Preface

The Ultimate objective of the introduction of the Sample Registration System at national and State level by the Registrar General of India is to avoid the problems involved in the functioning of Civil Registration System. The Sample Registration System was introduced in the State in 1964 beginning with 20 selected rural samples and at present the survey is being conducted in 150 rural samples of the state by this department.

The current report contains the results of the survey for the year 1995. The main contents of the reports are crude birth rate, death rate, Infant Mortality rate and the; details regarding population, marriage, sex ratio, life expectancy etc.

This report has been prepared under the guidance and direction of Sri. A. Meera Sahib, Additional Director (General). Sri. V. Ramachandran, Deputy Director (Vital Statistics) has supervise the preparation of this report. The tabulation work of the report has been done by Smt. M. Premakumaray (Computer Supervisor) and Smt. G. Santha, Compiler has prepared the tables.

4	Mid year sample population and estimated population according to age and sex 1995	18
5	Sex ratio and percentage distribution of population by age group – 1981,1994 & 1995	19
6	Religion wise sample population and estimated population for each District	20
7	District wise Live births observed in samples and estimates according to Sex in 1995	21
8	Estimated number of total Women, Married women and Live births in different reproductive age groups 1995	22-23
9	Age specific fertility rate, age specific marital fertility rate, GFR, TFR and GRR	24-25
10	Distribution of currently married women observed according to age and number of surviving children 1995	26
11	Distribution of currently married women observed in samples according to age and children ever born 1995	27
12	Distribution of currently married women observed in samples according to age of mother and age of last child 1995	28
13	Live births observed in samples classified by month of occurrence 1995	29
14	Live births observed in samples by type of medical attention at delivery	30
15	Percentage distribution of births by age of mother and order of births of child	31
16	Distribution of samples according to birth rate of each sample	32
17	Still Births observed in samples and estimated according to sex and still birth rates	33
18	District wise deaths observed on samples and estimated according to sex	34

<i>Table No.</i>	<i>Title</i>	<i>Page No.</i>
18	(a) Distribution of death observed in samples according to age and sex 1995	35-37
	(b) Distribution of estimated death according to age and sex 1995	38-40
19	Age Specific death rates based on estimated values 1995	41
20	Death observed in Samples classified by month of occurrence 1995	42
21	Deaths classified by type of medical attention	43
22	Distribution of samples according to death rate of each sample 1995	44-45
23	Infant death observed and estimated according to sex and infant mortality rate 1995	46
24	Number of infant deaths observed in samples of children born during the current year and previous year 1995	47
25	Estimated number of infant deaths for the year 1995 of children born during the current year and previous year	48
26	Estimated number of Perinatal, Neonatal Post neonatal infant death according to sex	49
27	Birth and death detected through overlapping survey and intensive enquiry classified according to place and type of births and deaths 1995	50
28	Distribution of Births and Deaths recorded by Enumerator and Supervisor, detected through overlapping survey and intensive enquiry 1995	51-52
29	Distribution of rate of marriage per thousand population and percentage distribution of marriage according to age and sex 1995	53
30	Life Tables of Males based on Age specific Death rates for the year 1993, 1994 and 1995	54
31	Life Tables of Females based on Age specific Death rates for the year 1993, 1994 and 1995	55
32	Life Tables of Persons based on Age specific Death rates for the year 1993, 1994 and 1995	56
33	Number of units and population in the universe and the samples	57

Sample Registration of Births and Deaths in Kerala Rural – 1995

Chapter I

Introduction

The sample Registration system is a dual recording system and provides reliable vital rates at the National and State level separately for rural and urban areas. The system was introduced for rectifying the problems involved in the civil Registration system and provides quite and reliable estimates of vital rates. The department of Economics and Statistics and the Census Department are the implementary agencies of the study in rural and urban areas. The Registrar General of India is giving necessary guidelines in this regard. This report pertaining to Sample Registration survey conducted in the 150 selected sample in the rural areas for the year 1995.

Initially this survey was started during 1964 as a pilot project in 20 rural areas and 5 urban. Sample units. However this system attained a full-fledged level in 1965 with the coverage of 150 rural sample units in the state. The Director of census operation was in the charge of the work in the urban areas since 1970. The fieldwork of the survey was conducted in the selected 150 rural sample units in the State. Instead of the Stratum wise tables, district level tables have been incorporated in the survey report since 1995.

Staff engaged in the survey

150 part time enumerators were posted for the conduct of continuous enumeration survey in the respective sample units allotted to them. The half-yearly surveys in these 150 units were conducted by 17 statistical assistants / computer deputed from the Census Department. The additional District Officers (SR) working in the district offices have conducted revivification of both unmatched and partially matched events. One R.S.O., one R.A., two compilers and one computer from Census Department were attending the survey work in the Head office.

Field Work

As per the instruction of the survey, a base line survey was conducted in all the newly selected sample units. During the base line survey the house list, house hold list, list of pregnant women and a notional map of the sample area were prepared by the supervisor with the help of part time enumerator of the respective sample units. Moreover the part-time enumerator of each sample units is responsible for the continuous enumeration survey and to report the births and deaths occurred in the sample units. The supervisors have to conduct the half-yearly survey and furnish the final result of each sample to district office soon after the completion of the fieldwork of the survey. After the matching process, the partially matched and unmatched events should be re-verified by the Additional District Officer (S.R) of the District Office.

Overlapping Survey

While conducting the half-yearly survey by supervisor, he should also collect the details of births and deaths of the last half-year in order to find out the missing event of that period. During the year under report 151 birth events and 35 death events were netted in the over lapping survey.

Chapter 2

Estimated population in Rural areas of Kerala

2.1. Population and its growth

The rural population of Kerala was estimated as 22981646 on 01.07.95 and 23167905 on 01.01.96 recording an increase of 81% during the second half of 1995. District wise analysis shows that maximum numbers of population were in Malappuram with 3028581 in which the male and females break up were 1480014 and 1548567 respectively. Thiruvananthapuram district comes next with 2121469 numbers. However the lowest estimated population was in Wayanadu district with only 765773 numbers.

Comparative study of the estimated population of this year under report with last year shows some variation. This is due to the adoption of newly selected samples in the 60th round onwards and the size of population of these sample units are less than that of the samples used in the last year.

2.2 Sex ratio and percentage distribution of population by age group

Sex ratio based on age group was highest in the age of 25-29 with 1212 followed by 70 and above with 1175. But it was lowest in the age group of 5-9 age group having 931. Classification of population in terms of age group, it was highest in the age group of 10-14with 10.6% and lowest in the age group of 65-69 with 2.6%

2.3 Religion wise Population

Classification of estimated population based on religion wise viz. Hindu, Muslim and Christian in the state was 12895297, 5696293 and 4390056 respectively. Out of the total population 56.11% were Hindus. District wise figures show that Hindu were maximum in Kollam followed by Thrissur. In the case of Muslim it was maximum in Malappuram followed by Kozhikode. As regards to Christian population it was maximum in Kottayam followed by Eranakulam.

Chapter 3

Measures of Fertility

3.1. Fertility indicators

The primary components of Fertility is the crude death rate, Age specific fertility rate total fertility rate, and net reproduction rate are also components of fertility. Estimates of these rate are stated in this chapter.

Crude birth rate is the number of live births per 1000 population (mid year) The births to the usual residents were only taken into account for the calculation of vital rates. The crude birth rate of Kerala estimated during the year under report was 18.10.

District wise crude birth rate displayed that Malappuram was the highest among the districts with 23.02 followed by Kasaragod with 22.02. However the lowest crude birth rate was in Alappuzha district having only 13.78. Usually the crude birth rate in the southern region of the state was less than that of the northern region.

Table A1

Crude birth rate of Kerala and India (Rural) for the year 1985 to 1995

Year	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
B.R	23.2	22.6	21.5.	19.9	20.2	19.6	18.4	17.6	17.5		18.1
B.R(I)	34.3	34.2	33.7	33.1	32.2	31.7	30.9	30.9	30.4	30.5	30.0

3.2 Birth rate of neighbouring states (1995)

The birth rate of Kerala (rural) and neighbouring states are presented below

State	Rural	Rural and Urban combined
Andra Pradesh	24.8	24.2
Karnataka	25.1	24.1
Tamil Nadu	21.0	20.3
Kerala	18.1	18.0
All India	30.0	28.3

The above table shows that birth rate of Kerala is the lowest among the states with 18.1 and the second one is in Tamil Nadu with 21.0

3.3 Distribution of sample units under different rates

The table represent the birth rate existing in the sample units out of the 150 sample units 38 numbers having the birth rate between 24 to 28 and 30 numbers having the same between 28 to 32 District wise figure shows that in Malappuram out of the 28 sample units, 6 units having more 44 and above birth rate. It is obvious that the high birth rate in Kerala is due to the occurrence of more births in the areas like this

3.4 Age specific Fertility rate

It is defined as the number of live birth in a year to 1000 women of a specific age group. Table No.9 depicts the age specific fertility rate both district and state level. Age specific fertility rate was highest in the age group of 25 to 24 with 68.86 and followed by 20 to 24 with 66.8% District wise figure show that A.S.F.R was highest is Malappuram with 187.38 at the age group of 20-24, a more muslim belt populated district in the state. An overall picture of A.S.F.R showed that the same in all age group was highest in Malappuram and Kasargode district.

3.5 Age specific Marital Fertility rate.

Age specific marital fertility rate can be delivered as the number of live births in an year to 1000 married woman of specific age group. Table 9 display the district level and state level marital fertility rate during the year under report. Marital fertility rate was highest in the age group of 20-24 with 267.96 followed by 15 to 19. In the age group of 20-24, M.F.R was highest in Thiruvananthapuram district with 456.52 and lowest in Eranakulam district with 157.72. While in the age group of 25 to 29, M.F.R was highest in Kottayam district with 315.17 and lowest in Kozhikode district with 222.82.

3.6 Number of Surviving children and children ever born in different age group.

This table furnish the details regarding the number of surviving children and children ever born to the married woman who delivered births during the year under

report. It was seen that out of 4275 birth events, 1951 numbers were initial birth and 1500 numbers were second births.

3.7 General fertility rate.

The number of live births in a year to 1000 women in the reproductive age group 15-49 is defined as the G.F.R. General Fertility Rate of the State was 62.87 during the year. District wise figure shows that it was highest in Malappuram and lowest in Kollam. General Fertility rate from 1986 to 1995 in the State is as follows.

1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
81.0	77.4	71.5	72.2	69.8	64.8	61.6	61.2		62.87

3.8 Total Fertility rate.

It is delivered as the average number of children that would be born to a woman during her lifetime: if she passes through the child bearing years confirming the age specific fertility rate of the year. Total fertility rate was presented in the table No.9. The State level total fertility rate was 1:8:6 during the year under report. The total fertility rate from 1986 to 1995 is stated below.

1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
2.3	2.2	2.0	2.0	1.9	1.8	1.7	1.7		1.86

3.9 Gross reproduction rate.

It is defined as the average number of female children that would be born to a woman during her life time, if she was to pass through her child bearing years conforming to the age specific fertility rate of the year. The gross production rate of the state during the year 1995 was 90 and the same from 1986 to 1995 is stated below.

1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
1.1	1.1	1.0	0.95	0.92	0.92	0.82	0.83		0.90

3.10 Net Reproduction Rate.

Net production rate is the average number of female children that would be born to a woman during her life time conforming to the age group by corresponding proportion of survivors as per life table for female and (L_x/I_x) then repeating the process in the gross reproduction rate. Net reproduction at the state from 1986 to 1995 is presented below.

1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
1.09	1.05	1.00	0.95	0.91	0.91	0.81	0.83	0.79	0.90

3.11 Still birth rate.

Still birth rate is defined as the number of still births to 1000 births.(Both live births and still birth). Total number of still birth estimated during the year was 2582 in which the male and female classification were 1340 and 1242 respectively. Still births in district wise shows that it was maximum in Idukki with 415 followed by Kasargode with 369 while any still births was not reported from Pathanamthitta, Ernakulam and Wayanad districts. Still birth rate in the state during the year was 6.17.

3.12 Order of birth by age of mother.

Table 15 represents the percentage of distributors of order of birth according to the age of mother. Usually the birth order in the State is very less. 44.89% of the total births covered in the first birth order and 35.65% in the second birth order. It is obvious that most of Women in Kerala delivered only one or two child.

3.13 Birth by type of Medical attention received

This table relating to the details of medical attention received by the women during the delivery period. Out of the 4275 events, 4116 numbers had received institutional medical attention. That is 96.28% of delivery was happened in the medical institutions. All the births in Kollam, Idukki and Ernakulam districts were happened in the medical institution. Table No 14 present the live births observed in sample by type of medical attention at delivery percentage distribution of births by type of medical attention received for the period from 1986 to 1995.

Year	Institution	Trained professional	Untrained professional	Non professional	Not stated
1986	80.2	6.3	9.7	3.7	0.1
1987	82.5	7.7	9.2	0.6	-
1988	83.1	6.8	7.9	2.0	0.2
1989	86.0	5.6	6.8	1.5	0.1
1990	89.1	3.6	5.6	1.4	0.3
1991	91.1	2.7	4.9	1.2	0.1
1992	94.5	1.8	3.2	0.4	0.1
1993	96.9	1.6	0.9	0.5	0.1
1994	91.9	5.4	2.2	0.2	0.3
1995	96.28	2.6	1.1	0.02	0.0

3.14 sex ratio at birth

The number of male children born to 1000 female children is defined as the sex ratio at birth. Sex ratio at birth of the state from 1986 to 1995 is stated below

Year	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
	110.7	104.2	99.3	111.3	109.3	96.5	108.9	106.2		105.4

The table shows that Male birth is outnumbered that of female birth. District wise figure shows that the same was highest in Eranakulam and lowest in Pathanamthitta.

3.15 Child women ratio

Child women ratio is defined as the estimated number of children in the age group (0-4) year per 1000 women in the reproductive age group (15-49). According to the survey results the child women ratio during the period was 293.

3.16 Comparison of vital rates under SRS and CRS

Civil Regulation System is the statutory system for collecting the details of vital events in the state and national level. However the functions of C.R.S is not in a full fledged level due to the existence of under registration .Sample registration provide cent percent reliability in data. So that the vital rates estimated in SRS has vital importance

than CRS. The vital rates estimated through CRS and SRS from 1986 onwards (rural) is stated below.

Year	Birth rates		Still birth rates	
	CRS	SRS	CRS	SRS
1986	13.5	22.6	2.9	14.0
1987	13.2	21.5	2.9	11.1
1988	13.0	19.9	2.4	11.7
1989	12.6	20.2	3.4	10.6
1990	11.6	19.6	4.5	8.6
1991	10.8	18.4	3.7	6.2
1992	9.6	17.6	3.0	10.3
1993	9.4	17.5	3.0	7.6
1994	9.1	17.2	2.05	8.3
1995	9.41	18.1	3.85	6.17

It is obvious that the birth and death rate estimated in SRS is always higher than CRS

3.17 Rate of marriage per 1000 population and percentage distribution according to age and sex

Table no.31 represent the rate of marriage and remarriage per 1000 population and percentage distribution of marriage according to age and sex. During the year under report the rate of marriage at state level with male and female division was 18.19 and 19.76 respectively. Most of the marriage was occurred at the age of 25 to 29 to the males (50.32%) and 20 to 24 to females (46.84%). Usually the percentage of remarriage was very less in all age group.

Chapter 4

Mortality Measures

4.1 Crude death rate

Death rate means the number of deaths occurred per 1000 mid year population. The death rate is decreasing invariably in the state during the last few years due to the existence of good health system and high literacy rate. The estimated death rate of the state was 5.36 during the year. District wise figures shows that death rate was maximum in Pathanamthitta district with 9.20 followed by Alappuzha with 6.33 while the same was minimum in Malappuram district with 3.65 the most muslim density populated district in the state. Table no.1 present the death rated in the districts and state level.

4.2 Death rate of neighbouring states

The death rate is in rural and both rural and urban of India and neighbouring states published by R.G of India during the year 1995 are given below.

State	Rural	Rural and Urban combined
Andra Pradesh	9.2	8.4
Karnataka	8.5	7.6
Tamil Nadu	8.8	8.0
Kerala	6.0	6.0
All India	9.8	9.0

Among the states, death rate for 1995 was lowest in Kerala and highest in Andra Pradesh. However the special features of Kerala was that the death rate both in rural and rural and urban combined were same in the state. It indicated that the death rate in rural and urban area of Kerala was same during the year 1995.

4.3 Age specific death rate

It provide the details regarding the death occurred in the different age group of the people. Age at death has much importance in case of death. Out of 123082 estimated death events in the state, 60423 (49.09%) deaths were occurred at the age of 70 and above in which the classification of males and females was 30346 and 30077

respectively. Age group at 45 to 49 and above, the number of deaths was increasing continuously. District wise analysis present that maximum number of death estimated were in Thrissur district with 13058 followed by Thiruvananthapuram with 12376 numbers, The minimum number of death estimated were in Wayanadu district with 3618, followed by Kannur with 4712 numbers.

4.4 Infant death rate

Infant death means death of the children below one year age. Out of 1000 live birth in an year. The usual trend of infant mortality in the state is a decreasing one.I.M.R in the state during 1995 was 1423 number of infant deaths estimated during the year under report was 6007 in which the males and females division were 3209 and 2798 respectively.

Analyzing infant mortality the males were outnumbered with females. District wise figures shows that infant deaths was estimated maximum in Thiruvananthapuram with 936 numbers of which the males and females divisions were 520 and 416 respectively. Next it was maximum in Malappuram with 690 numbers while it was estimated minimum in Kollam district with 224 numbers, Any infant death was not reported from Idukki district. A comparative study between southern region and northern region, it was very less in the former one.

4.5 Neo natal mortality rate

It means the number of death of infants below 28 days of age per 1000 live births in an year. Neo natal mortality rate estimated during the year under report was 2.61 in the state.

4.6 Peri natal mortality rate

It is defined as the estimated numbers of deaths of infant below 7 days of age per 1000 live births in an year. The estimated perinatal mortality rate during the year was 6-84. The classification of infant mortality rate as perinatal, neo-natal and post natal is given in table No.28.

4.7 Distribution of Samples according to death rate of each sample

This table furnish the details regarding the extend of death rate in sample wise. Death rate of 3 to 5 was in most of the samples. 46 samples were in the range of 3 to 5 death rate. Next of the same was 7 to 9 death rate which have 38 samples. However any sample has no death rate of 13 to 15 and 15 above.

4 Medical attention received before death

The percentage distribution of deaths according to type of medical distribution of death according to type of medical attention received for the year 1985 to 1995 is stated below.

Year	Institutional	Qualified medical practitioner	Unqualified medical practitioner	None
1985	49	23	11	17
1986	49	27	6	18
1987	47	28	7	18
1988	42	32	7	19
1989	43	31	6	20
1990	47	36	7	10
1991	45	35	5	15
1992	54	29	4	13
1993	58	21	4	17
1994				
1995				

Table No 21 displays deaths classified by type of medical attention. Institutional deaths was predominated among the type of medical attention. Out of 1199 deaths events 610 numbers were occurred in institutions and 378 numbers in qualified medical practitioner.

4.9 Comparison of rural mortality rate under Civil Registration System and SRS for the year from 1985 to 1995.

Following table displays the death rate and IMR noted both in C.R.S and SRS in the state. Usually the rate in CRS is lower than in SRS due to the outstanding of under registration in CRS and most of the events of the rural people were occurred in the urban area for obtain modern medical facilities.

MORTALITY RATE UNDER CRS AND SRS

Year	Death rate		Infant mortality rate	
	CRS	SRS	CRS	SRS
1985	4.0	6.6	9.1	33.0
1986	3.9	6.0	8.0	28.6
1987	4.0	6.1	8.2	27.0
1988	4.1	6.3	7.3	29.9
1989	4.2	6.1	8.2	23.3
1990	4.1	6.0	8.1	17.1
1991	4.3	6.2	7.5	16.6
1992	4.5	6.3	5.2	17.0
1993	4.3	6.1	5.8	14.8
1994	4.3	5.9	7.1	16.0
1995	4.2	5.4	6.5	14.4

CRS related to Rural only

It is obvious that both death rate and infant mortality rate in the rural areas are decreasing trends in the states.

4.10 Expectation of life based on age specific death rated for the last three year

Generally the life expectancy of the people is very high in Kerala among the states in India. Table No. 30, 31, 32 pertaining to the life expectancy of males, females and both males and females in the rural area of Kerala. The life tables are prepared sex-wise and population wise separately based on the age specific death rates for the year 1993, 1994 and 1995. The expectation of life at birth for males, females and for both.

Sex together were calculated as 70.21, 76.59 and 73.26. The life expectancy of males are higher than that of females. The following table provides the life expectancy of rural people during the last 10 years.

Expectation of life based on age specific death rates-1985-95

Age specific death rates for the year			Males	Females	Both sex
1984	1985	1986	66.9	72.8	69.7
1985	1986	1987	67.1	73.1	70.1
1986	1987	1988	67.0	73.5	70.2
1987	1988	1989	67.6	73.9	70.6
