## **PREFACE**

The Sample Registration System was introduced in all the States of India under the direction of the Registrar General of India in 1964 ~~under the directions of the Registrar General of India.~~ The object of the System is to avoid the problems involved in the functioning of Civil Registration System. Sample Registration System had been introduced with 20 selected samples and at present the survey is being conducted in 150 rural samples of the state by this department.

The report presents the results of the study in rural areas of Kerala State for the year 1999. It includes the details of population marriages, sex ratio, birth rate, death rate, Infant mortality rate, etc.

This report is prepared by the Sample Registration unit of this Directorate.

### LIST OF TABLES

Table No	Title	Page No
1	2	3
1	Mid year estimated population Births, Deaths and Vital rates 1999	15
2	District wise Sample Population and Estimated population.	15
3	Population according to sex	16
4	Mid year sample population according to age and sex.	16
4A	Estimated population by age group and sex	16
5	Sex Ratio and percentage distribution of population by age group	17
6	District wise – Religion wise population – samples and estimated	17
7	District wise Live births observed in samples and estimated according to sex	18
8	Observed number of Total women in different age group	18
8A	women in different age group estimated	19
8B	Observed number of married women in different age group	19
8C	Observed number of Live births in different age group	20
8D	Estimated number of Live births in different age group	20
8E	Estimated No.of married women in different age group	21
9	Age specific Fertility Rate	21
9A	Age, Specific Marital Fertility Rate	22
10	Distribution of live births observed in samples according to age of currently married women and number of surviving children.	22
11	Distribution of live birth observed in samples according to age of currently married women and number of everborn children.	22
12	Distribution of currently married women observed in samples according to age of mother and age of last child	23
13	Live births observed in samples classified by monthwise occurrence.	23
14	Live births observed in samples by type of medical attention.	14
15	Percentage distribution of birth by age of mother and order of birth of child.	15

Table No	Title	Page No
1	2	3
16	Percentage distribution of samples according to birth rate	25
17	Distribution of still births observed in samples and estimated according to sex	26
18 A	Distribution of death estimated in samples and according to age and sex.	27
18B	District wise death observed and estimated	29
19	Age specific Death rates of State	29
20	Distribution of Death observed in samples classified by month of occurrences	30
21	Distribution of Death observed in samples classified by Type of Medical Attention.	30
22	Distribution of samples according to Death rate in samples	31
23	District wise Infant death observed in samples, estimated according to sex and Infant Mortality Rate.	32
24	Number of Infant Death observed in samples born in previous year and current year.	33
25	Number of Infant death estimated in samples born in previous year and current year.	33
26	Distribution of prenatal, neonatal and Infant death according to sex	34
27	Distribution of Births recorded by Enumerator and Supervisor	34
28	Distribution of Deaths recorded by Enumerator and Supervisor	35
29	Distribution of rate of marriage per thousand population and percentage distribution of marriage according to age and sex	35
30	Life table of Males based on Age specific Death rates for the year 1999.	36
31	Life table of Females based on Age specific Death rates for the year 1999.	37
32	Life Tables of persons based on Age specific Death rates for the year 1999.	38
33	Number of units and population in the universe and the samples.	38

# **Sample Registration of Births and Deaths in Kerala Rural – 1999**

## **CHAPTER – I**

### **Introduction**

The Sample Registration System is a dual recording system and it provides reliable vital rates at the National and State level separately for urban and rural areas. The insufficiencies in Civil Registration System have made the Sample Registration System as a unique technique for obtaining reliable vital rates. The department of Economics and Statistics is the implementing agency of the study in rural and urban areas as per directions from the Registrar General of India. This report presents the findings of the operation of the Sample Registration System in the 150 samples selected in the rural sector for the year 1999.

The Sample Registration System was introduced in the State during the year 1964 as a pilot project in 20 rural and 5 urban sample units. The full-fledged scheme was introduced on a regular basis by extending the survey in 150 rural samples in the state on 1<sup>st</sup> July 1965. The Director of Census Operations was in charge of the work in the urban areas since 1970. The fieldwork of the survey was conducted in the selected 150 rural samples units in the State. Instead of the stratum wise tables, district level tables have been incorporated in the survey report since 1995.

### **1.2 Staff engaged in the Survey**

150 part-time enumerators were posted for the conduct of continuous enumeration survey in the respective samples units allotted to them. The half yearly surveys in these 150 units were conducted by 17 computer supervisors deputed from the Census Department. The Additional District Officers (SR) working in the district offices have conducted re-verification of both unmatched and partially matched events. On RSO, One RA, two Compilers and one Senior Compiler from Census Department were attending the survey work in the Head Office.

### **Field Work**

As per the instruction of the survey, a base line survey was conducted in all the selected sample units. During the base line survey the house list, house hold list, list of pregnant women, and notional map of the sample area were prepared by the supervisor with the help of part time enumerator of the respective sample units. The part time enumerator of each sample units is responsible for the continuous enumeration survey and to report the births and deaths occurred in the sample units. The supervisors have to conduct the half-yearly survey and furnish the final results of each sample to district office soon after the completion of the Field work of the survey. After the matching process the partially matched and unmatched events should be re-verified by the Additional District Officer (SR) of the District Office.

### **Overlapping Survey**

While conducting the half-yearly survey by supervisor, he should also collect the details of birth and death of the last half year in order to find out the missing netted in the overlapping survey.

## **CHAPTER – II**

### **Estimated population in rural areas of Kerala**

#### **2.1 Population and its growth**

The rural population of Kerala was estimated as 23892124 on 1.7.1999 and 24078609 on 1.1.2000. District wise analysis shows that population in Malappuram is 3196341 in which Male and Female populations are 1527373 and 1668968 respectively. Thiruvananthapuram District comes next with 2183559 numbers. The lowest estimated population is in Wayanad with 793451 number.

#### **2.2 Sex ratio and percentage distribution of population by age group**

Sex ratio based on age group was highest in the age of 25-29, being 1230 and the corresponding figure against the age group 70 and above is 1220. It is the lowest in the age group 5-9. Considering the classification of population in terms of age group, the highest percentage population is 10.53 for the age group 15-19 and it is the lowest for the age group 65-69, being 2.40%.

#### **2.3 Religion wise Population**

Classification of estimated population based on religion wise viz. Hindu, Muslim and Christian in the State was 13376726, 6259348 and 4256050 respectively. Out of the total population 55.99% were Hindus, 26.2% Muslims and 17.81% Christians. District wise figures shows that Hindu were maximum in Kollam followed by Thrissur. In the case of Muslim it was maximum in Malappuram followed by Palakkad. As regards to Christian population it was maximum in Kottayam followed by Ernakulam.

## CHAPTER - III

### Measures of Fertility

#### 3.1 Fertility Indicators

The most common measures of fertility are the birth rate, Age specific fertility rate, general fertility rate, total fertility rate and net reproduction rate. Estimates of these rates are presented in this Chapter.

Birth rate is defined as the number of live births per 1000 population (mid year). The births to the usual residuals were only taken into account for the calculation of vital rates. The birth of Kerala estimated during the year under report was 17.72.

District wise birth rate displayed that Malappuram was the highest among the districts with 22.23 followed by Wayanad with 20.29. However the lowest crude birth rate was in Pathanamthitta district heavy only 8.40

Table – A

Birth rate of Kerala and India (Rural) for the year 1990 to 1999.

Year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999
BR	19.6	18.4	17.6	17.5	17.2	18.1	18.1	17.9	18.3	18.1
BR(I)	31.7	30.9	30.9	30.4	30.5	30.0	27.5	27.2	28.0	27.6

(Source – SRS bulletin)

#### 3.2 Births rate of neighbouring States 1998

The table shows that birth rate of Kerala is the lowest among the states with 18.1

The Birth rate of Kerala (Rural) and neighbouring States are presented below

State	Rural	Rural and Urban combined
Andhra Pradesh	22.0	21.7
Karnataka	23.7	22.3
Tamil Nadu	19.8	19.3
Kerala	18.1	18.0
All India	27.6	26.1

(Source – SRS bulletin)

#### 3.3 Distribution of Sample units under different rates

Table 16 represents the birth rate existing in the samples. Out of 150 samples 43 numbers have the birth rate between 16 and 20, and 36 numbers have the birth rate between 12 and less than 16.

#### 3.4 Age Specific Fertility rate

Age specific fertility rate can be defined as the number of live birth in a year to 1000 women of a specific age group. Table No.9 represents the Age specific fertility rate. It was highest in the age

group of 20-24 with 141.85. District wise figure shows Age Specific Fertility Rate was highest in Kozhikode with 178.25 at the age group of 20-24.

### **3.5 Age Specific Marital Fertility Rate**

Age Specific Marital Fertility Rate is defined as the number of live births in an year to 1000 married women of specific age group. Table 9A shows the district level and state level marital fertility rate during the year under report. Age specific fertility rate was highest in the age group of 20-24 with 251.74 followed by 217.69 the age group 15-19 Age Specific Marital Fertility Rate highest in Thiruvananthapuram District with 800 and lowest in Kollam District with 95.

### **3.6 Number of Surviving Children and Children ever born in different age group**

The number of ever born and surviving children of currently married women in different age group from 15-19 to 45 and above is given in table 10 & 11 which is appended. It is observed that out of 4358 birth events 2078 were initial birth and 1507 numbers were second birth.

### **3.7 General Fertility Rate (GFR)**

The number of live births in an year to 1000 women in the reproductive age group 15-49 is defined as General Fertility Rate. General Fertility Rate of the State was 60.50 during the year under report. District wise figures shows that it was highest in Malappuram and lowest in Pathanamthitta District. General Fertility rate from 1990 to 1999 in the State is as follows :-

Year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999
GFR	69.8	64.8	61.6	61.2	60.0	62.87	62.6	64.1	59.4	60.50

### **3.8 Total Fertility Rate**

Total fertility rate represents the average number of children that would be born to a woman during her life time, if she passes through the child bearing years conforming the age specific fertility rate of the year. The state level total fertility rate was 1.79 during the year under report. The total fertility rate from 1990 to 1999 is stated below:

Year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999
TFR	1.9	1.8	1.7	1.7	1.7	1.9	1.8	1.9	1.8	1.8

### **3.9 Gross Reproduction Rate**

Gross Reproduction Rate is defined as the average number of female children that would be born to a woman during her life time, if she passes through her child bearing years conforming to the age specific fertility rate of the year. The gross reproduction rate of the State from 1990 to 1999 is stated below:

Year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999
GRR	0.92	0.92	0.82	0.83	0.80	0.90	0.89	0.88	0.87	0.86

### 3.10 Net Reproduction Rate (NRR)

Net Reproduction rate is the average number of Female Children that would be born to a woman during her lifetime. Conforming to the age group by corresponding proportion of survivors as per life table for female ( $L_x/l_x$ ) and then repeating the process in the gross reproduction rate. Net reproduction at the state from 1990 to 1999 is presented below: -

Year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999
NRR	0.91	0.91	0.81	0.83	0.79	0.90	0.89	0.87	0.87	0.86

### 3.11 Still Birth Rate (SBR)

Still Birth Rate is defined as the number of still births to 1000 Births (Both still birth and live birth) Total number of still birth estimated during the year was 948 in which the male and female classification were and 507 and 441 respectively. District wise still birth shows that it was maximum in Malappuram with 345 followed by Idukki and Thiruvananthapuram with 104.

Still birth rate in the State during the year was 2.23.

### 3.12 Order of Birth by age of mother

The percentage of distribution of births according to the age of mother and order of birth of child is given in Table 15 appended. Out of total 4358 birth 47.73% of birth comes under the first and 34.53% of birth comes under II<sup>nd</sup> order of birth. The birth under seventh order above during the year under report is less. It is clear that most of women in Kerala delivered only one or two children.

### 3.13 Birth by type of Medical Attendance received

Table 14 represents the details of medical attention received by the women during the delivery period. Out of the 4358 events, 4346 numbers had received institutional medical attention i.e. 97.7% of delivery was happened in the medical institutions. All the births in most of the districts were happened in the medical institutions. It was observed that the number of people utilising the institutional facilities provided for maternal and child health increased year by year. The percentage distribution of births by type of medical attention received for the period from 1990 to 1999 are furnished below: -

Year	Institutions	Trained Professional	Untrained professional	Non Professional	Not stated
1990	89.1	3.6	5.6	1.4	0.3
1991	91.1	2.7	4.9	1.2	0.1
1992	94.5	1.8	3.2	0.4	0.1
1993	96.9	1.6	0.9	0.5	0.1
1994	91.9	5.4	2.2	0.2	0.3
1995	96.28	2.6	1.1	0.02	~J
1996	96.95	1.6	1.1	0.02	~J
1997	97.8	1.0	0.9	0.3	~J
1998	98.8	0.6	0.2	0.4	~J
1999	99.7	0.1	0.1	0.1	~J

### 3.14 Sex ratio at birth

The number of male children born to 1000 female children is defined as the sex ratio at birth. Sex ratio at birth of the state from 1990 to 1999 is sated below:-

Year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999
Sex ratio at birth	109.3	96.5	108.2	106.2	112.3	105.4	107.2	108.26	105.09	108.12

District wise figures shows that the same was highest in Kottayam and lowest in Ernakulam

### 3.15 Child women Ratio (CWR)

Child women Ratio is defined as the estimated number of children in the age group (0-4) year per 1000 women in the reproductive age group (15-49). According to the survey results the child women ratio during the period was 321.

### 3.16 Comparison of Vital rates under SRS and CRS

The Civil Registration System is a statutory system of recording the details of vital events in the state and national level. The functions of CRS are not in a full-fledged level due to the existence of under Registration. Sample Registration provide cent percent reliability in data. So that the vital rates estimated under SRS has more importance than CRS. The vital rates estimated through CRS and SRS from 1990 to 1999 are given below:

Year	Birth Rate		Still Birth Rate	
	CRS	SRS	CRS	SRS
1990	11.6	19.6	4.5	8.6
1991	10.8	18.4	3.7	6.2
1992	9.6	17.6	3.0	10.3
1993	9.4	17.5	3.0	7.6
1994	9.1	17.2	2.1	8.3
1995	9.4	18.4	3.9	6.2
1996	9.4	18.0	3.1	10.5
1997	9.8	18.6	2.7	6.9
1998	9.4	18.3	2.6	6.58
1999	9.0	18.1	2.8	2.23

### 3.17 Rate of marriage per 1000 population and percentage distribution according to age and sex.

Table no. 29 represent the rate of marriage per 1000 population and percentage distribution of marriage according to age and sex. During the year under report the rate of marriage at state level with male and female division was 20.86 and 29.32 respectively. Most of the marriage was occurred at the age of 25-29 to males and 20-24 females.

## CHAPTER – IV

### Mortality Measures

#### **4.1 Death Rate**

Death Rate is defined as the number of deaths occurred per 1000 mid year population. The death rate is decreasing invariably in the State during the last few years due to the existence of good health system and high literacy rate. District wise figures shows that death rate was maximum in Alappuzha district with 7.78 followed by Pathanamthitta with 7.55 while the same was maximum in Kannur district with 4.3.

Table – 1 represent the district wise and state wise death rate.

#### **4.2 Death rate of neighbouring State**

The death rates in rural area and rural and urban combined provisionally for the year 1999 by the Registrar General of India in respect of the neighbouring States and All India are given below

State	Rural	Rural – Urban combined
Andhra Pradesh	9.0	8.2
Karnataka	8.7	7.7
Tamil Nadu	8.7	8.0
Kerala	6.5	6.4
All India	9.4	8.7

Source : SRS Bulletin

#### **4.3 Age specific death rate**

Age specific death rate is defined as the number of deaths in a specific age group among 1000 persons of that age group in a year. Table 19 appended to this report gives the age specific death rates for different age group. For Age groups from 5 to 9 and above, the number of deaths was increasing continuously. District wise analysis present that maximum number of death estimated was in Malappuram district with 15740 followed by Thrissur District with 14922. The minimum number of death estimated was in Wayanad district with 3798.

#### **4.4 Infant Mortality Rate**

The infant mortality rate is defined as the estimated number of children below one year of age out of 1000 live birth in a year. Infant Mortality Rate in the State during 1999 was 14.48. Number of infant deaths estimated during the year under report was 6133 in which the males and females were 3654 and 2479 respectively.

District wise figure shows that infant deaths were estimated maximum in Malappuram with 897 numbers of which the males and females were 345 and 552 respectively.

#### **4.5 Neo Natal Mortality Rate**

Neo natal mortality rate is defined as the estimated number of deaths of infants below 28 days of age per 1000 live births in a year. Neo natal mortality rate estimated during the year under report was 10.9 in the State.

#### **4.6 Perinatal mortality rate**

Perinatal mortality rate defines as the estimated number of deaths of infants below 7 days of age per 1000 live births in a year. Estimated Perinatal mortality rate during the year was 8.9. The classification of infant mortality rate was perinatal, neo natal and post natal is given in Table No. 26

#### **4.7 Distribution of Samples according to death rate of each sample**

Table 22 furnish the details regarding the extend of Sample wise death rate. In 42 samples, death rate was in between 5 and 7 and 41 samples, it was in the range of 3 to 5 and in 40 the range between 7 & 9.

*after 1997*

#### **Medical attendance received before death**

The percentage distribution of deaths according to type of medical attention received for the year 1990 to 1999 are stated below:

Year	Institutional	Qualified medical practitioner	Unqualified medical practitioner	None
1990	47	36	7	10
1991	45	35	5	15
1992	54	29	4	13
1993	58	21	4	17
1994	57	20	4	19
1995	51	32	6	11
1996	51	36	4	9
1997	60	27	4	9
1998	55	30	6	9
1999	58	27	5	10

Table No.21 denotes the deaths classified by type of medical attention. Out of 1487 death events 867 numbers were occurred in institutions and 74 numbers by unqualified medical practitioners & 399 by qualified medical practitioner.

#### **4.9 Comparison of rural mortality rate under Civil Registration System and SRS for the year from 1990 to 1999**

Following table represents the death rate and Infant Mortality rate noted in the Civil Registration System and Sample Registration System in the State. The major reason for the decrease of death rate in CRS than SRS may be because most of the events of the people were occurred in the urban area for obtaining modern medical facilities.

## MORTALITY RATE UNDER CRS AND SRS

Year	Death Rate		Infant Mortality Rate	
	CRS	SRS	CRS	SRS
1990	4.1	6.0	8.1	17.1
1991	4.3	6.2	7.5	16.6
1992	4.5	6.3	5.2	17.0
1993	4.3	6.1	5.8	14.8
1994	4.3	5.9	7.1	16.0
1995	4.2	5.4	6.5	14.4
1996	4.3	6.2	5.8	13.0
1997	4.2	6.0	5.0	18.8
1998	4.7	6.5	4.9	11.5
1999	4.5	6.3	4.4	14.5

The death rate and infant mortality rate estimated under Civil Registration System are less than that of the rates arrived through Sample Registration System. The low mortality rate under Civil Registration System may be due to the fact that a considerable number of births and deaths of the resident population in rural areas are registered in urban areas where they seek better medical attention.

### 4.10 Expectation of life based on age specific death rates for the last three years.

Generally the life expectancy of the people is very high in Kerala among the states in India. Expectation of life in different age group is calculated in the life table – Table No. 30, 31, 32 appended to this Report. The life table prepared sex wise and population wise separately based on Age specific death rate 1997, 1998, 1999. The expectation of life at birth for males, females and for both sex together were calculated separately. Expectation of life calculated for the last 10 years are given below:

#### Expectation of life based on age specific death rates

Age specific death rates for the year			Male	Female	Both Sex
1990	1991	1992	67.9	74.8	71.2
1991	1992	1993	68.3	75.2	71.6
1992	1993	1994	64.3	65.2	67.5
1993	1994	1995	70.2	76.6	73.6
1994	1995	1996	70.4	76.8	73.5
1995	1996	1997	70.2	77.5	73.6
1996	1997	1998	69.1	76.7	72.7
1997	1998	1999	69.0	76.4	72.5

## Method adopted for calculation of Life Table

$$m_m - \frac{\text{Total age specific death rates for the last three years}}{3 \times 1000}$$

$$q_o = \frac{D_1}{B_1} + \frac{D_2}{B_2}$$

Where  $D_1$  is the number of deaths of children born during 1995 and died in 1996.  $D_2$  is that of the children born and died in 1996.  $B_1$  and  $B_2$  denote the total number of births occurred during 1995 and 1996 respectively.

$$Q_x = \frac{2 \times (c \times nmx)}{2 + (c \times nmx)} \quad \text{Where } c \text{ is the class interval}$$

Let  $l_o$  be 1,00,000

$$l_x = l_o - d_o$$

$$d_x = l_x \times q_x$$

Let  $d_{>0} = l_o$

$$L_o = f \times l_o + (1-f) l_1$$

where  $f =$

$$\frac{D_1}{D_1 + D_2}$$

$$L_x = \frac{(l_x + l_{x+1}) \times c}{2}$$

$$L_{70} = \frac{D_{70}}{nmx_{70}}$$

Let  $L_{70}$  be  $T_{70}$

$$T_{(70-1)} = T_{70} + L_{(70-1)}$$

$$\text{Expectation of Life} = E_x = \frac{T_x}{l_x}$$

**Table -1 Midyear estimated population, Births, Deaths and Vital rates 1999**

**Estimated figures**

District	Population	Vital Rates							
		Births	Deaths	Still Birth	Infant death	Birth	Death	Still Birth	Infant Death
