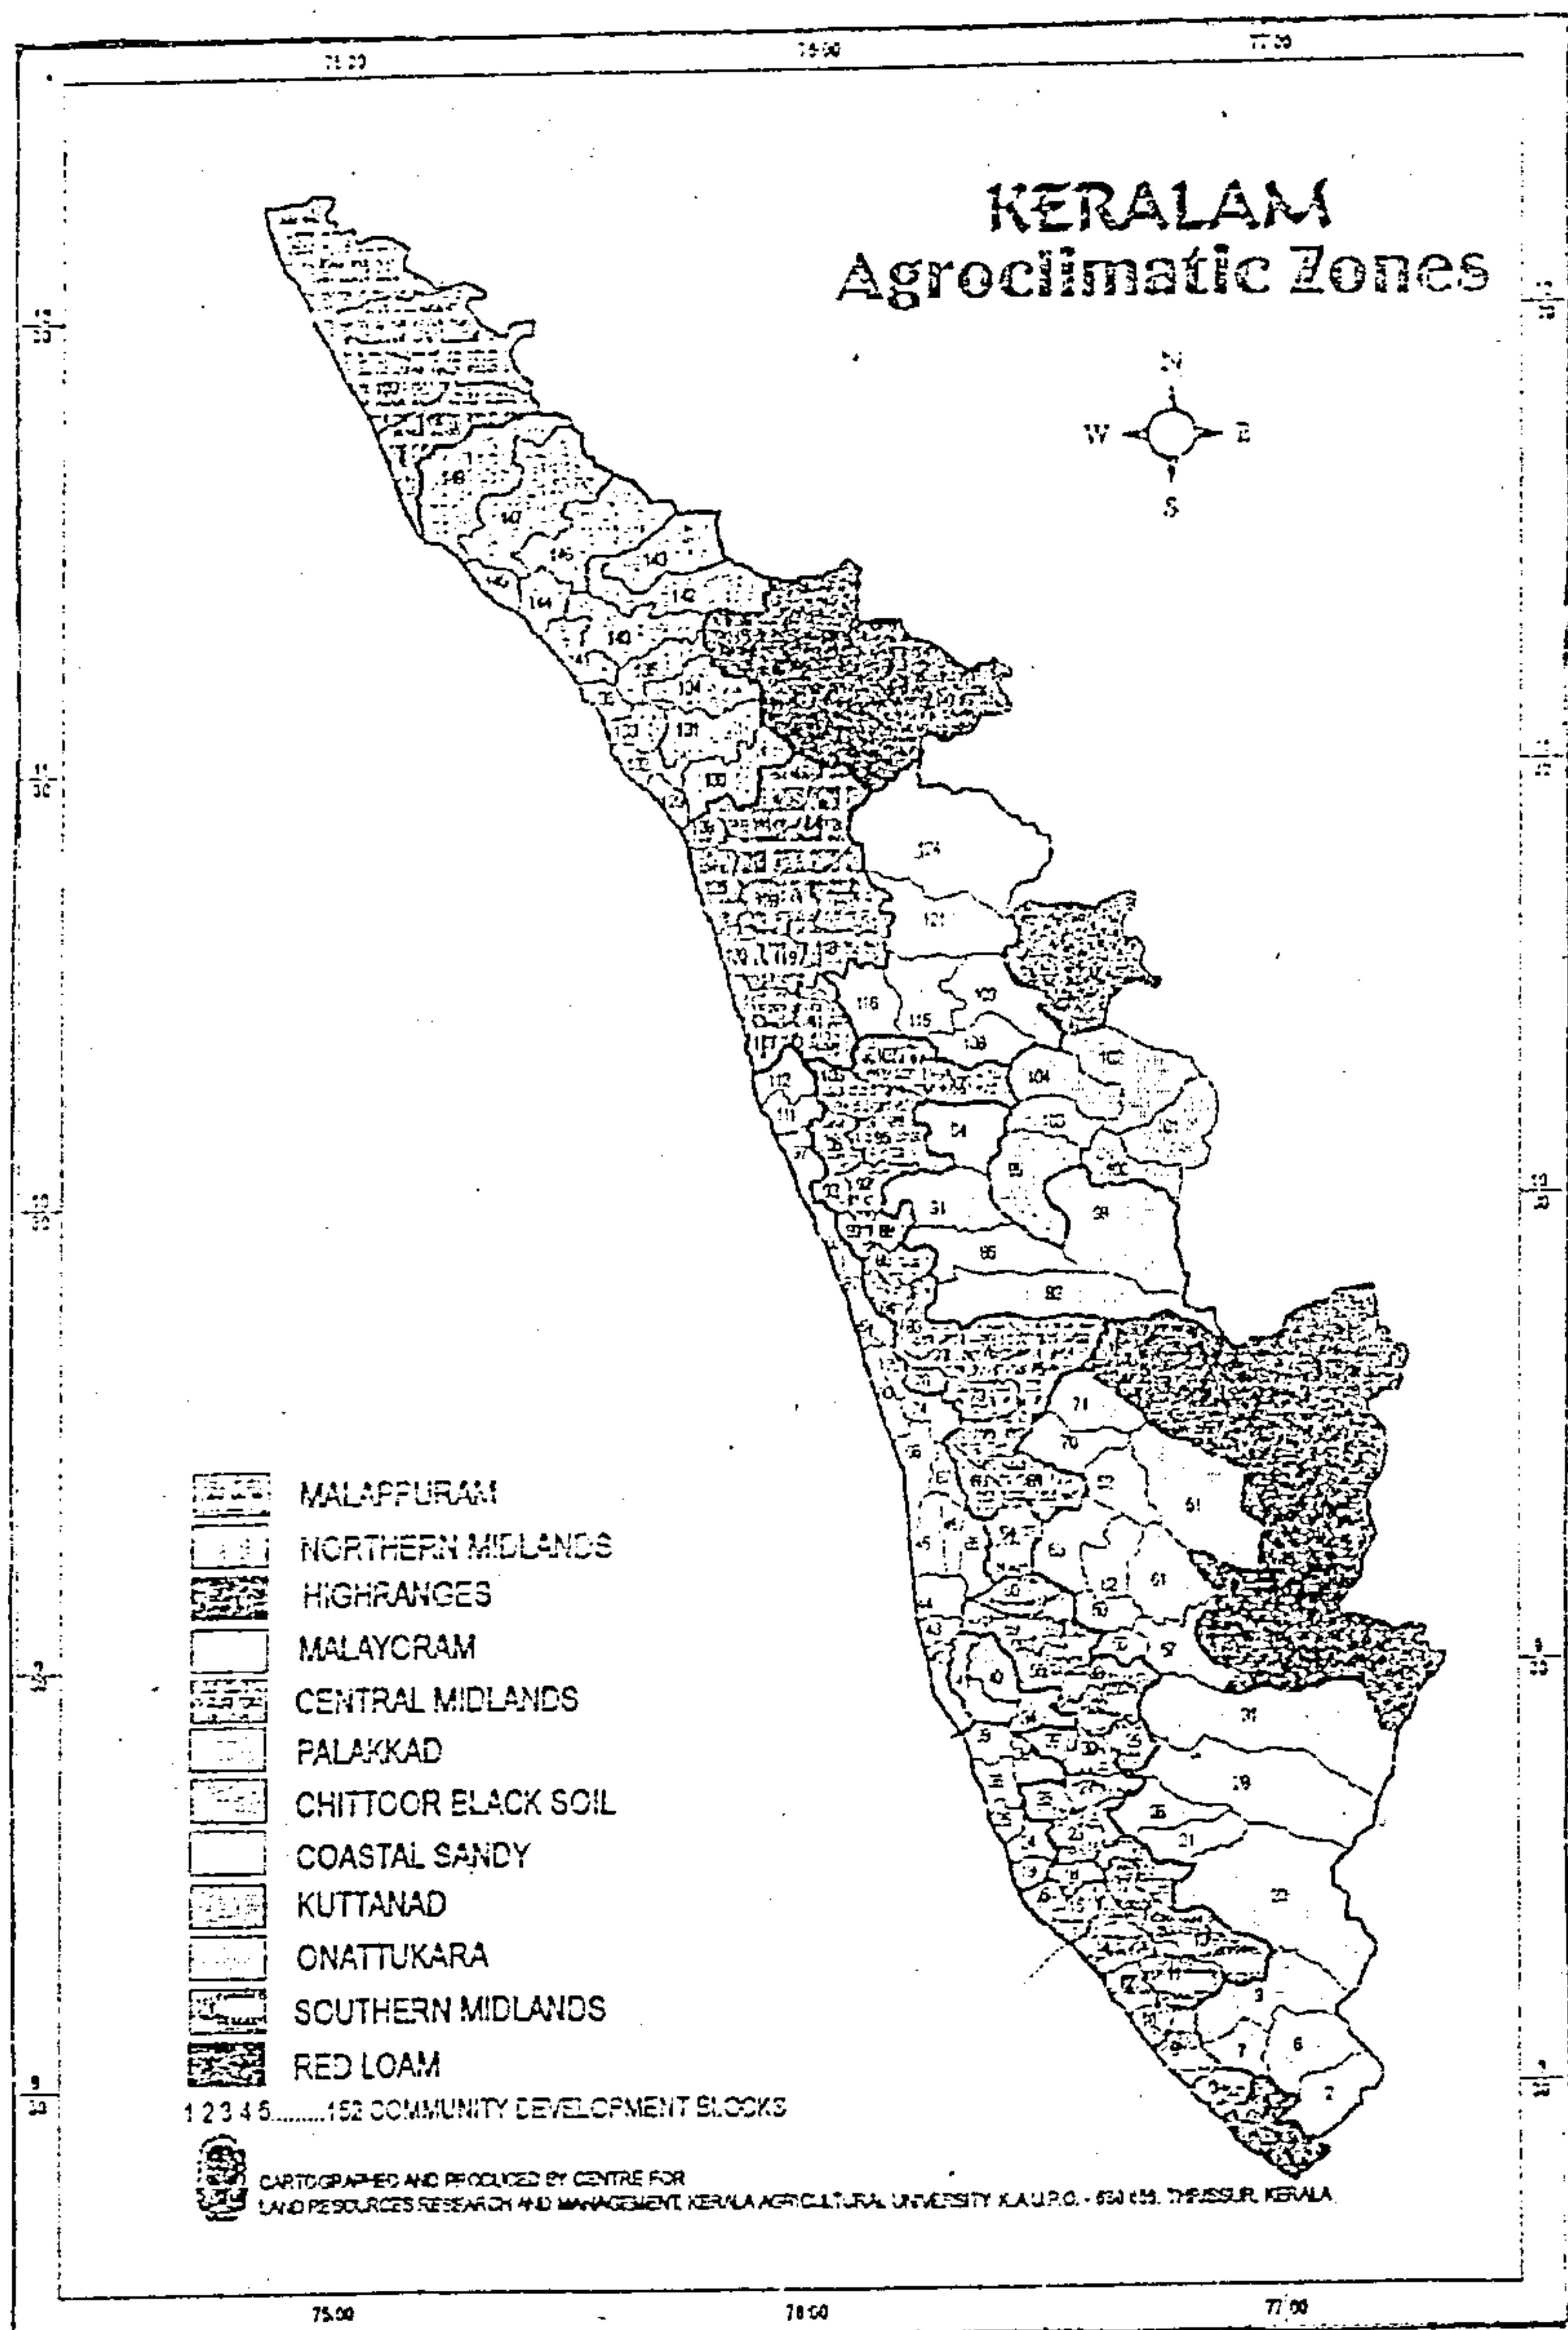

- (a) Area:- Malayoram and central midlands together contributing about 80% of area of the total area under pineapple in the state that stands first and second places with an area of 6432 hect and 2540 hect respectively. Kuttanad is the lowest in the pineapple cultivation.
- (b) Production:- As area, Malayoram and central midlands strands in the first to second places in the production 48616 MT and 22693 MT respectively. Kuttanad in the lowest producing zone.
- (c) Productivity:- While ranking productivity as compared, to other zones, central midlands and Chittoor Black soil occupies first and second position with 8934 kg/hect and 8429 kg/hect respectively. Red loam reveals the lowest productivity zone that accounts to 4016 kg/hect.
