PREFACE

'Agricultural Statistics' is one of the important publications of the Department of Economics and Statistics, Government of Kerala. This report presents the result of sample survey conducted in Kerala during the period from 01.07.2002 to 30.06.2003 under the central scheme – Establishment of an Agency for Reporting Agricultural Statistics (EARAS). The data relating to land use, area under crops, crop production, yield rate, irrigation statistics, etc are furnished in this report.

This report was prepared in the Agricultural Statistics Division of the Directorate of Economics and Statistics.

I hope this report would be of great help to those engaged and interested in Agricultural sector, Planners, Administrators, Research scholars ect. in this field. Suggestions for the improvement of future issues of this report are welcome.

Thiruvananthapuram

M.R. BALAKRISHNAN
DIRECTOR

Agricultural Statistics 2002-2003

The Report "Agricultural Statistics" annually published by the Directorate of Economics and Statistics deals with estimates of area under various crops, land utilisation pattern, crop production and other major aspects of agricultural sector of Kerala state. Initially the data collected through the land utilization survey was utilised for preparation of Agricultural Statistics in Kerala. But the data collected and estimates prepared were inadequate on account of small sampling frame and the limited coverage. With a view to obtain more comprehensive data on Agricultural Statistics in non-reporting states like Kerala, West Bengal and Orissa, Government of India sponsored a scheme namely Establishment of an Agency for reporting Agricultural Statistics (EARAS). In Kerala the scheme was being implemented by the Department of Economics and Statistics from 1975-76 onwards. Originally the scheme was intended to collect Agricultural Statistics from 20% of the selected village in each year on a phased manner covering the entire state. EARAS Scheme was further revised in 1987-88 with an objective to prepare district level estimates with breakup for Block/Municipality/Corporation. During 1993-94 the Investigator zones were reorganized by suiting the villages to Panchayats. From 2000-01 onwards the part panchayats were discontinued and each investigator zone formed with full panchayat/panchayats. With the introduction of the Crop Insurance Scheme by Government of India, estimates of agricultural crop production and the yield rate at lower level became necessary. Even though this department is providing data for the use of National Agricultural Insurance Scheme (NAIS by GIC), there is an urgent need to generate an error free lower level Agricultural Statistics. To realise this objective the Small Area Crop Estimation Method (SACEM), an alternative methodology to estimate the area and yield of paddy at micro level was suggested by Indian Agricultural Statistics Research Institute (IASRI). Final decision on this is awaited. The estimate of area under the crop and yield rate of the crop are the most important components in the estimation of crop production. The area Statistics are collected through the area enumeration survey while the yield rates are obtained through the General Crop Estimation Survey conducted under the scheme EARAS.

Sampling Design:

Stratified Multistage random sampling method is followed in the survey. The Block/Municipality/Corporation are treated as a stratum. The Blocks are divided in to a number of Investigator Zones depending on the area of the block and nature of land. Corporation area is divided in to three Investigator Zones. Each Municipality with area more than 10 square Km is treated as a single Investigator Zone. The Investigator Zones within the stratum is the first stage unit of sampling.

selected clusters of each Investigator Zone the second stage unit, and the selected survey number of the plot is the ultimate unit of sampling.

Sample Size:

In each Investigator Zone 100 clusters of five-survey sub division as in the basic Tax Register is selected for the survey. These 100 clusters is allocated among the dry land and wet land in proportion to area under these categories in the zone. 100 survey numbers are selected from the basic tax register using circular systematic sampling method. These plots are the key plots for cluster formation.

The Investigators form the cluster by identifying 4 or more survey numbers adjacent to key survey number in a systematic manner so as to have a minimum of five acres for enumeration. Five hundred survey numbers will be enumerated annually in an Investigator Zone. Wet and Dry cluster will be formed separately and carried out separate enumeration. Wetland clusters will be enumerated in all three seasons Autumn, Winter and Summer and Dry land plots will be visited two times for enumeration. The area under crops of each season, annual, perennial, horticrops and vegetables etc. Land utilization details, irrigation particulars etc will be collected by the Investigator at the time of enumerations. Simultaneously Investigator will identify and conduct crop cutting experiments for all major crops and selected minor crops.

The yield rates obtained through analysis of scientifically designed crop cutting experiments under crop estimation survey are used for estimation of production and to work out mean yield for the purpose of implementation National Agricultural Insurance Scheme (NAIS).

The data collected through Area Enumeration Survey will be consolidated compiled and prepared area estimates at block and district level. By using area estimates and yield rate production estimates are prepared. The data regarding the land utilization are used to estimate the area under different classification of land utilization.

The following tables are prepared on the basis of the data collected through sample survey during 2002-2003 under the scheme EARAS in the state of Kerala.

Agricultural Statistics 2002-2003

Table 1 – Classification of area under land utilization

Sl No	District	Geogra- phical area	Total Forest	Barren & uncultivable land	Land put to non agricul- tural use	Permanent pastures and other grazing lands	Land under misc. trees	Cultivable waste lands	Fallow than current fallow	Current fallow	Net area sown	Area sown more than once	Total cropped area	(Area in hectares)
