ANNUAL REVIEW OF CROP STATISTICS SYSTEM IN KERALA

THROUGH THE SCHEME FOR IMPROVEMENT OF CROP STATISTICS

2013-14

**DEPARTMENT OF ECONOMICS AND STATISTICS
KERALA**

PREFACE

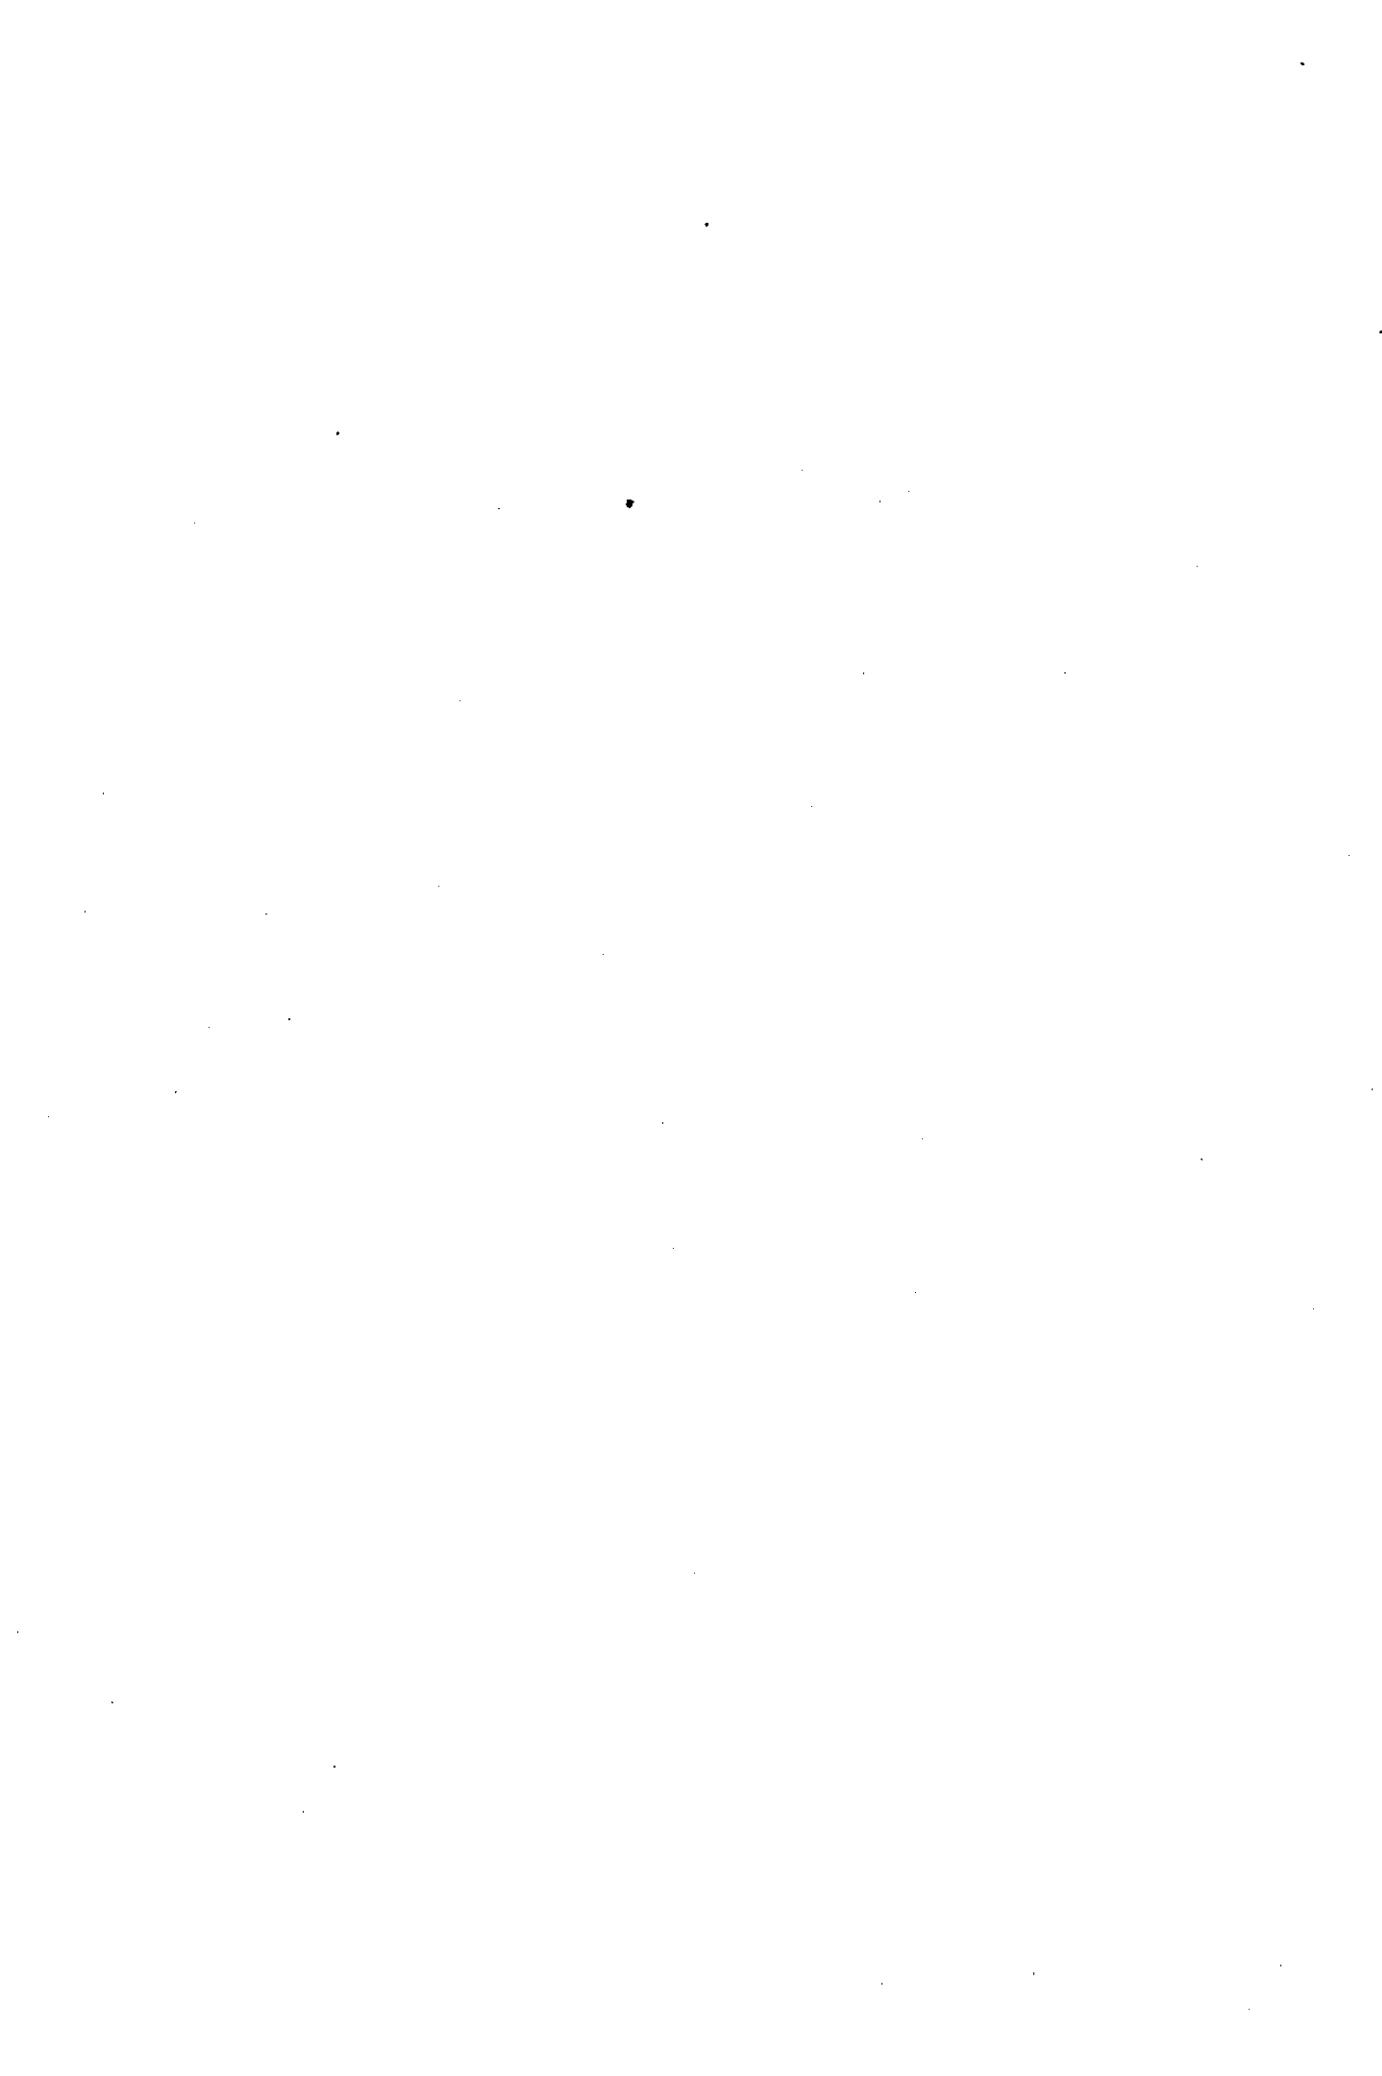

The Ministry of Agriculture and Co-operation, Government of India is implementing the scheme on Improvement of Agriculture Statistics for the Collection of Agriculture Statistics. The components of the scheme are Timely Reporting Scheme (TRS), Establishment of an Agency for Reporting Agricultural Statistics (EARAS), Improvement of Crop Statistics (ICS) and Crop Estimation Survey on Fruits and Vegetables (CES-F&V). In Kerala, the scheme on EARAS and ICS are being implemented annually for the collection of data on Agricultural statistics.

The Scheme on Improvement of Crop Statistics is implemented in the State jointly by the efforts of National Sample Survey Office and the State Agricultural Statistics Authority (Department of Economics & Statistics).

The Annual Review report on ICS for 2013-14 is prepared by the Sample Check unit functioning in the EARAS section of the Directorate of Economics and Statistics, Government of Kerala. In this connection I express my sincere gratitude to Smt. Radhamany V.S. (Additional Director), Sri. K. Damodaran (Joint Director), Smt. Sangeetha. R (Assistant Director), Smt. K. N Prameela Devi (Research Assistant), Smt. Jayasree K. B and Smt. Sheeja. N (Statistical Assistants- Grade I) for the preparation and publication of this Report.

I welcome suggestions if any to the improvement of this publication from the wellwishers and data users.

**V. RAMACHANDRAN
DIRECTOR GENERAL**

I. INTRODUCTION

Scheme for Improvement of Crop Statistics (ICS)

The scheme Improvement of Crop Statistics was introduced from Rabi I season of 1973-74 with the main objective of improving the quality and reliability of agricultural statistics by locating deficiencies in the state system of collection of Agricultural statistics and suggest remedial measures through the joint efforts of the Field Operation Division of National Sample Survey Office (FOD), Government of India (GOI) and State Agricultural Statistics Authorities (SASA). The primary responsibility for the collection of data on crop statistics rests with the State Government. Crop statistics has two major components, area sown and average yield. Land use statistics is collected by Area Enumeration Survey. The yield rates of principal crops are estimated through General Crop Estimation Survey.

This report contains full account of the current position of estimation of crop production, the procedures followed for enumeration of area and yield and the steps to be taken for improving the system for the year 2013-14. The report also gives the position of training to staff entrusted with crop cutting work, the equipment supplied to them, the adequacy of experiments planned under General Crop Estimation Survey (GCES), the response rate etc. Besides, the findings of sample checks under ICS scheme on the working of the system are also brought out indicating the remedial measures to rectify the deficiencies observed. It also provides comparison of estimates of yield of crops based on sample checks under the scheme for Improvement of Crop Statistics and General Crop Estimation Survey.

1. District level Committees (DLC)

District Level Committees are also functioning in the State with representatives of NSSO and State Government (DES). This committee discusses the reasons for large differences/ no differences between the entries made by supervisor and primary worker in area enumeration.

2. The Scheme for Improvement of Crop Statistics (ICS)

The scheme accomplishes its objectives by conducting sample check on the primary fieldwork through

- (1) Physical verification of the crop enumeration done by the investigator in a sample of 80 Investigator zones in each season.
- (2) Checking the aggregation of crop wise area in the Form I diary and
- (3) Inspection of crop cutting experiments at harvest stage in an agricultural year.

The sample checks are undertaken by the supervisory staff of NSSO (FOD) and the Supervisory staff of DES (ADOs) of the State Government on matching basis in two non-overlapping samples. The basic data collected through these sample checks are exchanged between the two agencies.

Three schedules viz., AS 1.0, AS 1.1 and AS 2.0 are used for recording the findings of sample checks on (a) area enumeration (b) area aggregation and (c) crop cutting experiment respectively. The filled in schedules are sent to both agencies on reciprocal basis for tabulation and analysis.

The programme of sample check on area enumeration consists of selecting and locating a sample of 4 clusters in each selected IV zone with the help of village maps and recording actual utilization to which land under survey numbers are put during each season and comparing these with the corresponding entries made by the investigator in respect of these clusters.

The programme of sample check on area aggregation consists of finding out the total of area figures recorded by the investigator under different utilization in Form I diary maintained by him and comparing them with the totals arrived by the supervisor.

The concurrent inspection of crop cutting experiments at harvest stage consists of examining whether the conduct of the experiments by the investigator conforms to the procedures prescribed under GCES. The inspection covers aspects such as selection of fields and random coordinates, marking of experimental plots of specified shape and size, harvesting of plants, weighment of the produce etc. In addition, the position regarding the supply and use of equipments for conducting the experiments, training received by the primary workers, crop condition, use of inputs etc. are also ascertained.

The data collected through the sample check are analysed facilitating factual appraisal of the system with reference to the following.

- (1) Timeliness in completion of area enumeration and working of the EARAS Scheme
- (2) Discrepancies in recording a crop area, their frequency and impact.
- (3) Discrepancies in recording ancillary information, their frequency and impact.
- (4) Discrepancies in crop abstract statement and their impact.
- (5) Departures from the prescribed procedure for conducting crop cutting experiments and their impact.

The yield data from the supervised experiments are also used for obtaining the average yield rates of specified crops and their standard errors. The calculation of standard errors and their study is helpful in assessing the adequacy of the sample size, trend of changes in yield rates and in planning other allied studies.

Analysis of Data 2013-14

II. Check on Area Enumeration and Area Aggregation

Every year 80 Investigator Zones each under the Central and State samples are selected for sample check on Area Enumeration and Area Aggregation. The sample checks are conducted immediately after the completion of area enumeration survey under EARAS scheme.

1. Response in Sample Check on Enumeration of Area during 2013-14

The response in sample check on area enumeration i.e., the number of IV zones for which filled in schedules were received during 2013-14 each is given in Table 1. The response for both Central & State sample was 100 % in whole seasons. (Response is 100% in all districts (all seasons))

2. Completion of Area enumeration under EARAS.

Under EARAS, the Investigator is required to complete enumeration of area in each season according to a prescribed time schedule and also to submit EARAS statement to higher authorities immediately on completion of enumeration work. The sample checks are programmed to be carried out within one month after the due date for the completion of area enumeration. Provision exists in schedule AS 1.0 for collecting information on the due and actual dates of completion of area enumeration as well as the submission of EARAS statement. Analysis of data collected indicates how far the time schedule under EARAS being adhered to by primary workers and throws light on delays which would defeat the purpose of EARAS.

Timeliness in completion of area enumeration during 2013-14 is given in Table – 2. 96.25%, 97.50% and 95% cases for Central sample and 92.5 %, 85 % and 91% cases for State sample were completed by the girdawari intime during Autumn, Winter and Summer seasons respectively. 2.5%, 1.25% and 3.75% cases for Central sample during Autumn, Winter and Summer seasons and 7.5% , 11% & 9% cases for State sample during Autumn, Winter & Summer season reported that the area enumeration has completed after the due date. 1.25% , 1.25 % & 3.75% cases during Autumn, Winter and Summer season for the Central sample has not reported to the date of completion of area enumeration. In the case of State sample reporting of date of completion of area enumeration “not known” is Nil during the three seasons.

3. Submission of EARAS Statement

The details of season wise submission of EARAS crop statements during 2013-14 are indicated in Table 3. Timely submission of these statements still needs considerable improvement; especially in Kollam, Ernakulam , Thrissur, Malappuram Kozhikode, Wayanad and Kasargod district.

4. Discrepancies in recording crop and crop areas

The crop utilization and area reported by the Investigator in the state system and with the corresponding entries made by the technical personnel associated with the ICS programme reveal the following types of discrepancies.

- (1) Non-reporting of crops actually grown (E1)
- (2) Reporting of crops actually not grown (E2)
- (3) Reporting of incorrect area of crops (E3)

The percentage of Survey nos. in which different types of discrepancies in recording paddy area by the investigator during Autumn, Winter and Summer for the year 2013-14 are given in Table 4.

The crop actually grown in the field and it is non reported in Palakkad state sample in winter sample (E1) . Reporting of crops actually not grown in the field (E2) was reported in Palakkad and Thrissur State Sample in winter sample. The most predominant error observed was that of reporting of incorrect area. Reporting of incorrect area of crops (E3) were found high in Idukki , Ernakulam and Palakkad districts in Autumn season, Ernakulam, Idukki, Palakkad, Malappuram, Kozhikode, Wayanad, Kannur & Kasargod districts in Winter season, Idukki, Ernakulam, Wayanad and Malappuram districts in summer seasons.

5. Discrepancies in recording variety particulars of seed used

Information on distribution of survey numbers as per the type of seed used for paddy during Autumn, Winter and Summer is given in Table 5(a), 5(w) and 5(s) respectively. Following discrepancies were noted in recording variety particulars of seed used for State and Central samples in Autumn seasons.

1) Autumn Season Discrepancies

Idukki (Central sample) 5.56%

Ernakulam(State sample)	7.1%
Palakkad (State sample)	5.61%
Kasargod (State sample)	9.54%

No remarkable variations found in Winter and Summer seasons

III. Check on Crop Cutting Experiment

1. Sample Check on Crop Cutting Experiments.

Table 6 reflects the number of experiments planned and percentage response achieved under the sample checks on crop cutting experiments in each district during different seasons of the year 2013-14. The response position of paddy was 100 % during Autumn season , 96% during winter season and 90% during summer season for Central Samples & 100 % during Autumn and winter and 98% during Summer seasons for State samples.

2. Distribution of number of experiments conducted by important inputs

Table 7(i), 7(ii) and 7(iii) shows the details of distribution of paddy crop cutting experiments conducted according to the percentage of experiments irrigated, sown with high yielding varieties of seeds and applied with fertilizer. In the programme of sample check under ICS on crop cutting experiments, particular emphasis has been given to ensure that supervisors are invariably present at the harvest stage to inspect the technique and procedure adopted by the Investigators, and provide support and guidance wherever necessary. The extent of participation at harvest stage is presented in the tables. Central personnel were able to participate in the programme at harvest stage to the extent of 100%, 96% and 90 % during Autumn, Winter and Summer seasons respectively and the State personnel's participation was 100%, 100% and 98% during Autumn, Winter and Summer for all the three seasons for Paddy 2013-14 . The extent of participation at harvest stage is cent percent for State & Central personnel for the crops Tapioca, Pepper, Coconut and Areca nut [Tables 7(iv),7(v), 7(vii) & 7(viii)] was 96% for the crop Banana (State)[Table 7(vi)] and cent percent for Central personnel during 2013-14.

3. Procedural Deviations and Discrepancies

Particulars gathered during the visit of technical personnel are used to assess the extent to which the procedural guidelines prescribed for the conduct of crop cutting experiments were observed by the statistical investigators. Incidences of deviation and departures observed during the Sample Check Programme for each crop are:

- E1 – Error in selection of survey/ sub-survey numbers
- E2 – Error in selection of field within survey/ sub-survey numbers
- E3 – Error in reporting seed variety
- E4 – Error in reporting of seed rate.
- E5 – Error in reporting irrigation particulars
- E6 – Error in reporting application of fertilizers
- E7_ Error in reporting application of manures
- E8 – Error in reporting application of pesticides
- E9 _Error in reporting measurement of field
- E10_Error in checking random numbers
- E11_Error in location of plots
- E12_Error in plot dimensions
- E13_Error in weighment of produce
- E14_Inadequate arrangement for storing the produce for drage
- E15_Error in reporting proportion of experimental crops in mixture/ wrong reporting of constituents in mixture and
- E16_any one of the items missing

4. Supply and use of Crop Cutting Equipments

Information on supply and use of crop cutting equipments such as Tapes, Pegs, Balance and set of Weights collected during the Sample Check Survey 2013-14 is presented in Tables 16 (i) & 16(ii). The primary workers were supplied with all

essential items of equipments during 2013-14. The supplied equipments were reported to have been carried to the field for the conduct of crop cutting experiments to a large extent in most of the Districts.

IV. Estimation on Average Yield Rates

Estimated yield rates of high yielding and other varieties of crops for irrigated and unirrigated categories and crop-wise rate of application of fertilizers and differential yield rates according to inputs for paddy during Autumn, Winter and Summer for Central and State samples are given in the Tables.

Crop wise number of experiments planned for check at harvest and the response achieved, variety wise estimated yield rates for irrigated and unirrigated categories, crop-wise rate of application of fertilizers and yield rates according to inputs for Central and State samples for the whole year crops Banana, Tapioca, Coconut, Pepper and Areca nut are given in the Tables.

V. Comparison of ICS and GCES yield Estimates

The yield rates of rice under ICS and GCES during the year 2013-14 for district level for Central and State samples are given in Table 17(i). Trend of yield rate for Rice under ICS and GCES during Autumn, Winter and Summer for the year 2013-14 are given in Chart 1, 2 and 3 respectively. State wise yield rate under GCES and ICS for paddy is given in Chart 4.

Yield rates of rice under ICS are higher as compared to GCES for State and Central samples during the three seasons.

The yield rates of important crops under GCES and ICS for the year 2013-14 is given in Table 17(ii) & 17(iii). A graphical representation of yield rates of Tapioca, Banana, Coconut, Pepper and Areca nut are given in Chart 5 to 9. A graphical representation of state-wise yield rates of important crops during the year 2013-14 is given in Chart 10.
