## **PREFACE**

Report on **Index Number of Area, Production and Yield of Crops** is one of the important Publications of the Department of Economics and Statistics, Govt. of Kerala. This report helps to study the changes in area, production and productivity of crops. The Index of Food area of Food crops shows continuous decreasing trend in the state. It covers 36 crops under two main groups and 8 subgroups. This report shows the trends from the year 1975-76 to 2008-09.

This report was prepared by A.R Yamuna, Assistant Director, Agricultural Statistics Division (EARAS) of the Directorate of Economics & Statistics. I hope this report will be much useful to those engaged and interested in Agricultural sector, Planners, Administrators, and Research Scholars etc.

Suggestions for the improvement of future issues of this report are welcome.

Thiruvananthapuram  
25.02.2011.

**V. Ramachandran**  
DIRECTOR

## Report on Index Number of Area, Production and Yield of Crops

**Introduction:-** The prime need of human being is food. Agriculture provides basic essential food items for direct consumption. It also provides raw material for industries which meet the essential need for living. According to 2001 census, 15.8% of the workers of Kerala state peruses agriculture as primary means of livelihood. About 10.3% of the state domestic product is derived from agriculture.

On the other hand, agriculture production is a biological process generally influenced by uncertain factors like rainfall, flood, sunshine, temperature etc and is therefore subject to wide fluctuations. The basic purpose of framing the index numbers of agricultural economy is to study the trends over time and to assess the relative contribution of the area and yield to the increase in over-all agricultural production over a period of time. Index numbers of area under crops, production and productivity of crops are being compiled at the state level. The purpose of these index numbers is to study the trends of production to assess the relative contribution of area and yield in the variations of overall agricultural production over a period of time. In order to assess the trends in net area sown; cropping intensity corresponding indices are also calculated.

**Coverage:-** The index numbers of agriculture commodities cover 36 crops under two main groups and 8 sub-groups. The crops and groups are listed below.

**A) Food Grains**

- I. Cereals - Paddy, Jower, Ragi and Other cereals.
- II. Sugar crops - Sugarcane
- III. Spices & Condiments - Pepper, Ginger, Turmeric, Nutmeg, Cardamom, Arecanut, Clove, Tamarind, Garlic
- IV. Fruits and Vegetables - Papaya, Jack, Mango, Chilies, banana, Plantain, Drumstick, Pineapple, Cashew.
- V. Tuber crops - Tapioca, Sweet Potato

**B) Non-Food Crops**

- I. Oil Seeds - Sesamum, Groundnut, Coconut
- II. Fiber drugs & Narcotics - Cotton, Tobacco, Betel Leaves
- III. Plantation crops - Tea, Coffee, Rubber, Cocoa

**Base Period** - The base period for these indices is taken as the triennium ending agricultural year 2001-02=100.

The computation of various indices are detailed below:-

1. **Index of Area under crops**:- As the areas under crops can be added hectre by hectre in the existing series by pooling together the indices of area under different crops, for the computation of indices for subgroups, groups and all crops no explicit weightage has been given. The subgroup, groups and all crops indices can be worked out directly from the area under the different categories of crop in different years.

$$\text{Ie., index of Area} = \frac{a_{ij}}{a_{io}} * 100 = I_{Aij}$$

Where  $a_{ij}$  = the area under  $i$ th crop in the  $j$ th year

$a_{io}$  = the area under  $i$ th crop in the base year

2. **Index of production**:- For individual items, the index of production is calculated using the formula

$$I_{Pij} = \frac{P_{ij}}{P_{io}} * 100$$

For any subgroup or group of items, for calculating the index of production weights have to be assigned since the production of various crops cannot be added together. So price per unit of various crops in the base period have been taken as the weights or in other words the value weights are the price weights and the formula used is Laspeyres' one.

$$\text{Ie., Index of production} = \frac{\sum p_{ij} P_{io}}{\sum p_{io} P_{io}} * 100$$

Where  $P_{io}$  is the average price per unit of the  $i$ th crop in the base period.

$$\text{Index of yield} = \text{Index of production} / \text{Index of Area} * 100$$

#### Index of net area sown:

Due to the mixed cropping pattern and the availability of irrigation facilities, a considerable increase in the double or multiple cropped area. Therefore the gap between the gross area and the net area sown are widening. In order to have a measure of the rise or fall in the cultivated area, the index of net area sown is calculated as follows

$$\text{Index of Net area sown} = \frac{N_j}{N_o} * 100$$

Where  $N_j$  – Net area sown in the  $j$ th year

$N_o$  – Net area sown in the base period

#### Index of cropping intensity:-

As stated earlier with the improvement in irrigation facilities and other measures for intensification of agriculture, there is a considerable increase in the double or multiple cropped areas. In order to assess the trends in intensity which means the ratio of total cropped area to net area sown, the index of cropping intensity is completed.

I.e., index of cropping intensity = Index of Area under crops / Index of net area sown  
x100

#### **Index number of food crops:-**

The index of production for food crops with base year as the triennium ending 2001-2002 shows a slight decrease in 2007-08 as compared to previous 5 years. Index of area also decreased in 2008-09 and it was 79. That is index of area shows a gradual decrease from 1975-76 to 2008-09. Index of yield shows a gradual increase from 1975-76 to 2007-08 and it is maximum in the year 2008-09.

#### **Index of Non-food crops:-**

The index of production for non-food crops with base year as the triennium ending 2001-2002 shows a gradual increase from 2002-03 and then decreased in 2007-08. Productivity index also shows the same change and index of area shows a decreasing trend.

#### **Index number of all crops:-**

Index number of production and productivity of all crops shows an increasing trend from 2002-03 and it was slightly decreased in 2008-09 where as the index of area shows a decreasing trend from 2002-03.

#### **Sub-group wise Index**

##### **Index numbers of food grains :-**

Index number of area and production of food grains shows a decreasing trend from 1975-76 to 2007-08 where as the productivity index was steady from 1975-76 to 1985-86 and then shows an increasing trend up to 1994-95 and a maximum productivity index in 1999-2000 and decreasing thereafter.

##### **Index of spices and condiments:-**

Area, production and productivity index of spices and condiments shows an increasing trend from 1975-76 to 2005-06 and then shows a decreasing trend in area and production index for the last two years.

##### **Fruits and vegetables index:-**

Area, production and productivity index of fruits and vegetables shows an increasing trend from 1975-76 to 2005-06 and then shows a decreasing trend in area and production index for the last two years.

**Tubers Index:-**

Area and production index of tuber crops shows a decreasing trend from 1975-76 to 2007-08 and the productivity index shows a gradual increase from 1975-76 to 2008-2009.

**Oil seeds index:-**

Area, production and productivity index of oil seeds shows gradual increase from 1977-78 to 2000-01 and then index of area decreases where as production and productivity indices increases.

**Fiber drug and Narcotics index:-**

Area and production index of fiber drug and narcotics shows an increasing trend from 1977-78 to 1997-98 and then shows a decreasing trend where as productivity index shows an increasing trend from 1975-76 to 1986-87 and then shows a decreasing trend and it was very less for the last three years.

**Plantation crops index:-**

Area, production and productivity indices show a gradual increase from 1975-76 to 2007-08.

**Index numbers of individual crops:-**

The index number of area and production for rice with the base year as triennium ending 2001-02 showed a steady decrease from the beginning to end where as the productivity shows a steady increase and it was maximum in the year 2006-07.

Index number of area and production of pulses also shows a steady decrease from the beginning to end where as its productivity increases and it reached a maximum value in 2004-05 and then shrunk again for the next three years.

The index numbers of area and production of Arecanut, Banana and Black pepper shows a steady increase from 1975-76 to 2008-09 except black pepper. It was decreased in 2008-09 and the productivity index of Banana shows a fluctuating change and it was maximum in 1993-94.

**Index of Net Area sown and Index of Cropping Intensity**

Index of Net Area sown is almost steady from 1975-76 to 1988-89 and then shows an increase from 1989-90 to 1997-98 and again decreased from 1998-90 onwards and it was minimum in 2008-09.

Index of cropping intensity was maximum in 1980-81 & 1981-82 and it was around 100 for the rest of years.
